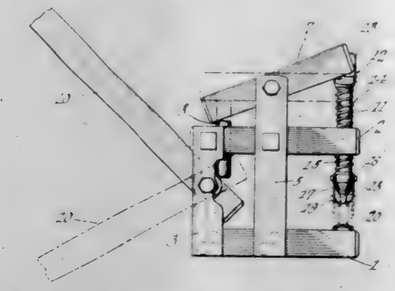
1. A brush including a back member having an integral upward and forward extensions at one end, an applicator carried by said extension, ribs formed on said back and constituting a combined handle and holder adapted to receive a receptacle between said ribs, and

a conduit passing through said extension and adapted to discharge into the applicator carried thereby, the inlet end of said conduit being adapted for connection with the receptacle.

1,561,305. RIVETING TOOL. HARRY LAVON BISHOP, Arcadia, Fla. Filed Mar. 7, 1925. Serial No. 13,881. 4 Claims. (Cl. 218—1.)

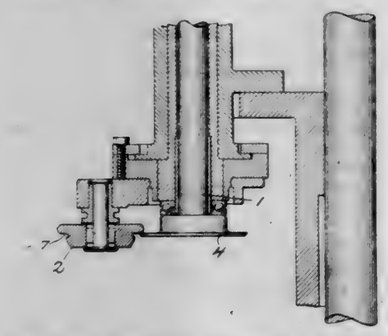


4. In a tool of the class described a supporting structure, plungers mounted to reciprocate in said structure, a beam fulcrumed intermediate its ends and supported at its end by one of said plungers, the other of said plungers having a detachable bifurcated head engaged with said beam and provided with a coiled spring to normally move the beam upward and retract the plunger, spring fingers carried by said last mentioned plunger for holding the rivets to be riveted, and a lever engaging the other plunger whereby the lowering of the lever will operate to elevate one end of the beam and lower the other thereby forcing the spring pressed plunger downward into operating position.

1,561,306. NONMAGNETIC STEEL WIRE. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1921. Serial No. 463,149. 3 Claims. (Cl. 75—1.)

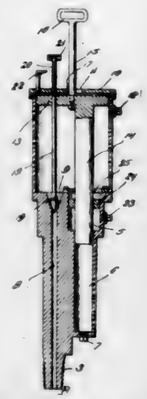
1. A substantially non-magnetic ferrous alloy comprising 10 to 18 per cent manganese, 2 to 8 per cent of chromium and 5 to 10 per cent of nickel.

1,561,307. SEAMING MECHANISM. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Aug. 17, 1922. Serial No. 582,378. 2 Claims. (Cl. 113—24.)



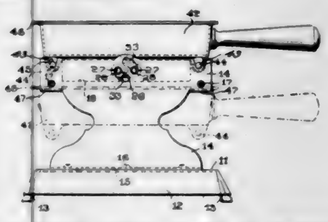
1. Seaming mechanism comprising a chuck having a head to enter the depressed portion of a container cover and a circumferential flange, of greater diameter than the container to be seamed and in a plane above the latter, against the underside of which the circumferential portion of the cover bears, and a coacting seaming roller having a seaming surface and having an upper surface above the seaming surface engaging the lower surface of the flange.

1,561,308. VACUUM-FEED LUBRICATING DEVICE. PERRY O. BROWN, St. Vincent, Minn., assignor of one-half to G. V. Backstrom, St. Vincent, Minn. Filed May 23, 1925. Serial No. 32,430. 3 Claims. (Cl. 184—39.)



1. In a lubricating device of the class described, a lubricant cup, a suction chamber in communication with said cup, a plunger located in the cup and embodying a head, slidable in the latter, and a stem extending into said suction chamber, whereby the production of suction in said chamber will serve to move the plunger in the cup to eject the lubricant therefrom.

1,561,309. COMBINED TOASTER AND TABLE STOVE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1923. Serial No. 667,870. 5 Claims. (Cl. 219—19.)



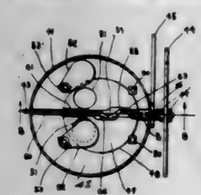
2. In an electric cooking utensil, in combination, a frame, a single flat, open heating unit pivotally mounted in said frame and adapted to be swung to either a vertical or a horizontal position, and a combined material-supporting and heating-element-locking means removably mounted on said frame for holding said heating element in a substantially vertical position.

1,561,310. PACKING RING. RUDOLF D. CORKE, Yonkers, N. Y. Filed Mar. 26, 1923. Serial No. 627,612. 1 Claim. (Cl. 288—3.)

A packing ring comprising an outer ring member formed of a plurality of segments arranged in end to end abutting relation and provided with circumferentially disposed grooves on their peripheries, an inner ring member formed of a plurality of segments formed for overlapping end to end engagement, the segments of said inner ring member comprising graphite blocks impregnated with molten metal and machined into the desired form, and straight wire binding members disposed in the

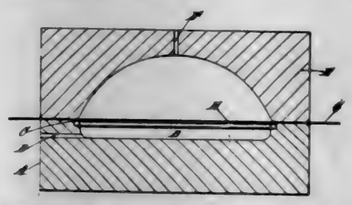
grooves of said outer ring member for binding all of said ring members in assembled relation whereby to impart radial as well as circumferential pressure to the interior of said ring when assembled.

1,561,311. DRAFT-REGULATING DEVICE. JAMES W. CRAIG, Providence, R. I. Filed Dec. 21, 1922. Serial No. 608,225. 2 Claims. (Cl. 126—292.)



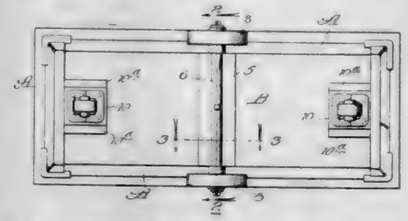
1. In a draft regulating device for furnaces, a damper comprising an inner plate member, a rod rotatable in and supporting said inner plate member, cooperating means carried by said rod and inner plate member engageable in one longitudinal position of said rod for holding said rod and inner plate member against relative rotation, an outer plate member having its external circumference of suitable size to fit within the pipe and provided with an opening for receiving said inner plate member, and means for securing said inner plate member within the opening formed in said outer plate member whereby said inner plate member may be secured to outer plate members of different sizes while so positioning the cooperating means carried by said rod and inner plate member as to hold the rod and inner plate member against relative rotation.

1,561,312. APPARATUS FOR FORMING OR SHAPING ARTICLES FROM SHEET MATERIAL. ARTHUR EDWARD CUTLER and PHILIP ALLAN MARSDEN, Newcastle, Australia. Filed Feb. 20, 1925. Serial No. 10,524. 1 Claim. (Cl. 113—44.)



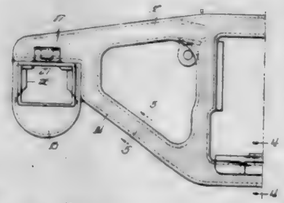
An apparatus for shaping articles from sheet material comprising a die member, a block having a pressure chamber, said die member and block adapted to yieldingly secure the sheet material between them, means for admitting fluid pressure to said chamber to act directly on one side of the sheet material, said block having a groove at the edge adjacent the pressure chamber, and a closed flexible tubular gasket fitting in said groove and adapted to be subjected to the action of a fluid pressure and to have its contour altered by said pressure to maintain a sealing action against the sheet material and prevent leakage of the fluid pressure.

1,561,313. TRUCK UNDERFRAME CONSTRUCTION. CHARLES H. DODGE, Chicago, Ill. Filed July 20, 1925. Serial No. 44,780. 2 Claims. (Cl. 280—50.)



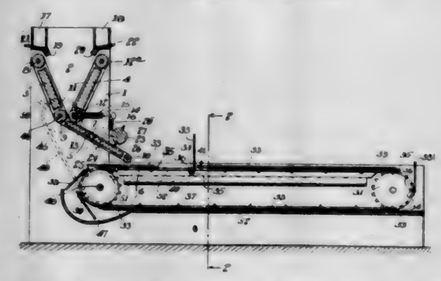
1. In combination with the sheet-metal bottom of a truck of the character described, a boltless underconstruction comprising a reinforcing plate welded to the exterior of said bottom to extend across its central portion, and a cylindrical tubular axle-bearing welded to said plate to extend lengthwise thereof.

1,561,314. SIDE FRAME FOR TRUCKS. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 27, 1924. Serial No. 702,191. 5 Claims. (Cl. 105—219.)



1. Truck side frame construction comprising a pressed steel side frame and a pressed steel journal box formed integrally with the side frame.

1,561,315. BAKING MACHINE. BLAS ENCISO, Los Angeles, Calif., assignor of one-half to Miguel M. Aguilar, Los Angeles, Calif. Filed Jan. 10, 1925. Serial No. 1,694. 3 Claims. (Cl. 107—57.)

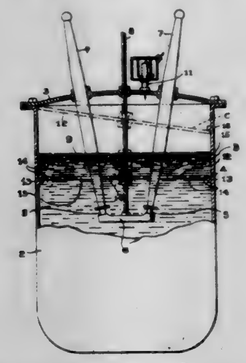


3. In a machine as disclosed, a dough hopper, a delivery table leading from the hopper, means for rolling the dough as it passes from the hopper over said table, means for cutting the rolled dough on the table in suitable cake lengths, a baking conveyor onto which the cut dough is delivered, said baking conveyor including a pair

of endless chains, sprockets over which said chains extend, a plurality of plates pivotally mounted on said chains, means for swinging said plates upwardly to turn the cakes thereon over onto the next forward plates, and means for swinging the plates down from vertical position into normal horizontal position, and means for heating said plates to bake the cakes thereon on both sides.

---

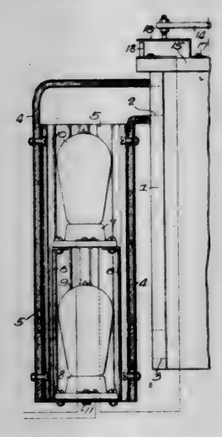
1,561,316. CIRCUIT INTERRUPTER. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1923. Serial No. 630,267. 5 Claims. (Cl. 200—150.)



1. In a circuit interrupter, the combination with a closed tank, a fluid in said tank, relatively movable contact members immersed in said fluid, and venting means for said tank, of a diaphragm having uniform movement axially of said tank for a limited distance and means for causing an irregular movement of said diaphragm beyond a predetermined point.

---

1,561,317. HEATING DEVICE FOR INCUBATORS. WILLIS ESHELMAN, Lampeter, Pa. Filed July 10, 1923. Serial No. 650,664. 9 Claims. (Cl. 219—19.)



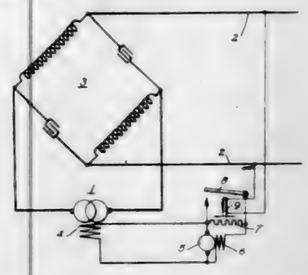
7. The combination with an incubator of a vertically extending casing connected to deliver heated air thereto; a sleeve mounted in the casing and spaced away from the walls thereof; a frame removably mounted in said sleeve; and at least one heating element carried by said frame.

1,561,318. AIRCRAFT. CURTIS K. FORNEY, Oakland, Calif. Filed Jan. 16, 1924. Serial No. 686,531. 2 Claims. (Cl. 244—14.)

1. An aeroplane comprising a fuselage, a lateral upper wing, lower wing sections disposed in spaced parallel relation to the upper wing at the outer ends thereof, inclined elevator wing sections which unite with the top wing at points directly above the inner ends of the lower wing sections, said inclined wings extending downwardly and inwardly at an angle of 45 degrees to a point substantially in the same plane as the lower wing sections, a propulsion propeller, and auxiliary propellers adapted to direct a blast of air inwardly against said elevating planes to elevate the aeroplane.

---

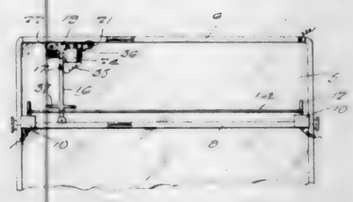
1,561,319. SINGLE-PHASE DISTRIBUTING METHOD AND SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 13, 1922. Serial No. 552,243. 10 Claims. (Cl. 171—119.)



2. A method of regulating a transmission line supplied from an alternating-current source through a static network of the type tending to effect a constant-voltage constant-current transformation, said method consisting in the step of regulating the voltage of said source to maintain a substantially constant voltage on said line.

---

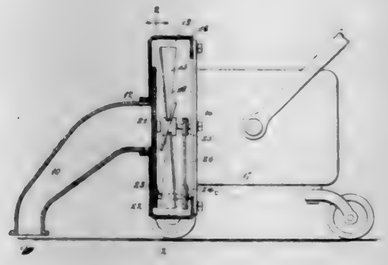
1,561,320. WINDSHIELD WIPER. CHARLES GLIDRIC and MALVIN BATES, Memphis, Tenn. Filed June 20, 1925. Serial No. 38,491. 2 Claims. (Cl. 15—253.)



1. A windshield cleaner including a pair of racks mounted on the windshield in spaced parallel relation and insulated therefrom, a switch at each end of the lower rack, each switch having a pair of fixed terminals and a movable arm, one terminal of each switch being electrically connected with one rack and the other terminal electrically connected with the other rack, a connecting rod between the arms of the switches, a carriage, pinions on the carriage travelable on the racks, a motor on the carriage operatively associated with one of the pinions for driving the carriage, the lower portion of the carriage being insulated from the upper portion of the carriage, the lower portion of the carriage being electrically connected with one pole of the motor and the upper portion being electrically connected with the other pole thereof.

---

1,561,321. VACUUM CLEANER. MILTON GOODMAN, New York, N. Y. Filed Apr. 25, 1924. Serial No. 709,010. 3 Claims. (Cl. 15—16.)



1. In a vacuum cleaner including a suction nozzle, a chamber communicating with the nozzle and having means therein for creating a suction draft through the nozzle, and mechanism co-operating with the point of communication between the nozzle and chamber, said mechanism being positively driven by the suction draft-creating means for periodically and completely cutting off communication between the nozzle and said chamber, whereby to subject the surface being cleaned to a succession of suction impulses.

---

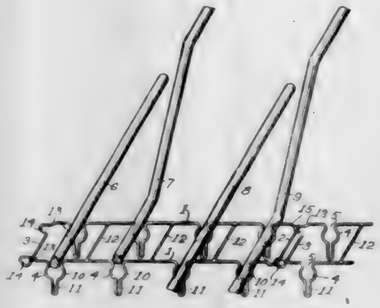
1,561,322. MANUFACTURE OF FUEL BRIQUETTES. THOMAS AUGUSTUS GOSKAR, Burnham-on-Sea, England. Filed June 26, 1925. Serial No. 39,747. 4 Claims. (Cl. 44—28.)

1. A process for the manufacture of fuel briquettes which consists in forming a binding medium from caking coal reduced to an impalpable powder or a finely comminuted state such as to pass 150–200 (or finer) mesh, mixed with only enough liquid such for example as water or/and tar or other suitable liquid hydrocarbons to thereby form a smooth homogeneous paste, mixing a suitable proportion of this binding medium with a base material or materials of a non-caking character, such as anthracite or dry steam coal or coke breeze, e. g. in the proportions of 30%–10% of binding medium to 70%–90% of the base material or materials, pressing or moulding this mixture into briquettes, removing the latter from the press or moulds, and then subjecting the briquettes after removal from the press or moulds to heat treatment for the purposes described.

---

1,561,323. BAR SPACER. JOHN D. GREGG, St. Louis, Mo., assignor, by direct and mesne assignments, to Reinforced Concrete Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 24, 1924. Serial No. 708,628. 5 Claims. (Cl. 72—122.)

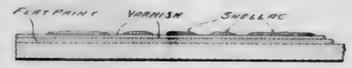
1. A bar spacer comprising an open frame of resilient material and having side bars and end bars connecting the side bars, said side bars being bent to provide depending substantially U-shaped supporting members each having the upper portions of its side arms bowed away from each other and providing the upper portions of the supporting



members with rod receiving seats having constricted inlets at their upper ends through which rods may be forced into the seats.

---

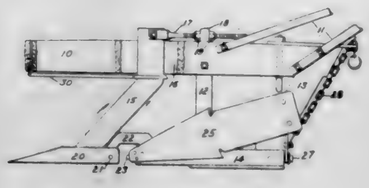
1,561,324. DECORATED SURFACE AND METHOD OF PRODUCING SAME. GEORGES L. GUÉNOT and GUÉNOT MAURICE, Los Angeles, Calif. Filed July 12, 1923. Serial No. 651,084. 3 Claims. (Cl. 91—68.)



3. The herein described method of decorating surfaces which consists in applying to a surface, a coat of copal varnish that has been cut with turpentine and then applying to the varnished surface before the same is dry, shellac that has been cut with alcohol.

---

1,561,325. PLOW. PHILIP B. HACKLEY, Berkeley, Calif. Filed Apr. 18, 1923. Serial No. 632,862. 3 Claims. (Cl. 97—33.)



1. A plow including a share, a sub-frame at the rear of the share and a yoke forming a rigid and pivotal connection between said sub-frame and share and a mold board pivotally connected at its front end to the yoke and at its rear end to the sub-frame for movement beneath the said sub-frame whereby the mold board may be disposed at either side thereof.

1,561,326. ROCK DRILL. LUCIUS A. HARRISON, Hesperus, Colo. Filed Oct. 24, 1924. Serial No. 745,647. 3 Claims. (Cl. 255—63.)

1. A drill bit of the class described including a shank having a pair of spaced and opposed outer blades and a pair of spaced inner blades disposed transversely of and connecting the end portions of the outer blades.

---

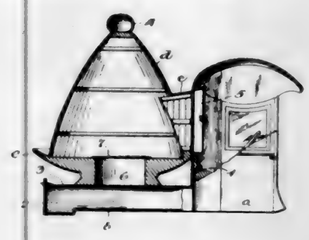
1,561,327. BAILER. SAM L. HEDRICK, Wewoka, Okla., assignor, by direct and mesne assignments, to International Patent Corporation of America. Filed Jan. 23, 1925. Serial No. 4,316. 2 Claims. (Cl. 166—19.)

1. A bailer of the class described comprising a barrel having a valve seat in its lower end, a bail at its upper end, a double jar link straddling the bail, a cable engaging member connected with the upper end of the link, a valve for engaging the seat, a valve stem, a socket member carried by the lower end of the link and receiving the upper end of the stem, a spring dog for connecting the socket member with the stem and means for holding the dog in an inactive position.

---

1,561,328. VEHICLE BODY. LIONEL MANUEL HENDLER, Baltimore, Md. Filed Jan. 11, 1924. Serial No. 685,653. 2 Claims. (Cl. 296—21.)

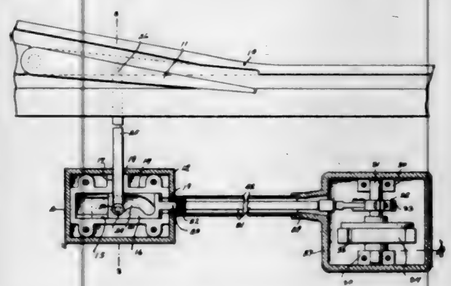
1. A vehicle body comprising a cab, a lower flat compartment extending rearwardly from the cab and having a door at its rear end, and an upper compartment supported on the lower compartment and extending thereover substantially from end to end of the latter, the



wall of said upper compartment constituting a top and side walls for the body, said upper compartment being closed to the rear and sides and having an entrance opening at the front communicating with the cab.

---

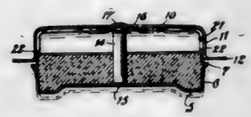
1,561,329. SWITCH-OPERATING MECHANISM. DAVID MARION JENNINGS, Waco, Tex. Filed Jan. 5, 1924. Serial No. 684,610. Renewed Apr. 9, 1925. 2 Claims. (Cl. 246—158.)



1. In a device of the type described and in combination with a railway switch embodying a shiftable point, a guide arranged adjacent the switch, a longitudinally shiftable block mounted in the guide and having a longitudinally disposed arcuately curved slot, car operated means for shifting said block, a roller operating in the groove of said block and held against movement longitudinally of the block, a link connecting said roller and the point of said switch, the car operated means including an eccentric having a strap, a link connecting the strap and block, and means for partially rotating said eccentric.

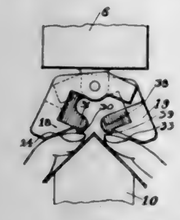
---

1,561,330. BOX CLOSURE. ARTHUR HENRY KELLER, Pleasantville, N. J. Filed Aug. 18, 1924. Serial No. 732,853. 6 Claims. (Cl. 220—43.)



1. In a box closure, a cover for the box, a strap member carried by the cover and adapted to engage the edge of the open side of the box whereby upon flexing of the cover the strap owing to its engagement with the box, forces the box from the cover.

1,561,331. BOX-MAKING MACHINE. OWEN W. KENNEDY, Boylston, Mass. Filed Feb. 26, 1923. Serial No. 621,280. 18 Claims. (Cl. 192—137.)



1. In a machine of the class described, cooperating pressing elements, one of which comprises a member turnable about a pivotal axis and provided with work engaging portions on opposite sides of said axis whereby said member is capable of exerting pressure only upon engagement of its work engaging portions with the other of said elements, or with work supported between said elements.

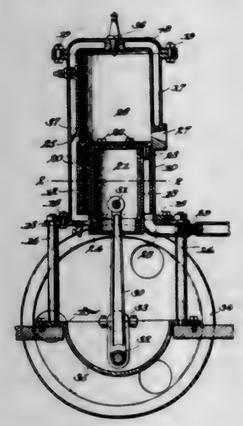
---

1,561,332. PUNCTURE-CLOSING COMPOSITION. THOMAS E. LAW, Mesa, Ariz. Filed Feb. 24, 1925. Serial No. 11,383. 2 Claims. (Cl. 134—17.5.)

1. A puncture closing composition for pneumatic tires consisting of ground asbestos, pulverized slippery elm bark, and water in such proportions as to permit introduction into the tire.

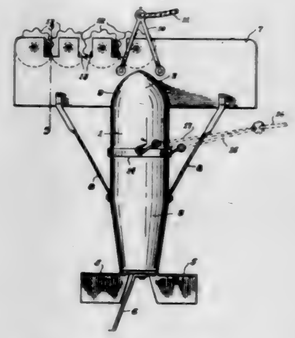
---

1,561,333. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. GEORGE LAWSON and RICHARD C. LENT, Jr., Brooklyn, N. Y. Filed May 11, 1923. Serial No. 638,298. 1 Claim. (Cl. 123—74.)



In an explosive engine, an open base, and an inner cylinder open at both ends and provided with an annular flange at its lower end, a plurality of stanchions rising from said base and connected with said flange for supporting the same, an outer cylinder provided with a flange at its lower end and bolted to the flange of said inner cylinder, a pair of spaced pistons movable simultaneously within said inner and outer cylinders in the same direction, the space between said cylinders constituting a compression chamber, means for removably securing said pistons together, and a removable head secured to the top of said outer cylinder whereby the removal of said head will permit withdrawal of said pistons through the top of said outer cylinder.

1,561,334. MINE-RELEASING DEVICE. HARRY J. LEIBLE, Philadelphia, Pa. Filed Oct. 8, 1924. Serial No. 741,499. 1 Claim. (Cl. 114—240.)



In a mine releasing device, a cylindrical body, tail fins thereon, a bow fin, a towing cable, connected to the bow fin, and a plurality of rotary cutters carried at the forward edge of the bow fin, said cutters having serrated perimeters; the cutting perimeters with one cutter overlapping the cutting perimeter of the cutter next thereto, said bow fin being recessed beneath the overlapping portion of the cutters, a strap about said body, and a guiding cable connected to said strap.

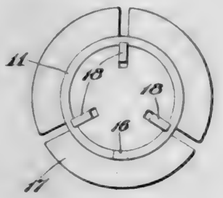
---

1,561,335. AIRPLANE FRAMEWORK AND METHOD OF MAKING THE SAME. WILLIAM A. LORENZ, Hartford, Conn. Filed Apr. 20, 1921. Serial No. 462,796. 3 Claims. (Cl. 18—55.)

1. The method of forming a structural piece from vulcanized fiber which consists in shaping the piece to approximate form while the stock is in a soft state, slitting the edges of said piece parallel to the plane of its sides, turning the parted edges outwardly to form flanges and holding the piece thus shaped under pressure until it has hardened and set.

---

1,561,336. METHOD OF PRODUCING PISTON RINGS. JOHN F. MCGLENN, Harvey, N. Dak. Filed Nov. 25, 1924. Serial No. 752,180. 2 Claims. (Cl. 29—156.6.)



1. The method of producing piston rings consisting in providing a solid ring of greater exterior diameter and

less interior diameter than the ring finally to be produced, splitting the ring and removing material in forming the split of such quantity that when the ends of the split are drawn together the external diameter of the ring is still greater than the external diameter of the ring to be produced, securing such ends together by a securing element lying wholly within the surfaces of the ring thus produced and finishing the exterior surface of the ring to the diameter of the ring to be produced with the ends so secured and removing the securing means by the finishing of the interior surface of the ring.

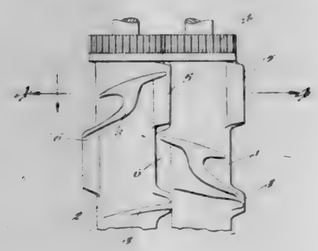
---

1,561,337. QUICK-RELEASE SAFETY HOOK. THOMAS FRANCIS MADIGAN, Beness, via Leeton, New South Wales, Australia. Filed Aug. 30, 1924. Serial No. 735,103. 3 Claims. (Cl. 24—242.)

1. A quick release safety hook comprising two complementary hook-shaped body members and two U shaped springs which embrace and flexibly clamp such body members together.

---

1,561,338. SNAPPING ROLL. JOHN E. MALMBERG, Lee, Ill. Filed Oct. 10, 1924. Serial No. 742,862. 1 Claim. (Cl. 130—5.)



The combination with a plurality of snapping rolls arranged in parallel relation and spaced from each other, of cams arranged upon opposed sides of said rolls and extending longitudinally thereof but out of transverse axial alignment relative to the other and the cams on the adjacent rolls being disposed in longitudinal alignment at the passing point of said cams.

---

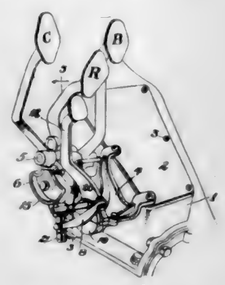
1,561,339. STAND. EMILIO A. MARAFFI, New York, N. Y., assignor to Electrolite Products Co., a Copartnership, Brooklyn, N. Y. Filed May 4, 1925. Serial No. 27,922. 12 Claims. (Cl. 131—51.)

1. A pedestaled receptacle comprising superposed receptacles, the upper receptacle having an opening in its lower end, a standard upon the upper end of which, the lower receptacle seats and means slidably mounted on the

standard and connected with the upper receptacle for supporting the same from the standard for vertical movement.

---

1,561,340. NEUTRAL DEVICE. CHARLES F. MARSTON, Brooklyn, N. Y. Filed Dec. 10, 1924. Serial No. 755,008. 6 Claims. (Cl. 74—81.)



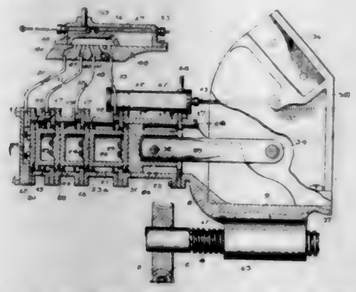
1. The combination with a clutch pedal, a cam on the clutch pedal, a heel pedal having a fixed member thereon, a dog on the heel pedal adapted to engage the member on the cam and hold the clutch pedal in neutral position, and a pressure roller engaging the face of the cam and adapted to move the clutch pedal from neutral into high speed position when the dog is released from its holding position by the operation of the heel pedal.

---

1,561,341. TAPERING MECHANISM. FREDERICK E. MARTIN, San Francisco, Calif., assignor to Martin Air Dog Company, San Francisco, Calif., a Corporation of California. Filed Nov. 19, 1923. Serial No. 675,706. 29 Claims. (Cl. 143—118.)

4. In mechanism for tapering a log on saw mill carriages, a head block having flanges, a slide movably supported on the head block, a knee movably supported on the slide and having guiding cooperation with the head block, operating means to impart taper adjustment to the knee on the slide and having a maximum limit of travel divided into a series of limited successive steps, each of which defines a taper adjusted position of the knee, and means for actuating the operating means throughout any desired number of such steps successively, said latter

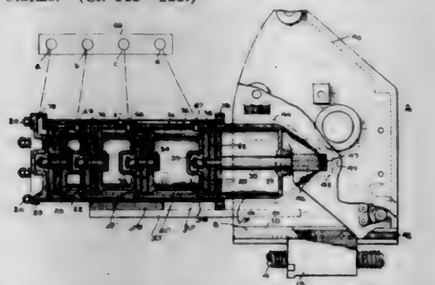
means forming a cushion at each successive step actuation of the operating means to resist the thrust of a log against the knee.



12. In a saw mill carriage, a head block, a knee movable thereon for taper purposes, a cylinder, a series of pistons operating in the cylinder, said pistons being aligned in the cylinder and operating in the same direction and adapted in operation to impart respectively predetermined taper movements to the knee, and means independent of the pistons for returning the knee and the actuated piston to normal positions.

---

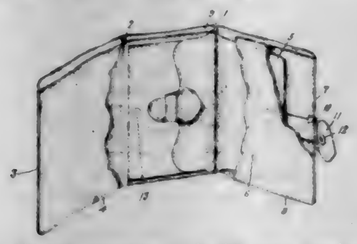
1,561,342. TAPERING MECHANISM. FREDERICK E. MARTIN, Berkeley, Calif., assignor to Martin Air Dog Company, San Francisco, Calif., a Corporation of California. Filed May 29, 1924. Serial No. 716,744. 25 Claims. (Cl. 143—118.)



1. In a saw mill carriage, a head block, a knee movable thereon for taper purposes, a cylinder carried by and movable with the knee above the head block, a series of pistons operating in the cylinder, said pistons being aligned in the cylinder and operating in the same direction to impart respectively predetermined taper movements to the knee, and means for selectively operating said pistons.

---

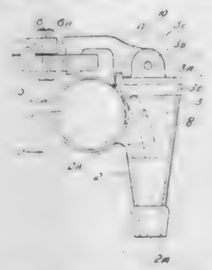
1,561,343. BILL FOLD. ALEXANDER HUGO MICHAELS, Brooklyn, N. Y. Filed Jan. 5, 1923. Serial No. 610,779. 9 Claims. (Cl. 150—38.)



1. A bill-fold comprising a flexible outer member, and a flexible inner member which is shorter than the outer member, said inner member being attached to the outer member along one end and along substantially one-third only of one side adjacent the end which is attached.

---

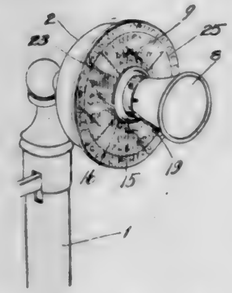
1,561,344. PULSATOR FOR MILKING MACHINES. SAMUEL MILLAR, Dunedin, New Zealand. Filed Aug. 29, 1924. Serial No. 734,982. 3 Claims. (Cl. 31—61.)



1. In a pulsator for milking machines, a milk pipe, a tapered housing having communication with the milk pipe, a plug mounted for rotation in the housing and formed with a peripheral recess adapted in one position of the plug to establish communication between the interior of the housing and the milk pipe, a rod mounted adjacent and moving longitudinally of the milk pipe, and means connecting said plug and rod wholly beyond the housing and milk pipe for rotating the plug in the housing to control the communication between the milk pipe and the housing.

---

1,561,345. TELEPHONE ATTACHMENT. VOLNEY T. MILLER, Kansas City, Mo., assignor to American Telephone Advertising Company, Kansas City, Kans., a Corporation of Kansas. Filed Mar. 27, 1922, Serial No. 547,174. Renewed Apr. 10, 1925. 6 Claims. (Cl. 179—178.)



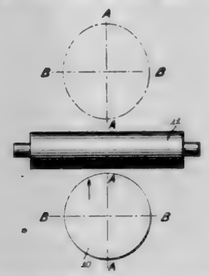
1. In combination with the sound box of a telephone transmitter, a stop pin carried thereby, a disk having a rim overlapping the edge of the sound box and provided with a notch engaged by the stop, the disk having a central opening co-axial with the opening in the sound box, and means for clamping the disk about the edge of the opening in the sound box, said means also serving as a support for the mouthpiece of the telephone transmitter.

---

1,561,346. MANUFACTURE OF ROLLED METAL DISKS. FOSTER MILLIKEN, Lawrence, N. Y. Filed Dec. 4, 1920. Serial No. 428,331. 3 Claims. (Cl. 80—16.)

2. The herein described method of producing a rolled metal disk of uniform thickness throughout which consists passing a cast circular disk between a pair of rollers for subjecting the disk to the rolling action of said

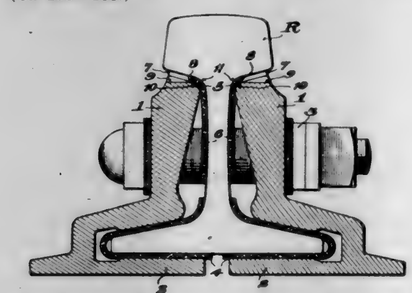
rolls to reduce the disk and elongate it in one direction, then giving a quarter turn to the disk and again pass it



between said rollers for again subjecting the disk to rolling action of said rolls to elongate the disk in another direction.

---

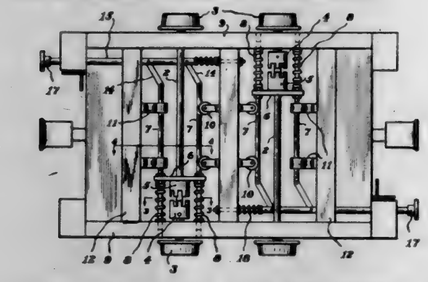
1,561,347. INSULATED RAIL JOINT. ERNEST MUEHLECK, Brooklyn, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed May 4, 1925. Serial No. 27,924. 7 Claims. (Cl. 238—155.)



5. An insulated rail joint including a joint bar having a clearance recess in the central part of its head and a head unit of insulation having a cut away portion over said recess.

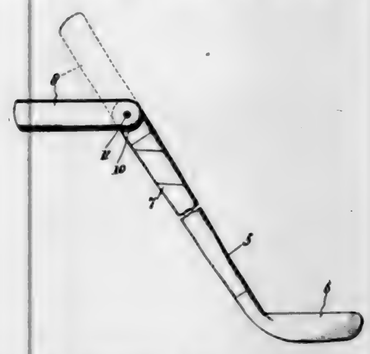
---

1,561,348. SAFETY BRAKE FOR MINES. RICHARD L. MUGFORD, Minersville, Pa. Filed Feb. 12, 1924. Serial No. 692,339. 2 Claims. (Cl. 188—111.)



1. The combination with a car body including a rotatable axle and supporting wheels thereon, of a clutch section keyed to the axle, a movable clutch section slidable on the axle for braking engagement with the first named clutch section, a pair of operating rods connected to said movable clutch section, a plate connecting said movable section section to said operating rods for moving the braking clutch section and holding it against rotation, a contact operated rod, links connecting said contact operated rods to said first named operating rod, and a bumper, on said contact operated rod.

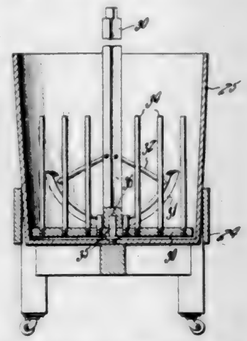
1,561,349. GOLF CLUB. CLARENCE B. MURPHY and JAMES T. SWANN, Tampa, Fla. Filed June 23, 1923. Serial No. 647,316. 1 Claim. (Cl. 273—80.)



A golf club comprising a shaft, a club head on the lower end of the shaft extending at an angle laterally therefrom, a separate handle for the upper end of the shaft, and a pivot connecting said handle to the shaft and with its axis lying in a plane at right angles to the plane of said club head, said pivot maintaining said handle for adjustment into coaxial relation with the shaft and permitting said handle to be swung at an angle to the shaft and in the plane of said club head, said handle being adapted to swing from said shaft in a direction opposite from said club head, whereby said handle may form a pivotal support in one hand upon which the shaft may be swung by the other hand in use of the club.

---

1,561,350. CANDY-MIXING MACHINE. PETER NICHOLAS, Medicine Hat, Alberta Canada. Filed June 14, 1924. Serial No. 720,052. 3 Claims. (Cl. 259—108.)

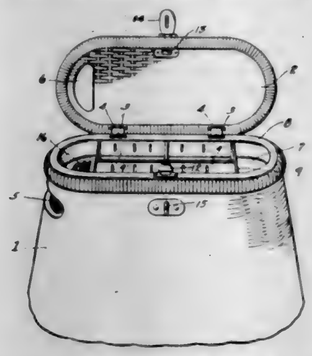


2. In a device of the character described, a receptacle provided centrally of its bottom with an upstanding bearing member, and agitating means including a member formed of arms arranged in intersecting relation and journally engaged with said bearing member, upstanding rods carried by said arms, an elongated shank member journaled centrally of said arms and carrying arcuate shoes arranged in intersecting relation about said arms.

---

1,561,351. FISH BASKET. FREDERICK J. NIELSEN, Seattle, Wash. Filed Feb. 18, 1924. Serial No. 693,502. 2 Claims. (Cl. 43—31.)

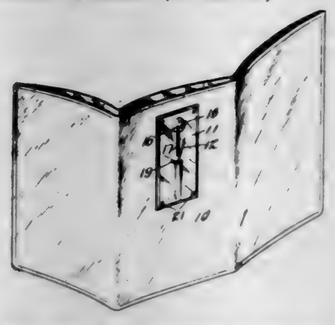
1. In combination, with a fish basket having a hingedly mounted cover and an opening therein for the reception of fish, a detachable tray disposed within said basket beneath the cover with an opening therethrough in registration with the cover opening, said tray having a



peripheral flange to seat upon the edge of the basket and provided with slots adapted to detachably receive the hinge of said cover.

---

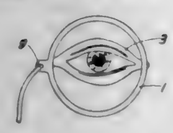
1,561,352. BILL-FOLD PROTECTOR. DANIEL M. PARKINSON, Dayton, Ohio. Filed Oct. 20, 1924. Serial No. 744,757. 3 Claims. (Cl. 150—47.)



1. An attachment for pocketbooks comprising a body having a recess in its rear face, a passage extending from said recess to the front face of said body said body having a slot in its front face joining said recess, a slide in said recess, a piercing element carried by said slide and extending through said passage, and a manipulating element carried by said slide and extending through said slot, substantially as set forth.

---

1,561,353. INFLATABLE TOY EYE. ARTHUR PEEL, London, England. Filed Dec. 14, 1923. Serial No. 680,706. 6 Claims. (Cl. 46—40.)

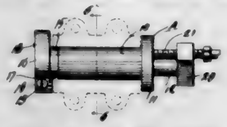


1. In a toy eye, a pupil formed of extensible material, means for distending said pupil, and means for supporting the pupil in position to overlie the human eye.

---

1,561,354. MAIN-BEARING-CAP FACER. HOMER O. PENCE, Spring Valley, Wis. Filed June 16, 1924. Serial No. 720,440. 3 Claims. (Cl. 82—4.)

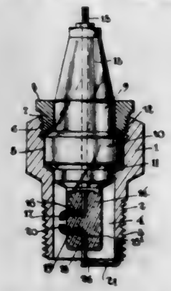
1. A bearing cap facer comprising a hollow cylindrical body for receiving the bearing cap to be re-faced, a stop flange formed on one end of the body, a head rotatably carried by the other end of the body, a re-



facing knife carried by the head, means for adjusting the head relative to the end of the cap to be re-faced, and means for rotating said head.

---

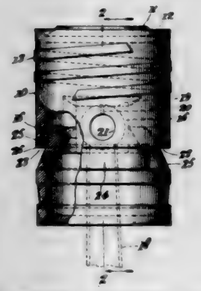
1,561,355. SPARK PLUG. WILLIAM R. POLSON and WILLIAM GRANT, Bruneau, Idaho. Filed June 20, 1924. Serial No. 721,287. 1 Claim. (Cl. 123—169.)



A spark plug comprising, a shell, a body of insulation therein having the lower portion formed to provide an elongated cylindrical body of relatively small diameter and wholly within said shell, an electrode within said body formed into an upper and a lower portion, the lower end of the upper portion being bent at right angles to extend through and beyond the side of said elongated body and the upper end of the lower portion being bent at right angles to extend through and beyond the side of the body parallel with the first mentioned bent portion, the outer ends of said bent portion being in spaced relation to provide sparking points, and a ground electrode spaced from the lower end of said lower portion to provide a second sparking point.

---

1,561,356. PISTON FOR INTERNAL-COMBUSTION ENGINES. CARL GUST PETTS, Milbank, S. Dak. Filed Apr. 21, 1924. Serial No. 707,963. 1 Claim. (Cl. 74—108.)

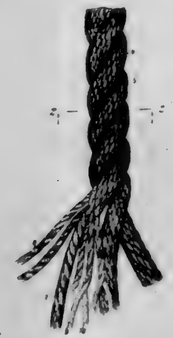


A piston for internal combustion engines comprising a cylindrical hollow body provided in opposite sides and intermediate its ends with a pair of inwardly projecting wrist pin bearings, said piston also having a pair of diametrically opposed and circumferentially elongated slots, said slots inclining downwardly through the opposite walls of the piston and extending entirely through the walls, the upper ends of the slots terminating substantially in the transverse plane of the pis-

ton in which the axis of the wrist pin bearing lies, the piston further provided on its inner side with upstanding flanges extending across the upper sides of the wrist pin bearings at their inner ends and merging into the inner walls of the piston to provide between the same and the flange pockets, to trap oil flowing downwardly against the inner walls of the piston and adjacent the wrist pin bearings, said bearings also having channels therethrough leading from said pockets for lubricating the surface of said wrist pin bearings, the lower walls of said downwardly inclined slots of said piston extending upwardly therein to catch oil flowing downwardly over the inner sides of the piston between said flanges for conducting the oil to the exterior of the piston below the wrist pin bearings, said piston also having an external annular groove leading into the lower ends of said slots for distributing oil passing downwardly through the slots.

---

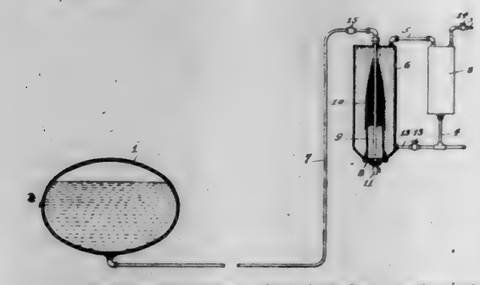
1,561,357. CORDAGE STRUCTURE. FELIX RIESENBERG, Tuckahoe, N. Y. Filed Apr. 24, 1923. Serial No. 634,328. 1 Claim. (Cl. 117—52.)



A rope comprising a plurality of strands twisted together in one and the same direction, each strand comprising a core of elements twisted together in a twist opposite to the twist of said strands, and a covering for each core, said covering comprising elements twisted together in a twist similar to the twist of the elements of said core, the elements of each core constituted of fibers twisted together in a twist opposite to the twist of the elements of the core, the elements of the covering constituted of yarns twisted together in a twist opposite to the twist of the elements of said covering, and said yarns constituted of fibers twisted together in a twist opposite to the twist of said yarns.

---

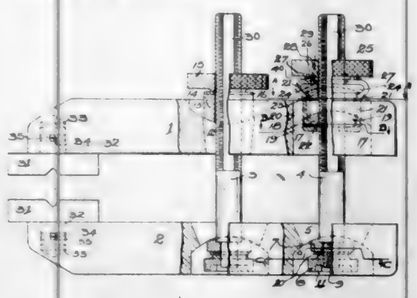
1,561,358. AUXILIARY FUEL TANK FOR AUTOMOBILES. CHARLES L. SARNELLE, Brooklyn, N. Y. Filed Apr. 10, 1923. Serial No. 631,137. 4 Claims. (Cl. 158—46.5.)



1. A fuel supply system which includes a main tank, a vacuum tank, and an auxiliary tank, a conduit leading from the main tank to the bottom of the auxiliary tank, a conduit leading from the top of the auxiliary tank to the top of the vacuum tank, a conduit leading from the top of the vacuum tank to a source of suction, a conduit leading from the bottom of the vacuum tank to an engine, and a conduit leading from the bottom of the auxiliary tank to the conduit which leads from the bottom of the vacuum tank.

---

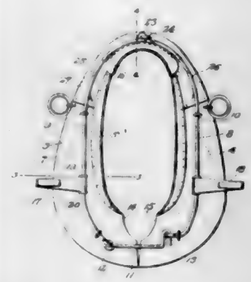
1,561,359. PARALLEL CLAMP. LEO W. SCHLEICHER, Detroit, Mich. Filed Jan. 29, 1925. Serial No. 5,615. 6 Claims. (Cl. 144—300.)



1. Parallel clamps comprising an upper and a lower clamping bar, slots through said upper clamping bar having wider and narrower portions, a curved surface at the end of each wider slotted portion contiguous to its narrower slotted portion, blocks having a curved side corresponding to the curved surface of said wider slotted portions and adapted to bear thereon, adjusting screws passing through said blocks and mounted in the lower clamping bar, and a nut on each of said adjusting screws.

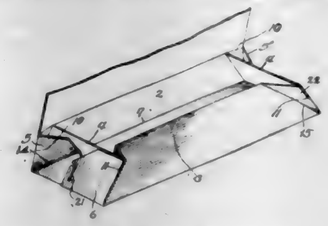
---

1,561,360. HORSE COLLAR AND HAME. GEORGE SCHREINER, New Orleans, La. Filed May 14, 1925. Serial No. 30,349. 3 Claims. (Cl. 54—18.)



2. A combined horse collar and hames comprising collar members adapted to open at their lower ends and having their upper ends terminating short of the top part of the collar, a tubular flexible piece engaged about the upper ends of said collar members for flexibly joining the same together, a flexible strip secured over said piece and terminating short at one side thereof, a flexible yoke piece secured to said first mentioned piece and having one edge extending up over the side of the piece and forming a trough with said strip, hame rods secured to said collar members and having their upper ends lying in said trough, the upper ends of said members being hinged together, and means for releasably connecting the lower ends of said hame members.

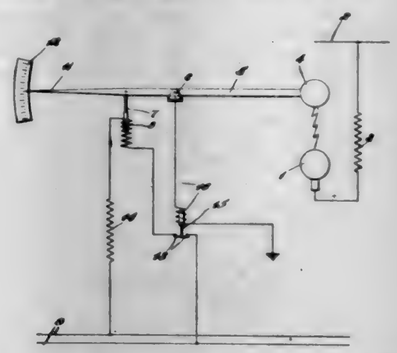
1,561,361. BOX OR CARTON. HENRY F. SCHURMANN, Wilmette, Ill., assignor to W. A. Schurmann & Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1922. Serial No. 605,146. 1 Claim. (Cl. 229—41.)



A collapsible box or carton formed from an integral folded blank and comprising bottom, front and back walls, rectangular end sections on said bottom extending the full width thereof, said sections being uncreased, the said end sections thereby retaining a relatively rigid character to brace the end structure of the box, a flap on each end of said front and back walls, each front flap being adapted to overlap the corresponding rear flap outside of said end sections, means for fastening said overlapping flaps to the adjacent end section near the center thereof, an oblique crease in each of said rear flaps, the front flaps being uncreased, and an oblique crease at each end of said front wall, whereby when said box is folded the front wall will be folded inwardly to form a triangular portion at each end lying between the adjacent end section and the bottom, the remainder of said end sections being in contact with the bottom.

---

1,561,362. CREST VOLTMETER. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1920. Serial No. 430,562. 11 Claims. (Cl. 171—95.)

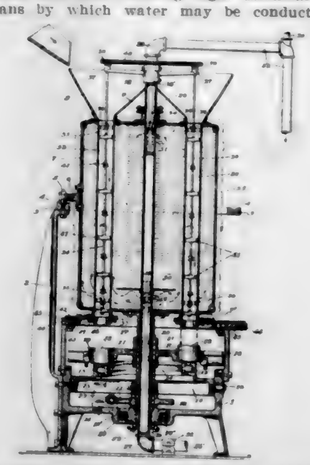


8. A measuring instrument comprising variable space-gap terminal means, means for giving an indication in accordance with the length of said gap and means responsive to the voltage across the gap for increasing the length of the gap until said voltage attains a peak break-down value.

---

1,561,363. COOKER. ALICE MAUD SMITH, Portland, Me. Filed Oct. 24, 1924. Serial No. 745,707. 6 Claims. (Cl. 99—2.)

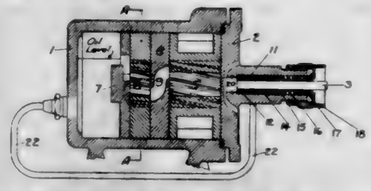
3. In a cooker, a cylindrical vessel with perforate heads, the axis of said vessel being vertically disposed, tubes closely fitting said perforations in said heads and extending through said vessel from head to head thereof, means surmounting said vessel whereby a storage space for food may be had, said space to be in direct communication with the open ends of said tubes, shafts located within and on the axes of said tubes, paddles, at spaced intervals, on said shafts, with blades having inclined faces and their entering edges downwardly disposed, means by which water may be conducted into



said vessel and around said tubes, means whereby said water may be conducted out of said vessel, means for rotating said vessel on its axis, means for rotating said shafts and valves beneath and in alignment with said tubes.

---

1,561,364. COMPRESSOR GLAND. HAZOR JUDSON SMITH, Springfield, Mass., assignor, by mesne assignments, of one-fourth to Willard Reid, Springfield, Mass.; one-fourth to Alfred Buckley, jr., Providence, R. I.; and one-fourth to John W. Scott, Philadelphia, Pa. Filed Nov. 18, 1922. Serial No. 601,800. 1 Claim. (Cl. 230—30.)



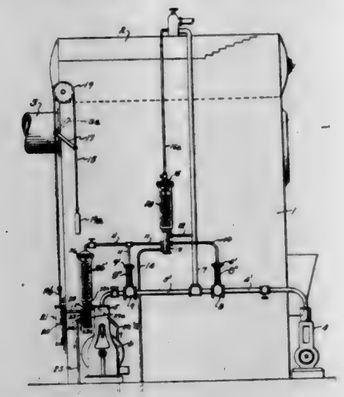
In a multiple stage compressor of the type described, a plurality of pairs of meshing gears, each pair of gears from low to high having less volumetric capacity than the preceding pair, mounted on two parallel shafts, one of which is the drive shaft to which the gears are radially fixed, a gland, said drive shaft provided with an oiling lantern adjacent the inner end of said gland and fed with oil at high pressure, a shoulder on the drive shaft at the inner end of said gland, a ring on the shaft within the stuffing box of the gland and resting against the shoulder on the drive shaft so as to overlap said shoulder, a mass of packing surrounding the shaft, a spring actuated aligning ring pressing against the packing and forcing said first mentioned ring into overlapping relation against said shoulder of the drive shaft, an adjustable gland block, and means maintaining a high pressure acting to press the shoulder of the drive shaft against said first mentioned ring.

---

1,561,365. PRESSURE REGULATOR. JOSEPH M. SMITH, Detroit, Mich. Filed July 2, 1923, Serial No. 649,176. Renewed Sept. 16, 1925. 12 Claims. (Cl. 236—85.)

1. In a boiler pressure regulator, the combination with an appliance influencing the furnace temperature of a

boiler, of a hydraulic motor controlling said appliance, valves respectively controlling the delivery and exhaust of water from said motor, a steam pressure line sub-



jecting one of said valves to a controlling pressure, and means for admitting or exhausting steam to and from said pressure line according as the boiler pressure varies.

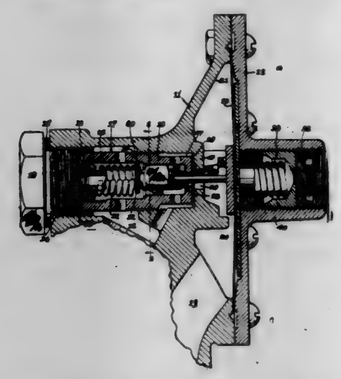
---

1,561,366. FUSE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,795. 25 Claims. (Cl. 102—8.)

1. Fuse comprising a powder core, and a waterproofing cover for said core including a substance tending to vulcanize with increasing temperature.

---

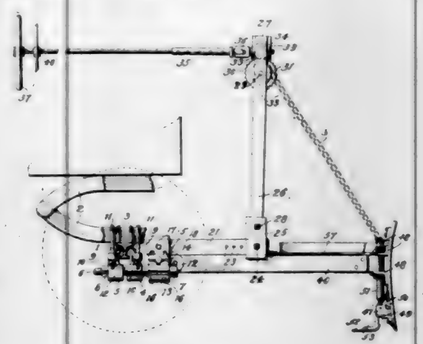
1,561,367. VALVE. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, a Corporation of Michigan. Filed Aug. 4, 1924. Serial No. 729,940. 1 Claim. (Cl. 50—23.)



An expansion valve comprising: a casing provided with an interior wall separating the space interiorly of said casing into an inlet chamber and an outlet chamber and pierced by an aperture adapted to afford communication between said chambers, one of said chambers comprising an elongated tubular recess alined with said aperture; a valve unit comprising a frame carrying the entire unit, of substantially even cross section throughout, removably positioned within said recess with its forward end abutting said wall and overlying said aperture, and provided with a bore communicating with said aperture and terminating in a valve seat, a valve head reciprocably mounted in said frame and arranged to close said valve seat and removable through the rear end of said frame, an adjustable abutment mounted in the said rear end of said frame, and a spring tensioned between said valve head and said abutment with its tension adjustable by adjustment of the position of said abutment; and a plug closing the outer end of said recess removable to permit bodily removal of said unit.

---

1,561,368. MOTOR-VEHICLE ATTACHMENT. RALEIGH H. STALEY, Springfield, Ill., assignor to The Baker Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,542. 16 Claims. (Cl. 37—42.)

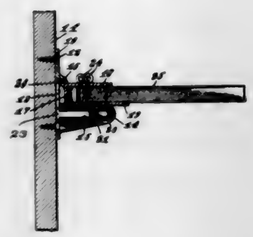


1. In combination with a motor vehicle, a longitudinally extending bar connected to the vehicle, a vertical frame carried by the bar, a hoisting drum carried by the frame, and means for operating the drum.

8. In combination with a motor vehicle, a sub axle detachably connected to the vehicle axle, castings carried by the sub axle and transversely adjustable thereon, bars pivotally connected to the castings for vertical swinging movement, and a scraper connected to the bars.

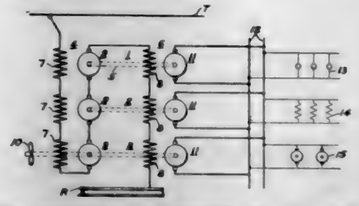
---

1,561,369. CLOTHES DRIER. JOHN J. STEVENSON, Muskegon, Mich. Filed Jan. 16, 1925. Serial No. 2,803. 2 Claims. (Cl. 68—34.)



1. A device of the character described comprising, a base member having an opening therethrough, a forwardly and downwardly directed lip at the top edge of said opening, longitudinally slotted spaced arms extending from said base one on each side of said opening and having the slots therein merging with said opening, rack bars, a holder for said bars, a lug at the rear of said holder adapted to engage under said lip, spaced depending ears carried by said holder, and a rod having a head upon each end, carried by said ears and engageable in said slots, the heads of said rods bearing against the outer faces of said arms.

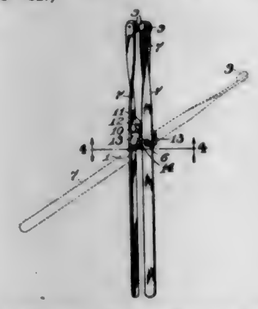
1,561,370. MOTOR-GENERATOR SET. NORMAN W. STORER, Pittsburgh, and RALPH E. FERRIS, Swissvale, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 14, 1923. Serial No. 645,240. 6 Claims. (Cl. 171—224.)



1. The combination of plurality of motor-generators, each motor-generator comprising a motor and a dynamo-electric machine mechanically coupled thereto, the armatures and field windings of said motors and the field windings of said dynamo-electric machines being connected in series relation across a source of supply, and the armatures of said dynamo electric machines being connected in parallel circuit relation to secure equal load distribution between the individual motors.

---

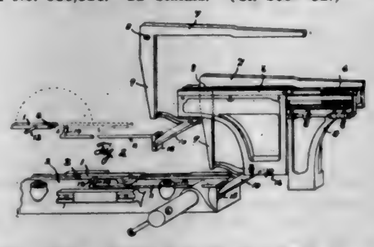
1,561,371. ADJUSTABLE STAND. CECIL H. STRUPE, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 22, 1923. Serial No. 614,186. 6 Claims. (Cl. 248—41.)



1. In a stand the combination with a pivot block having a plurality of substantially vertical sides and a plurality of legs pivotally secured to said sides, of a plurality of stops on said block for limiting the movement of said legs on said pivots toward a horizontal position, said stops being vertically adjustable on said block to vary the angular position of the legs.

---

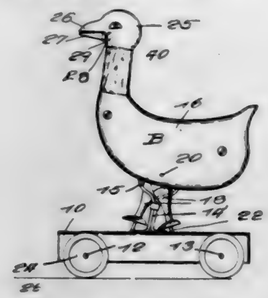
1,561,372. SAFETY ATTACHMENT FOR LINOTYPES AND INTERTYPES. HERMAN T. SUNDSTROM, Houston, Tex., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Sept. 5, 1922. Serial No. 586,314. 11 Claims. (Cl. 199—52.)



1. In a device of the character described, the combination with a channel along which matrices travel to the molding disc of an assembling elevator provided to carry said matrices into alignment with said channel, a locking mechanism adapted to contact against the matrices while in said elevator, and stop them before they enter said channel, and a first elevator filling piece which, when in active position, operates to hold said mechanism in locked position.

---

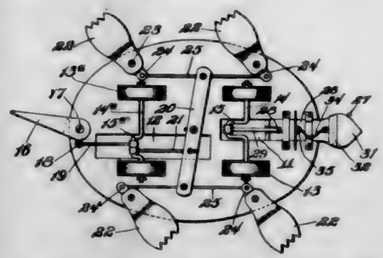
1,561,373. TOY ANIMAL. CLIFFORD I. SWEET, Sterling, Ill. Filed May 16, 1923. Serial No. 639,370. 3 Claims. (Cl. 46—45.)



1. A toy of the character described comprising a body having the form of an animal, a head separate from the body and provided with a pivoted member, legs pivoted to the body, a platform upon which the body is supported, wheels and axles for the platform operatively connected to the legs to oscillate them, a rod extending downward from the head and into the body, operative connections betwen said rod and one of said legs whereby an oscillation of the leg will cause the vertical movement of the head, and means operatively connecting the body and the pivoted member on the head whereby to cause an oscillation of the pivoted member as the head is raised and lowered.

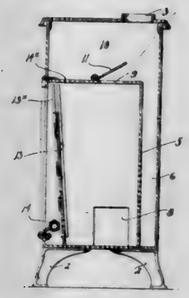
---

1,561,374. ANIMAL TOY. CLIFFORD I. SWEET, Highland Park, Ill. Filed Nov. 15, 1924. Serial No. 750,086. 2 Claims. (Cl. 46—45.)



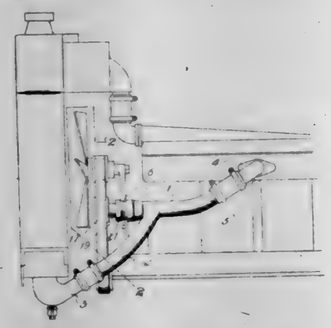
1. An animal toy of the character described comprising a body, shafts mounted upon the under face of the body at the forward and rear ends thereof and carrying wheels, the shafts being cranked a longitudinally reciprocatable head at the forward end of the body having a neck slidably mounted upon the body, a connecting rod connecting the forward cranked shaft with said neck, legs pivoted upon the sides of the body for movement in an approximately horizontal plane, a tail pivoted upon the rear end of the body for lateral oscillation, a lever pivoted upon the under face of the body, connecting rods connecting the ends of said lever with the inner extremities of the legs, and a connecting rod connecting the cranked rear shaft to the tail at one side of the pivotal point of the tail.

1,561,375. GAS HEATING STOVE. CORNELIUS L. TAYLOR, Huntington, W. Va. Filed Nov. 28, 1924. Serial No. 752,766. 3 Claims. (Cl. 126—86.)



1. A gas heating stove having an outer casing with means for the discharge of products of combustion therefrom, an inner chamber located within the outer casing and spaced from the back wall, end walls and top wall thereof and having wall openings adjacent to its bottom and also having a damper controlled opening in its top wall, a slab of refractory material forming the front of the lower portion of said chamber and exposed at the front of the casing and having its upper end spaced below the top wall of the chamber, and burner means in front of the lower portion of said slab.

1,561,376. WATER-CIRCULATING DEVICE. HERBERT F. THOMAS, Seattle, Wash., assignor to H. B. Jameson. Filed Sept. 20, 1922. Serial No. 589,432. 1 Claim. (Cl. 123—175.)



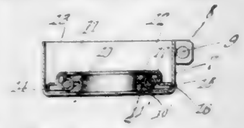
The combination with an internal combustion engine including a water circulating pipe, of a pipe fitting arranged in the water circulating pipe of a cooling system and having laterally disposed branches, one of such branches having one end threaded, a plug threaded in the latter and provided with a longitudinal bore, a shaft extending through the bore and provided with a water impelling blade at one end, a drive element fixed to the opposite end of the shaft and adapted to be driven from the engine, one end of the plug being reduced and formed with a many sided projection intermediate the ends of the plug, a horizontal bar supported from the engine and provided with a many sided notch in one end thereof which receives the projection, and a nut threaded on the reduced end of the plug and engaging the bar.

1,561,377. RAILWAY-TRACK GAUGE. WARD G. TRAVIS, Canton, Kans. Filed June 1, 1925. Serial No. 34,138. 1 Claim. (Cl. 254—44.)

A railway track gauge, comprising a stock member terminating at one end in a hook adapted to engage the tread or ball of a track rail, a stop formed on said stock at a point slightly removed from the other end thereof against which is adapted to abut the tread or ball of another track rail, a sleve slidably fitted on the stock and having a stop for cooperation with the hook, means carried by the sleeve for locking the same in an adjusted position upon the stock, a lever pivotally connected

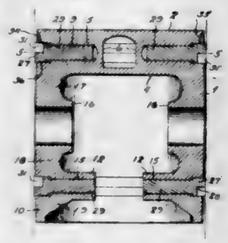
to the stock at the free end remote from the hook, and a nose formed on the lever and being curved downwardly and inwardly to engage the web of a track rail below the tread or ball thereof, whereby on the outward swinging of the lever the ball or tread of said rail will be forced against the stop integral with the stock.

1,561,378. OIL RETAINER. WILLIAM L. TRAUTNER and GEORGE H. TRAUTNER, St. Paul, Minn. Filed Sept. 18, 1924. Serial No. 738,515. 1 Claim. (Cl. 286—7.)



In a device of the character described, a housing, a retainer cap positioned within the housing, a grooved washer positioned within the housing and adapted to move within the retainer cap, a coiled spring positioned within the groove of the washer, a finger stamped from the retainer cap and having its side edges disposed longitudinally with the side faces of the washer, and said finger being disposed between the convolutions of the coiled spring.

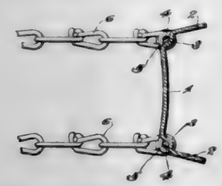
1,561,379. PISTON AND PISTON RING. WILFRED G. UNGER, Hagerstown, Md. Filed Aug. 9, 1924. Serial No. 731,220. 11 Claims. (Cl. 74—108.)



1. In a piston and ring structure, a body having a cylindrical intermediate portion and tapered end portions, the ends portions being formed to provide grooves, and rings seating within said grooves, the tapering of the end portions permitting automatic correction of misalinement.

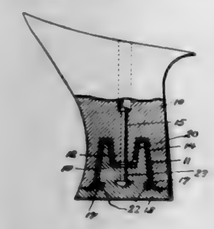
1,561,380. MUD SHOE. HARRY L. VAN BRUNT, Hurst, Ill., assignor of one-half to Victor H. Burkhart, Hurst, Ill. Filed May 3, 1924. Serial No. 710,865. 4 Claims. (Cl. 152—14.)

1. A mud shoe comprising a plate having its ends formed in radially extending flanges and further having an ear formed at the juncture of each flange with the body of the plate, a bolt mounted in each ear and means



having connection with similar ends of the bolts adapted to embrace a wheel felly and swingingly connect the felly to the other ends of the bolts.

1,561,381. DETACHABLE HEEL TREAD FOR SHOES. ROBERT A. WADE, Jersey City, N. J. Filed July 19, 1924. Serial No. 727,007. Renewed Sept. 12, 1925. 2 Claims. (Cl. 36—36.)

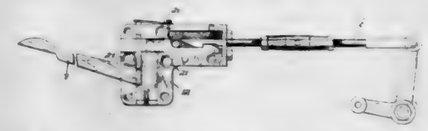


1. A heel structure comprising a heel body having an irregular-shaped socket therein, yieldable tongues located within the socket and conforming to the shape of the walls of the latter, inwardly offset extremities at the free ends of the tongues, a tread for the heel and a plug carried by the tread and conforming to the shape of the tongues, said plug having recesses to receive the offset ends of the tongues and hold the tread secured to the body, the shape of the plug coacting with the tongues to hold the tread against turning with respect to the body.

1,561,382. CONTAINER. GEORGE WALTERS, Ardenode, Alberta, Canada. Filed Apr. 11, 1923. Serial No. 631,410. 2 Claims. (Cl. 221—60.)

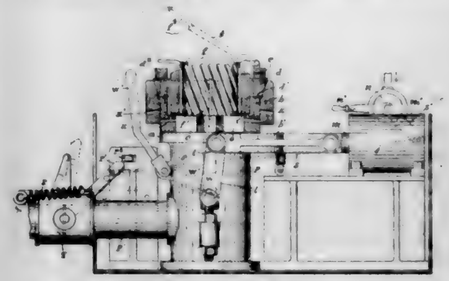
1. A tube holding device comprising a holding member having a tube-neck-receiving opening in one end and oppositely disposed slots extending longitudinally thereof, a flared portion formed on the opposite end, a removable cap associated with said flared portion and forming a closure therefor; a cover member adapted to receive the holder member, and means for effecting the releasable connection of the cover member to the holder member.

1,561,383. SAFETY APPLIANCE. JOSEPH R. WARNER, Syracuse, N. Y., and JOHN C. FOX, Mansfield, Ohio, assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1920. Serial No. 420,387. 6 Claims. (Cl. 192—131.)



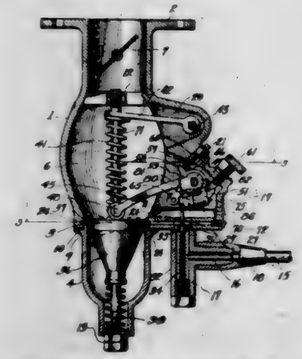
1. A control mechanism comprising a pair of operating levers, a latch bar for actuating a clutch member, a plurality of lock members associated with said latch bar and means for actuating said lock members.

1,561,384. QUENCHING APPARATUS AND PROCESS. JAY G. WEISS, Montclair, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 29, 1921. Serial No. 465,522. 17 Claims. (Cl. 148—2.)



1. In a process for hardening steel sleeves, heating the sleeve to the desired temperature, clamping the heated sleeves by pressure from clamping-sections upon numerous points upon the periphery of the sleeve, supplying a current of cooling fluid to the said sleeve and forcing the current longitudinally within the sleeve.

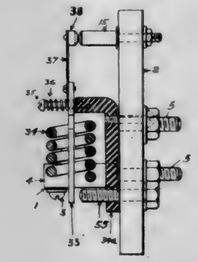
1,561,385. CARBURETOR. LEONARD A. WESTBO, county of Pierce, Wash. Filed June 9, 1921. Serial No. 476,181. 4 Claims. (Cl. 261—50.)



1. In a carburetor comprising in combination, a mixing chamber, an air inlet, a valve for controlling the flow of air through said inlet in accordance with the degree of vacuum produced in the mixing chamber, a valve movable to control the flow of fuel oil to the mixing chamber, a supporting shaft, a lever pivotally mounted on

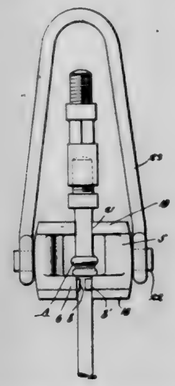
said shaft between its ends and having one end engaging and movable in accordance with the air-inlet valve, an adjustment piece pivotally mounted on the said shaft, a plate pivotally supported from said piece and engaged by the other end of said lever to be rocked thereby to actuate the fuel valve and an adjustment means for the adjustment piece whereby the effective movement of the plate may be varied.

1,561,386. ELECTRIC-CIRCUIT PROTECTOR. HAROLD E. WHITE, Montclair, N. J. Filed June 14, 1921. Serial No. 477,424. 13 Claims. (Cl. 200—88.)



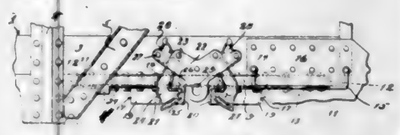
8. In an electric-circuit protector, the combination with an electromagnet having a movable core member associated therewith, of a member, adapted to lose its magnetism at a predtermined temperature, and to cooperate with the core member for normally holding the core member in an inoperative position, and means whereby current from the electric circuit of said electromagnet so heats said holding member that it loses its magnetism and permits the core to be moved to an operative position.

1,561,387. SAFETY SUCKER-ROD ELEVATOR AND WRENCH COMBINED. WILL N. WHITE and ROY OVERFIELD, Independence, Kans. Filed June 25, 1923. Serial No. 647,678. 2 Claims. (Cl. 294—91.)



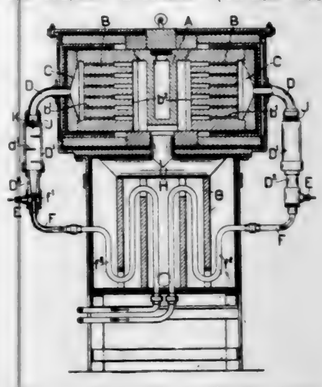
1. In a device of the character described, a body portion having a cut out portion formed in one wall, a plate removably secured to the body portion, a plate secured to the upper end of the body portion, movable jaws supported within the body portion, means forming a part of the body portion and adapted to engage the jaws to restrict inward movement of the jaws, and a locking member adapted to engage one of the jaws to lock the jaws against movement.

1,561,388. CAR-DOOR LOCK. WILLIAM E. WINE, Toledo, Ohio. Filed Dec. 20, 1924. Serial No. 757,129. 8 Claims. (Cl. 105—308.)



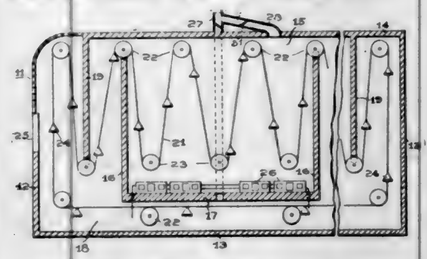
1. The combination with a gondola car, of a drop door therefor, securing means for said door comprising a plurality of hook engaging members and a plurality of hooks, and a unitary bracket for said hooks, said bracket having a portion interposed between said hooks, said portion being adapted to serve as supporting means for a door engaging member.

1,561,389. REFLEX OVEN. GEORG WOLLERS, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 7, 1924. Serial No. 691,326. 2 Claims. (Cl. 158—108.)



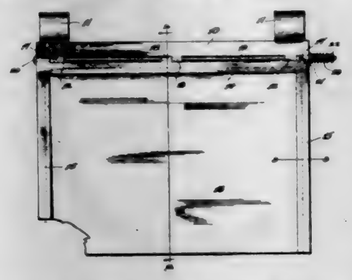
1. In a furnace for gaseous combustion known as surface combustion having a heat radiating burner consisting of refractory material and provided with a plurality of channels opening at the heat radiating surface thereof and a conduit for supplying a gas mixture to said burner, the combination with means for preheating the gas mixture before entering said burner of a mixing chamber arranged in said conduit and containing baffle means for whirling the constituents of the gas mixture.

1,561,390. CONTINUOUS-CONVEYER BAKE OVEN. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 27, 1923. Serial No. 671,172. 6 Claims. (Cl. 34—12.)



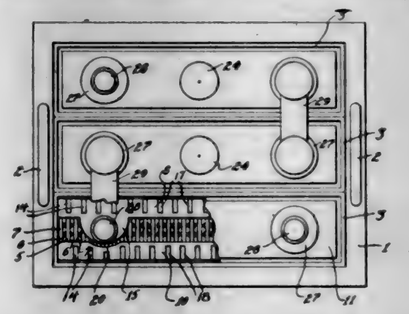
1. In an oven, the combination with a plurality of walls enclosing a baking chamber, a return chamber located outside of said baking chamber, one of said walls having an opening therein for access into said return chamber and a heating means in said baking chamber, of means for causing air to flow into said return chamber through said opening.

1,561,391. GLARE SCREEN. JOHN A. WRIGHT, Maquoketa, Iowa. Filed Jan. 17, 1923. Serial No. 613,202. 1 Claim. (Cl. 296—97.)



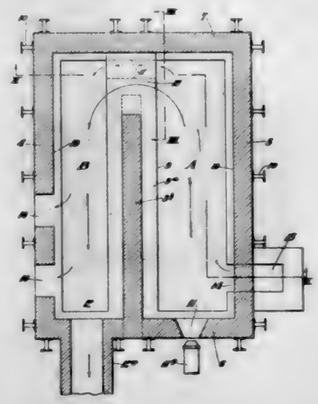
In a device of the character described, the combination of a screen comprising a frame provided at its ends with a pair of upstanding hinge lugs, a unitary hanger comprising an oblong bar provided at its upper edge with spaced suspension clamps and at its lower edge with a pair of depending hinge lugs fitting between and mating with the lugs of the frame whereby the bar is limited against endwise movement relative to the frame, the end edges of the bar and frame lying flush with each other, a hinge rod extending through said lugs swingingly connecting the frame with the bar and provided at one end with a head to contact corresponding end edges of the bar and frame, and spring pressed means upon the opposite end of the rod to contact the opposite corresponding end edges of the frame and bar.

1,561,392. SECONDARY BATTERY. HOWARD L. YOUNG and FREDERICK W. PLUMB, Shreveport, La. Filed Apr. 11, 1921. Serial No. 460,548. 1 Claim. (Cl. 136—170.)



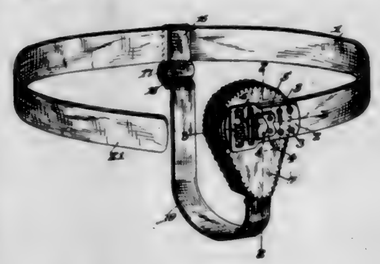
A battery cell comprising a jar, positive and negative plates snugly fitted in said jar and each having a projection at its upper end and at its outer vertical edge, nonconducting means interposing between the positive and negative plates, positive and negative straps arranged above the major portions of the plates and having kerfs in their outer edges receiving the said projections of the plates; each of said straps also having on its inner edge near one of its ends a lateral offset bearing an upstanding post and also having in its inner edge near its opposite end a recess opposite the lateral projection of the other strap, a lower cover superimposed on the said straps and receiving said posts, an upper cover receiving the said posts and spaced above the lower cover, and sealing material interposed between the said covers and also between the walls of the jar.

1,561,393. MELTING FURNACE. WILLIAM A. YUNG, Pittsburgh, Pa. Filed Apr. 15, 1925. Serial No. 23,289. 7 Claims. (Cl. 263—39.)



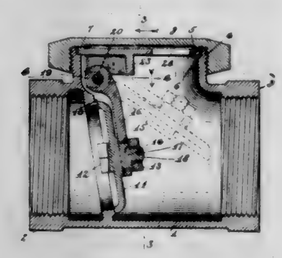
7. In a glass melting furnace comprising a rectangular body portion composed of a bottom wall, side walls, front and back end walls and roof, a dividing wall extending longitudinally of said furnace from end to end and bottom to roof forming two chambers, openings through said dividing wall adjacent one end for the passage of glass and the products of combustion from one chamber to the other, said side walls being offset outwardly intermediate their upper and lower edges and said dividing wall being materially thicker from its bottom upwardly to a point intermediate the bottom and roof of said furnace to thereby form relatively narrow flow paths for the molten glass and relatively wider flow paths for the products of combustion above the glass, and means for cooling the thicker portion of said dividing wall.

1,561,394. TRUSS. JOHN F. ZINK, Allegany, N. Y. Filed Oct. 8, 1924. Serial No. 742,414. 4 Claims. (Cl. 128—112.)



1. A truss comprising a waist band, a flexible laminated pad having its outer face secured against the inner face of one terminal portion of said band and having its laminations formed throughout of like material, said pad depending from said terminal portion, a flexible plate having its inner portion secured to and its outer portion free of the outer face of said terminal portion, a buckle carried by said free outer portion and coacting with the other terminal portion of the band to secure it in position, a breeching strap having its forward terminal portion anchored between a pair of laminations of said pad at the lower end thereof, and means for adjustably connecting the rear end of said strap to the rear of the band.

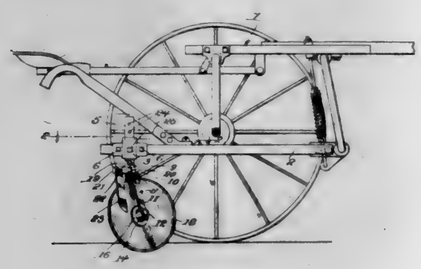
**1,561,395. CHECK VALVE.** EDWARD THAYER ADAMS, Binghamton, N. Y., assignor to The Fairbanks Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 2, 1924. Serial No. 735,447. 1 Claim. (Cl. 251—123.)



In a check valve, a casing having an externally threaded tubular enlargement extending substantially radially of the casing, a supporting or suspending ring mounted in said enlargement, and a cap having a threaded portion screwed onto said enlargement and an annular finished surface fitting against said ring near the outer edge thereof whereby a fluid-tight connection is presented and the ring is held against warping, said ring comprising an annular structure with a plurality of arms presenting a central spider structure, a depending wall extending from one of said arms, and apertured ears extending from said wall, said apertured ears being designed to receive a pintle pin.

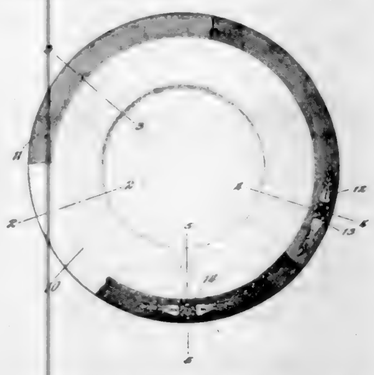
---

**1,561,396. COTTON CHOPPER.** WILLIAM M. BARNES, Holland, Mo. Filed Nov. 11, 1924. Serial No. 749,280. 1 Claim. (Cl. 97—11.)



In combination with a straddle row type of cultivators, of a means for converting the same into a cotton chopper, comprising removable and adjustable socket carrying brackets on the beams of the cultivator, rolling disks, supporting shanks therefor having lower rounded portion providing bearings for the rolling disk shafts, a bracket secured on each shank having a shouldered portion terminating in a downwardly rounded arm providing a bearing for the second end of the disk shaft, a plate resting on the angle portion of each bracket, each of said plates having an offset end to engage with the shank and with the connected portion of the bracket, a single element securing the plate to the said portion of the bracket and to the shank, said plate having an angled outer end, a scraper blade for the rolling disk rigidly secured thereon, and means for vertically sustaining the shanks in the sockets of the brackets on the cultivator beams.

**1,561,397. ORNAMENTAL GLASSWARE AND METHOD OF MAKING THE SAME.** JACOB BASS, New York, N. Y., assignor to E. & J. Bass, Inc., a Corporation of New York. Filed May 2, 1925. Serial No. 27,467. 7 Claims. (Cl. 41—34.)



4. The method of mounting glass jewels, or the like, on an article of glassware, which comprises, electro-plating a layer of metal into the glass, soldering a metallic object having a jewel recess, onto the layer of metal, electro-plating the object and layer to conceal the solder, and fastening the jewel into the recess.

---

**1,561,398. COUPLER FOR TOY CARS.** HARRY S. BECKER, Chicago, Ill., assignor to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1925. Serial No. 19,428. 6 Claims. (Cl. 213—175.)

1. A coupler for toy cars comprising a latch unit having an elongated relatively narrow keeper slot arranged parallel to the direction of coupling, keeper means for automatically closing the entrance end of the slot, a pin unit, and a flat coupling pin adapted to enter said keeper slot edgewise.

---

**1,561,399. SAFETY BELT FOR INFANTS.** ANNA L. BEGG, Seattle, Wash. Filed Nov. 8, 1923. Serial No. 673,479. 1 Claim. (Cl. 128—134.)

A device of the class described, comprising a relatively wide belt portion having ends adapted to secure it about the body, shoulder straps secured to the belt and attached to the belt at the front and back each with its end portions extended downwardly from the belt and joined together with one end portion extended considerably to provide tie straps at each side and a cross tie strap joining the shoulder straps in spaced relation across the back with its ends extended substantially at opposite sides.

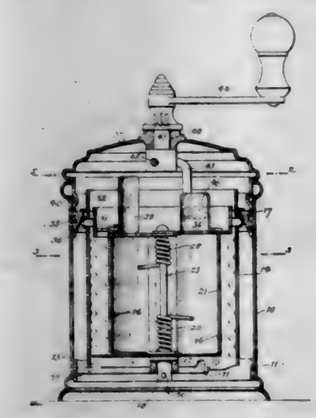
---

**1,561,400. DEVICE FOR PREVENTING THUMB SUCKING.** ANNA L. BEGG, Seattle, Wash. Filed Nov. 8, 1923. Serial No. 673,480. 1 Claim. (Cl. 128—133.)

A device of the class described, comprising a sleeve applicable to the arm with its upper end portions at the front and back extended to form elongated straps adapted to be secured together about the body, a lining for the sleeve stitched thereto about the lower end of the sleeve and longitudinally of the sleeve forming a plurality of pockets open at their upper ends and stiffening ribs located removably in said pockets.

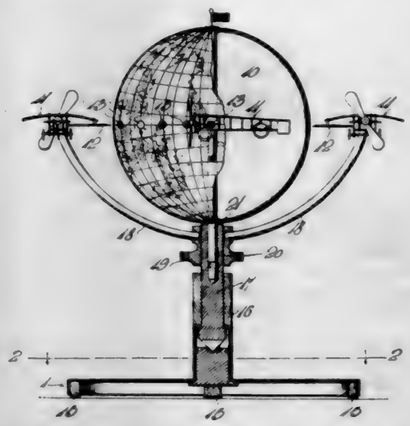
---

**1,561,401. GRATER.** MELCHIORRE BEMBINA, Palermo, Italy, assignor of one-half to Domenico Guido Vernaci, New York, N. Y. Filed Dec. 30, 1924. Serial No. 758,922. 11 Claims. (Cl. 146—61.)



1. In a grater, a casing, a grater member removably disposed in the casing, a container member disposed within the casing and having means for advancing material against the grater member, and means to move one member relatively to the other member.

**1,561,402. EDUCATIONAL GAME.** ARTHUR E. BERNWALL, Janesville, Wis. Filed June 18, 1925. Serial No. 38,046. 8 Claims. (Cl. 273—141.)



1. In a device symbolizing the world flyers, a terrestrial globe, miniature aircraft at the periphery thereof, and means mounting the aircraft for movement about the globe.

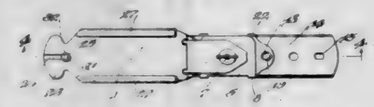
---

**1,561,403. DRAPERY STRETCHING AND CUTTING DEVICE.** ALBERT W. BOTCHER, San Francisco, Calif. Filed Nov. 22, 1924. Serial No. 751,634. 1 Claim. (Cl. 164—79.)

In a device of the character described adapted to be attached to a table, a pair of channel members adapted to engage the opposite sides of a table, a cross piece extending between said channel members, supports mounted on said channel members, a rod extending between said supports, a plurality of holding elements pivotally supported on said rod, said holding elements having a plurality of fabric engaging points, and a second rod extending between said supports for the purpose of retaining said holding elements in inoperative position.

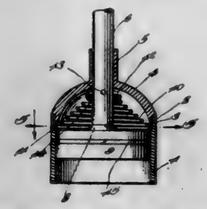
---

**1,561,404. BLADE HOLDER.** CARL M. BRENDEN, Laurel, Mont. Filed Sept. 29, 1924. Serial No. 740,666. 3 Claims. (Cl. 30—25.)



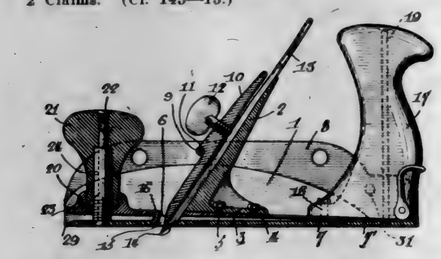
1. A blade holder including opposed handle members, blade holders pivotally connected to one end of said handles, means for moving said holders in clamping position, means for clamping a razor blade at either end of said holders and means whereby said handle members may be moved to dispose the blade between said handle members or extend the same from one end of the handles.

1,561,405. PLUNGER. JOHN H. BRYANT, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 12,146. 3 Claims. (Cl. 68—5.)



1. A plunger including a cylinder having an annular groove therein adjacent one end, a piston mounted for movement in the cylinder, a rod having connection with the piston, a conical shaped spring member having one end seated within the groove and encircling the rod, a stop pin carried by the rod and a washer between the stop pin and the other end of the spring.

1,561,406. PLANE. JOSEPH CAISSE, Montreal, Quebec, Canada. Filed Dec. 26, 1924. Serial No. 758,290. 2 Claims. (Cl. 145—15.)

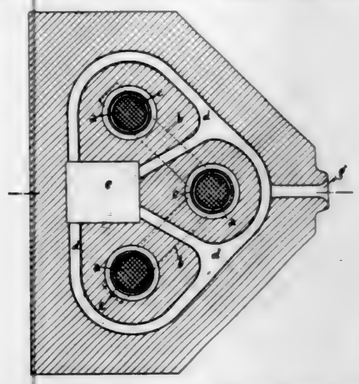


1. A plane comprising a body, means for securing a plane iron to said body, a sole disposed beneath said body, a pivotal connection between the body and the sole at one end thereof, a knob secured to said body at the opposite end, a hollow screw secured in said knob and threaded through the bottom of the body, and a pin extending from said sole through said screw and into said knob, whereby rotation of the knob varies the distance between the bottom of the sole and the plane iron securing means.

1,561,407. EXPANDING PLUNGER FOR OIL WELLS. CHARLES CARD, Breckenridge, Tex. Filed Apr. 9, 1924. Serial No. 705,288. 1 Claim. (Cl. 103—225.)

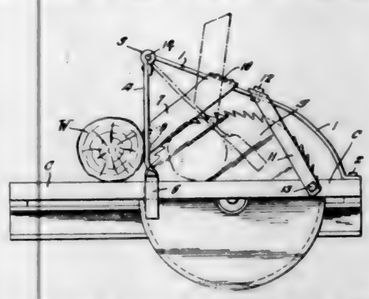
A well plunger having a member fixed thereon presenting a flaring formation and adapted to be expanded at its flaring portion and a sliding loosely fitting expanding sleeve on said plunger above said member, that end of the sleeve opposed to the flaring end of said member being bevelled to effect a wedging action and an expansion of the sleeve in the operation of the plunger in the working barrel of the well.

1,561,408. INDUCTION ELECTRIC FURNACE. RENÉ LOUIS CHARTIER, Paris, France, assignor to Compagnie Francaise des Metaux, Paris, France. Filed Aug. 21, 1923. Serial No. 658,616. 4 Claims. (Cl. 204—64.)



1. In a three-phase induction electric furnace comprising closed channels filled with molten metal which act as the secondary wires of induction transformers, and in which the channels form a circuit around each core of a primary, an arrangement wherein the portions of these circuits which are at the interior of the furnace are common to two contiguous circuits and have the same section as the portions of the circuits which are turned near the exterior of the furnace.

1,561,409. AUTOMATIC GUARD FOR CIRCULAR SAWS. JOSEPH C. CHLADEK, Mount Horeb, Wis., assignor of one-third to Roy A. Beat and one-third to John Beat, both of Mount Horeb, Wis. Filed Feb. 7, 1925. Serial No. 7,689. 6 Claims. (Cl. 143—159.)

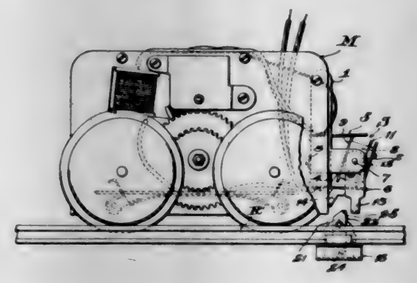


1. An automatic guard for circular saws, comprising a curved guard member adapted to be fastened to the saw frame and extending over the top of the exposed portion of the circular saw, a depending front guard member pivotally mounted to the forward end of said top guard member, said depending guard member having upset end portions bent at right angles to the main depending portions, and side guard strips attached to the depending end portions and connected to each other over the top of the top guard member, whereby to function both as guard elements and as weight elements to automatically return the front guard member to its normal guard position.

1,561,410. BRAKE ATTACHMENT. CHARLES H. COLE, Pueblo, Colo. Filed Feb. 13, 1925. Serial No. 8,998. 2 Claims. (Cl. 254—149.)

1. A brake attachment of the character described comprising a brake staff, fixed and rotatable pulleys arranged upon the lower end portion of the brake staff, a brake rod attachment including a pulley thereon, and a cable wound upon the pulleys and secured to one of the staff pulleys and brake rod whereby the brakes may be applied.

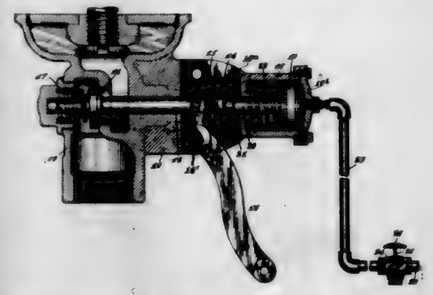
1,561,411. MOTOR AND HEADLIGHT CONTROL MECHANISM FOR TOY ELECTRIC LOCOMOTIVES. FRANK S. CULVER, Chicago, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1925. Serial No. 9,667. 13 Claims. (Cl. 104—149.)



5. A motor and headlight control mechanism for toy locomotives including in combination with the motor and a pair of headlights located at opposite ends of the locomotive, of a switch device electrically connected with the motor and with both headlights, and means located on the track for shifting said switch device thereby to simultaneously reverse the current to the motor and automatically illuminate and extinguish the headlights in accordance with the direction of travel of the locomotive, said switch device comprising a frame, a series of headlight control terminal elements carried by said frame and a series of motor control terminal elements also carried by said frame, and a shiftable switch device pivoted in said frame.

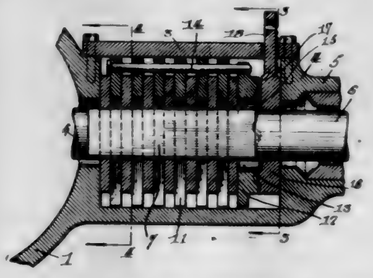
1,561,412. WHISTLE-OPERATING MECHANISM. GLENN L. DAVIS and FRANK W. LAMPTON, Springfield, Mo. Filed Dec. 3, 1924. Serial No. 753,696. 1 Claim. (Cl. 137—139.)

A valve operating mechanism, comprising, in connection with a valve body having a valve stem projecting therefrom and provided with a slot adjacent its outer end, a pair of relatively broad parallel spaced webs formed upon and extending from said body, one on each side of said slotted stem end, a cylinder mounted upon and connecting the outer ends of said webs, a piston in said cylinder, a stem carried by said piston and abutting, at its free end, said valve stem end, means for conveying power to said cylinder, a manually controlled lever having one end pivotally mounted between said webs, and



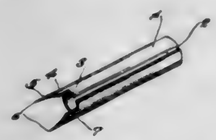
an extension carried upon said pivoted end and extending into and having free movement in the slot in said stem.

1,561,413. MULTIPLE-DISK BRAKE. ADÉLARD DESCARRIES, Montreal, Quebec, Canada. Filed Dec. 12, 1924. Serial No. 755,567. 5 Claims. (Cl. 188—172.)



5. A multiple disc brake comprising in combination with a shaft having a squared portion, a plurality of disks mounted on said squared portion to rotate therewith, yokes alternating with said disks and free from the shaft, a plate loosely surrounding said squared portion and having a corrugated face, a collar surrounding the round portion of the shaft and having a corrugated face, a pin passed through said plate and yokes, said pin lying outside the periphery of the disks, a housing enclosing said shaft and parts surrounding the shaft, said housing having a removable cover with a slot formed therein, an arm extending from said collar and passing through said slot, and a link attached exteriorly to said slot, and a link attached exteriorly to said arm for turning the collar relatively to the shaft.

1,561,414. NAIL SOCKET. JOHN L. DILLMAN, Lemont, Ill. Filed June 28, 1924. Serial No. 723,066. 1 Claim. (Cl. 248—37.)

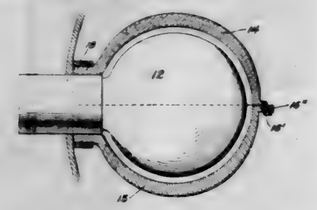


A device of the character described including a split socket having one end thereof provided with oppositely disposed cut-away portions to form opposed shanks, the outer ends of said shanks being tapered to form penetrat-

ing prongs, the said edges formed on the sides of said shanks providing shoulders whereby to prevent rocking or tilting movement of the socket when the shanks are driven into the object.

---

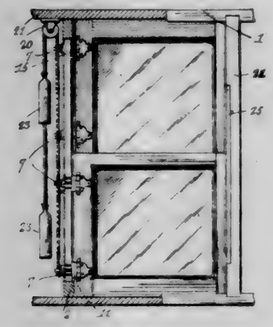
1,561,415. GLARE ELIMINATOR. LOUIS DRESNER, Bronx, N. Y. Filed Mar. 27, 1925. Serial No. 18,882. 2 Claims. (Cl. 240—48.6.)



1. A lamp attachment comprising a pair of separable shell sections, one of said sections being transparent and the other of said sections being apaque, co-acting means on one end of said members for hingedly connecting the same, neck portions formed on the other end of said sections, and clamping means encircling said neck portions for holding said sections in globular formation.

---

1,561,416. HINGED WINDOW. GEORGE DREW, Montreal, Quebec, Canada, assignor of one-half to Wilfrid S. Chandler, Montreal, Canada. Filed Apr. 25, 1925. Serial No. 25,933. 2 Claims. (Cl. 20—50.)

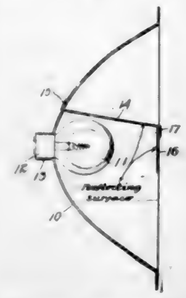


1. A window comprising a frame having a slotted pulley style, cord holders slidably mounted at the outer side of said style, hinges slidably mounted at the inner side of the style, attaching members extending from the hinges through the slots of the style and to the cord holders, sashes secured to said hinges, said cord holders each having a groove in its face, and pins extending from said hinges and received in said grooves.

---

1,561,417. DEFLECTOR FOR AUTOMOBILE HEADLIGHTS. JOSEPH DROLL, Fostoria, Ohio. Filed Sept. 27, 1922. Serial No. 590,940. 2 Claims. (Cl. 240—48.2.)

1. In a headlight a parabolic reflector, a lamp supported by the reflector in the focal center thereof, an opaque partition arranged in the reflector above the lamp, said partition being of a shape to conform to the contour of the reflector and having a depending portion extending across its front, the ends of said depending portion being extended around the sides of the reflector to provide supports, said partition also being provided at its rear with a portion extending through the reflector for securing the same thereto, the underside of said partition and the inner side of the depending portion thereof



being polished to reflect the rays of light in a horizontal plane and downwardly upon the roadbed, substantially as set forth.

---

1,561,418. TOOL FOR STRAIGHTENING TUBES. OSWALD DUDA, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Jan. 26, 1924. Serial No. 688,829. 2 Claims. (Cl. 153—81.)

1. In combination in a tool for straightening tubes, a body having a screw threaded socket at its upper end, a member screwed into said socket for imparting rotary movement to the body, pockets in the body, rollers in said pockets exposed therethrough to bear on the tube to be straightened, a mandrel within the body on which the rollers bear, means for holding the mandrel against lengthwise movement relative to the body, said mandrel, body and member having aligned passage ways for flushing fluid at the axial center of the tool, said passage ways delivering the said flushing fluid at the lower end of the body, substantially as described.

---

1,561,419. DRILL JAR. EDWARD J. DUNIGAN, Muskogee, Okla. Filed June 25, 1925. Serial No. 39,573. 3 Claims. (Cl. 255—27.)

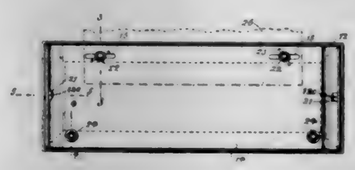
1. A jar of the class specified comprising two duplicate link members each having a body with inwardly projecting reins with centrally disposed longitudinal slots extending partway of the length thereof and terminating in inner transversely straight shoulders from which seats on opposite sides of the slots extend towards the body and terminate in outward curved concave extremities, the reins having their inner ends shaped as heads with rounded free ends and having tongues

centrally disposed therein and of less width than the heads to form flanges which are slidable in the said

seats, the tongues terminating inwardly a distance from the free rounded ends of the heads, the heads being wider than the remaining portions of the reins.

---

1,561,420. FRAME FOR LICENSE PLATES. FRED DEXTER ELLIOTT, Saulte Ste. Marie, Mich. Filed Jan. 10, 1925. Serial No. 1,672. 3 Claims. (Cl. 40—152.)

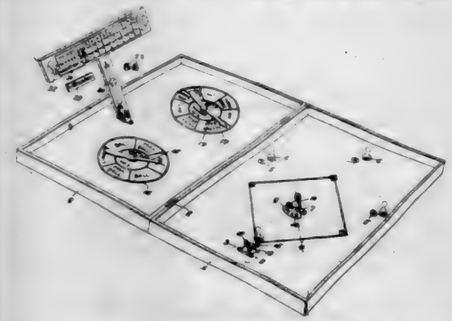


1. A frame for license plates and other purposes including a frame element having a front portion to conceal an area of the license plate at the four sides thereof and having a rearwardly directed flange at the outer edge of said front portion, and a back plate in said frame, said back plate extending behind said front of the frame element and having bolt holes and bolts in said holes in the area of the back plate covered by the front of the frame element, said bolts adapted to secure between the front of the back plate and the rear of the front of the frame element a plate to be framed; together with bolts extending transversely through the frame flange at the ends of the frame, and flanges on the back plate through which said last-mentioned bolts also pass for securing the ends of the back plate to the ends of the frame element.

---

1,561,421. GAME. TORLIEF G. ERICKSON, Providence, R. I. Filed Mar. 18, 1925. Serial No. 16,502. 2 Claims. (Cl. 273—93.)

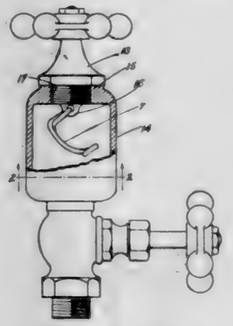
1. A game board having a field inscribed with a diamond, pivotally supported finger carrying playing pieces on the center of the diamond and to the rear of the home base, dials having figures thereon over which the fingers of the playing pieces are arranged when the said playing pieces are turned, two cylindrical dials divided into segments each bearing inscriptions relative



to the plays made respectively by the batter and by the fielders of a baseball game and a pivoted spinner on each of the last mentioned dials.

---

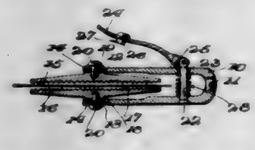
1,561,422. COVER-CAP LOCK. HARRY J. ERNST, Cincinnati, Ohio, assignor to The D. T. Williams Valve Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,433. 1 Claim. (Cl. 220—24.)



A cap anchor comprising a rod bent at its middle portion to form a ring, the free ends each being bent adjacent the ring at right angles to the plane of said ring to form parallel arms, said arms being curved and having formed at their ends oppositely disposed hooks parallel to the plane of the ring portion.

---

1,561,423. CHECK PROTECTOR. JOHN EVANS, Melville Station, Newport County, R. I. Filed July 9, 1925. Serial No. 42,574. 6 Claims. (Cl. 101—19.)

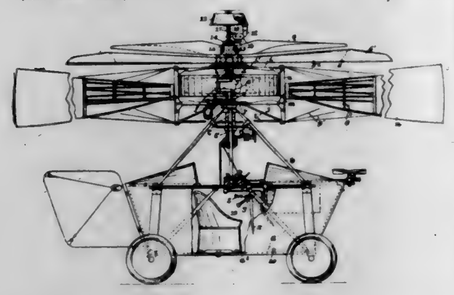


1. A check protector including a pair of elongated impression members having serrated opposing faces and having their opposite ends provided with outstanding bosses centrally between the ends thereof, a U-shaped supporting frame having the ends of its extensions provided at their inner sides with recesses to receive said bosses, threaded fasteners projecting through the extensions of the frame and engaging the bossed portions

of the impression members to hold the same rotatably in position whereby they may be shifted from longitudinal to a transverse position with respect to the frame, and hand actuated means for shifting the extensions of the frame toward one another.

---

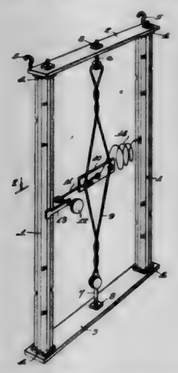
1,561,424. HELICOPTER. GEORGE EXEL, Clifton, N. J. Filed Nov. 6, 1924. Serial No. 748,088. 10 Claims. (Cl. 244—19.)



1. In a helicopter, the combination of two rotary means respectively including the active and reactive elements of a motor and each also including an aerofoil driven from the corresponding element and having its axis of rotation upright, gearing connecting said elements and including an intermediate gear member, a carrier supported by and with respect to which each of said means is rotary, and means, movable independently of the carrier and in which said member is journaled, to oppose shifting of said member from one to another position of rotation.

---

1,561,425. THERMOSTATIC SWITCH. HUGO ROBERTS FERNANDEZ, Habana, Cuba. Filed Oct. 7, 1924. Serial No. 742,214. 3 Claims. (Cl. 200—137.)

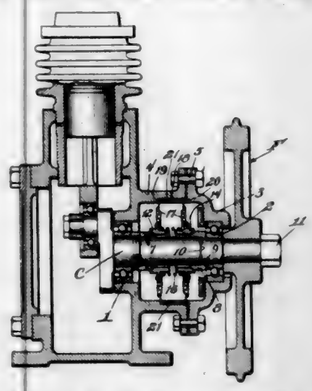


1. A thermostatic switch, comprising a thermostatic expansible frame, a double run twisted flexible member secured in the frame, a circuit breaker carried by the flexible member and to which turning movement is imparted by the flexible member, means connecting the circuit breaker with a fixed contact, and said circuit breaker adapted to engage a second contact.

---

1,561,426. STUFFING BOX. PHILIP FISCHBACHER, Chicago, Ill. Filed Mar. 18, 1924. Serial No. 700,123. 3 Claims. (Cl. 286—11.)

1. In combination with a box, a cap associated therewith, bearings carried by the cap and the opposed wall of the box, a shaft rotatably engaged with the bearings, cones mounted upon the shaft within the box for rotation therewith and spaced apart, cups freely surrounding the shaft between the cones, a tension spring interposed between and bearing upon the cups to maintain the same in contact with the cones, corrugated spring metal



washers secured to the cups and bridging the space betwen the cups and the peripheral wall of the box, and a spacer interposed between the peripheral portions of the washers, the bearing cap being provided with means to effect an air-tight contact between the peripheral portions of the washers and the spacer when the cap is in applied position.

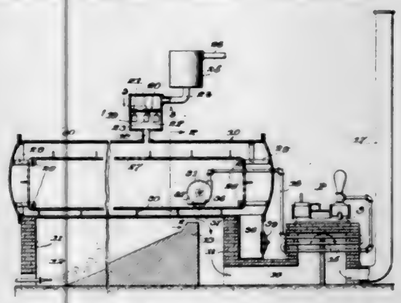
---

1,561,427. METHOD AND MEANS FOR MARKING CASTINGS. CARL T. FORSBERG, Mountain View, N. J. Filed Oct. 23, 1922. Serial No. 596,433. 7 Claims. (Cl. 22—203.)

1. The method of marking castings, which consists of embedding characters formed of sheet metal in said casting, so that the edge of said sheet metal appears on the surface of said casting, and the faces of said sheet metal are embedded in said casting.

---

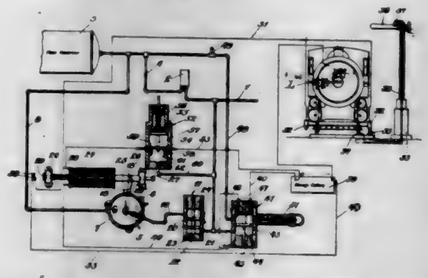
1,561,428. APPARATUS FOR DISTILLATION. WILLIAM M. FRASER, Bristow, Okla. Filed June 11, 1923. Serial No. 644,746. 2 Claims. (Cl. 196—122.)



1. Apparatus for heating liquids comprising the combination, with a closed vessel, for heating liquid, means for feeding liquid into said vessel, of agitator means located in said vessel, and a fluid motor located within said vessel and connected to said liquid-feeding means for operation by the latter and arranged to be driven by liquid fed through said liquid-feeding means.

---

1,561,429. AUTOMATIC TRAIN-CONTROL DEVICE. EARL JACOB GILDERSLEEVE, Maybrook, N. Y., assignor of one-fourth to Alfred H. Bawden, jr., Park Ridge, N. J. Filed Nov. 22, 1921. Serial No. 516,994. 7 Claims. (Cl. 246—183.)



4. A train stopping device including a train line control valve communicating with and governing an exhaust from the train line pipe, a three-way valve for controlling the operation of the first-mentioned valve, having communication with a main air reservoir and the first-mentioned valve and normally admitting main reservoir air to said valve, a solenoid having a movable core connected with the three-way valve, normally held in one position, and adapted to move the three-way valve to permit the exhaust of air in the first-mentioned valve and allow the operation thereof to open the exhaust from the train line when the solenoid is energized, a main circuit connecting the solenoid and adapted to be closed for energizing said solenoid under predetermined conditions, an auxiliary circuit through the solenoid, a pair of contacts in said auxiliary circuit adapted to be closed by the core upon its initial movement by the solenoid after the solenoid is energized for closing the auxiliary circuit, and a timed circuit breaker for maintaining the solenoid energized for a predetermined length of time.

---

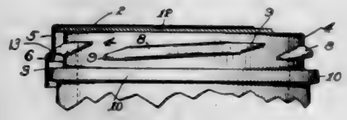
1,561,430. FOOTWEAR. ALFRED A. GLIDDEN and FRANK D. BEAN, Watertown, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Sept. 2, 1924. Serial No. 735,373. 6 Claims. (Cl. 36—5.)

1. An article of footwear of the class described having a plurality of pairs of separable metallic fasteners secured to the inner face of the upper somewhat back from the edges, and a narrow strip of resilient rubber incorporated in each of said edges.

2. A front opening article of footwear of the arctic type, having a plurality of pairs of interengaging fasteners secured to the inner face of the upper sufficiently back from the edges to cause the inter-engaging portions of the fasteners to lie approximately flush with the edges, whereby when the cooperating fasteners are engaged the edges will be held in abutting position and the fasteners concealed.

---

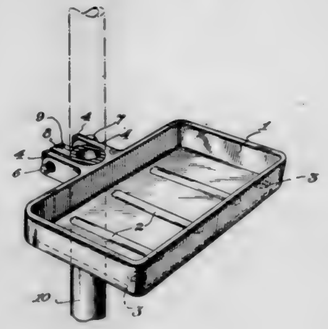
1,561,431. BAND-LUG CLOSURE. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 19, 1922. Serial No. 530,267. 8 Claims. (Cl. 215—44.)



1. A combined rotatable and reusable metal cap and sealing band, said cap comprising a top having a depending skirt provided with a strengthened, curled or beaded lower edge, and inwardly extending locking projections, said sealing band extending below said skirt and having its top and bottom portions bent inwardly, the former to directly engage the strengthened edge of the cap and the latter to engage under the shoulder of the container, the sealing band and cap so cooperating that the sealing band forms the first locking means for the cap without the rotation thereof while the projections of the cap form the second locking means on the removal of the band.

---

1,561,432. SOAP DISH. OTTO G. HITCHCOCK, Erie, Pa., assignor to Hays Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 21, 1925. Serial No. 31,760. 2 Claims. (Cl. 45—24.)



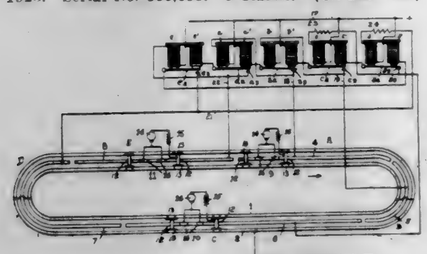
1. A soap dish adapted to be clamped to a pipe, comprising a pair of lugs adapted to embrace said pipe, a clamping block disposed between said lugs and adapted to engage said pipe, and a headed screw-bolt in threaded engagement with said block and passing freely through apertures in said lugs.

1,561,433. YARN TUBE FOR LOOMS. JAMES H. JOHNSON, Amsterdam, N. Y. Filed Mar. 9, 1925. Serial No. 14,043. 4 Claims. (Cl. 139—10.)

2. A yarn tube for a tube frame, made of resilient material and having a longitudinal slit dividing the forward wall thereof, said slit adapted to permit a yarn to be forced therethrough but preventing the free passage thereof.

---

1,561,434. TRAIN-CONTROL SYSTEM. NORRIS J. JONES, Jr., Pittsburgh, Pa.; Lottie Jones executrix of said Norris J. Jones, jr., deceased. Filed Oct. 5, 1923. Serial No. 666,695. 6 Claims. (Cl. 246—32.)



1. In a safety electric railway system, a sectional conductor dividing the railway system into blocks, each section of the conductor being electrically continuous, means including for each block only one switch having only one pair of contacts, whereby a car on any block prevents a car on the next block in the rear thereof from receiving motor-operating current, and whereby the said second car prevents a car in the next block in the rear thereof from receiving motor-operating current.

---

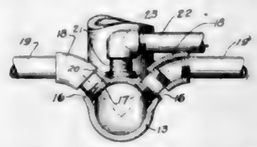
1,561,435. ONE-MAN GASOLINE SAFETY RAIL CAR. PHILIP J. MITTEN, Philadelphia, Pa., assignor to Mitten-Traylor Incorporated, a Corporation of Delaware. Filed Jan. 18, 1923. Serial No. 613,393. 6 Claims. (Cl. 105—62.)

1. A railway car comprising a body frame, a body, a motor supported by said frame beneath the forward end of said body, front and rear axles including wheels yieldably supporting the body frame, a transmission supported by said frame intermediate of said axles, means operatively connecting said motor with said transmission, and drive means independently connecting said transmission with each axle.

---

1,561,436. PLUMBING CONNECTION. MICHAEL J. SMITH, Morristown, N. J., assignor to Iron Closet Bend Company, Morristown, N. J., a Corporation of New Jersey. Filed Mar. 14, 1925. Serial No. 15,432. 1 Claim. (Cl. 285—203.)

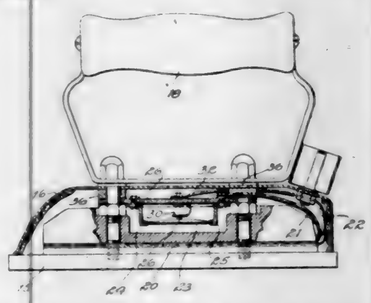
A soil pipe fitting adapted to discharge a flow from a closet bowl into a pipe, said fitting comprising a substantially horizontal portion and a plurality of connections at said portion, to one of which a drainpipe can be connected and a vent pipe to the other, said connections being formed with their axes lying in substantially the same plane on opposite sides of the fitting,



and intersecting at a point below the upper portion of the fitting but inclined at an angle to the horizontal so that said connections lie above the normal level of flow in said horizontal portion of the fitting, and the inclination of said connections insuring that a discharge from one of them will not enter the other connection.

---

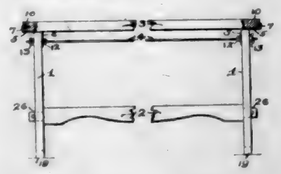
1,561,437. ELECTRIC HEATER. JOHN A. SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Original application filed Apr. 8, 1921, Serial No. 459,773. Divided and this application filed Mar. 12, 1923. Serial No. 624,597. 5 Claims. (Cl. 219—25.)



1. In an electrical heating device, the combination with relatively movable contact members mounted therein, of a snap acting composite thermostatic member mounted in a heated portion of the device and constituting the sole actuating means for effecting relative movement of the contact members, whereby the contact members are actuated relatively to interrupt quickly the circuit of the device.

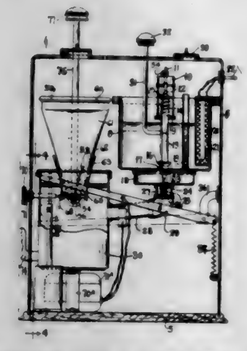
---

1,561,438. CHILD'S TABLE. ROSS WINSHIP, Valparaiso, Ind. Filed Aug. 5, 1922. Serial No. 579,898. 8 Claims. (Cl. 45—109.)



1. In a tilting top table, a table top, a pair of standards thereunder, means for supporting the table top on the standards, cooperating means between the lower face of the table top and the upper edge of the standards for limiting the angular position of the parts to each other, means for pivoting the parts to each other, and means for locking them in different positions.

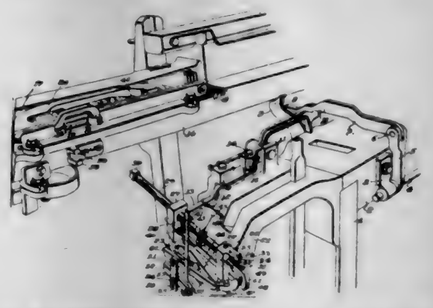
1,561,439. MACHINE FOR MAKING AND DISPENSING LATHER. FRANK ACKERMANN, MORRIS LANGHAUS, and HERMAN GOULD, New York, N. Y.; said Langhaus assignor to said Ackermann and said Gould. Filed Aug. 29, 1924. Serial No. 734,855. 12 Claims. (Cl. 259—24.)



2. In combination with a lather making machine, a powder container, a source of water supply, a mixing chamber, an agitator journaled in the bottom of said chamber, a motor for driving said agitator, and means for feeding the powder and water to said chamber, said means being adapted to close the circuit to start the motor for driving the agitator.

---

1,561,440. FEELER MECHANISM FOR LOOMS. JOHN C. BROOKS, Paterson, N. J., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 18, 1925. Serial No. 31,000. 12 Claims. (Cl. 139—274.)

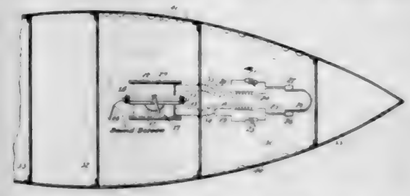


1. In a feeler mechanism for looms, the combination of a feeler having a magnetic tip that causes the feeler to be moved rearwardly on detection of substantial exhaustion of filling in the shuttle and by such movement to be lowered to initiate replenishment of filling as the feeler is moved frontwardly on the next detecting beat, and means actuated by such frontward movement of the feeler for effecting replenishment of filling.

---

1,561,441. APPARATUS FOR DIRECTIVE SIGNALING. REGINALD A. FESSENDEN, Newton, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Original application filed Dec. 26, 1918, Serial No. 268,231. Divided and this application filed May 28, 1920. Serial No. 384,993. 3 Claims. (Cl. 181—0.5.)

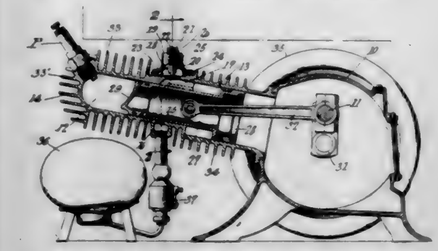
2. In apparatus of the character described, the combination of a plurality of receptors of wave energy disposed about a common center, a detecting device, and means for bringing the received energy into phase at the detecting device comprising connections from the detecting device to the several receptors having time difference of energy traverse equal to the difference in



time of arrival at the receptors to which they are connected, of wave energy passing in a certain direction across the center of receptors, substantially as described.

---

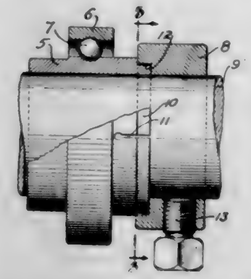
1,561,442. INTERNAL-COMBUSTION ENGINE. HERBERT O. EWING, Middleport, Ohio. Filed Feb. 27, 1922. Serial No. 539,676. 9 Claims. (Cl. 60—32.)



7. In a two cycle internal combustion engine, the combination of a power cylinder having a piston connected to the crank shaft and a vacuum cylinder having a piston also connected to the crank shaft, said piston having substantially zero clearance with the top of the vacuum cylinder, an intake port for said power cylinder thru which a fresh charge is aspirated, an exhaust port from the power cylinder to the vacuum cylinder thru which all of the spent gases are drawn into the vacuum cylinder for subsequent exhaust to the atmosphere, said two ports being controlled by the power piston, and being so arranged that they are opened approximately at the end of the power stroke, the exhaust port opening before and closing after the opening and closing of the intake port.

---

1,561,443. LOCKING MEANS FOR ANTIFRICTION BEARING RINGS. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed July 28, 1923. Serial No. 654,334. 3 Claims. (Cl. 308—189.)

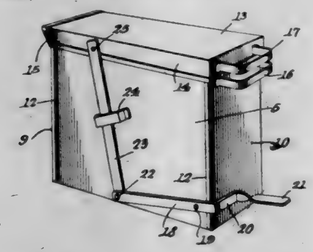


1. In combination, an anti-friction bearing having inner and outer race-members and anti-friction elements

therebetween, a shaft passing through said inner race-member, and a member adapted to be secured to said shaft adjacent the inner race-member and having a flange overlying a part of said inner race-member, said flange and part having contiguous concentric surfaces which are eccentric to said shaft whereby the inner race-member is prevented from turning on said shaft.

---

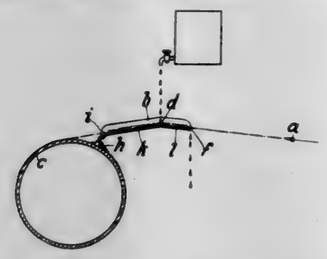
1,561,444. RECEPTACLE. GOODWIN B. SMITH, Philadelphia, Pa., assignor to Smith Vending Machine Corp., New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 698,995. 1 Claim. (Cl. 220—94.)



A device of the character described, comprising a receptacle, a lid permanently hinged near its rear end to the top of the receptacle, said lid having telescoping action with the top of the receptacle, a loop handle rigidly attached to the forward end of the receptacle near its upper end, a second loop handle rigidly attached to the forward end of the lid and arranged in close relation to the first named loop handle, the arrangement of the loop handles being such that the hand may be passed through them to grasp both, a lever pivotally mounted upon the side of the receptacle and projecting forwardly therebeyond and carrying a treadle, and a link pivotally connected with the rear end of the lever and with the lid.

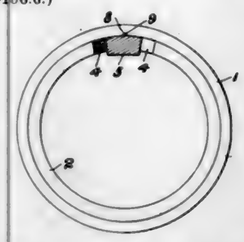
---

1,561,445. GUTTER OR CHANNEL FOR TREATING ARTIFICIAL THREADS OR YARNS, PARTICULARLY IMITATION-SILK YARNS, WITH ACIDS OR AN ACID CONTAINING LIQUOR. EMIL ELSAESSER, Barmen-Langerfeld, and WALDEMAR ZUR LÖWEN, Barmen-Rittershausen, Germany, assignors, by mesne assignments, to American Bemberg Corporation, a Corporation of Delaware. Filed Oct. 29, 1923. Serial No. 671,565. 2 Claims. (Cl. 18—8.)



1. A gutter or channel for treating artificial threads in particular imitation silk threads or yarns, with an acid or an acidiferous liquor, said gutter or channel having a bend between its ends and located at such a point as to form two sloping end portions for compelling the liquor admitted at the highest part of the gutter to flow off in both directions towards its lower ends, one of which sloping portions is about half the length of the other one, substantially as set forth.

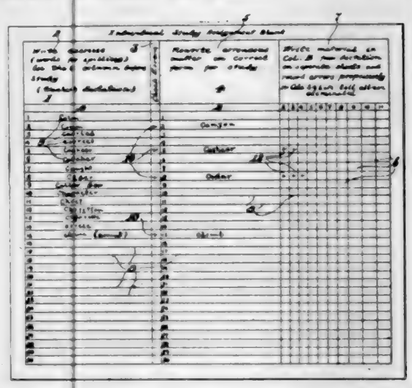
1,561,446. METHOD OF PATTERN OR RING FORMING FOR PISTON RINGS. CHARLES E. JOHNSON, Muskegon, Mich., assignor to The Piston Ring Company, Muskegon, Mich., a Corporation of Michigan. Filed June 14, 1922. Serial No. 568,280. 4 Claims. (Cl. 29—156.6.)



1. The herein described method of changing a continuous circular ring to out-of-round form which consists in placing the ring around a circular die parted at one side and then spreading the die at the parting in the side thereof to change the circular ring to an out-of-round form.

---

1,561,447. EDUCATIONAL DEVICE. SHERWIN CODY, Tompkinsville, N. Y. Filed Dec. 12, 1922. Serial No. 606,508. 6 Claims. (Cl. 283—46.)



1. In a teaching device, a sheet employed as an individual assignment for study having areas defined thereon which are adapted to receive a school exercise with a progressive record of tests upon the exercise, comprising an area in which an exercise may be written by a pupil and corresponding areas in progressively designated columns in which errors made on successive tests upon the original exercise may be recorded, and having associated therewith instructions for concentrating study upon the subject of errors checked in the successive columns after each test as so many successive assignments for study.

---

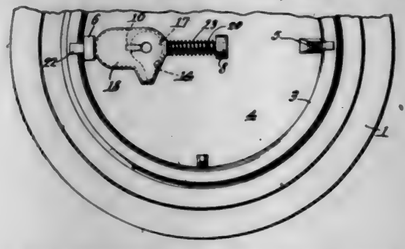
1,561,448. RETARDING CHUTE. LOUIS H. SIMON, Seattle, Wash. Filed Oct. 1, 1924. Serial No. 740,930. 1 Claim. (Cl. 193—27.)

In a retarding chute a plurality of detachable sections which, when in place, form a zig-zag line, the intermediate sections having rings at their ends the planes of which are substantially at right angles to each other, each of the said sections being made up of a plurality of straight sections, clamping and holding means at one end of each of the said sections, sockets for engaging the said clamping and holding means at the opposite ends of the said sections to receive the said clamping and holding means of the succeeding section, other sections forming the end sections also made of short straight sections and equipped with the said clamping and holding means, the planes of the ends of the said end sections forming substantially 45° angles, a hopper with converging sides attached to the top of the said chute

for receiving and guiding material into the said chute, handles on the sides of the said chute, and another of the said end sections having rollers projecting upward from it to engage a flange on the lower end of the said chute thereby forming a revolving, deflecting member at the end of the said chute.

---

1,561,449. LOCK FOR METER-BOX COVERS. CHARLES JOHN ARMSTRONG, Austin, Tex. Filed May 19, 1925. Serial No. 31,348. 4 Claims. (Cl. 70—14.)



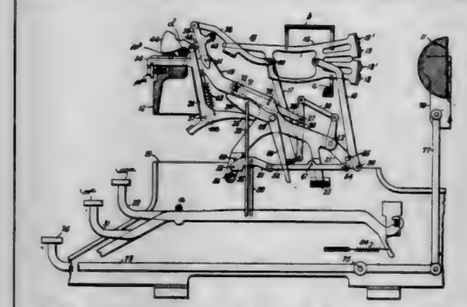
2. The combination with a cover having a keyhole and a centering boss adjacent the keyhole, of a tumbler mounted for rotation on the boss and having a key receiving slot normally registering with the keyhole, a spring pressed bolt connected to the cover, said bolt including a housing in which the tumbler is concealed, said housing having an extension, there being a wing upon the tumbler for wiping engagement with one wall of the extension, and cooperating means upon the housing and tumbler for holding said tumbler against free rotation within the housing.

---

1,561,450. TYPEWRITING MACHINE. GEORGE GOULD GOING, Middletown, Conn., assignor, by mesne assignments, to Remington-Noiseless Typewriter Corporation, a Corporation of New York. Filed Sept. 28, 1923. Serial No. 665,290. 96 Claims. (Cl. 197—25.)

1. In a typewriting machine, the combination of a platen, a front stroke end-thrust type-bar carrying a plurality of transversely arranged types fixed on an end thereof, a plurality of independently operable printing keys, and means controlled thereby for effecting an individually selective actuation of said type-bar to print

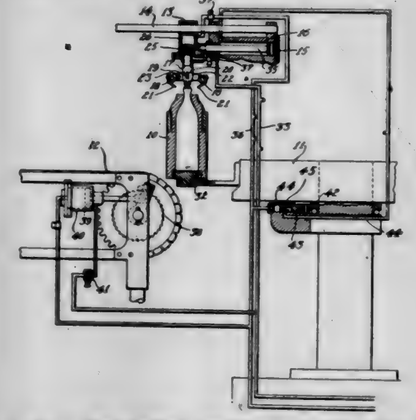
from one or another type thereon depending on which of said keys is independently actuated and for effecting a printing movement of the type bar in a general endwise direction and causing different types to travel through different oppositely disposed curved paths in the same plane to a position where the effective types reach a line of substantial coincidence in front of the



printing point before the platen is reached, said line of coincidence obtaining for a substantial portion of the final part of each path of advance of the active type towards the platen, the construction and arrangement of said controlling means being such that both of said printing keys is actuated by substantially a uniform touch.

---

1,561,451. TAKE-OUT DEVICE FOR BOTTLE-BLOWING MACHINES. JAMES W. LYNCH, Alexandria, Ind., assignor to Lynch Glass Machinery Company, Anderson, Ind., a Corporation of Indiana. Filed Mar. 2, 1922. Serial No. 540,538. 30 Claims. (Cl. 198—22.)



1. In a glass working machine, a movable table and series of molds carried thereby, means for opening said molds at a predetermined point in their movement, a conveyor adjacent said point, and a take-out device for transferring glass ware from said molds at said point to said conveyor, said take-out device comprising a laterally movable carrier, a vertically movable yoke mounted thereon, and arms carrying grippers at their outer ends pivotally connected to said carrier intermediate their ends and to said yoke at their ends remote from the grippers, said pivotal connections having limited freedom of movement whereby raising said yoke first swings and then elevates said grippers, and continuously acting means for restraining said grippers against lifting movement until the gripping action is completed.

Patents Nos. 1,561,452 to 1,562,429.

THE

# OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 340—No. 3. TUESDAY, NOVEMBER 17, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,363,814, E. C. Raney, Automatically-reclosing circuit breaker, decided October 28, 1925, claims 10, 11, 12, 17, and 19.

Pat. 1,506,054, H. M. Friendly, Telephone system, decided October 10, 1925, claim 59.

Pat. 1,518,682, W. R. G. Baker, Signaling system, decided October 5, 1925, claims 2 and 4.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 31,210, Relishes, Saville Packing Company, New York, N. Y. Registered February 1, 1898. Decided October 8, 1925.

T. M. 40,440, Certain named beverages, W. A. Megrath, New York, N. Y. Registered May 26, 1903. Decided October 10, 1925.

T. M. 142,801, All varieties of cured fish, salt fish, and canned fish and shrimp, J. S. Twombly, Boston, Mass. Registered May 17, 1921. Decided October 6, 1925.

## NOTICE TO ATTORNEYS.

**A circular letter reading as follows has been placed in the mail addressed to each attorney on the roster:**

**"Your name appears on the roster of those registered to practice before the United States Patent Office. We are preparing to revise the roster to eliminate the names of those who are dead or who have retired from practice before this Office.**

**"You are reminded that the rules provide that attorneys registered in this Office should keep the Office advised of any change of address. To this end will you please fill out the form below and return this letter immediately.**

**"Your failure to fill out and return this letter will be considered your authorization to remove your name from the roster."**

**Attorneys who have not received this circular and who wish their names to be retained on the roster should immediately write the Commissioner of Patents to that effect and give him their full names and business addresses, together with their registration numbers and the names of any firms of which they are members or with which they are associated.**

## Condition of Applications Under Examination at Close of Business November 6, 1925.

| Room No. | (Total number of applications awaiting action, excluding Trade-Mark Division, 39,825; Trade-Mark Division, 3,106. Oldest new case, Apr. 22, 1925; oldest amended, Apr. 27, 1925. The dates given are 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS. | Oldest new application and oldest action by applicant awaiting office action. New. | Amended. | No. of applications awaiting action. |

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

EX PARTE SHORT.

*Decided April 22, 1924.*

INVENTION—SUBSTITUTION OF EQUIVALENTS.

When cork has been used for a clutch-disk facing and a cork compound has been produced and described as a substitute for cork, there is no room for invention in merely using it for one of the purposes, that of facing a clutch disk, for which cork has heretofore been used.

[Note.—This application has resulted in Patent No. 1,524,217, January 27, 1925.]

Application for patent.

APPEAL from Examiners in Chief.

CLUTCH DISK FOR MOTOR-VEHICLE CLUTCHES.

Application filed May 28, 1917, No. 171,493.

*Mr. Le Roi J. Williams* and *Mr. Lloyd Blackmore* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief, affirming that of the Primary Examiner denying patentability to claims 1, 3, and 4.

Claim 1 will serve for illustrative purposes:

1. As an article of manufacture, a metallic clutch disc having a facing of friction material in thin sheet form, said friction material comprising granulated cork mixed with a liquid binding material which sets and hardens, and with a liquid material having non-setting and non-hardening qualities; the mixture being compressed and permitted to harden under pressure to thereby increase the density of the resulting product.

The references are: Smith et al., No. 913,572, February 23, 1909; Loomis, No. 1,172,146, February 15, 1916; Kwis, No. 1,164,531, December 14, 1915; Bubinger, No. 1,151,759, August 31, 1915.

The claims are directed to an article of manufacture of the character of a clutch disk made up of a thin sheet of friction material comprising corrugated cork mixed with a binding material and compressed and retained in such compressed state until the binder properly sets.

Appellant states many advantages in the cork compound when used for the purpose of a clutch surface and his assertions are not to be disputed. The prior art illustrates friction clutches made up of clutch disks and the patent to Bubinger discloses one member of a clutch coupler which consists of a metal disk faced with cork. That cork has been widely used for clutch faces is not denied. The patent to Smith et al. discloses a compound made up of ground cork with a suitable binder of the general character employed by appellant. None of the claims here on appeal defines from the cork compound recited in the patent to Smith et al. It is clear enough this patent does not specify the use of this cork compound for the purpose adopted by appellant. The question here to be determined is whether with the suggestion of Bubinger that cork may be used for facing clutch disks, it would be obvious the cork compound described by Smith et al. could be used for a like purpose. These patentees, Smith et al., state their product is a substitute for cork, and although they do not name a clutch element, yet they name many of the uses to which cork has been put and state their cork compound can be substituted. The claims being broadly drawn, they in effect are for using the cork compound of Smith et al. in place of the cork facing shown on the clutch disks of Bubinger.

It must be held there was no inventive concept in making such a substitution. It may well be appellant's cork compound is superior, for the purposes described, to that of Smith et al.; but the appealed claims do not make any distinction over the cork compound of the reference. When cork has been used for a clutch-disk facing and a cork compound has been produced and described as a substitute for cork, it would appear there was no room for any invention in merely using it for one of the purposes, that of facing a clutch disk, for which cork was heretofore used.

The decision of the Examiners in Chief is affirmed.

---

SPRAGUE *v.* HOWE *v.* WORK.

*Decided May 7, 1924.*

1. INTERFERENCE—APPLICATIONS OR PATENTS OF COMMON OWNERSHIP—ELECTION UNDER RULE 94.

It is highly desirable that a common assignee be required to elect, under rule 94, the application which will be retained in interference.

2. SAME—SAME—SAME—SHOWING.

The showing of reasons why an election should not be required is sufficient where an affidavit is made by the assignee's attorney that one of the assignors is not an employee of the assignee and not under its supervision and permanently resides in a foreign country; that the inventive work was done a number of years ago in another foreign country; that drawings, descriptions, etc., were submitted to engineers and others; and that deponent has sought information from these persons, but some of the papers could not be located and the remainder could not be obtained without compulsion.

3. SAME—SAME—SAME—SAME—RIGHT TO MAKE CLAIMS CONTESTED.

Under the foregoing circumstances it is especially true that the showing is sufficient where the opposing party is contesting the right of one of the assignors to make the claims.

ON PETITION.

AUTOMATIC TRAIN CONTROL.

*Messrs. Dorsey & Cole* for Sprague and for Work.

*Mr. Neil D. Preston* for Howe.

KINNAN, *First Assistant Commissioner:*

This is a petition by the party Howe requesting a review and reversal, under my supervisory authority, of the ruling by the Law Examiner that

the Sprague Safety Control and Signal Corporation may retain in this interference the applications of both Sprague and Work.

Howe contends that the Sprague Corporation, as the common assignee of the Sprague and Work applications, should be required to elect, under rule 94, which of said applications it will retain in the interference and that the other application should be eliminated from such proceeding. The second paragraph of rule 4 reads:

> Parties owning applications or patents which contain conflicting claims will be required before an interference is declared to show cause why these claims shall not be eliminated from all but one of the applications or patents of common ownership.

The showing made by the Sprague Corporation consists of the affidavit of one Sidney F. Parham, who testifies that he is an employee of the firm of Dorsey and Cole, attorneys for the Sprague Corporation; that he has had direct and immediate charge of the Work application since its acquisition by the Sprague Corporation in October, 1922, and of the various interferences in which it has been involved since that time; that he has conducted all the investigations that have been made as to the testimony which might be produced in connection with proof of the Work dates in the instant interference; that said Work is not in the employ or under the supervision of the Sprague Corporation and is a permanent resident of Paris, France; that the inventive work of the party Work began in the year 1912 and continued for several years thereafter in the Canal Zone, Panama; that during this period certain drawings and descriptions relative to the invention were submitted to engineers and others connected with the Panama Canal Commission, which papers it has been impossible, up to the present time, to locate; that said Work in the year 1913 also submitted certain plans, specifications, and information to the chief engineers of a certain railroad company; that deponent has sought information from these engineers, but that they have refused to investigate the files of the railroad company until and unless they are compelled to do so by order of a competent court; and that by reason of these facts deponent and the senior counsel for the Sprague Corporation are unable to determine with any degree of certainty the extent to which they can produce evidence to establish the early dates of conception, drawings, disclosure, and reduction to practice of the party Work.

[1, 2, 3] It is highly desirable that common assignees be required to elect under rule 94. This simplifies the proceedings and reduces the expenses to the parties involved. However, where the common assignee is unable to determine which of the assignors is the prior inventor injustice might result from a forced election. Rule 94 contemplates this situation and provides for a showing of reasons why an election should not be required. It is believed the showing made in the instant case is sufficient. Especially is this true in view of the fact that the party Howe is contesting the right of the party Work to make the claims. If it be finally determined that Work can not make the claims, and this is a matter ancillary to the question of priority, an election of the Work application would result in an award of priority to Howe, although Sprague might be the prior inventor. On the other hand, Work may be the prior inventor, and if his application were eliminated the award might go to one who is not the first inventor.

Howe contends that in any event election should be required before the taking of testimony, and that the Sprague Corporation should be given additional time to obtain the necessary information from the engineers of the railroad company mentioned in Parham's affidavit. Parham swore that said engineers refused to give the desired information, and counsel for the Sprague Corporation point out that the engineers for the railroad company can not be compelled to give the information before the taking of testimony.

It is believed the showing made by the common assignee brings the matter within the exception contemplated by the rule and that the conclusion of the Law Examiner is sound.

The petition is denied.

---

### EX PARTE GOLDMAN.

*Decided December 17, 1924.*

1. NOLAN ACT OF MARCH 4, 1921—SECTION 2—LIMITS TO PERIOD OF EXTENSION.

   Citizens of other countries are not entitled under section 2 of the Nolan Act of March 3, 1921, to extension periods longer than those granted by their respective governments to citizens of the United States, and no extensions can be granted beyond March 3, 1922.

2. SAME—SAME—PAYMENT OF FINAL FEE.

   Where it could not be ascertained until after March 3, 1922, that Poland had granted to citizens of the United States privileges reciprocal to those extended under the Nolan Act, it was not possible at any time to accept a final fee from a Polish citizen under this act.

ON PETITION.

APPARATUS FOR STIRRING, AGITATING, OR MIXING LIQUIDS.

*Mr. Frank S. Appleman* for the petitioner.

KINNAN, *First Assistant Commissioner:*

Petitioner requests that the above case be reviewed by the Commissioner, the application having been abandoned for nonpayment of the final fee June 26, 1920, and that if the fee be accepted an informal call be made on the attorney for the deposit of the fee.

The petition admits that the applicant, through his attorney, interviewed the Assistant Commissioner on or about August 27, 1924, and was informed that for reasons substantially the same as those urged by the examiner the fee could not be applied. These reasons are still held to prevent receiving or applying the final fee.

[1] Applicant now urges that under section 2 of the Nolan Act an extension beyond March 3, 1922, could take place if only the respective country does not grant a shorter term. This interpretation is plainly contradictory to the language of the statute itself which says that "the time now fixed by law for the payment of any fee * * * is hereby extended until the expiration of one year from the passage of this act," etc. The proviso quoted by the petitioner simply prohibits an extension for the full period from August 1, 1914, to March 3, 1922, to citizens of those countries which did not grant an equally long period to citizens of the United States.

[2] Applicant argues that if the last day for paying the final Government fee was March 3, 1922, no reason appears for the publication of the Commissioner's order of June 30, 1923. The obvious reply to this is that in all cases under section 1 of the Nolan Act, and in the vast majority of cases under section 2 of the act, applications filed on or before September 3, 1921, and amendments filed on or before March 3, 1922, were received and held in abeyance until it could be ascertained whether the Polish Government extended reciprocal privileges to citizens of the United States during the year following March 3, 1922. There was no statutory prohibition, as in the case of applications awaiting payment of the final fee. If the fee had been received on or before March 3, 1922, a patent must issue within three months; but no patent could issue because this Office had not received satisfactory information that Poland was granting reciprocal privileges. It was, of course, through no fault of this Office that the necessary information was not forthcoming as soon as that received from many other countries. If the fee had been held until the Polish laws were recognized and then applied as of March 3, 1922, the three months period within which the patent must have issued under section 4885 would have long since passed, and the fee would have had to be returned in any case.

There is no authority in any event for accepting a fee paid in 1924 as if paid Mar. 3, 1922, even if the proviso that the patent must issue within three months after payment of the final fee be disregarded.

The final fee was returned on request of the applicant June 2, 1922. The delay until February 26, 1924, before again tendering the fee itself constitutes fatal laches.

The petition that the Commissioner call for payment of the final fee is denied.

---

### EX PARTE HOLT.

*Decided September 30, 1925.*

TRADE-MARKS — ACT OF 1920 — ENTIRE SENTENCES AND COMBINATIONS OF WORDS—"WE CATER TO THE PARTICULAR TRADE."

The act of March 19, 1920, does not give applicant the right to appropriate entire sentences and combinations of words from the English language which do not have the characteristics of trade-marks, technical or otherwise.

Application for registration of trade-mark for Turkish towels, jacquard towels, etc., filed September 12, 1923, Serial No. 185,706.

ON PETITION.

*Mr. John W. Steward* for applicant.

FENNING, *Assistant Commissioner:*

Applicant petitions from the refusal of the Examiner of Trade-Marks to register, under the act of 1920, the phrase "We Cater to the Particular Trade."

The ground of rejection is that the clause is not a trade-mark, since it does not distinguish applicant's goods, and no one has the right to monopolize as a trade-mark a mark which others may apply with equal truth and have an equal right to employ for the same purpose.

The mark at issue is a mere statement that the parties cater to the particular trade they desire for customers, and it is not apparent how these words can be considered together as falling within the accepted definition of a trade-mark as given by the Supreme Court in the case of *Elgin National Watch Co.* v. *Illinois Watch Case Co.*, 94 O. G. 755; 1901 C. D. 273; 179 U. S. 665, 673, as follows:

> A distinctive mark of authenticity, through which the products of particular manufacturers or the vendible commodities of particular merchants may be distinguished from those of others. It may consist in any symbol or in any form of words, but as its office is to point out distinctively the origin or ownership of the articles to which it is affixed, it follows that no sign or form of words can be appropriated as a valid trade-mark, which from the nature of the fact conveyed by its primary meaning, others may employ with equal truth, and with equal right, for the same purpose.

The Patent Office has refused to register such words as "If Not Right — Write — Will Make Right," for sawmills and the like, in the case of *Ex parte Sumner Iron Works*, 147 O. G. 237, 1909 C. D. 171, and "Good Candy—Nothing Else," for candy, in the case of *Ex parte Chocolate Products Co.*, 142 Ms. D. 335. These two cases were cited with approval by the Court of Appeals of the District of Columbia in the case of *The Dolly Varden Chocolate Company*, 333 O. G. 525, in which the court affirmed the action of the Commissioner in refusing to register the words "When Words Fail—Send" as a trade-mark for Dolly Varden candy.

The act of March 19, 1920, clearly does not intend to give applicant the right to appropriate entire sentences and combinations of words from the English language and thereby prevent others from using those words to which they are inherently entitled, which words, furthermore, do not have the characteristics of trade-marks, technical or otherwise.

The decision of the Examiner of Trade-Marks is affirmed.

---

## ADJUDICATED PATENTS.

(C. C. A. III.) The Appleton and Crawford patents, Nos. 950,502 and 1,016,925, consisting, respectively, of devices for attaching switch box to wall and for putting together sectional part of box, *Held* invalid for want of invention. *Chicago Fuse Mfg. Co.* v. *Roach-Appleton Mfg. Co.*, 6 F. (2d) 827.

(C. C. A. N. Y.) The Hammond patent, No. 1,283,164, for windshield for automobiles, *Held* valid and infringed. *Hammond* v. *Benzer Corporation*, 6 F. (2d) 760.

(D. C. N. Y.) The Belais patent, No. 1,330,231, for white-gold alloy, claim 3 *Held* invalid for want of invention. *David Belais, Inc.*, v. *Goldsmith Bros. Smelting & Refining Co.*, 6 F. (2d) 930.

(C. C. A. N. Y.) The Nessler patent, No. 1,400,370, for hair-waving apparatus, *Held* valid and not anticipated. *Nestle Patent Holding Co.* v. *Gem Permanent Wave Co.*, 6 F. (2d) 1013.

## PATENT SUITS.

## Notice of Publication.

U. S. PATENT OFFICE, *Washington, Oct. 19, 1925.*

*Home Art Masters, Inc., its assigns or legal representatives, take notice:*

An application was filed in this Office by the Library Bureau, of Cambridge, Mass., for cancellation of trade-mark registration No. 97,675, issued June 16, 1914, to Louise Brigham, of 546 East Eighty-ninth Street, New York, N. Y. The assignment records of this Office show a transfer of title of this registration to the Home Art Masters, Inc., a corporation of New York. Since the Office has been unable to obtain the post-office address of the Home Art Masters, Inc., the proceeding can not be instituted. Therefore notice is hereby given that unless said Home Art Masters, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Interference Notices.

U. S. PATENT OFFICE, *Washington, Oct. 21, 1925.*

*Wallace M. Fewel, his assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Ivanhoe Fruit Association, Ivanhoe, Calif., for registration of a trade-mark and trade-mark registered July 22, 1924, No. 186,742, to Wallace M. Fewel, Centerville, Calif., and a notice of such declaration sent by registered mail to said Fewel at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Fewel, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 22, 1925.*

*Harry Leigh Curran, his assigns or legal representatives, take notice:*

An interference has been declared by this Office between applications for patents filed by Louis Carrol Howard, of 612 West One hundred and eighty-fourth Street, New York, N. Y., and Harry Leigh Curran, of 244 West Seventy-sixth Street, New York, N. Y. Counsel for Curran states that the present whereabouts of Curran is unknown to him. Notice is hereby given that unless said Curran, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 27, 1925.*

*International Shade Co., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Incandescent Supply Company, 468 West Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered June 24, 1913, No. 92,222, to the International Shade Co., 46 Harrison Avenue, Springfield, Mass., and a notice of such declaration sent by registered mail to said International Shade Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said International Shade Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

## Changes in Classification.

Order No. 2,935, October 31, 1925, provides:

In *class 1, Nailing and Stapling* (Division 11), establish the following subclasses and definitions, the patents contained therein having been taken for the most part from class 1, Nailing and Stapling, subclasses 46, Implements, Nail driving, Magazine, and 50, Implements, Staple setting:

**Implements**
Nail driving
Magazine
46.1 Pneumatic.
49.4 **Belt-hook inserters.**

46.1. IMPLEMENTS, NAIL DRIVING, MAGAZINE, PNEUMATIC. Nail-driving implements of the magazine type in which the driver is operated by pneumatic means.

49.4. BELT-HOOK INSERTERS. Devices for inserting along the ends of a belt belt hooks to receive the connecting member for the ends of the belt.

In *class 23, Chemistry* (Division 6), in subclass 20, Compounds, Rare-element-compound recovery, Treatment, in the third line of the definition cancel the word "earth;" in subclass 111, Compounds, Salts, Silicon, Base exchange, add to the second note following the definition the following: *and comoination processes and apparatus for treating water and regenerating the base exchange material;* in subclass 113, Compounds, Salts, Silicon, Base exchange, Wet methods, Precipitate, add to the definition the following: *This subclass contains processes forming jellies as well as gelatinous precipitates with a free liquid phase;* in subclass 132, Compounds, Salts, Sulphur, Sulphites, Bisulphites, Towers, change the last word of the title to read *Tower;* in subclass 133, Compounds, Salts, Sulphur, Sulphites, Bisulphites, Tanks, change the last word of the title to read *Tank;* in subclass 224, Nonmetals, Sulphur, add to the definition the following note: *Note.—Colloidal sulphur and sulphur sols made*

*by chemical reaction are found in this class, while those made by physical means are found in class 252, Substance Preparation, subclass 6, Colloids and suspensoids;* and in subclass 291, Apparatus, Chamber elements, insert after the word "process" in the second line of the definition the following: *and other minor parts and components of such chambers as are classified above.*

In *class 28, Textiles* (Division 21), change the titles of subclasses 59, Finishing thread, With liquid treatment; 60, Finishing thread, With liquid treatment, Silk type; and 61, Finishing thread, With liquid treatment, Heating or drying, to read:

**Finishing thread**
59 With fluid treatment
60 Silk type
61 Heating or drying;

abolish the definition of subclass 59, and establish in lieu thereof the following definition:

59. FINISHING THREAD, WITH FLUID TREATMENT. The finishing treatment includes the application of gas or liquid.

**Search Classes—**
8—BLEACHING AND DYEING, appropriate subclasses.
91—COATING, appropriate subclasses;

and in the definition of subclass 61 change the last word in the third line, "liquid," to *fluid.*

In *class 122, Liquid Heaters and Vaporizers* (Division 46), subclass 412, Feed heaters, add to the definition the following note:

Note.—For power plants combined with feed-water heaters see class 60, POWER PLANTS, subclasses 4, Combined with heater, Heating water, By furnace gases and steam; 5, Combined with heater, Heating water, By steam; 64, Exhaust treatment; 66, Exhaust treatment, Reexpansion, Tapping; 67, Exhaust treatment, Reexpansion, Tapping, Turbine; 94, Exhaust treatment, Fluid mingling, Liquid; and 95, Exhaust treatment, Cooling. For Chemical treatment with heating see class 210, LIQUID SEPARATION OR PURIFICATION, subclass 34, Water purification, Chemical treatment, Chemical feeders, Steam or condensed steam. For condensers with feed heaters see class 257, HEAT EXCHANGE, subclass 31, Condensers, Surface, Feed-heater type. For structures of feed heaters per se see the structural subclasses in class 257, HEAT EXCHANGE. For feed heaters in which the steam and water come into contact see structural subclasses in class 261, GAS AND LIQUID CONTACT APPARATUS;

and in subclass 441, Feed heaters, Steam, add to the definition the following note:

Note.—See note to this class, subclass 412.

In class *171, Electricity, Generation* (Division 26), abolish the following subclass, the patents formerly contained therein having been placed for the most part in class 171, Electricity, Generation, subclass 97, Systems of distribution, and also in subclasses 327, Electromechanical, nonmagnetic; 328, Electromechanical, nonmagnetic, Friction; and 329, Electromechanical, nonmagnetic, Electrostatic induction, established in this order:

23 **Friction generators.**

In *class 171, Electricity, Generation* (Division 26), establish the following subclasses, the patents contained therein having been taken for the most part from class 171, Electricity, Generation, subclass 23, Friction generators, abolished in this order:

327 **Electromechanical, nonmagnetic**
328 Friction.
329 Electrostatic induction.

In *class 180, Motor Vehicles* (Division 10), establish the following subclass and definition, the patents contained therein having been taken from class 180, Motor Vehicles, subclasses 69, Power, Hoods, and 90, Bodies, Dashboards.

Power
Hoods
69.01 Water deflectors.

69.01. POWER, HOODS, WATER DEFLECTORS. Devices forming a part of the hood or adapted for use with a conventional hood for deflecting water from the engine compartment of a motor vehicle.

*In class 187, Elevators* (Division 47), abolish the following subclass with its definition, the patents formerly contained therein having been placed in class 214, Material or Article Handling, subclass 46.5, Roadway vehicle loading or unloading, With external cooperating means, Vehicle unloading, Vertically-movable track section, established in this order:

**Portable**
9.5 Wagon-dump type.

In *class 214, Material or Article Handling* (Division 4), establish the following subclass and definition, the patents contained therein having been taken for the most part from class 187, Elevators, subclass 9.5, Portable, Wagon-dump type, abolished in this order:

**Roadway vehicle loading or unloading**
With external cooperating means
Vehicle unloading
46.5 Vertically-movable track section.

46.5. ROADWAY VEHICLE LOADING OR UNLOADING, WITH EXTERNAL COOPERATING MEANS, VEHICLE UNLOADING, VERTICALLY-MOVABLE TRACK SECTION. A vertically movable track or support upon which the wheels of one end of a vehicle can be run and which is designed by vertical movement to elevate one end of the vehicle to facilitate dumping thereof.

In *class 83, Mills* (Division 25), abolish the following subclasses, the patents formerly contained therein having been placed for the most part in class 209, Classifying, Separating, and Assorting Solids, established in this order:

**Amalgamators**
65 Electric,
66 Lead,
67 Mercury,
68 Plate,
69 Vacuum,
70 Vapor,
92 **Assorters, miscellaneous automatic.**
74 **Chip graders.**
**Chop graders**
50 Bran dusters, beaters,
51 Bran dusters, brushes,
49 Electric purifiers,
40 Gravity,
39 Rotary bolts,
38 Shaking bolts,
**Ore and coal**
Separators
54 Dry,
58 Jiggers
79 Piston movement,
80 Sieve movement,
71 Magnetic,
59 Washers
81 Agitators and conveyers,
82 Classifying and separating tanks,
83 Endless apron,
84 Processes
85 Buoyant,
86 Rotary drums, horizontal axis,
87 Rotary pans and stirrers, vertical axis,
88 Shaking tables,
89 Stationary troughs and tables,
56 Sifters and screens
60 Household.

In *class 130, Threshing* (Division 25), abolish the following subclasses, the patents formerly contained therein having been placed for the most part in class 209, Classifying, Separating, and Assorting Solids, established in this order:

12 **Fans and regulators.**
32 **Fruit and vegetable separators.**
**Grain separators**
17 Gravity,
18 Oat, seed, and garlic,
16 Rotary screens,
19 Screens and riddles,
15 Shaking screens.

Establish, in Division 25, class 209, Classifying, Separating, and Assorting Solids, with the subclasses indicated in the new loose leaf now being published for insertion in the Manual of Classification, the patents contained therein having been taken for the most part from class 83, Mills, subclasses 38–40, 49–51, 54, 56, 58–60, 65–71, 74, 79–89, 92, abolished in this order, and class 130, Threshing, subclasses 12, 15–19, 32, abolished in this order.

Lists of subclasses with definitions may be seen in the Classification Division, Room 165.

# TRADE-MARKS

## OFFICIAL GAZETTE, NOVEMBER 17, 1925.

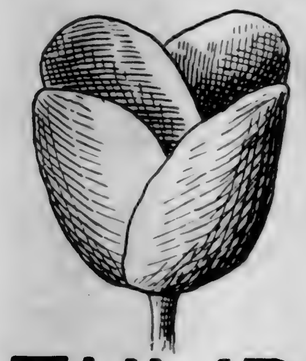
[VOL. 340. No. 3.]

**The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.**

**Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.**

**As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.**

Ser. No. 149,888. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EUGENE S. COCHRAN, Washington, D. C. Filed July 1, 1921.



TULIP

*Particular description of goods.*—Pineapples in Their Natural State, Coffee, and Fresh Vegetables and Fruits—to wit, Sweet Potatoes, Irish Potatoes, Yams, Tomatoes, Lima Beans, Peas, Carrots, Cabbages, Lettuce, Spinach, Corn, Radishes, Beets, Onions, Eggplants, Peppers, Melons, Bananas, Alligator Pears, Pumpkins, Squashes, Turnips, Cucumbers, Rhubarb, and Mint; Honey, Salad Dressing, and also Cooked Canned Poultry, Beef, Lamb, Pork, and Game.

*Claims use* since about Apr. 25, 1921.

Ser. No. 173,728. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. SCHILLING & Co., San Francisco, Calif. Filed Dec. 22, 1922.

WINGS OF 'THE MORNING

*Particular description of goods.*—Coffee, Ground or Pulverized.

*Claims use* since Oct. 3, 1922.

Ser. No. 180,675. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) WEIMARFARBE, GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Weimar, Germany. Filed May 15, 1923.

*Particular description of goods.*—Artists' Oil Colors.

*Claims use* since April, 1922.

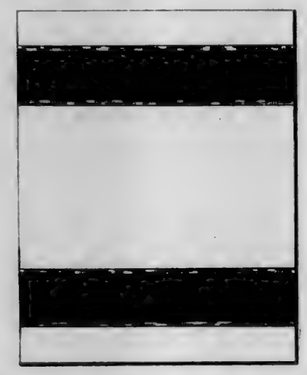
Ser. No. 184,949. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRY WEINSTEIN, doing business as Purafect Products Co., Brooklyn, N. Y. Filed Aug. 24, 1923.

The words "Purity, Fragrance, Refinement" are disclaimed apart from the mark shown.

*Particular description of goods.*—Preparation for Perfuming, Softening, and Disinfecting Water, Put Up in Liquid, Powder, Tablet, or Cream Form, Cold Cream, Lip Salve, Rouge, Face Powder, Hand Creams and Lotions, Face Creams and Lotions, Skin Bleaches; Remedies for Sunburn, Freckles, and Liver Spots; Talcum Powder, Foot Remedies in Powder, Liquid, or Soap Form; Toilet Waters, Tooth Powder, Tooth Paste, Mouth Washes, Hair Tonic, Liquid Shampoo, Depilatories, Deodorant, Antiseptics, Perfumery, Glycerin Lotions, and Face Enamel.

*Claims use* since about May 15, 1923.

Ser. No. 198,202. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TONE BROTHERS, Des Moines, Iowa. Filed June 6, 1924.



The mark consists of parallel black bands or stripes with narrower gold stripes at the edges thereof, as shown in the specimens. The drawing is conventionally lined for the color gold.

*Particular description of goods.*—Coffee, Tea, Spices, Food-Flavoring Extracts; Flavoring Seeds—namely, Mustard, Celery, Cardamom, Coriander, Carhway, Anise, Fennel, Dill, Cumin, and Poppy Seed.

*Claims use* since 1918.

---

Ser. No. 198,553. (CLASS 37. PAPER AND STATIONERY.) THE AMERICAN CRAYON COMPANY, Sandusky, Ohio. Filed June 14, 1924.

**Old Faithful**

*Particular description of goods*—Paper-Wrapped Pencils, Crayons, Chalk Crayons, Pressed Crayons, Wax Crayons, Pastel Crayons, and Pencils.

*Claims use* since 1914.

---

Ser. No. 198,937. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) C. P. CHEMICAL & DRUG CO., INC., New York, N. Y. Filed June 21, 1924.

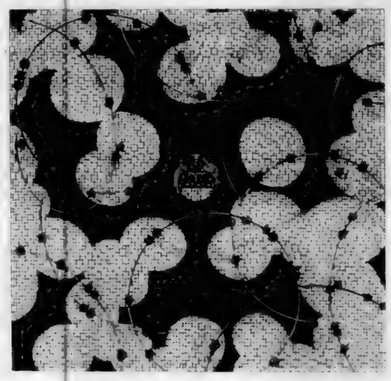
The letters "C. P." are disclaimed apart from the mark shown in the drawing.

*Particular description of goods.*—Pharmaceutical Preparations for Human Use and Veterinary Purposes to Be Employed for Treatment of Gonorrhea, Vulvovaginitis, Blenorrhea, Constipation, Atonic and Spastic Obstipation, Ingestional Stasis, Hypersecretion, Hyperacidity, Hyperæsthesia of the Stomach Lining, Gastric and Duodenal Ulcer, Neurasthenia, Hysteria, Nervous Insomnia, Palpitation of the Heart, Alcoholism, Gout, Rheumatism, Neuritis, Neuralgia, Inflammation of Different Organs Such as Nose, Pharynx, Larynx, etc., to Be Administered by Injections, Rinsing, or by Means of Tampons, Brushes, etc.

*Claims use* since September, 1922.

---

Ser. No. 199,084. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE ROGER & GALLET, Paris, France. Filed June 24, 1924.



The drawing is lined to indicate the colors gold, green, and black.

*Particular description of goods.*—Toilet Preparations—Namely, Pastes and Powders for Beautifying and Preserving the Skin, Hair, and Teeth—and Perfumery.

*Claims use* since February, 1923.

---

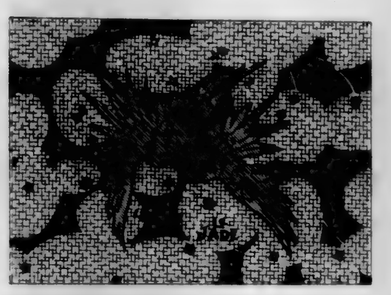
Ser. No. 199,085. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE ROGER & GALLET, Paris, France. Filed June 24, 1924.

The drawing is lined to indicate the colors gold, green, and black.

*Particular description of goods.*—Toilet Preparations—Namely, Pastes and Powders for Beautifying and Preserving the Skin, Hair, and Teeth—and Perfumery.

*Claims use* since February, 1923.

Ser. No. 199,086. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE ROGER & GALLET, Paris, France. Filed June 24, 1924.



The drawing is lined to indicate the colors gold, green, and black.

*Particular description of goods.*—Toilet Preparations—Namely, Pastes and Powders for Preserving and Beautifying the Skin, Hair, and Teeth—and Perfumery.

*Claims use* since February, 1923.

---

Ser. No. 199,294. (CLASS 39. CLOTHING.) NELSON KNITTING COMPANY, Rockford, Ill. Filed June 28, 1924. Under ten-year proviso.

ORIGINAL ROCKFORD

No exclusive claim is made to the word "Original" apart from the mark as shown. The mark consists in the words "Original Rockfords."

*Particular description of goods.*—Hosiery.

*Claims use* since 1914.

---

Ser. No. 199,295. (CLASS 39. CLOTHING.) NELSON KNITTING COMPANY, Rockford, Ill. Filed June 28, 1924.

THE OLD ORIGINAL ROCKFORD SOCK

Trade-mark consists of the words "The Old Original Rockford Sock." No claim is made to the word "Sock" apart from the mark shown.

*Particular description of goods.*—Hosiery.

*Claims use* since 1914.

Ser. No. 200,013. (CLASS 39. CLOTHING.) SAWYER SHOE CO., INC., New York, N. Y. Filed July 14, 1924.

*Particular description of goods.*—Leather, Rubber, and Fabric Shoes for Men, Boys, and Youths.

*Claims use* since 1922.

---

Ser. No. 200,517. (CLASS 39. CLOTHING.) NATIONAL DEPARTMENT STORES INC., New York, N. Y. Filed July 25, 1924.

NADSCO

*Particular description of goods.*—Suits and Coats for Men and Boys; Dresses and Coats for Women, Children's Coats, Skirts and Waists; Underwear, Textile and Knitted for Men, Women, and Children; Fur Garments—viz., Cloaks, Stoles, Chokers, and Neck Pieces; Kimonos, Children's Dresses; Hosiery for Men, Women, and Children; Corsets and Neckties; Skin and Fabric Gloves; Hats for Men, Women, and Children; Men's and Boys' Clothing in One, Two, Three, and Four Piece Garments; and Overcoats; Shoes for Men, Women, and Children Made from Leather or Fabric, or Combinations Thereof; and Sweaters.

*Claims use* since Apr. 10, 1924.

---

Ser. No. 200,961. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMIL RATH, doing business as Vial & Uhlmann, Frankfort-on-the-Main, Germany. Filed Aug. 4, 1924.

Bismolan

*Particular description of goods.*—Medicinal and Hemorrhoidal Preparations.

*Claims use* since June 10, 1903.

---

Ser. No. 201,319. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) ATLAS ASBESTOS COMPANY, North Wales, Pa. Filed Aug. 13, 1924.

BODYGARD

*Particular description of goods.*—Ford Transmission Lining.

*Claims use* since July 1, 1924.

Ser. No. 202,366. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ZONITE PRODUCTS COMPANY, New York, N. Y. Filed Sept. 8, 1924.

*Particular description of goods.*—Antiseptic, Germ Destroyer, Disinfectant, Deodorant, and Bleach.
*Claims use* since July 25, 1924.

---

Ser. No. 202,563. (CLASS 39. CLOTHING.) NOBILITY GLOVES, INC., New York, N. Y. Filed Sept. 12, 1924.

Nobility

*Particular description of goods.*—Gloves of Leather and Like Material.
*Claims use* since Apr. 22, 1924.

---

Ser. No. 203,304. (CLASS 33. GLASSWARE.) BIG BILL BOTTLING COMPANY, Winston-Salem, N. C. Filed Oct. 2, 1924.

BIG BILL

*Particular description of goods.*—Glass Bottles.
*Claims use* since Sept. 15, 1924.

---

Ser. No. 203,738. (CLASS 33. GLASSWARE.) THE MILLER COMPANY, Meriden, Conn., and New York, N. Y. Filed Oct. 11, 1924.

IVADINE

*Particular description of goods.*—Glass Globes and Reflectors for Artificial Light.
*Claims use* since July 1, 1920.

Ser. No. 204,295. (CLASS 32. FURNITURE AND UPHOLSTERY.) L. BAMBERGER & COMPANY, Newark, N. J. Filed Oct. 23, 1924.

Charm Shop

*Particular description of goods.*—Household Furniture—Namely, Tables, Chairs, Desks, Telephone Stands, Stools, Chests, Frames, Mirrors, Cabinets, and Aquarium Stands.
*Claims use* since about Sept. 1, 1924.

---

Ser. No. 204,739. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VICTOR VIVAUDOU, New York, N. Y. Filed Nov. 1, 1924.

Pleasant Memories

*Particular description of goods.*—Face Powders, Face Creams, Perfumes, Toilet Waters, Hair Tonics, Hair Oils, Dentifrices, Tooth Powders, Talcum Powders, Rouges, Nail Polishes, Face Packs, Deodorizing Preparations, and Sachet Powders.
*Claims use* since Oct. 14, 1924.

---

Ser. No. 204,899. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FRIED, MENDELSON & COMPANY, New York, N. Y. Filed Nov. 6, 1924.

VELV-O-ROY

*Particular description of goods.*—Silk, Cotton, and Silk and Cotton Mixture Piece Goods.
*Claims use* since Sept. 10, 1924.

---

Ser. No. 204,918. (CLASS 39. CLOTHING.) THE MALINE MILLS COMPANY, Winston-Salem, N. C. Filed Nov. 6, 1924.

Nu-kut

*Particular description of goods.*—Knit Underwear.
*Claims use* since Oct. 27, 1924.

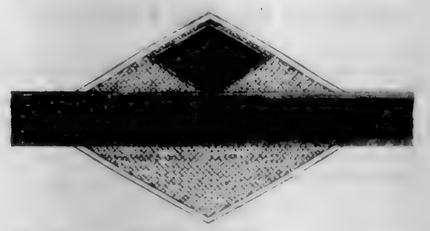
Ser. No. 204,982. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) THE UNITED STATES MATCH CORPORATION, Chicago, Ill. Filed Nov. 7, 1924.

American Family Matches

The word "Matches" is disclaimed apart from the mark shown.
*Particular description of goods.*—Matches.
*Claims use* since June 6, 1924.

---

Ser. No. 205,251. (CLASS 15. OILS AND GREASES.) HENRY C. THOMPSON, Hartford, Conn., assignor to The Thompson Specialties, Inc., Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 13, 1924.



The colors consist of the colors blue and yellow, as shown in the color lines therein.
*Particular description of goods.*—Oils and Greases—Namely, Gear Greases, Cup Greases, and Penetrating Oils.
*Claims use* since Oct. 31, 1924.

---

Ser. No. 206,495. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SIMON ROSENTHAL, doing business as Wholesale Brokerage Co., New York, N. Y. Filed Dec. 9, 1924.

S.R.

*Particular description of goods.*—Epsom Salts, Castor Oil, Spirits of Camphor, Tincture of Iodine, Tincture of Opium, Quinine, Borax, Sodium Bicarbonate, Tincture of U. S. P. Double-Strength Ginger, Senna Leaves, Licorice, and Sulphur.
*Claims use* since Nov. 22, 1924.

Ser. No. 206,939. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) WILLIAM RALPH CALHOUN, doing business as Red Chief Rubber Company, Fort Worth, Tex. Filed Dec. 19, 1924.

RED CHIEF

*Particular description of goods.*—Inner Tubes for Tires.
*Claims use* since September, 1922.

---

Ser. No. 208,044. (CLASS 15. OILS AND GREASES.) CORNING OIL COMPANY, INC., New York, N. Y. Filed Jan. 13, 1925.

ACORN ING BRAND

*Particular description of goods.*—Lubricating Oils and Greases.
*Claims use* since Jan. 1, 1894.

---

Ser. No. 208,250. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) W. G. MICKE, Lodi, Calif. Filed Jan. 17, 1925.

RACE TRACK

*Particular description of goods.*—Fresh Grapes.
*Claims use* since Sept. 1, 1912.

---

Ser. No. 208,654. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARMONY CREAMERY COMPANY, Pittsburgh, Pa. Filed Jan. 26, 1925.

"From the cow to you in glass"

No claim is made for the use of the printed matter appearing upon the illustration of the car except in conjunction with the remaining features of the mark.
*Particular description of goods.*—Milk, Buttermilk, and Cream.
*Claims use* since Dec. 4, 1924.

Ser. No. 208,655. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARMONY CREAMERY COMPANY, Pittsburgh, Pa. Filed Jan. 26, 1925.

No claim is made for the use of the printed matter appearing upon the illustration of the car except in conjunction with the remaining features of the mark.

*Particular description of goods.*—Milk, Buttermilk, and Cream.

*Claims use* since Dec. 4, 1924.

---

Ser. No. 208,810. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HACO GESELLSCHAFT A.-G. BERN, Gumligen, Switzerland. Filed Jan. 29, 1925.

TEX TON

*Particular description of goods.*—Condiments, Sauces, Bouillon Cubes, and Soup Tablets All Containing Chemically-Decomposed Vegetable Albumen.

*Claims use* since July 7, 1923.

---

Ser. No. 210,125. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KEEN, ROBINSON & COMPANY LIMITED, London, England. Filed Feb. 25, 1925.

The exclusive use of all of the wording upon drawing is disclaimed with the exception of the facsimile signature "Matts. Robinson" and applicant's name apart from the mark shown on drawing.

*Particular description of goods.*—Barley.

*Claims use* since 1862.

Ser. No. 210,368. (CLASS 39. CLOTHING.) DURABLE RUBBER CORPORATION, Detroit, Mich. Filed Mar. 2, 1925.

FIT-FAST

*Particular description of goods.*—Shoe Heels.

*Claims use* since Feb. 1, 1925.

---

Ser. No. 210,738. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN M. MASSLON, doing business as Cit-Rhu Mfg. Co., McKees Rocks, Pa. Filed Mar. 9, 1925.

**Masslon's Cit-Rhu Compound**

No claim is made to the words "Masslon's Compound" apart from the mark shown on the drawing.

*Particular description of goods.*—Effervescent Compound for Rheumatism, Kidney, Liver, and Bladder Trouble, Constipation, Headache, Dyspepsia, Stomach and Intestinal Trouble, Piles, and Skin Diseases.

*Claims use* since 1922.

---

Ser. No. 210,847. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KNICKERBOCKER CHOCOLATE CO., New York, N. Y. Filed Mar. 11, 1925.

*Particular description of goods.*—Sweet Milk Chocolate Cut in Fancy Shapes and Figures.

*Claims use* since Nov. 10, 1924.

---

Ser. No. 210,943. (CLASS 6. CHEMICALS, MEDICINES AND PHARMACEUTICAL PREPARATIONS.) WOLO A.-G. (WOLO LTD.), Zurich, Switzerland. Filed Mar. 12, 1925.

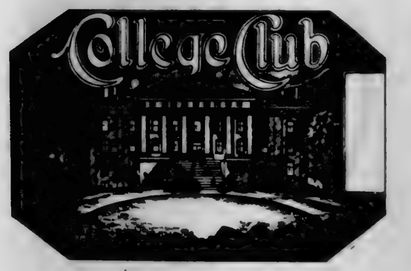
„EMPYROL"

*Particular description of goods.*—Pharmaceutical Preparation Used for Preparing Tar Baths for the Treatment of Chronic Skin Diseases and Rheumatic Diseases.

*Claims use* since 1909.

Ser. No. 211,171. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEXINGTON COFFEE COMPANY, Lexington, Ky. Filed Mar. 17, 1925.

College Club



*Particular description of goods.*—Coffee.

*Claims use* since Jan. 17, 1925.

---

Ser. No. 211,193. (CLASS 39. CLOTHING.) NATHAN WILSON, New York, N. Y. Filed Mar. 17, 1925.

Ritzy Miss

*Particular description of goods.*—Women's Outer Garments—Namely, Waists, Overblouses, Capes, Sweaters, Skirts, Dresses, Suits, and Coats.

*Claims use* since Mar. 2, 1925.

---

Ser. No. 211,722. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH W. STEVENS, New York, N. Y. Filed Mar. 26, 1925.

MERCOFUM

*Particular description of goods.*—Substance for Use in the Treatment of Syphilis.

*Claims use* since December, 1924.

---

Ser. No. 211,723. (CLASS 33. GLASSWARE.) L. W. TIFFANY, Winsted, Conn. Filed Mar. 26, 1925.

Get-Ezy

*Particular description of goods.*—Glass Pin Trays or Holders.

*Claims use* since Oct. 1, 1924.

Ser. No. 211,951. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) SEATTLE PAINT COMPANY, Seattle, Wash. Filed Mar. 31, 1925.

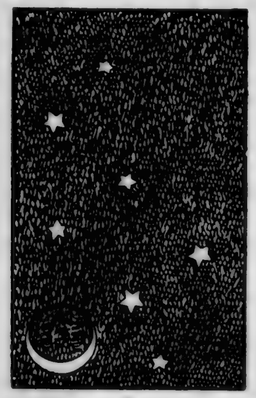
LIGHTNIN

*Particular description of goods.*—Ready-Mixed Paints, Paint Enamels, Stains, Varnishes, and Lacquers.

*Claims use* since Sept. 15, 1924.

---

Ser. No. 212,432. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANKLIN SIMON & CO., INC., New York, N. Y. Filed Apr. 9, 1925.



*Particular description of goods.*—Perfumes and Hygienic Products—Namely, Bath Salts, Compacts, Refills, Cold Creams, Face Packs, Shampoos, Skin Creams, Sachets; Toilet Powders, Such as Face, Sachet, Talcum, and Toilet Dusting Powders; Eyedrops, Toilet Waters, Toilet Extracts, Cologne, Cologne Water, Smelling Salts, Aromatic Vinegars, Rouges, Skin Bleaches, Lip Sticks, Vanishing Creams, Beauty Clay, Facial Paints, Eyebrow Pencils, and Hair, Face, Hand, and Foot Lotions.

*Claims use* since Mar. 10, 1924.

---

Ser. No. 212,909. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FOOTHILL GROVES, Yorba Linda, Calif. Filed Apr. 18, 1925.

Friendly

*Particular description of goods.*—Fresh Citrous Fruits—Namely, Fresh Oranges, Lemons, and Grapefruit.

*Claims use* since January, 1925.

Ser. No. 213,012. (CLASS 38. PRINTS AND PUBLICATIONS.) DOUBLEDAY, PAGE & CO., Garden City, N. Y. Filed April 20, 1925.

**RADIO BROADCAST**

*Particular description of goods.*—Magazine Issued Monthly.

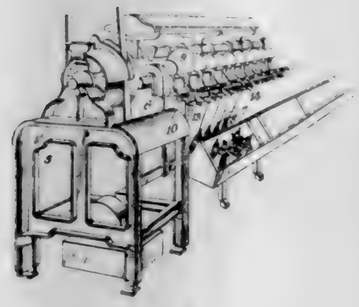
# REISSUES

## NOVEMBER 17, 1925.

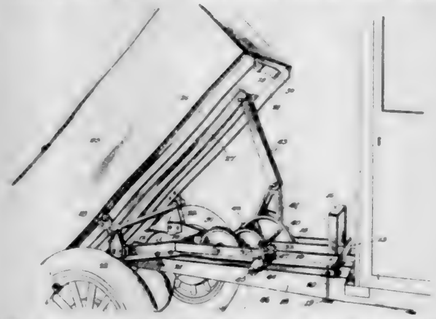
16,211. ATTACHMENT FOR CONE-WINDING MACHINES. ADOLPH A. JOHNSON, Hanes, N. C., assignor, by mesne assignments, to Danville Conditioning Machine Company, Inc., Danville, Va., a Corporation of Virginia. Filed Sept. 27, 1922. Serial No. 590,989. Original No. 1,424,100, dated July 25, 1922. Serial No. 487,795, filed July 26, 1921. 5 Claims. (Cl. 28—59.)



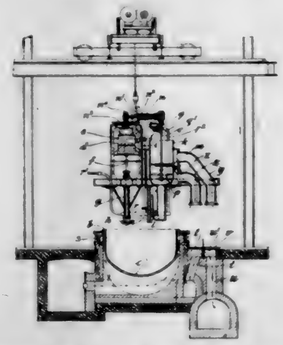
5. Yarn moistening means including a moistening roller revoluble about a horizontal axis, means for causing the yarn to bear against the periphery of said roller, means for causing the traverse of the yarn longitudinally of the roller and substantially the entire length thereof, and means for moistening the roller.

16,212. DUMPING UNIT FOR MOTOR TRUCKS. HARRY POUNDER, Galion, Ohio, assignor to Perfection Steel Body Company, Galion, Ohio. Filed Apr. 27, 1925. Serial No. 26,310. Original No. 1,529,374, dated Mar. 10, 1925, Serial No. 726,531, filed July 17, 1924. 5 Claims. (Cl. 298—19.)

4. In a dumping unit for motor trucks, a base frame having opposite end portions extended laterally to engage the side bars of a truck chassis, and having the intermediate portion narrow to come between the said side bars, elements at opposite ends of the frame to form a front rest and rear bearing members, a body tiltably mounted upon the bearing members and normally in engagement with the said rest, a train of gearing mounted upon the intermediate narrow portion of the frame between the rest and bearing members and including a large gear wheel having an arm projected radially therefrom, and a link connection between the said body and radial arm.



16,213. APPARATUS FOR REFINING METALS. HENRY HARRIS, London, England. Filed Feb. 12, 1925. Serial No. 8,838. Original No. 1,465,128, dated Aug. 14, 1923. Serial No. 537,009, filed Feb. 16, 1922. 13 Claims. (Cl. 266—34.)

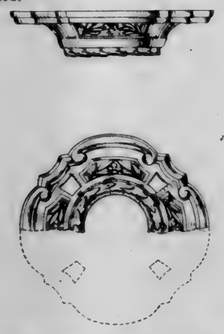


1. Apparatus for refining molten metal by passing it through a molten reagent, comprising a melting pot for the metal, a framework adapted to be lowered over the melting pot, a container for the molten reagent carried by the framework, and means also carried by the framework and extending into the molten metal for raising the latter and delivering it into the container, the lower portion of the container having a discharge opening for the return of the metal to the melting pot.

# DESIGNS

## NOVEMBER 17, 1925.

68,752. BALL-LAMP ADAPTER. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 14,341. Term of patent 7 years.



The ornamental design for a ball lamp adapter, as shown.

68,753. BALL-LAMP ADAPTER. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 14,342. Term of patent 7 years.

The ornamental design for a ball lamp adapter, as shown.

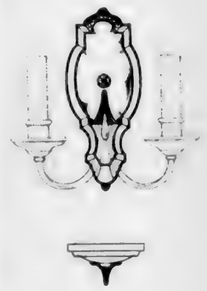
68,754. PENDANT FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 14,343. Term of patent 7 years.

The ornamental design for a pendant for lighting fixtures, as shown.

68,755. PENDANT FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 14,344. Term of patent 7 years.

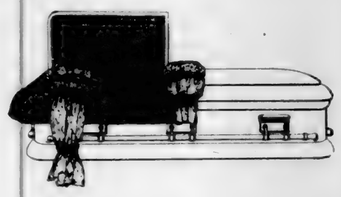
The ornamental design for a pendant for lighting fixtures, as shown.

68,756. BACKPLATE FOR LIGHTING FIXTURES. HARRY AGLOW, New York, N. Y., assignor to Artcraft Metal Stamping Corporation, a Corporation of New York. Filed Sept. 18, 1925. Serial No. 14,811. Term of patent 3½ years.



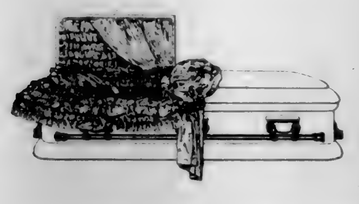
The ornamental design for a backplate for lighting fixtures substantially as shown.

68,757. COMBINED CASKET AND LINING. RIA OLIVE ANDERSON, Oakland, Calif., assignor to Western Casket Co., Oakland, Calif., a Corporation. Filed Oct. 27, 1924. Serial No. 11,296. Term of patent 3½ years.



The ornamental design for a combined casket and lining, as shown.

68,758. COMBINED CASKET AND LINING. RIA OLIVE ANDERSON, Oakland, Calif., assignor to Western Casket Co., Oakland, Calif., a Corporation. Filed Oct. 27, 1924. Serial No. 11,297. Term of patent 3½ years.



The ornamental design for a combined casket and lining, as shown.

68,759. COMBINED CASKET AND LINING. RIA OLIVE ANDERSON, Oakland, Calif., assignor to Western Casket Co., Oakland, Calif., a Corporation. Filed Oct. 27, 1924. Serial No. 11,298. Term of patent 3½ years.

The ornamental design for a combined casket and lining, as shown.

68,760. GAME BOARD. ERASTUS WILLIAMS APPELMAN, Clermont, Iowa, assignor to Anna Larrabee, Clermont, Iowa. Filed Oct. 12, 1923. Serial No. 7,479. Term of patent 14 years.

The ornamental design for a game board, as shown.

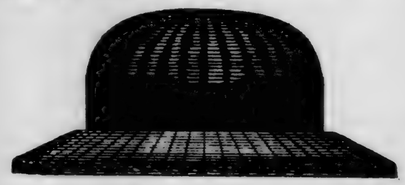
68,761. METAL BORDER STRIP FOR A PLATE OR SIMILAR ARTICLE. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed May 29, 1925. Serial No. 13,595. Term of patent 14 years.

The ornamental design for a metal border strip for a plate or similar article as shown.

68,762. FLOWER HOLDER. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed May 29, 1925. Serial No. 13,596. Term of patent 14 years.

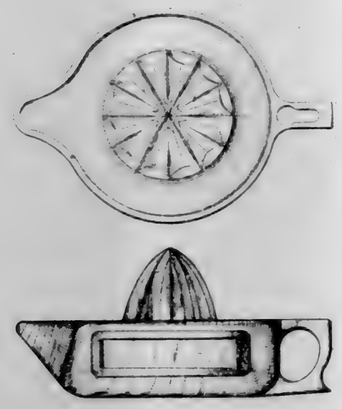
The ornamental design for a flower holder as shown.

68,763. HAT. CHARLES E. BINGHAM, New York, N. Y. Filed July 16, 1925. Serial No. 14,120. Term of patent 3½ years.



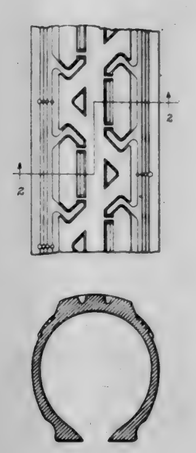
The ornamental design for a hat, as shown.

68,764. FRUIT-JUICE EXTRACTOR OR SIMILAR ARTICLE. WILLIAM M. BRISTOL, Highland, Calif., assignor to California Fruit Growers Exchange, Los Angeles, Calif., a Corporation of California. Filed Aug. 19, 1925. Serial No. 14,510. Term of patent 14 years.



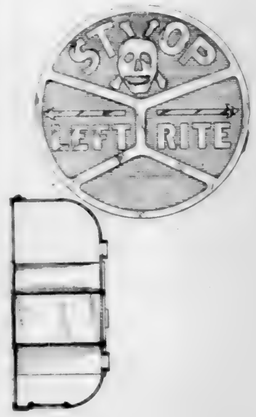
The ornamental design for a fruit juice extractor or similar article, substantially as shown.

68,765. TIRE. EDWARD H. BROADWELL, Longmeadow, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 2, 1924. Serial No. 10,948. Term of patent 14 years.



The ornamental design for a tire as shown.

68,766. SIGNAL-LAMP CASING. THOMAS S. CATLIN, Waveland, Ind. Filed Sept. 29, 1925. Serial No. 14,938. Term of patent 14 years.

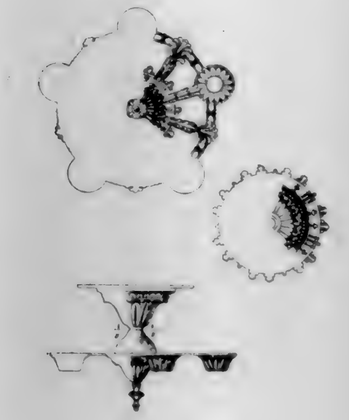


The ornamental design for a signal lamp casing, as shown.

68,767. SWIVEL JOINT FOR LIGHTING FIXTURES. THOMAS C. CHRIST, Reading, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 14,340. Term of patent 7 years.

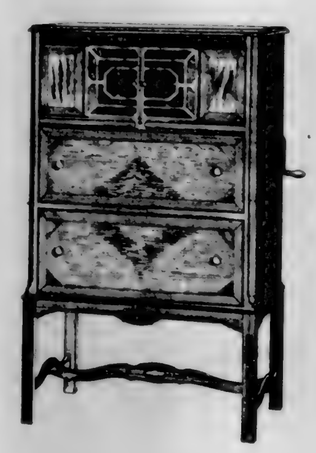
The ornamental design for a swivel joint for lighting fixtures, as shown.

68,768. LIGHTING FIXTURE. STANLEY CZAPEK, Detroit, Mich., assignor to Radiant Specialty Co., a Corporation of Michigan. Filed July 20, 1925. Serial No. 14,146. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

68,769. RADIO PHONOGRAPH CABINET. WILLIAM H. DEWAR, Philadelphia, Pa., assignor to The Pooley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 13,954. Term of patent 7 years.

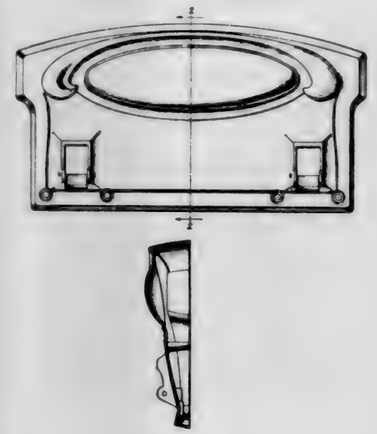


The ornamental design for a radio phonograph cabinet, as shown.

68,770. RADIOCABINET. WILLIAM H. DEWAR, Philadelphia, Pa., assignor to The Pooley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 13,955. Term of patent 7 years.

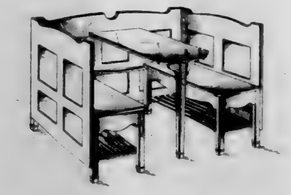
The ornamental design for a radiocabinet, as shown.

68,771. CASKET-HANDLE SOCKET. EDWARD DRINKUTH, Cincinnati, Ohio, assignor to The Cincinnati Coffin Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1925. Serial No. 12,833. Term of patent 3½ years.



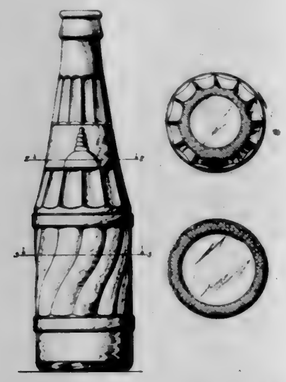
The ornamental design for a casket handle socket, as shown.

68,772. COMBINED SEAT AND TABLE. ARTHUR W. EICHMAN, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Dec. 16, 1921. Serial No. 522,932. Term of patent 14 years.



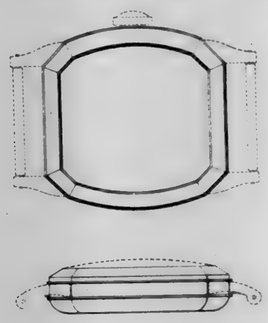
The ornamental design for a combined seat and table, substantially as shown.

68,773. BOTTLE. HARRY J. EISENBERG, Montgomery, Ala. Filed Sept. 23, 1925. Serial No. 14,879. Term of patent 14 years.



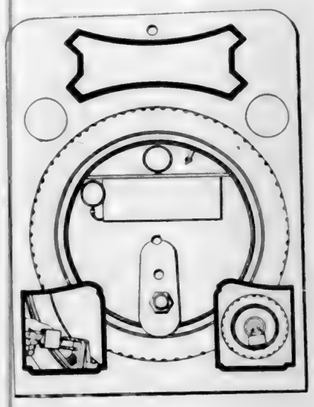
The ornamental design for a bottle, as shown.

68,774. WATCHCASE. JOSEPH FAHYS, Locust Valley, N. Y., assignor to Joseph Fahys & Co., New York, N. Y., a Corporation of New York. Filed June 24, 1925. Serial No. 13,880. Term of patent 7 years.



The ornamental design for a watchcase, as shown.

68,775. DISPLAY CARD. SAMUEL R. FRAIM, Lancaster, Pa. Filed Apr. 29, 1925. Serial No. 13,255. Term of patent 14 years.

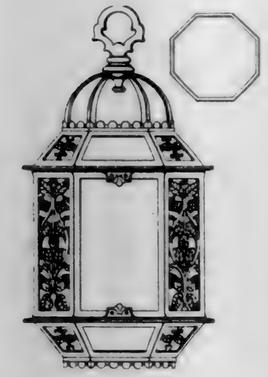


The ornamental design for a display card, as shown.

68,776. CHANDELIER BODY FOR LIGHTING FIXTURES. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Mfg. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1925. Serial No. 13,120. Term of patent 7 years.

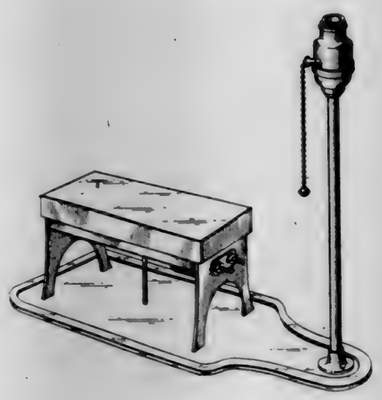
The ornamental design for a chandelier body for lighting fixtures, as shown.

66,777. ELECTRIC LANTERN. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Mfg. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1925. Serial No. 13,121. Term of patent 7 years.



The ornamental design for an electric lantern, as shown and described.

68,778. COMBINED ELECTRIC HEATER AND LAMP STAND. DANIEL J. GESSLER, San Francisco, Calif., assignor, by mesne assignments, to Universal Specialty Company, a Copartnership consisting of Lillian V. Gessler, Albert J. Brown, William Klein, Reed M. Clarke, and Alvin Gerlack. Filed Apr. 2, 1923. Serial No. 5,662. Term of patent 3½ years.



The ornamental design for a combined electric heater and lamp stand, as shown.

68,779. PERFUME BOTTLE. GUY T. GIBSON, New Rochelle, N. Y. Filed Sept. 29, 1925. Serial No. 14,948. Term of patent 14 years.

The ornamental design for a perfume bottle as shown.

68,780. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,967. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,781. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,961. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,782. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,962. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,783. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,963. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

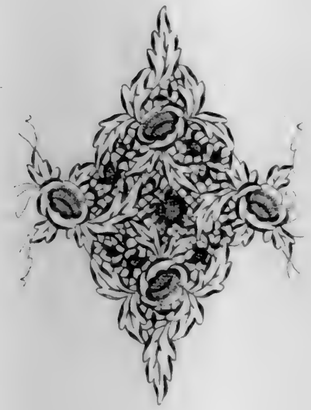
68,784. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,964. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,785. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,965. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,786. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,966. Term of patent 3½ years.

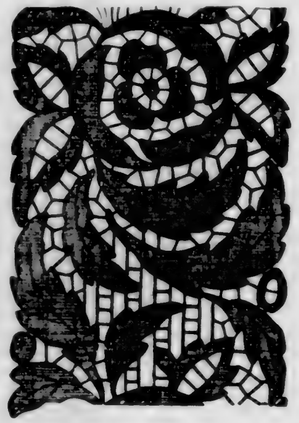


The ornamental design for lace substantially as shown.

68,787. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,968. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,788. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,969. Term of patent 3½ years.

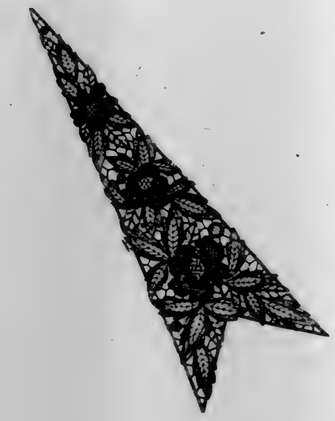


The ornamental design for lace substantially as shown.

68,789. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,970. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,790. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,971. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

68,791. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,972. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,792. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,973. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,793. LACE. PAUL GROEBLI, New York, N. Y. Filed Sept. 30, 1925. Serial No. 14,974. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,794. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,042. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,795. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,043. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

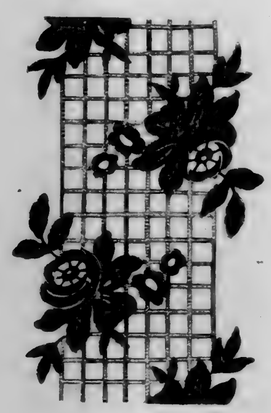
68,796. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,044. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,797. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,045. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,798. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,046. Term of patent 3½ years.

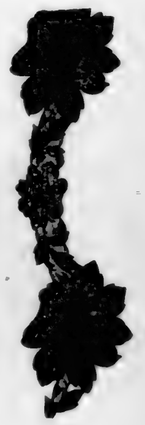


The ornamental design for lace substantially as shown.

68,799. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,047. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,800. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,048. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

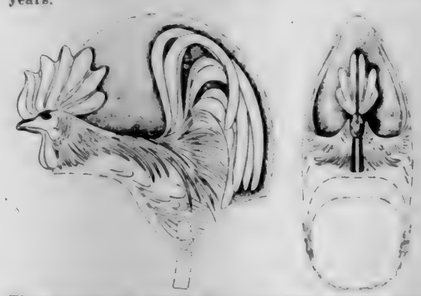
68,801. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,049. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,802. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,050. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

68,803. BATHING CAP. GEORGE K. GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Mar. 10, 1925. Serial No. 12,677. Term of patent 7 years.



The ornamental design for a bathing cap, as shown.

68,804. TOY BANK. DOUGLAS HALL, Chicago, Ill. Filed Sept. 25, 1925. Serial No. 14,903. Term of patent 14 years.

The ornamental design for a toy bank, as shown.

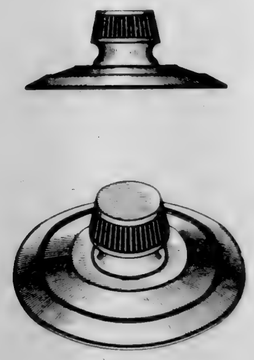
68,805. CUT STONE OR SIMILAR ARTICLE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,881. Term of patent 3½ years.

The ornamental design for a cut stone or similar article, as shown.

68,806. CUT STONE OR SIMILAR ARTICLE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 14,880. Term of patent 3½ years.

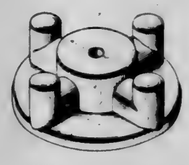
The ornamental design for a cut stone or similar article, as shown.

68,807. DIAL ASSEMBLY. WILLIAM R. HILL, Rochester, N. Y., assignor to Sargent & Greenleaf, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 10, 1925. Serial No. 13,085. Term of patent 14 years.



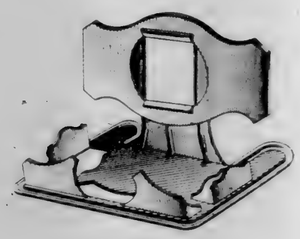
The ornamental design for a dial assembly, as shown.

68,808. BATTERY VENT CAP. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1923. Serial No. 5,299. Term of patent 14 years.



The ornamental design for a battery vent cap, substantially as shown.

68,809. CALENDAR STAND. NELSON L. JACOBUS, Hempstead, N. Y., assignor to The Electro Chemical Engraving Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 25, 1924. Serial No. 10,543. Term of patent 14 years.



The ornamental design for a calendar stand, as shown.

68,810. PLATE OR SIMILAR ARTICLE. WILLIAM G. JACKSON, Los Angeles, Calif., assignor to Empire China Company, Burbank, Calif., a Corporation of California. Filed Sept. 2, 1925. Serial No. 14,693. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

68,811. SPINNING TOP. LOUIS MORDECAI JAMPEL, New York, N. Y. Filed Aug. 11, 1925. Serial No. 14,391. Term of patent 7 years.

The ornamental design for a spinning top, as shown.

68,812. WEDDING RING. FELIX P. KINSLEY, St. Louis, Mo. Filed Sept. 12, 1925. Serial No. 14,767. Term of patent 7 years.

The ornamental design for a wedding ring, as shown.

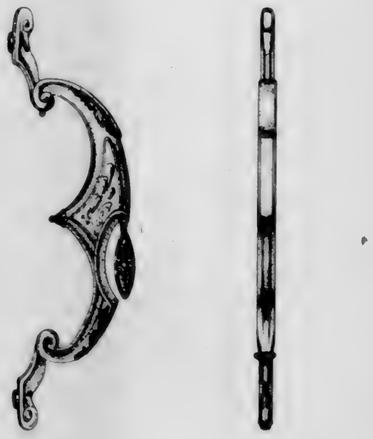
68,813. LEATHER OR SIMILAR ARTICLE. FREDERICK ANTHONY KOLB, Newark, N. J., assignor to Geisman, Musliner & Brightman, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 14,421. Term of patent 7 years.

The ornamental design for leather or similar article, as shown.

68,814. ARM FOR LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed July 31, 1925. Serial No. 14,290. Term of patent 7 years.

The ornamental design for an arm for lighting fixture, as shown.

68,815. BRACKET ELEMENT OF AN ELECTRIC-LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Aug. 14, 1925. Serial No. 14,427. Term of patent 7 years.



The ornamental design for a bracket element of an electric lighting fixture as shown.

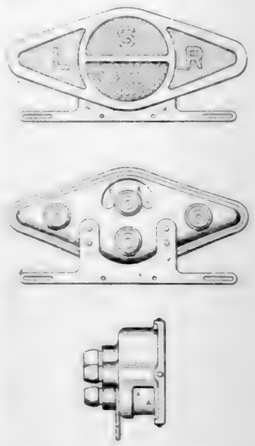
68,816. BRACKET ELEMENT OF AN ELECTRIC-LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Aug. 14, 1925. Serial No. 14,428. Term of patent 7 years.

The ornamental design for a bracket element of an electric lighting fixture as shown.

68,817. ELECTRIC-LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Aug. 14, 1925. Serial No. 14,429. Term of patent 7 years.

The ornamental design for an electric lighting fixture as shown.

68,818. TRAFFIC SIGNAL LAMP. BERT G. LA BAR, Turtle Creek, Pa. Filed Dec. 15, 1924. Serial No. 11,704. Term of patent 7 years.



The ornamental design for a traffic signal lamp as shown.

68,819. BENCH. WALLACE WARD MALLEY, New Haven, Conn. Filed Aug. 14, 1924. Serial No. 10,458. Term of patent 7 years.

The ornamental design for a bench as shown.

68,820. PERFUME BOTTLE. CHARLES LIONEL MARCUS and JOSEPH A. FIELDS, New York, N. Y. Filed Dec. 12, 1924. Serial No. 11,681. Term of patent 7 years.

The ornamental design for a perfume bottle as shown.

68,821. COMBINED PERFUME BOTTLE AND HOLDER. CHARLES LIONEL MARCUS and JOSEPH A. FIELDS, New York, N. Y. Filed Dec. 12, 1924. Serial No. 11,685. Term of patent 7 years.

The ornamental design for a combined perfume bottle and holder as shown and described.

68,822. GARTER. CHARLES B. NAMIOT, New York, N. Y. Filed July 2, 1925. Serial No. 13,980. Term of patent 3½ years.

The ornamental design for a garter as shown.

68,823. STRIP OR BANDING FOR DECORATIVE PURPOSES. HARRY NEGBAUR, New York, N. Y., assignor to E & J Bass, Incorporated, a Corporation of New York. Filed May 10, 1923. Serial No. 6,122. Term of patent 3½ years.

The ornamental design for strip or banding for decorative purposes substantially as shown and described.

68,824. ELECTRIC-LIGHTING FIXTURE. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1925. Serial No. 14,430. Term of patent 14 years.

The ornamental design for an electric lighting fixture as shown.

68,825. ELECTRIC-LIGHTING FIXTURE. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1925. Serial No. 14,431. Term of patent 14 years.

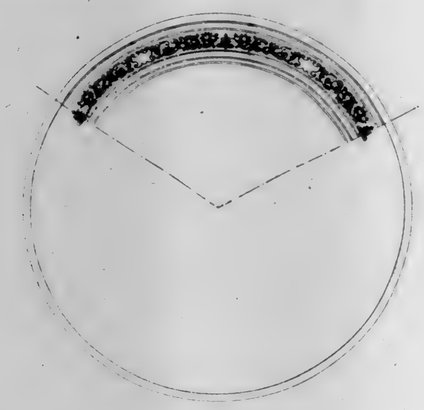
The ornamental design for an electric lighting fixture as shown.

68,826. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 14, 1925. Serial No. 14,785. Term of patent 14 years.

The ornamental design for lace substantially as shown.

---

68,827. PLATE OR ANALOGOUS ARTICLE. GEORGE F. PARKER, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1923. Serial No. 5,191. Term of patent 7 years.



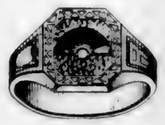
The ornamental design for a plate or analogous article, substantially as shown and described.

---

68,828. PANEL FOR RADIODIALS. PYAM L. PENDLETON, Providence, R. I., assignor to Martin-Copeland Company, a trusteeship consisting of Edgar W. Martin, Barrington, R. I.; Laurence C. Martin, Providence, R. I.; and George W. Bleecker, Chicago, Ill. Filed June 11, 1925. Serial No. 13,743. Term of patent 7 years.

The ornamental design for a panel for radiodials substantially as shown in the drawing.

68,829. FINGER RING. HENRY W. PETERS, Boston, Mass. Filed Aug. 29, 1925. Serial No. 14,634. Term of patent 3½ years.



The ornamental design for a finger ring, as shown.

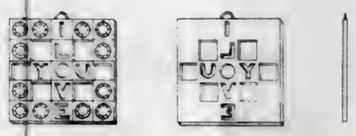
---

68,830. BOTTLE OR SIMILAR ARTICLE. JULIETTE L. PHILIPPEAU, New York, N. Y. Filed Aug. 21, 1925. Serial No. 14,548. Term of patent 14 years.

The ornamental design for a bottle or similar article, as shown.

---

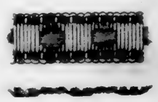
68,831. BADGE OR LIKE ARTICLE. WILLIAM I. ROSENFELD, Jr., New York, N. Y. Filed Jan. 8, 1925. Serial No. 11,964. Term of patent 3½ years.



The ornamental design for a badge or like article as shown and described.

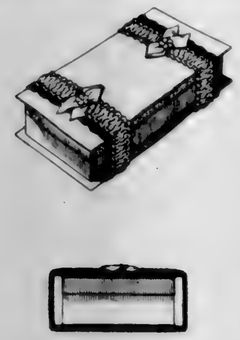
---

68,832. FURNITURE GIMP. GEORGE RUNGE, Chicago, Ill., assignor to E. L. Mansure Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1925. Serial No. 14,029. Term of patent 7 years.



The ornamental design for furniture gimp, as shown.

68,833. CANDY BOX OR SIMILAR CONTAINER. CHARLES C. SCHULER, Winona, Minn. Filed Apr. 27, 1925. Serial No. 13,235. Term of patent 7 years.



The ornamental design for a candy box or similar container, as shown.

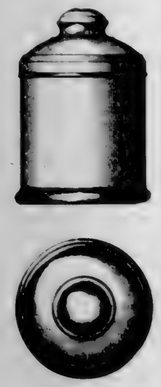
---

68,834. WRIST-WATCH CASE. HARRY W. SCHWETTMAN, Cincinnati, Ohio, assignor to The Gruen Watch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 9, 1924. Serial No. 11,005. Term of patent 3½ years.

The ornamental design for a wrist watch case, as shown.

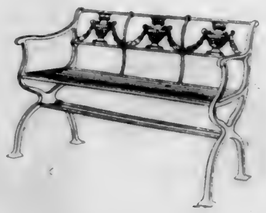
---

68,835. CONTAINER FOR CIGARS AND TOBACCO. JACOB S. SHERMAN, Chicago, Ill. Filed Sept. 13, 1924. Serial No. 10,774. Term of patent 14 years.



The ornamental design for a container for cigars and tobacco substantially as shown.

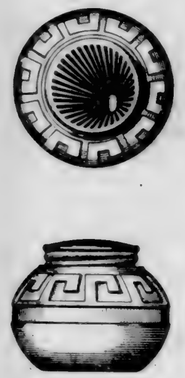
68,836. BENCH. WILLIAM A. SNOW, Winchester, Mass. Filed Aug. 17, 1925. Serial No. 14,496. Term of patent 14 years.



The ornamental design for a bench as shown.

---

68,837. JAR OR SIMILAR CONTAINER. IRVING A. VEITH and RICHARD F. EBENTAL, New York, N. Y. Filed Sept. 23, 1925. Serial No. 14,884. Term of patent 14 years.



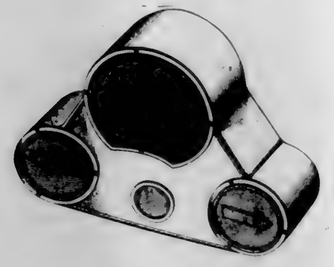
The ornamental design for a jar or similar container, as shown.

---

68,838. BADGE. ELMER T. WALDSCHMIDT, Pittsburgh, Pa. Filed July 13, 1925. Serial No. 14,074. Term of patent 14 years.

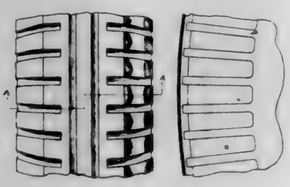
The ornamental design for a badge, as shown.

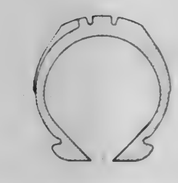
68,839. AUTOMOBILE SIGNAL CASING. GEORGE B. WILLIAMS, Gary, Ind. Filed Mar. 9, 1923. Serial No. 5,423. Term of patent 7 years.



The ornamental design for automobile signal casing as shown.

68,840. TIRE TREAD. WILLIAM S. WOLFE, Akron, Ohio. Filed Sept. 20, 1924. Serial No. 10,837. Term of patent 14 years.





The ornamental design for a tire tread, as shown.

68,841. PERFUME BOTTLE. GUY T. GIBSON, New Rochelle, N. Y. Filed Sept. 29, 1925. Serial No. 14,949. Term of patent 14 years.

The ornamental design for a perfume bottle as shown.

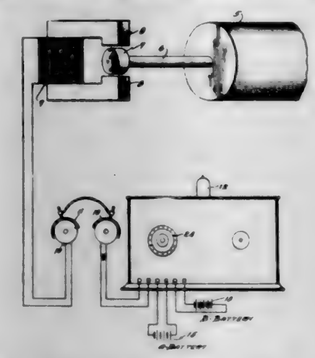
68,842. REFRIGERATOR HINGE. ALFRED J. HEYER, St. Louis, Mo., assignor to Harry L. Hussmann Refrigerator & Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 25, 1922. Serial No. 4,398. Term of patent 3½ years.

The ornamental design for a refrigerator hinge, as shown.

# PATENTS

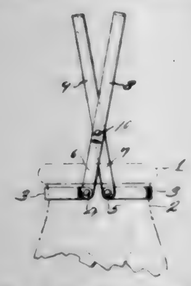
## GRANTED NOVEMBER 17, 1925.

1,561,452. SPEED-MEASURING DEVICE. CARROLL R. ALDEN, Detroit, Mich., assignor to Ex-Cell-O Tool and Manufacturing Company, Detroit, Mich. Filed Jan. 28, 1925. Serial No. 5,410. 12 Claims. (Cl. 175—183.)



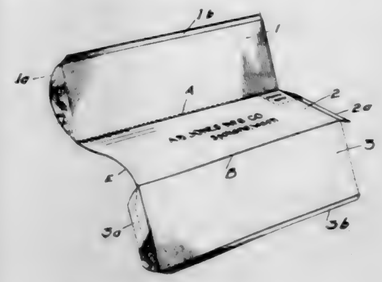
1. In a speed measuring device, means under the control of the mechanism to be measured for electrically producing a musical note, and manually controlled means for electrically producing a corresponding note adjacent the first mentioned note for comparison therewith.

1,561,453. MILK-BOTTLE CARRIER. FREDERICK C. ALTHEN, Anamosa, Iowa. Filed July 11, 1923. Serial No. 650,909. 1 Claim. (Cl. 215—100.)



A bottle carrying device comprising oppositely disposed associated U-shaped members circumferentially arranged on substantially he same arc, one of said U-shaped members having its ends provided with compound bends, thereby forming offset ears outside of the ends of the other segmentally shaped member and spaced from said ends, inverted U-shaped handle members, said handle members having their arms crossed and pivoted together, the ends of the arms of the inverted U-shaped handle members being pivotally connected to the offset ears carried by one of the segmentally shaped members and to the inner side of said ears and to the outer side of the ends of the other segmentally shaped members said arms of the U-shaped members diverging angularly upwardly and outwardly from the ends of the segmentally shaped members, said arms of the U-shaped members converging inwardly and upwardly from adjacent their pivotal points.

1,561,454. RETURN ENVELOPE. ALLEN B. ASHBY, Bonners Ferry, Idaho. Filed May 2, 1921. Serial No. 466,112. 1 Claim. (Cl. 229—73.)



A return envelope comprising an intermediate address leaf having a single end sealing flap, a primary address leaf having a single end sealing flap and an outer sealing edge, and a third leaf having an outer sealing edge and a single end sealing flap, the sealing flaps of the outer leaves being located at the end of the envelope opposite to the end sealing flap of the intermediate leaf, whereby the primary address leaf may be removed by the first receiver in opening the envelope.

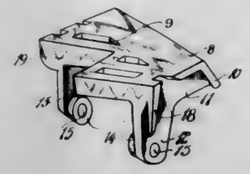
1,561,455. ARTIFICIAL WREATH AND METHOD OF MAKING SAME. SALVATORE BERTONA, New York, N. Y. Filed June 6, 1925. Serial No. 35,278. 5 Claims. (Cl. 41—12.)

1. The method of making an artificial wreath, consisting of arranging a series of independent leaves in a form in overlapping relation with the backs of said leaves uppermost, pasting a flat stiffening ring on the backs of said leaves and applying pressure to said ring.

1,561,456. FURNACE GRATE. LEO J. BINDER, Spokane, Wash. Filed Feb. 7, 1925. Serial No. 7,720. 3 Claims. (Cl. 126—168.)

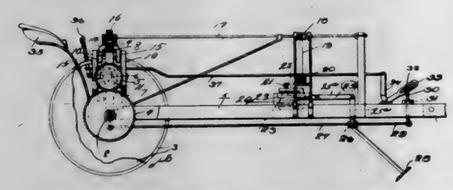
1. An end section for a stationary grate comprising a flat body portion having a transversely extending supporting lip and formed with an inclined outer face,

spaced longitudinal webs integral with said body and lip and perforated ears integral with said webs, hollow supporting bosses on the inner adjoining faces of said ears, and a pair of flanges having inclined faces located between said bosses and transverse lip.



---

1,561,457. POWER HOE. GUSS BRANNAN, Indian Gap, Tex. Filed Dec. 4, 1924. Serial No. 753,864. 4 Claims. (Cl. 97—19.)



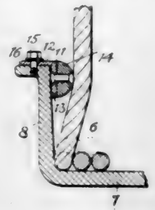
1. The combination with a hoeing machine comprising a pivoted oscillatory hoe bar carried by a frame, spaced rotatable shafts carried by the frame, endless cable connections between the shafts and the hoe bar whereby upon the rotation of the shafts in one direction and then the other, the hoe bar will be oscillated, a guide roller carried by the hoe bar and movable in an arcuate guide, a transversely movable rack bar, gear connections between the rack bar and the spaced shafts and means cooperating with the rack bar for imparting reciprocation to the rack bar as the machine moves over the ground.

---

1,561,458. COMPOUND PRESSURE GAUGE. ANTHONY MARCUS CAHILL, Sellersville, Pa., assignor to United States Gauge Company, Sellersville, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1924. Serial No. 743,875. 2 Claims. (Cl. 73—109.)

1. In a compound gauge, the combination with the pinion shaft which is turned in either direction in proportion to the pressure of two pointers loosely mounted thereon and a spring secured to said pointers and adapted to impel them in opposite directions towards a fixed stop at the zero point on the scale, and an arm fixed to the pinion shaft adapted to engage and move one or the other pointer according to the direction in which it is turned.

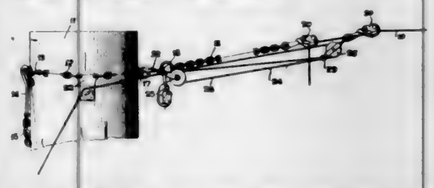
1,561,459. ROPE-DEFLECTING DEVICE. ORLANDO M. CARSE, Cleveland, Ohio, assignor to The McMyler Interstate Company, Bedford, Ohio, a Corporation of Ohio. Filed May 12, 1923. Serial No. 638,487. 2 Claims. (Cl. 242—117.)



1. The combination with a winding drum having a rope receiving channel, one wall of which is formed by an outwardly projecting flange, of a bead ring formed of arcuate sections abutting end to end, each section having a portion overlying the periphery of the drum flange, and detachably secured thereto, said sections having portions projecting inwardly beyond the inner face of the flange and forming a continuous rope deflecting bead.

---

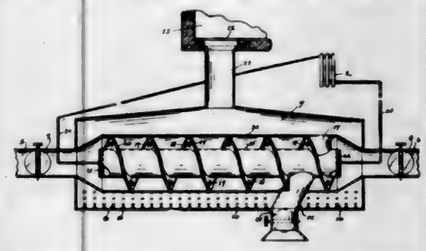
1,561,460. GUY-WIRE HOLDER. WILLIAM J. CASHIN, New York, N. Y. Filed Mar. 20, 1925. Serial No. 16,890. 5 Claims. (Cl. 254—65.)



1. A wire or cable tightening mechanism comprising a supporting element, means for securing the same directly to said wire or cable to retain the degree of tautness achieved between said element and said wire or cable, a power appliance having relatively movable members and having means for attachment of one of said members to said wire or cable, and means for securing the other of said members to either said supporting element or to an extended end of said wire or cable permitting said power appliance to draw said wire or cable toward either said supporting loop or toward the extended end of said wire or cable.

---

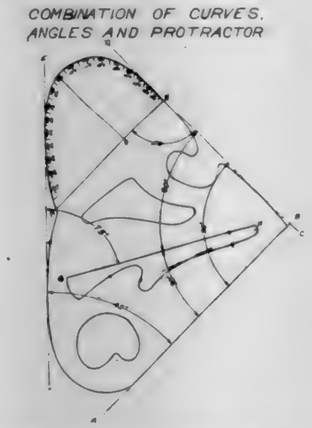
1,561,461. HEATING ATTACHMENT FOR STOVE AND FURNACE PIPES. BRUNO B. CHOINSKI, Milwaukee, Wis., assignor of forty-nine one-hundredths to Alexander B. Choinski, Milwaukee, Wis. Filed Apr. 5, 1922. Serial No. 549,896. 6 Claims. (Cl. 257—169.)



6. The combination with a flue and an enlarged section therein, of a cylinder within said section closed against the passage of flue gases, a helical flange wound about the cylinder between it and the wall of said section, a drum surrounding said section, means for permitting air to circulate through said drum, a pipe conforming to the outer margin of said helical flange, and a radiator connected in a closed circuit with said pipe.

---

1,561,462. DRAFTING INSTRUMENT. ARTHUR CRAM, Redfield, S. Dak. Filed Dec. 29, 1924. Serial No. 758,640. 2 Claims. (Cl. 33—104.)



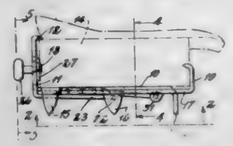
1. A drafting triangle comprising a thin sheet of material having one side substantially straight, the other two sides each comprising a plurality of irregular curves, whereby a common tangent to the two outer curves of each set will define the corresponding side of the triangle, and make a predetermined angle with the straight side, and the other tangent.

---

1,561,463. COUNTERBORE. ALLEN C. DE ROCHEMONT, Portsmouth, N. H. Filed Mar. 18, 1924. Serial No. 699,988. 4 Claims. (Cl. 77—58.)

1. A device of the class described comprising a blade member having end cutting edges and longitudinally slotted back of said edges, a pilot member slotted from one end to form a pair of jaws to take over said blade member, and means engaging the free ends of said jaws and passing through the slot of said blade member to clamp said pilot member to said blade member in adjustable axial relation.

1,561,464. ANTISLIPPING DEVICE. JOHN GEMBA, Danbury, Conn. Filed Nov. 19, 1924. Serial No. 750,761. 2 Claims. (Cl. 36—64.)



1. In a device of the class described, the combination of a stationary and a movable plate, a yoke on said movable plate having the lower ends of its branches attached to the stationary plate, a median bar on said yoke attached at its lower end to said stationary plate, perforated flanges on the branch bars of said yoke angularly disposed thereto, and a U-spring adapted to engage with its hook-shaped free ends into the perforations of said flanges, and a socket on said movable plate in which the connecting bar of the U-spring is turnably located.

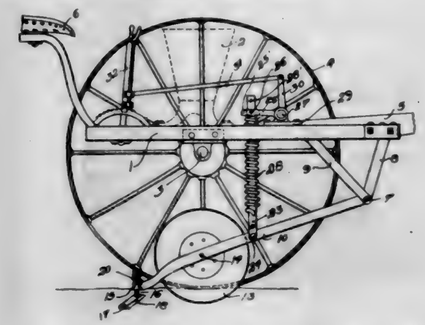
---

1,561,465. BUMPER-BAR ATTACHMENT. ANDREW G. GUSTAFSON, Aurora, Ill. Filed Oct. 5, 1923. Serial No. 666,711. 6 Claims. (Cl. 293—55.)

1. In combination, an axle, a chassis frame, means for resiliently mounting said frame on said axle, an upper brace member secured to said frame and extending forwardly therefrom, a lower brace member, a bumper bar, means for securing said bar to the forward ends of said brace members, a bar for connecting the rear ends of said members together, and means slidably engaging said bar for connecting said brace to said axle.

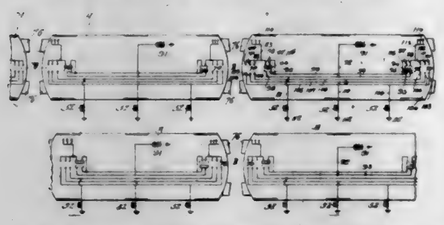
---

1,561,466. CULTIVATOR AND WEEDER. ALBERT D. HEALY, Davenport, Wash. Filed Mar. 6, 1923. Serial No. 623,287. 3 Claims. (Cl. 97—207.)



1. The combination in a wheeled cultivator, with a pivoted, slotted beam, and a vertically arranged cutting disk journaled in said beam, of a horizontally disposed cutter blade, means for swiveling said blade with relation to the beam, means for holding said blade in normal operative position, and resilient means for depressing said beam.

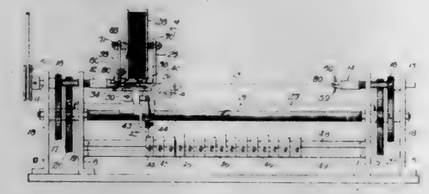
1,561,467. MULTIPLE-UNIT DOOR-CONTROL SYSTEM FOR CARS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed July 1, 1919. Serial No. 307,997. 55 Claims. (Cl. 105—341.)



1. In a multiple unit car door control system, the combination with a train of cars each having doors in the sides thereof, of means to control the operations of all the doors on either side at will of two or more cars of the train from the same control station.

---

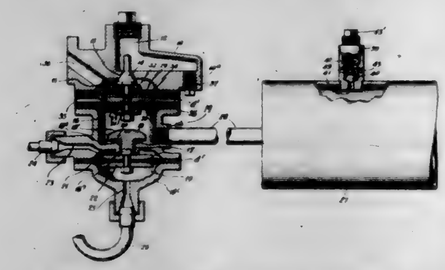
1,561,468. COILING OR WINDING APPARATUS. JAMES DENNY JORDAN, Riverside, and ARCHIE JOSEPH DOWD, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1921. Serial No. 474,141. 7 Claims. (Cl. 153—67.)



1. In a coil winding mechanism in combination, an arbor means for forming material around said arbor in a close helix, driving means for causing relative rotative movement between said arbor and said forming means, and adjustable means for causing periodic interruptions of different lengths in the uniformity of the helix without interrupting the continuity of the material being wound.

---

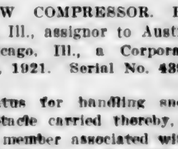
1,561,469. EXHAUST-CONTROL MECHANISM FOR AIR-BRAKE SYSTEMS. ALLEN B. KENDALL, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1924. Serial No. 709,443. 18 Claims. (Cl. 303—18.)



1. A train brake control apparatus comprising a valve controlling an exhaust port, a pneumatic device having different effective pressure areas on opposite sides thereof for operating the said valve, means for admitting fluid at brake pipe pressure to one side of said device, a second valve for controlling the admission of fluid at brake pipe pressure to the opposite side of said device, a second pneumatic device for operating the second valve, and means for admitting fluid at brake pipe and reservoir pressures respectively onto opposite sides of said second pneumatic device.

---

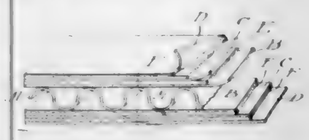
1,561,470. WINDOW SCREEN. OTTO R. KIHM, Irvington, N. J., assignor to The Foster Screen Co. Inc., a Corporation of New Jersey. Filed Sept. 23, 1921. Serial No. 502,649. 7 Claims. (Cl. 156—38.)



7. A frame for window screens or the like, comprising side and end pieces, and a plurality of corner pieces each formed of sheet metal and having two angularly disposed split tubular sockets each to receive one of said side or said end pieces, the split sides of said sockets opening inwardly and one edge of each of said sockets having a tongue to partially close said split side to positively hold the corresponding side or end piece against lateral movement out of the socket and capable of being bent to permit insertion and removal of a frame piece laterally into or from said socket, said end pieces and said corner pieces being provided with cooperating projections and recesses to hold the side and end pieces against longitudinal movement out of said sockets, corresponding edges of said sockets being connected by integral webs to reenforce said sockets against relative distortion, and crossed brace rods pivotally connected at their centers and having their ends loosely arranged between said webs to reenforce the frame against warping or like distortion.

---

1,561,471. COMPOSITE MOISTUREPROOF PAPER BOARD. OTTO KRESS, Appleton, Wis., assignor to American Lakes Paper Company, Chicago, Ill., a Corporation of Delaware. Filed July 26, 1924. Serial No. 728,324. 6 Claims. (Cl. 154—55.)



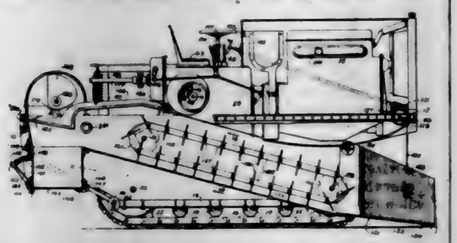
4. A composite moisture proof paper board comprising a sheet of corrugated board having adhesively connected to one side thereof a composite paper board composed of at least three sheets of paper united together by films of asphalt, the sheets next to the corrugated board being of unsized paper and the outer sheet being of sized paper.

---

1,561,472. SNOW COMPRESSOR. BERT A. LINDEMAN, Chicago, Ill., assignor to Austin Machinery Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 22, 1921. Serial No. 439,192. 19 Claims. (Cl. 37—10.)

2. An apparatus for handling snow, comprising a vehicle, a receptacle carried thereby, an intermittently acting pressure member associated with said receptacle, and means delivering snow to said receptacle between the actions of said pressure member.

5. An apparatus for handling snow, comprising a vehicle, a receptacle carried thereby and having confining walls adapted to be opened for discharge, means delivering the snow into said receptacle, a device for compressing



the snow in said receptacle, and a lock for said confining walls releasable under the pressure of said compression means, when the snow charge in said receptacle is in predetermined condition to permit discharge.

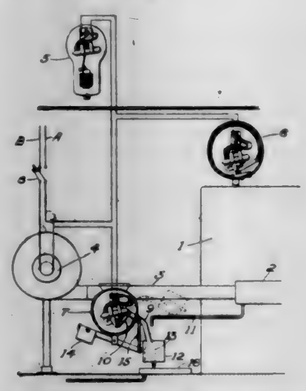
---

1,561,473. COMPOSITION OF MATTER AND METHOD OF MAKING THE SAME. HIRAM S. LUKENS, Philadelphia, Pa., assignor to Solidifier Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 24, 1925. Serial No. 4,426. 2 Claims. (Cl. 106—27.)

1. In the manufacture of artificial stone, the steps consisting of forming a wet mixture of aggregate other than ores of metals and a binder substantially all of which consists of magnesium oxide with sufficient water to form a plastic mass, and carbonating the mixture while wet to convert the oxide into magnesium carbonate.

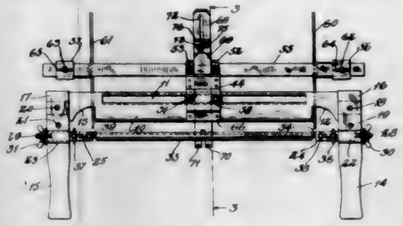
---

1,561,474. LIQUID-FUEL BURNER. IRA E. MCCABE, Chicago, Ill. Filed Apr. 3, 1924. Serial No. 703,841. 9 Claims. (Cl. 158—42.3.)



1. In a liquid fuel burning furnace including an electric circuit operating a motor supplying fuel to the furnace and having a room thermostat and furnace control switches in circuit therewith, a burner directing its flame into a combustion chamber within the furnace, a drain pipe for leading the unconsumed fuel from said chamber, and a safety control switch in the said circuit in combination with a liquid containing receptacle normally maintaining the safety switch in closed position when partially filled and into which the drain pipe discharges, means in connection therewith operated by a flow of liquid fuel from the drain pipe to empty the receptacle, and means operable when the receptacle is empty to open said safety switch and thereby cut off the supply of fuel to said burner.

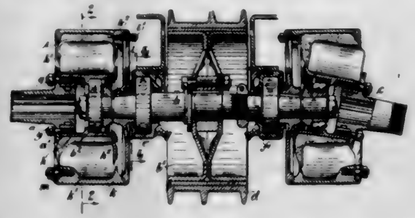
1,561,475. ADJUSTABLE TONGUE-AND-GROOVE PLANE. JOHN MACIAG, Rome, N. Y. Filed Mar. 19, 1925. Serial No. 16,695. 3 Claims. (Cl. 145—5.)



3. In an adjustable tongue and groove plane, a frame including a longitudinally extending, slotted bar having reduced ends, mountings secured to the reduced ends of said bar, sleeves formed with said mountings, perforated blocks guided in said sleeves having reduced inner ends, a bar in front of and below the level of said slotted bar having upturned ends adapted to be passed through the perforations of said blocks, wing heads on said blocks, wing nuts upon the upper ends of said upturned bar-ends, a roller on said last named bar, pins having I-shaped lower ends through which said bar is passed, said pins projecting also through perforations in said blocks, springs wound about said pins between said I-shaped ends and the reduced ends of said blocks to permit the adjustment of said bar and its roller toward and from the work piece, a cutter and its carriage on said frame bar, and means for laterally adjusting said carriage and cutter on said bar and allowing a guidance of the same over the work-piece by the manipulation of said handles.

---

1,561,476. TORQUE-CUSHIONING DEVICE. ALFRED F. MASURY and AUGUST H. LEIPERT, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 2, 1923. Serial No. 629,290. 2 Claims. (Cl. 64—26.)



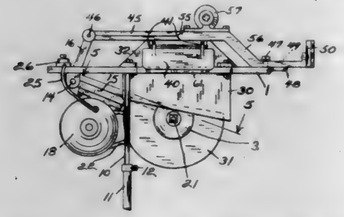
2. In combination, a propeller shaft section operatively connected with the prime mover of a motor vehicle, a brake drum carried with said section, means to apply braking power to said drum, a second propeller shaft section operatively connected with the final drive of the vehicle, means to connect the two sections yieldingly including a carrier carried with one end of a shaft section, a circular spider secured to the carrier, a retaining ring secured to the spider, a flange formed with the proximate end of the other shaft section, a spider secured to said flange and non-metallic yielding material retained between the spiders under compression.

---

1,561,477. OSCILLATORY-SAW MACHINE AND GUARD THEREFOR. ADOLPH N. MILLER, Milwaukee, Wis., assignor to A. N. Miller Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 9, 1925. Serial No. 7,816. 17 Claims. (Cl. 143—46.)

1. In a device of the character described, the combination with a work supporting base, of an operating tool adapted to extend above said base, a guard having

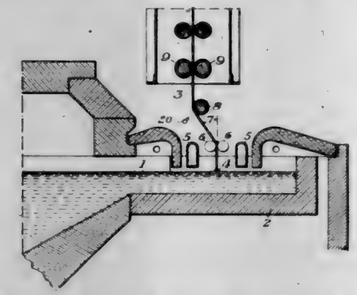
an apertured side laterally of said tool, said guard enclosing that portion of the operating tool above said base, and a door for closing said aperture, said door



being hinged adjacent the upper margin of said aperture, whereby to be opened automatically by material caused to enter said guard.

---

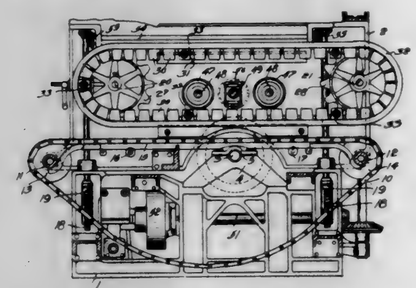
1,561,478. DRAWING AND FLATTENING SHEET GLASS. WILLIAM L. MONRO, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 15, 1924. Serial No. 732,171. 14 Claims. (Cl. 49—17.)



1. The method of drawing and flattening a single sheet of glass, which comprises drawing the sheet vertically from a bath of molten glass, and then deflecting the sheet from the vertical through an angle materially less than a right angle by passing it against a flattening roller, substantially as described.

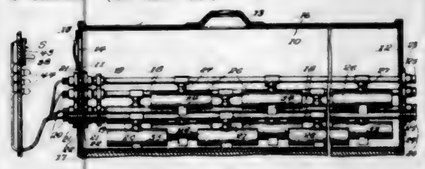
---

1,561,479. ADJUSTABLE FEED MECHANISM. PAUL G. OETTEL, Spokane, Wash. Filed Nov. 1, 1924. Serial No. 747,235. 13 Claims. (Cl. 143—49.)



1. In a machine of the character described a work feeding head comprising a flexible belt and driving means therefor, continuous strips on the exterior of said belt extending in the direction of travel of the work, and means for adjusting said strips laterally of the belt.

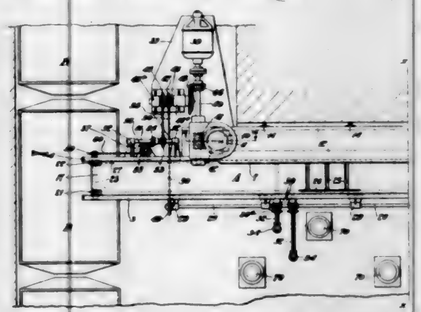
1,561,480. GENERATOR. THOMAS M. OFFUTT, Connersville, Ind. Filed Feb. 12, 1924. Serial No. 692,337. 3 Claims. (Cl. 219—38.)



1. The combination with a steam boiler, of a plurality of horizontally arranged pipes located within the boiler, a plurality of separate containers supported by and communicating with the pipes, combined spacing elements and heat conductors located between and connecting the containers and the boiler, heating elements located within the containers, electric conductor wires housed within the pipes and connected to the heating elements and means whereby said heating elements may be selectively controlled.

---

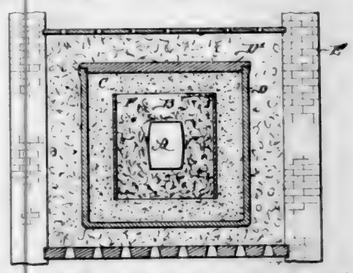
1,561,481. LONGWALL MINING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Feb. 14, 1924. Serial No. 692,694. 6 Claims. (Cl. 262—28.)



1. A mining machine comprising in combination a frame, a cutter chain having cutter bits thereon mounted on said frame and movable longitudinally thereof adapted to form a substantially horizontal kerf in the material to be mined, a conveyer mounted to the rear of said cutter chain and extending parallel therewith, a second cutter chain arranged at the butt end of said machine and movable in a direction at right angles to said first first named cutter chain adapted to form a substantially vertical kerf in the material to be mined, and means for operating said cutter chains and said conveyer.

---

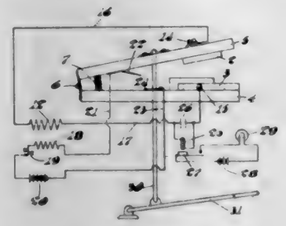
1,561,482. CARBURIZING PROCESS. NORA E. PHILLIPS, Chicago, Ill. Filed Aug. 27, 1923. Serial No. 659,501. 2 Claims. (Cl. 148—19.)



1. The process of carburizing iron, which consists in inclosing the iron within a closely consolidated packing of pulverized carboniferous substance of substantial thickness enclosed in a similarly consolidated packing of pulverulent calcium bearing substance, and subjecting the package to a temperature for heating the enclosed package and maintaining the same at white heat of the enclosed iron for from four to ten hours according to the depth of carburization desired.

---

1,561,483. DISTINGUISHING DIELECTRIC SHEETS. GREENLEAF WHITTIER PICKARD, Newton, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Apr. 23, 1920. Serial No. 376,131. 17 Claims. (Cl. 175—183.)



1. A mica testing apparatus comprising, in combination, upper and lower metallic blocks for engaging simultaneously opposite faces of a sheet of mica, supporting means for said blocks for relatively moving them into and out of engagement with a mica sheet, gaging means associated with the lower block for facilitating the positioning of a mica sheet properly between said blocks, a high potential circuit connected to said blocks and for which said blocks form terminals, and a signal operatively connected with said high potential circuit to be operated upon a flow of current therethrough.

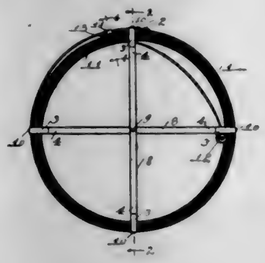
---

1,561,484. PRODUCTION OF TYPE MATRICES. FRANK HINMAN PIERPONT, Salford, England, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Jan. 25, 1924. Serial No. 688,607. 4 Claims. (Cl. 101—401.1)

1. The improvement in the art of producing justified type matrices which consists in driving a punch into a matrix blank, and thereafter, while the punch is positioned in the matrix cavity thus formed, cutting a surface of the matrix by cutting mechanism gaged by a surface of the punch.

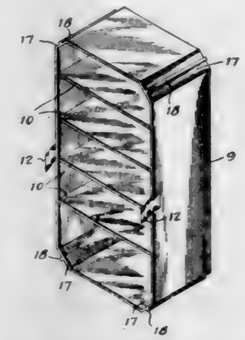
---

1,561,485. REEL. EARL K. POWERS, Grand Rapids, Mich. Filed Dec. 11, 1924. Serial No. 755,180. 6 Claims. (Cl. 242—77.)



1. In a device of the character described: an axially-open annular member having angularly-spaced pairs of axially-spaced inwardly-extending fingers.

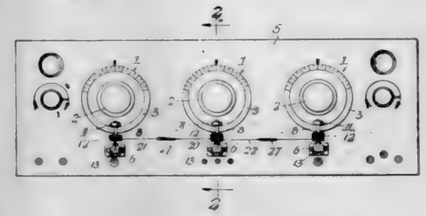
1,561,486. WARDROBE STEAMER TRUNK. JOSEPH A. RIORDAN, Harrison, N. J. Filed Apr. 29, 1925. Serial No. 26,594. 3 Claims. (Cl. 190—13.)



1. A removable container for a wardrobe trunk, said container completely filling one half of the trunk so as to be in sliding contact with the walls of the half of the trunk in which it is housed and having a series of drawers extending substantially the entire depth of the container.

---

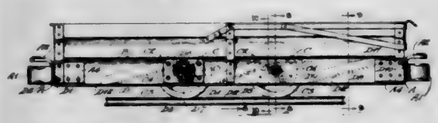
1,561,487. RADIO DIAL TURNER. ELMER RYDER, Berwyn, Ill. Filed May 5, 1924. Serial No. 710,958. 10 Claims. (Cl. 74—7.)



1. In a radio receiver, the combination with a panel, of a plurality of dials in front of the same, dial turning devices, one for each dial and mounted on the panel at their respective dials, and means connecting said devices together for turning the dials simultaneously and in unison from one of the same.

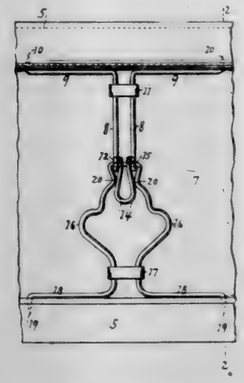
---

1,561,488. RAILWAY CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed Dec. 3, 1923. Serial No. 678,311. 10 Claims. (Cl. 105—364.)



1. In a car of the kind described, the combination of a frame, axles transverse to the length of the frame and located above the lower edges of the frame sides, a bottom plate structure supported by the frame ends and the axle structures and parts of said bottom plate structure being at approximately the level of the lower edges of the frame sides and other parts rising to the level of the axles and the forward frame end, and said bottom structure being substantially free from the frame sides, whereby the frame is given freedom for flexing or twisting, substantially as described.

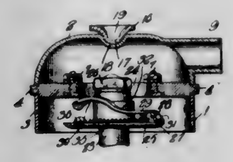
**1,561,489. STAIR-CARPET SUPPORT.** EUGENE A. SAVARY, Phoenicia, N. Y. Filed Jan. 3, 1925. Serial No. 306. 2 Claims. (Cl. 16—11.)



1. A stair carpet support comprising an upper member made of resilient wire, said member having a pair of shanks each provided with a pointed lateral arm for engagement with the tread of a stairway, the lower portions of the shanks forming loops and a handle depending from the loops; combined with a lower resilient wire member having a pair of legs the upper portion of which forms a transverse bar to hinge the lower member to the loops, and pointed lateral arms extending from the legs for engagement with the tread of a stairway, said legs being adapted to clasp the handle.

---

**1,561,490. TIMER.** STELLA HINDS SCHLUPP, Sabetha, Kans. Filed July 27, 1923. Serial No. 654,193. 4 Claims. (Cl. 200—24.)

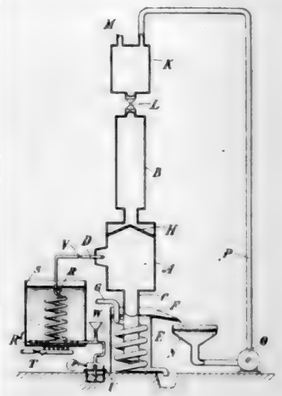


2. In a device of the class described, a casing comprising a body, a cap, and a track therebetween, a bracket secured to the body, the track and the cap having elements which cooperate with the bracket to connect the cap and the track with the casing for simultaneous rotation, the bracket terminating in a spring clamp engaging the cap to hold the cap, the body and the track assembled.

---

**1,561,491. MANUFACTURE OF ORGANIC COMPOUNDS BY REACTIONS INVOLVING REPLACEMENT OF SUBSTITUENT ATOMS OR GROUPS WITH LIQUID REAGENTS.** WILLIAM VIVIAN SHANNAN, London, England, assignor to The Gas Light and Coke Company, Westminster, London, England, a British Company. Filed Nov. 6, 1923. Serial No. 673,137. 19 Claims. (Cl. 260—130.5.)

1. In the manufacture of organic derivatives by a reaction involving substitution in a parent organic compound of a component atom or group, the process which consists in treating the parent compound with excess of a liquid reagent which is solvent upon the reaction product but relatively to its solvent action upon the said product is substantially non-solvent upon the parent compound, and effecting the reaction with the one reacting substance supernatant upon the other, the liquid reagent



maintained progressively in motion through the reaction vessel and the parent compound maintained stationary therein.

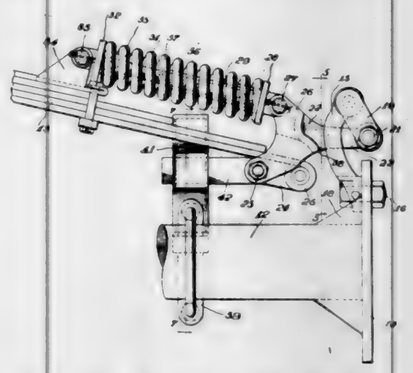
---

**1,561,492. MANUFACTURE OF CHAMOTTE BRICKS.** SVEN EMIL SIEURIN, Hoganas, Sweden. Filed July 27, 1923. Serial No. 654,257. 2 Claims. (Cl. 106—11.)

1. In a process for the manufacture of chamotte bricks, adding to the main mass of the bricks, a binding mass consisting of an intimate mixture of finely divided silica and fire clay, the said mixture being such that a sample of it after heating to glowing heat contains 73-90% silica, and then burning the masses.

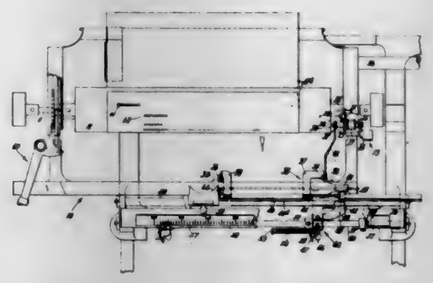
---

**1,561,493. SHOCK ABSORBER.** EARL H. SMITH, Chicago, Ill., assignor of one-half to Carl H. Jenkins, Chicago, Ill. Filed Apr. 18, 1923. Serial No. 632,971. 12 Claims. (Cl. 267—9.)



1. The combination with a vehicle spring, of a triangular lever pivotally connected at one end to said spring, supporting links pivotally connected to the other end of said lever, an abutment member pivotally connected to said lever between the ends thereof, a bracket fixed to said spring, a second abutment member pivotally engaged with said bracket, and a compression spring interposed between said abutment members.

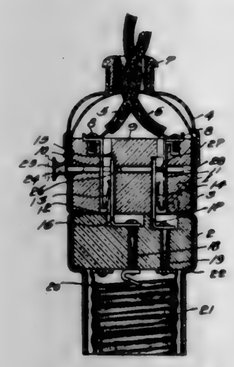
**1,561,494. TYPEWRITING MACHINE.** JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 20, 1923. Serial No. 669,668. 32 Claims. (Cl. 197—63.)



1. In combination with a typewriting machine having a letter-feeding carriage, releasably-adjustable means capable of either positioning the carriage on a lower scale-position for typing near the left-hand edge of a work-sheet or at a higher scale-position for typing to the right of the first-mentioned position, and means to simultaneously release the work-sheet and the positioning means when the latter is set at the higher scale-position, so that it may be automatically shifted with the carriage on its succeeding return movement to the lower scale-position.

---

**1,561,495. ELECTRICAL CONNECTER.** AMOS CECIL THOMPSON, Spokane, Wash. Filed Nov. 1, 1924. Serial No. 747,215. 2 Claims. (Cl. 173—356.)

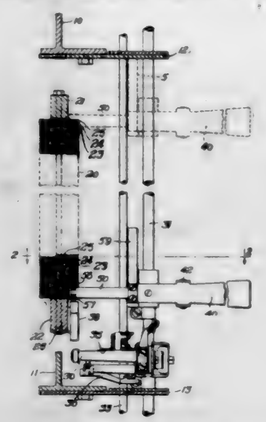


1. A holder having a transverse bolt hole and perpendicular spaced slots and contact plates in said slots, a plug having spaced contact plates, said plug plates having bifurcated free ends and bolt holes, and a slide bolt in the holder adapted to engage said bifurcated ends.

---

**1,561,496. TOOL FOR CLEANING ELECTRICAL-CONTACT SURFACES.** LEON EDWARD WHITLOCK, Leavenworth, Kans., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 7, 1923. Serial No. 643,888. 11 Claims. (Cl. 51—244.)

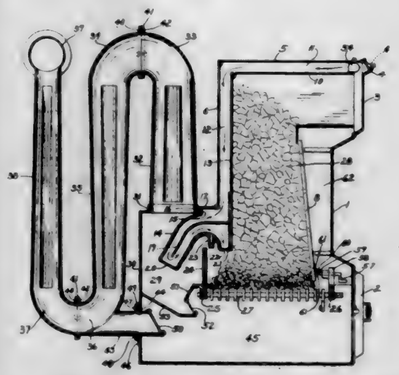
1. In a tool for cleaning a plurality of contact surfaces arranged for successive engagement by a movable contact terminal carried by a guiding member, means slidably engaging the guiding member, a resilient arm



supported therefrom and abrading means supported therefrom for successively engaging the surfaces in response to a movement of the means along the guiding member.

---

**1,561,497. HOT-AIR HEATER.** FREDERICK S. WIER, Richmond, Ind. Filed Mar. 30, 1923. Serial No. 628,870. 6 Claims. (Cl. 126—74.)



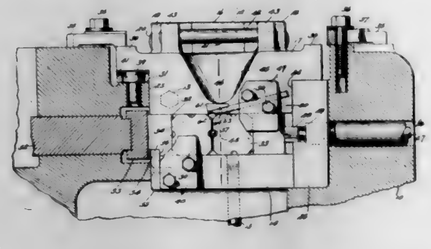
1. In a hot air heater, a magazine, an air heating chamber mounted in the lower portion of the heater adjacent said magazine and exposed to the hot gases formed in the latter, an air duct subjected to the heat of the magazine for conducting outside air downwardly to said heating chamber, the latter having openings through which the heated air therein is discharged for proper mixture with the gases formed in the magazine, and a baffle plate over which the bottom of said chamber is arched to assist in effecting the commingling of the gases with said air.

---

**1,561,498. DIE-HOLDING MEANS.** RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 31, 1921. Serial No. 511,807. 13 Claims. (Cl. 10—24.)

6. In a die holding means for a plural punch header; dies; a support for the dies; a die cap or cover therefor having a recess therein open at its front end and opposite

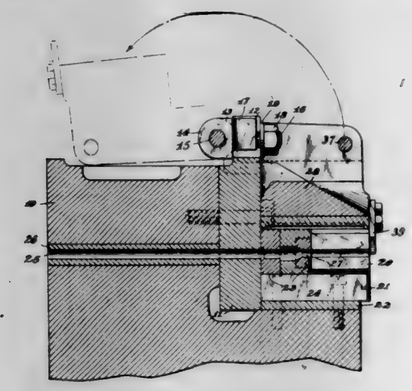
one of said punches when the same is above the upsetting line of the die; and clamp means for holding said cap or cover in its down position, connected with parts adja-



cent to said cap or cover and shifted out of the path of movement thereof while the same is being opened or closed.

---

1,561,499. DIE-HOLDING MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 714,527. 16 Claims. (Cl. 10—24.)

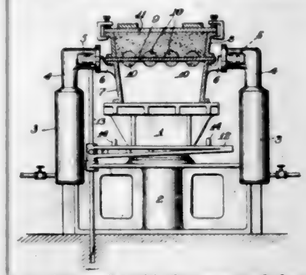


1. Means for holding dies in heading or upsetting machines or the like, comprising a die supporting member, and a cap or cover arranged so that it may be moved toward and away from a position wherein one face thereof is substantially parallel with one face of the member, the cap being adjustably mounted to vary such parallel position to accommodate dies of various sizes.

---

1,561,500. MOLDING MACHINE. JOHN R. WOOD, Newark, N. J., assignor to New Process Multi-Castings Company, Newark, N. J., a Corporation of New Jersey. Filed Sept. 19, 1923. Serial No. 663,694. 4 Claims. (Cl. 22—197.)

1. The process of making a plurality of sand molds from a single flask by means of matched pattern plates and a jolt molding machine, which consists in placing the assembled cope and drag members of a flask with an interposed matched pattern plate on the machine in an inverted position, supplying mold material such as sand to the drag member and packing or jolting it to an abnormal degree, closing with a board the drag member, then inverting the flask and packing the cope member, then separating the two members and removing the pattern plate, then reassembling the two members and re-



moving from the sand mold the cope and drag members, and removing the sand mold on the drag board from the table of the machine.

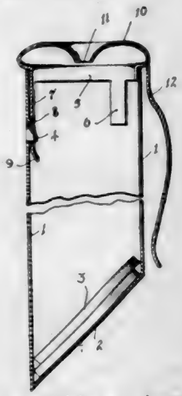
---

1,561,501. TIRE-CHAIN-HOOK PLIERS. ROBERT R. ALBRIGHT, York, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 10, 1922. Serial No. 574,062. 5 Claims. (Cl. 81—15.)

1. A chain tool adapted for use in opening chain tire grips of the type wherein two arms are pivoted together to form handles on one side of the pivot and wedges being equi-distantly spaced from the pivot and on the other side of said pivot, characterized by the wedges having substantially spherical engaging faces, adapted to overlap each other, one of said faces being concave and the other convex.

---

1,561,502. DIME-SAVINGS BANK. HARRY N. ANDREASEN, Chicago, Ill. Filed Mar. 19, 1923. Serial No. 626,094. 5 Claims. (Cl. 232—4.)

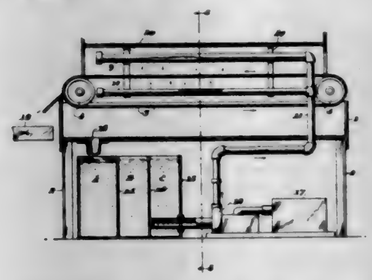


1. A coin bank, comprising an elongated receptacle of elliptical cross-section, with the bottom arranged at an inclination adapted to permit the coins to lay parallel

therewith, a removable cap provided with a coin-receiving slot and with a flange adapted to enter the receptacle, a portion of the flange being adapted to flex and provided with a socket, and a lug on the receptacle interior adapted to enter said socket and thereby lock the cap in place.

---

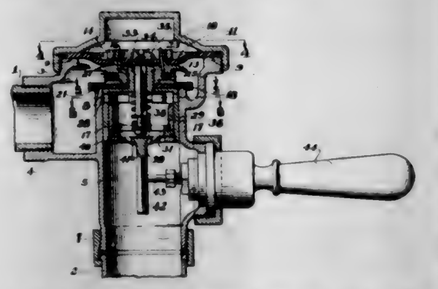
1,561,503. BRINING MACHINE. JAMES J. BARRY, New York, and CLARENCE BIRDSEYE, Yorktown Heights, N. Y. Filed Feb. 26, 1924. Serial No. 695,292. 1 Claim. (Cl. 17—45.)



In combination, with a brine fish cleaning machine a horizontally disposed tank having an opening in its bottom, a horizontally disposed belt within said tank, a pair of pipes arranged on either side of the upper run of said belt, said pipes being perforated on their sides adjacent said upper run, a second tank arranged below the first-mentioned tank and into which the latter discharges, said last-mentioned tank being divided into a plurality of compartments, said compartments separated by wire screens, the first compartment being adapted to receive the brine as it comes from the fish, containing various impurities such as fish scales, the second compartment is adapted to contain crystal salt, while the third compartment is kept comparatively free from solid substances by means of the intervening screens and crystal salt, thereby providing a clear cleaning brine, and means for pumping the said brine from the last named compartment through the pipes.

---

1,561,504. FLUSH VALVE. THOMAS ROBERT BEGGS, Hartford, Conn. Files. June 4, 1924. Serial No. 717,754. 27 Claims. (Cl. 137—93.)

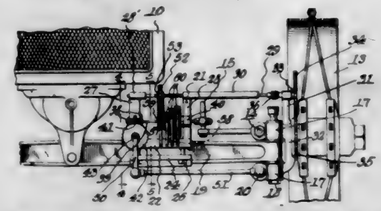


1. In a device of the character described, the combination of a housing having an inlet and an outlet, a primary valve associated with said outlet, a cage secured to said valve and slidable within the outlet and having ports which are uncovered when the valve is raised, and a sleeve valve reciprocable within the cage to open or close the ports from the inside.

17. In a flush valve mechanism, the combination of a diaphragm having a collar secured centrally thereto and formed with a peripheral flange beneath the diaphragm, a primary valve secured to the lower end of the collar in spaced relation to said flange, a bleed duct through the collar connecting the space above the diaphragm with the space between the flange and primary valve, corresponding annular shoulders formed on said flange and valve outside of the duct, and a screen seated on said shoulders to prevent clogging of the duct.

---

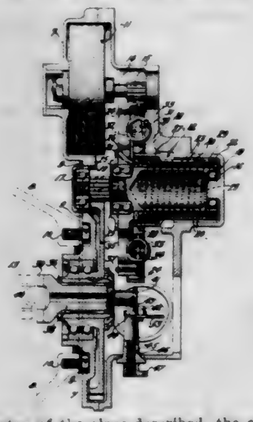
1,561,505. STEERING MEANS FOR TRACTORS. EDMUND C. BELLINGER, Atlanta, Ga. Filed Aug. 18, 1923, Serial No. 658,072. Renewed Aug. 14, 1925. 5 Claims. (Cl. 180—80.)



1. The combination with a tractor including an axle, steering wheels mounted upon the axle, and steering means for the wheels, of a support mounted upon the axle carrying the steering wheels, a worm-wheel mounted upon the support, connecting means between the worm-wheel and the steering means, gearing mounted upon a support and embodying a worm engaging the worm-wheel, and driving connecting means between the gearing and one steering wheel.

---

1,561,506. ENGINE STARTER. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, Inc., a Corporation of New York. Filed Apr. 12, 1924. Serial No. 706,142. 41 Claims. (Cl. 74—7.)



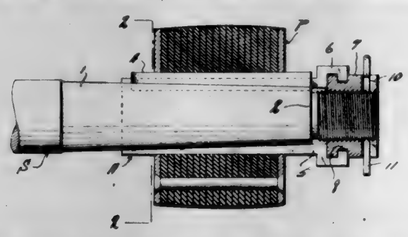
1. In apparatus of the class described, the combination with a means to be started, of a hand crank, a fly-wheel, gearing therebetween adapted for the relatively high speed rotation of the fly-wheel from the crank and for the low speed driving of the means to be started from said fly-wheel, a spring driving means operated by the gearing, a friction driving means coacting with said spring driving means and adapted to slip upon the yielding of said spring driving means.

---

1,561,507. PINION OR PULLEY COUPLING. ED WILLIAM CLARK, Byesville, Ohio. Filed Apr. 25, 1925. Serial No. 25,887. 2 Claims. (Cl. 287—53.)

1. In combination with a shaft having a tapered portion, a key-way extending along said tapered portion, a member to be mounted on said shaft having a bore, a sec-

tional sleeve fitting within the bore of said member, the bore of the sleeve being tapered similar to the tapered portion of the shaft, said sleeve when assembled being less than a cylinder to provide a space therealong, a key engaged within the bore of the member and within the space of the sleeve, said key being also engageable within the key-way of the shaft, and a member threaded upon the shaft, said member and the adjacent end portions of



the sections of the sleeve being provided with coacting means to connect the sections of the sleeve to said last named member to permit free rotation of said last named member but moving the sleeve endwise with the movement of said last named member lengthwise of the shaft, said last named member being operatively engaged with the end portion of the sleeve having the smaller diameter of bore.

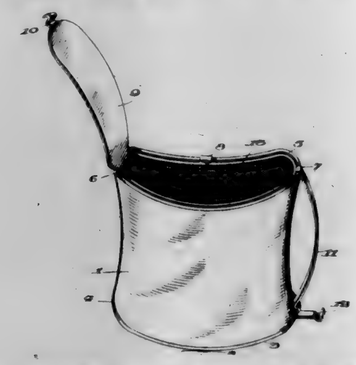
---

1,561,508. CANDLE HOLDER. CHARLES E. DANIEL, Sandusky, Ohio, assignor to The American Crayon Company, Sandusky, Ohio, a Corporation of Ohio. Filed Mar. 16, 1925. Serial No. 15,713. 5 Claims. (Cl. 7—23.)

1. A candle holder comprising a bowl formed to retain drippings, arranged to support a candle in its base, and provided at its rim with a unitary extension arranged to be inserted into a supporting body to support from said body both said holder and the candle carried thereby.

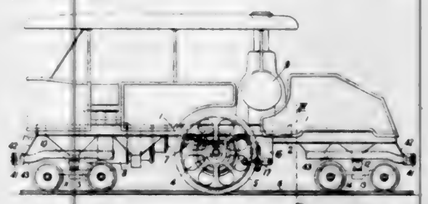
---

1,561,509. COLLAPSIBLE CUP. ISIDORE DAVIDSON, Newark, N. J. Filed Apr. 16, 1925. Serial No. 23,587. 7 Claims. (Cl 150—49.)



1. A collapsible receptacle comprising a flexible body portion, a cover and a handle secured to said body portion and adapted to swing on hinges, said cover and handle also serving to retain the body portion in an open position.

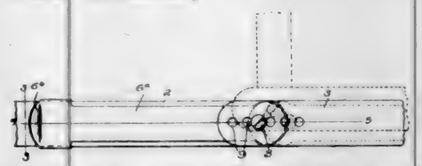
1,561,510. VEHICLE FOR SERVICE ON ROADS AND RAILS. FRANK HENRY DUTTON, Johannesburg, Transvaal, South Africa, assignor to Roadrails Limited, Wembley Hill, Middlesex, England, a British Company. Filed May 7, 1925. Serial No. 28,701. 11 Claims. (Cl. 105—26.)



1. A power driven reversible locomotive for service on roads and rails having driving means for running on the road and a rail bogie at each end, and composed of readily separable units each constructed to be separately convertible into a road unit for transport on ordinary roads.

---

1,561,511. WINDOW FIXTURE. JOHN E. FOWLER, Olean, N. Y. Filed Oct. 13, 1923. Serial No. 668,413. 1 Claim. (Cl. 156—23.)



A window fixture comprising a sustaining device for a shade or the like, two bars to each of which a sustaining device is secured, a rearwardly extending hook near the outer end of each bar, a resilient link pivoted on the front face of one bar near the inner end of the latter and having at its other end two rearwardly projecting lugs for engaging the opposite edges of said bar, and a headed pivot eccentrically arranged on the front face of said link, the other bar having its inner end lying in front of the link and provided with a longitudinally extending series of openings in any one of which the headed pivot may lie.

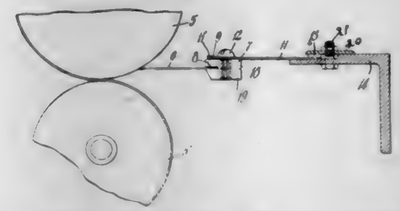
---

1,561,512. FISHING TACKLE. CHARLES FREDRICKS, Brooklyn, N. Y. Filed May 14, 1925. Serial No. 30,160. 4 Claims. (Cl. 43—42.)

1. Fishing tackle comprising a flexible artificial lure, a hook and an extensible and elastic suspension means for the hook connected with the lure at two separated points on its length, whereby as the suspending means is extended and contracted it imparts changes of form to said lure.

---

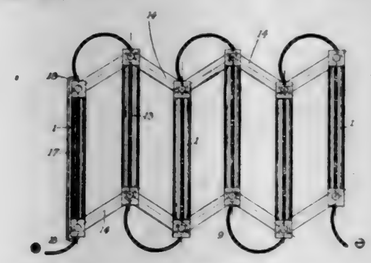
1,561,513. DEVICE FOR CLEANSING THE SURFACE OF ROLLS. JOHN A. FROSSARD, East Pepperell, Mass. Filed Mar. 25, 1925. Serial No. 18,136. 7 Claims. (Cl. 92—74.)



1. A device for cleansing the surface of a roll having, in combination, a bar provided with a slot along its front edge, a scraper blade with its rear edge positioned in said slot, and its front edge adapted to engage said roll, and yielding means on said bar projecting into said slot and engaging said scraper blade whereby the blade is detachably positioned and held in said slot.

---

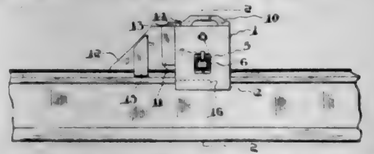
1,561,514. DEVICE FOR CURLING OR UNDULATING HAIR. PAUL EDMUND GAIRE, Brussels, Belgium. Filed Jan. 20, 1925. Serial No. 3,613. 3 Claims. (Cl. 132—31.)



1. In a hair waving apparatus, the combination of a number of heating elements, each of which is provided with a rounded surface carrying one or several rows of comb-teeth between which pass the hair, rigid links connecting said elements together and causing the successive elements to be moved longitudinally with relation to each other if the same are moved towards each other, whereby the hair will be caused to move in the same way, with a knife adapted to be inserted below the hair and raised to a varying amount according to the height of the rib to be formed on the hair, substantially as set forth.

---

1,561,515. RAILWAY CLAMP. WILLIAM JOHN GIBSON, Thorold, Ontario, Canada. Filed July 7, 1924. Serial No. 724,726. 11 Claims. (Cl. 104—258.)

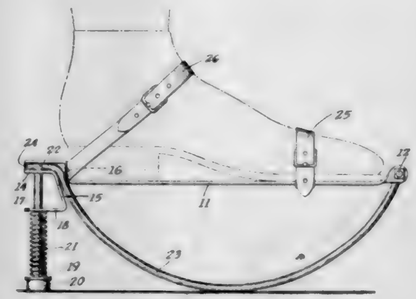


1. In a rail stop, the combination of a body having integral therewith a pair of depending legs directly opposite one another and adapted to straddle the rail,

each of said legs having a recess therein to receive the sides of the head of the rail, one of said recesses being of greater depth than the head of the rail whereby by rocking the body transversely of the rail it may be removed therefrom, said body having a slot formed in its under side; and a wedge in said slot engaging the head of the rail and adapted to exert a perpendicular lift effect to engage the under side of one of said recesses with the head of the rail.

---

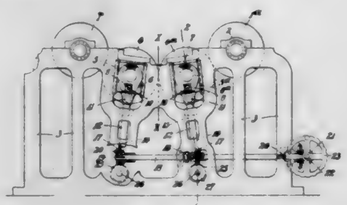
1,561,516. FOOTGEAR. ANTON GLOWA, Hoboken, N. J. Filed Feb. 27, 1924. Serial No. 695,448. 2 Claims. (Cl. 36—1.)



2. A device of the class described comprising a tread member having an offset portion at the rear end thereof, an arcuate supporting member fixed to the tread member, a transversely U-shaped plate at the rear end of the tread portion, a vertically slidable plunger in said U-shaped plate, a cushion at the lower end of the plunger, and yieldable means for urging said plunger downwardly.

---

1,561,517. ROTARY OFFSET WEB-PRINTING PRESS. BENJAMIN JOSEPH JOHN GOLDING, London, and JOHN SHUTTLEWORTH, Altrincham, England, assignor to Linotype and Machinery Limited, London, England. Filed June 5, 1925. Serial No. 35,256. 8 Claims. (Cl. 101—143.)



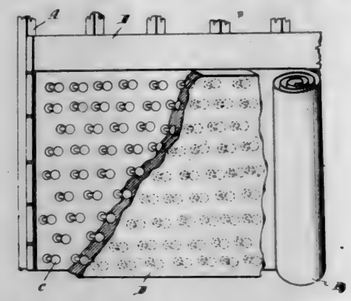
1. In a rotary offset web printing press, the combination of two plate cylinders mounted in stationary bearings, two impression transfer cylinders located between them at a lower level, screw mechanism adapted to adjust each impression transfer cylinder to vary the pressure relationship between the cylinders during the running of the press, and means adapted to effect the said adjustment of the two impression transfer cylinders simultaneously and to the same extent.

---

1,561,518. CEMENT-STUCCO ANCHOR NAIL. JAMES A. GRAHAM, Providence, R. I. Filed Sept. 25, 1924. Serial No. 739,828. 2 Claims. (Cl. 72—33.)

1. A double headed nail whose heads are flat and of extended surface, the inner side of the inner head being

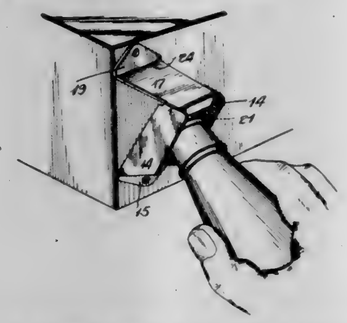
adapted to engage a base to be fastened to the siding of a building, and the outer head being spaced from the



inner a distance sufficient to act as an anchorage for the plaster applied over said base and siding.

---

1,561,519. BOTTLE-CAP REMOVER. HOMER B. MATHEWS, Baltimore, Md. Filed July 21, 1925. Serial No. 44,963. 2 Claims. (Cl. 65—46.)



1. In a bottle opener of the kind described, an upwardly inclined body portion having forwardly projecting wings at the sides thereof, the upper end of said body portion being provided with a forwardly and downwardly return bent bottle cap engaging portion, and upwardly and downwardly extending tabs on the said return bent and body portions respectively.

---

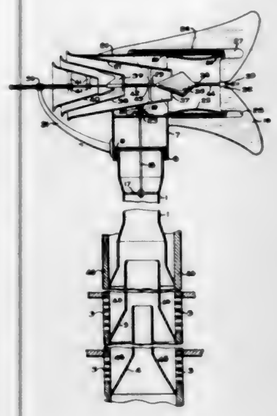
1,561,520. METHOD OF TREATING PLASTERED CEILINGS AND WALLS. SOFUS L. MORTENSEN, Boston, Mass. Filed Aug. 1, 1923. Serial No. 655,020. 8 Claims. (Cl. 72—123.)

1. The method of treating plastered walls and ceilings having plaster laid on laths which have air spaces between them, said method consisting of applying an adhesive to the plastered surface, and placing metal foil upon said adhesive.

---

1,561,521. CHIMNEY AND VENTILATING COWL AND ITS SHAFT. WILLIAM HEYWOOD MOTTERSHALL, Toronto, Ontario, Canada. Filed Jan. 5, 1923. Serial No. 610,861. 9 Claims. (Cl. 98—3.)

1. In chimney and ventilator cowls, the combination with a shaft, of a cowl comprising a T-shaped casing, its vertical portion being revolubly mounted on the shaft and communicating with the horizontal portion which includes a hollow truncated conical member, said truncated conical member having wind inlet and outlet



orifices, adjustable means for varying the cross sectional area of the wind inlet orifice, and adjustable means for varying the cross sectional area of the wind outlet orifice, both means functioning in unison.

---

1,561,522. REBOUND CHECK. RICHARD T. NEWTON, New York, N. Y. Filed May 19, 1923. Serial No. 640,105. 8 Claims. (Cl. 267—10.)

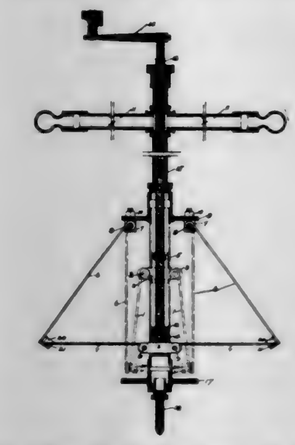
1. A rebound check device comprising a drum adapted to be mounted in fixed position upon the body portion of the vehicle, a brake band around said drum, and means adapted for operation by the running gear for causing frictional movement of said band around said drum on relative movement of the body and running gear, together with a brake shoe cooperating with said drum and band to grip the latter under predetermined conditions.

---

1,561,523. POSTHOLE AUGER. ARNOLD WILLIAM RIEDLE, Winnipeg, Manitoba, Canada. Filed Nov. 19, 1923. Serial No. 675,659. 3 Claims. (Cl. 255—74.)

1. In a post hole auger, a hollow casing having a handle, a non-rotary, vertically adjustable member carried by the casing, a series of cutter bars having their inner ends hinged to the vertically adjustable member

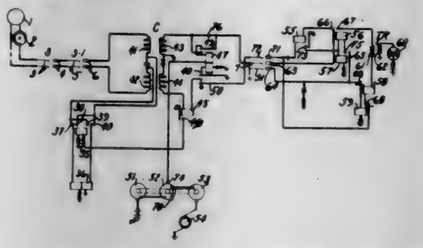
and their outer ends free, a series of cutter bars having their inner ends hinged to the casing in a location above the adjustable member and their lower ends free



and sockets carried by the latter ends of the latter cutter bars and receiving the outer ends of the former cutter bars.

---

1,561,524. TELEPHONE TESTING SYSTEM. GEORGE SANDALLS, Jr., New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 20, 1924. Serial No. 714,689. 5 Claims. (Cl. 179—175.)



2. A testing device for testing telephone lines comprising a line, means in the line including a source of tone current supply operable after the testing device is properly seized for transmitting a tone to the tester and means thereafter automatically operated for interrupting the tone.

---

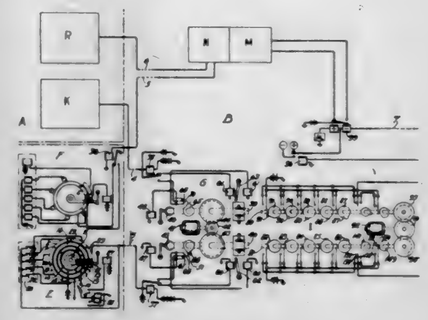
1,561,525. PLASTIC MOLDING. RICHARD W. SEABURY, Boonton, N. J., assignor, by mesne assignments, to Union Carbide and Carbon Research Laboratories Inc., Long Island City, N. Y., a Corporation of New York. Filed Feb. 16, 1921. Serial No. 445,520. 4 Claims. (Cl. 106—22.)

1. A molding composition comprising discrete particles containing a phenolic condensation product and filler in intimate admixture with particles containing a vulcanizable rubber composition and a filler.

---

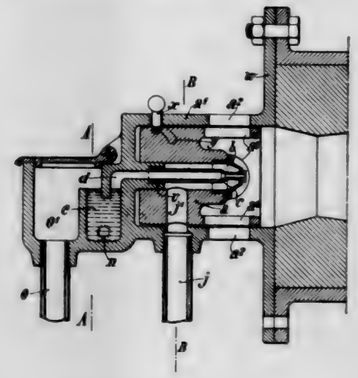
1,561,526. PRINTING TELEGRAPHY. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 11, 1922. Serial No. 606,272. 26 Claims. (Cl. 178—71.)

1. In a telegraph system, a plurality of stations, a multiplex synchronous system connecting two of said stations, an extension circuit extending from one of said stations to a distant station, means for transmitting code combinations of message impulses over said extension circuit, means comprising a plurality of selectively movable elements, and cam sectors controlled by said elements for retransmitting to said multiplex system impulses in accordance with those transmitted over said extension circuit.



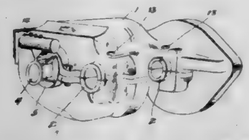
---

1,561,527. SUCTION BURNER WITH REGULATION OF OIL BY VARIATION OF LEVEL AND OF SUCTION FORCE. JEAN AUBÉ, Paris, France, assignor to Société Anonyme: Anciens Etablissements Loy et Aubé, Paris, France. Filed Jan. 17, 1925. Serial No. 3,134. 4 Claims. (Cl. 158—76.)



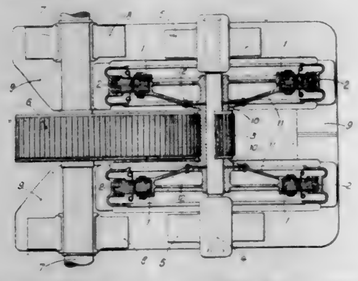
4. In a burner operating by suction of the liquid fuel, a cylindrical casing, a sleeve co-axial with the liquid hydrocarbon feeding tube, a channel, in the said sleeve; surrounding the hydrocarbon feeding tube, a conical nozzle at the orifice of the said channel, a passage connecting the said channel with the tube for the admission of air under pressure, a cylindrical flange forming an extension of the said sleeve, openings in the said cylindrical flange, corresponding ports in the cylindrical casing guiding the sleeve for cooperating with the openings of the flange, an hydrocarbon feeding tube in communication with the constant level vessel and the opposite end of which cooperates with the conical nozzle, a helical groove in the wall of the cylindrical guide casing, an operating rod, integral with the sleeve and its flange for cooperating with the helical groove and effecting the displacements of the sleeve and of its flange.

1,561,528. COMBINATION HOUSING AND OILER. HERSHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, Jersey City, N. J. Filed Nov. 21, 1922. Serial No. 602,433. 6 Claims. (Cl. 308—125.)



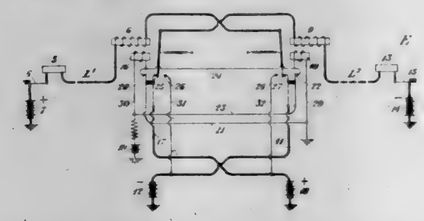
3. A bearing for encased motors and the like, comprising a body secured to the motor casing, a hub part extending axially from the body, the body and the hub provided with a bore adapted to receive a shaft to be supported, the hub formed with a funnel shaped offset, said funnel communicating with the bore, and a container seated on the top of the funnel shaped part and adapted to drain thereinto.

1,561,529. DRIVING ARRANGEMENT FOR ROLLING MILLS OR FOR THE MECHANICAL TRANSMISSION OF POWER FROM ELECTRIC MOTORS. ANDRÉ BOAS, Paris, France, assignor to Société Anonyme des Engrenages Citroen, Paris, France, a Corporation of France. Filed Jan. 3, 1924. Serial No. 684,244. 2 Claims. (Cl. 74—7.)



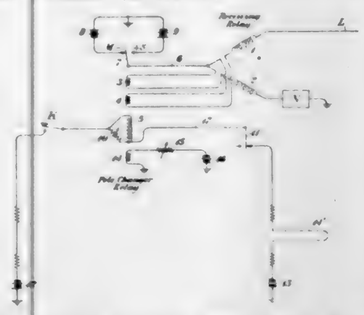
1. The combination of an electric motor having its rotor revolubly mounted on a stationary shaft and serving as a fly wheel, a pinion revoluble on said shaft, flanged connections between said rotor and said pinion, and a driven gear meshing with said pinion.

1,561,530. TELEGRAPH REPEATER CIRCUITS. ELMER J. CONOVER, Decatur, Ga., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 1, 1923. Serial No. 672,169. 3 Claims. (Cl. 178—71.)



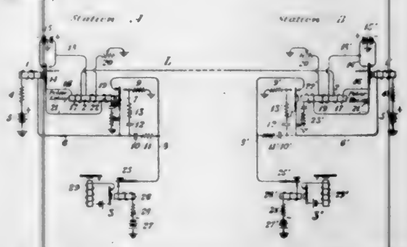
1. A telegraph repeater interconnecting two line sections, said repeater including a relay for each line section, an armature for each relay, battery of one polarity connected to the distant terminals of one of said line sections, the front contact of the armature of the relay associated with the other line section being connected to battery so poled to cause current to flow over said first line section in the same direction as the current flowing in the distant battery, and a battery of opposite polarity connected to the back contact of said armature so that when the armature rests upon said back contact a no-current condition will occur upon said first line section.

1,561,531. TELEGRAPH CIRCUITS. SAMUEL I. CORY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 17, 1922, Serial No. 544,568. Renewed Mar. 18, 1925. 5 Claims. (Cl. 178—2.)



1. In a duplex telegraph system, a line, a terminal station therefor, a balancing artificial line circuit at said station, receiving relay windings connected in said line and artificial line circuits, said receiving relay windings being arranged in series with respect to currents coming in over said line and being differentially arranged with respect to outgoing currents applied to said line, a pole changer, and holding windings for said pole changer, said holding windings being connected in said line and artificial line circuits in a manner similar to said receiving relay windings.

1,561,532. TELEGRAPH SYSTEM. SAMUEL I. CORY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 26, 1923. Serial No. 654,050. 6 Claims. (Cl. 178—2.)



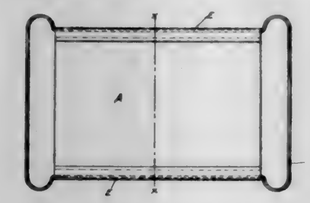
1. In a single Morse telegraph system, the combination with a line circuit of a polar receiving relay having a plurality of windings, one of which is connected with the said line circuit, a pole changer having its armature connected with that winding of the said polar relay with which the said line circuit is connected, and also with another winding of the said polar relay, the said relay having also a third winding connected between the positive contact of the pole changer and ground.

1,561,533. PARACHUTE TOY. THOMAS JOSEPH FLEURY, Toronto, Ontario, Canada. Filed Apr. 28, 1925. Serial No. 26,486. 5 Claims. (Cl. 244—21.)

1. In a parachute toy, the combination with the parachute portion, of a wind shield over the open end of the parachute whereby it may be thrown in the air open end first, a fan on the parachute adapted to be rotated upon the parachute and wind shield being thrown up in the

air together, and parachute releasing means between fan and wind shield actuated into operative position upon the fan being rotated a predetermined number of revolutions.

1,561,534. STENCIL FRAME. ELMER E. GRAY, Saugus, Mass. Filed May 6, 1925. Serial No. 28,488. 8 Claims. (Cl. 101—127.)

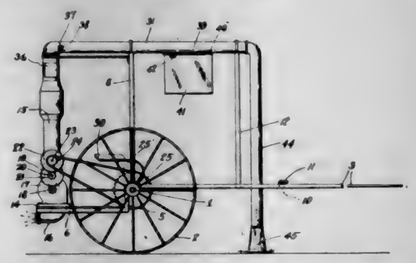


2. In a device of the character described, a resiliently flexible stencil-holding frame and a stencil adapted to be engaged with the said frame and being of smaller size than the frame, said frame being resiliently compressible to a size to permit attachment of the said stencil thereto and being adapted by its resiliency to hold the stencil taut.

1,561,535. PHARMACEUTICAL COMPOUND. HANS HAHL, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Original application filed Dec. 10, 1924, Serial No. 755,059. Divided and this application filed June 27, 1925. Serial No. 40,103. 3 Claims. (Cl. 260—11.)

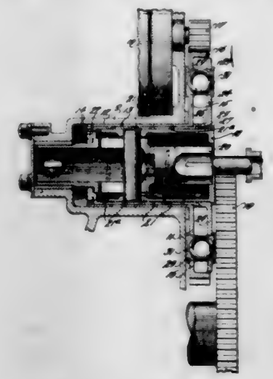
1. The process of producing alkali metal salts of complex antimony compounds of mercapto-carboxylic acids, which process consists in treating the mercapto-carboxylic acid with an oxy derivative of the trivalent antimony and neutralizing the resulting product with a suitable alkali metal compound, substantially as described.

1,561,536. WEEVIL COLLECTOR. WILSON L. HAMLET, Daviston, Ala. Filed Jan. 21, 1924. Serial No 687,612. 1 Claim. (Cl. 43—140.)



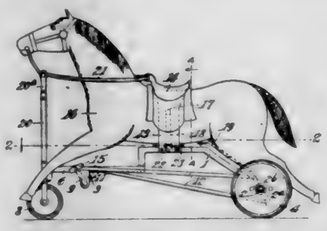
In a suction boll weevil collector, a stack, a pipe having a foraminous funnel-shaped end which is swivelly received in the top of the stack, a receptacle in the stack below the said end of the pipe, said pipe having an opening in the bottom thereof, an angle screen in the pipe arranged over the opening, and a box providing a receptacle removably secured on the pipe and covering the opening.

1,561,537. LOAD-LIMITING DEVICE. FRANK A. HAYES, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, a Corporation of New York. Filed July 2, 1923. Serial No. 649,089. 19 Claims. (Cl. 64—99.)



1. In a load limiting device, the combination of a helix wound for frictional driving engagement upon a drum to be driven, a power transmitting spring means, said frictional engagement subject to the power transmitting spring means, and means connecting the spring means to the helix to cause said helix to release the drum upon a yielding of said spring means.

1,561,538. VELOCIPEDE. ELMER HOFF, Wheeling, W. Va. Filed Oct. 28, 1924. Serial No. 746,322. 5 Claims. (Cl. 208—42.)

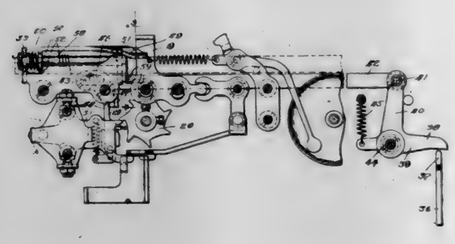


1. In combination, a vehicle running-gear, a rocking horse mounted over and supported by said running gear, means whereby travel of said running gear induces rocking movement of said horse, and a stationary rider's seat carried by said running gear independently of and at a distance from the back of the horse permitting unobstructed rocking movement of the horse.

1,561,539. TABULATOR MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Sept. 13, 1920. Serial No. 410,043. 10 Claims. (Cl. 197—176.)

1. In a typewriter, a platen carriage frame, a platen carriage arranged to move along said frame, a stop bar on said platen carriage and having margin and tabulator

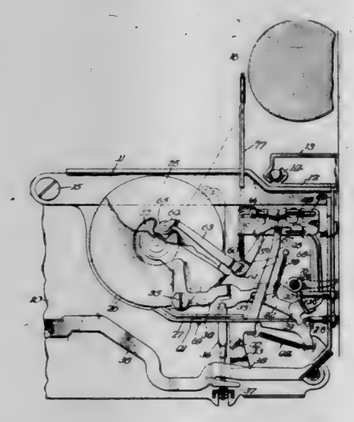
stops thereon, and means for shifting said bar on said carriage to move said stops out of operative position said shifting means comprising a pivoted lever having said bar secured thereto at a point removed from the pivotal



support therefor and a stop on said platen carriage frame below the horizontal plane of said pivotal support for engaging the stop on said bar.

---

1,561,540. RIBBON-FEED MECHANISM. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Aug. 25, 1921. Serial No. 495,332. 8 Claims. (Cl. 197—151.)

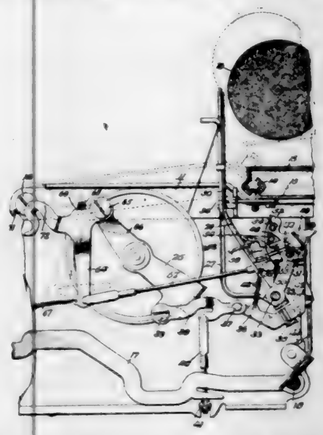


1. In a compactible typewriter, a main frame, a platen carriage frame pivotally mounted thereon for movement into and out of operating position, a ribbon guide on said main frame arranged to project into position to guide a ribbon adjacent said platen, said guide being foldable into compacted position, and means for automatically moving said guide into operating position when said platen carirage frame is moved into its operating position.

---

1,561,541. RIBBON VIBRATOR FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Sept. 1, 1921. Serial No. 497,647. 27 Claims. (Cl. 197—154.)

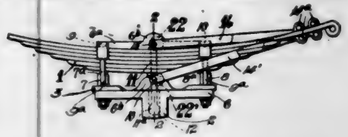
1. In a compactible typewriter, a main frame having a platen carriage frame movably mounted thereon, a ribbon vibrator support foldably mounted on said main frame for movement into a compacted position, a ribbon vibrator on said support, key levers on said main frame, and an operative means connecting said key levers with



said vibrator, said vibrator when folded being automatically movable by the folding movement of said vibrator support out of engagement with said operative connection.

---

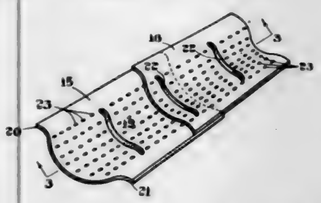
1,561,542. SUSPENSION FOR VEHICLES. MAURICE HOUDAILLE, Levallois-Perret, France. Filed July 13, 1923. Serial No. 651,380. 1 Claim. (Cl. 267—36.)



In a suspension for vehicles, an axle member and a chassis member, a leaf spring, a lower supporting plate for said spring arranged on the axle, semi-cylindrical projections on the plate contacting at spaced points with the underside of the spring, upper semi-cylindrical projections bearing at spaced points on the top of the spring, cams in contact with the upper face and the lower face of the spring, shafts on which cams are secured, bearings fixed relatively to the said axle member and supporting said shafts, and levers fixed to said shafts, said levers being arranged to automatically rotate when the chassis member and axle are subjected to relative displacements, for turning said cams.

---

1,561,543. ADJUSTABLE GRATE. JARVIS L. HOULT, Montreal, Quebec, Canada. Filed Dec. 9, 1924. Serial No. 754,824. 3 Claims. (Cl. 126—153.)

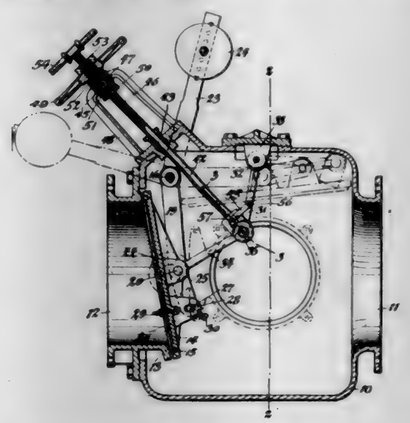


1. The combination with a stove or range of an auxiliary grate comprising two perforated plates bent in their lateral direction to form an arc, and means formed in the lateral direction of the plates to align

one plate with the other when they are placed in overlapping engagement with each other, the longitudinal edges of said plates being adapted to engage with the upper edges of the walls of the fire-pot of the stove.

---

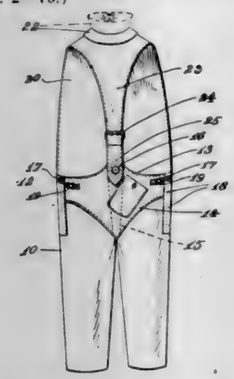
1,561,544. VALVE-OPERATING MECHANISM. HARLAN W. HOW, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Jan. 14, 1924. Serial No. 686,239. 10 Claims. (Cl. 251—10.)



4. A valve comprising an enclosing casing having a valve seat, a valve disk movable toward and from said seat, and means for operating said valve disk comprising an operating arm pivotally mounted at one end on said casing and pivotally connected at its opposite end with said valve disk, a pair of toggle links having their proximate ends pivotally connected and their opposite ends pivotally connected with the valve disk and casing, respectively, and means for actuating said operating arm for moving said links into a folded or unfolded position.

---

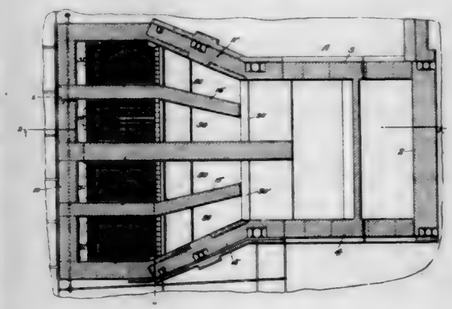
1,561,545. GARMENT. JOHAN E. JOHANNESEN, Brooklyn, N. Y., assignor of one-fourth to John A. Johansen and three-sixteenths to Arthur I. Ahlgren, both of Brooklyn, N. Y. Filed Sept. 15, 1923. Serial No. 662,886. 1 Claim. (Cl. 2—79.)



A slip over garment of the character described comprising a lower garment portion, a flap arranged on the rear thereof and buttonable to the front of the lower garment at the forward edges thereof and being adjustably associated therewith, a reinforcement secured at its edges to the seat portion of the flap and the lower garment portion respectively, an elongated seam reinforcement associated with the reinforcement last mentioned, a button fixed to the upper central edge of the seam reinforcement, a shirt like upper garment portion integrally formed with the front of the lower garment, a tapered rear part depending from the upper end of the shirt like portion and having a reinforced button hole in its lower end to receive the button and a means for adjusting the length of the tapered depending portion as and for the purpose specified.

---

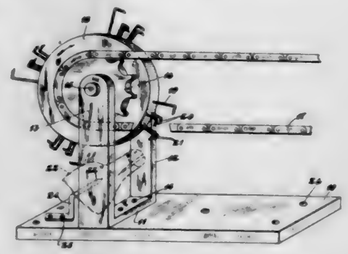
1,561,546. STEAM-GENERATING PLANT. JAMES E. KENNEDY, Bacolod, P. I. Filed Oct. 13, 1924. Serial No. 743,780. 4 Claims. (Cl. 110—7.)



1. A steam generating plant employing bagasse or similar fuel, comprising a boiler section having a boiler therein, and a furnace section of greater width than the boiler section and connected therewith by converging side walls, said furnace section including two pairs of grate and combustion chambers divided by a longitudinal wall and having arched crowns, an arched fire bridge extending substantially from the grate chambers to the discharge ends of the combustion chambers, the dividing wall between the pairs of chambers extending longitudinally throughout the length of the furnace section and the dividing walls between the chambers of each pair terminating approximately at the highest point of the bridge wall.

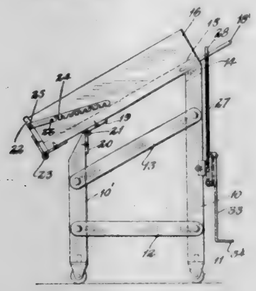
---

1,561,547. HOG'S-HEAD CUTTER. ARCHIP KARPENKO, New York, N. Y. Filed Mar. 5, 1925. Serial No. 13,156. 4 Claims. (Cl. 17—1.)



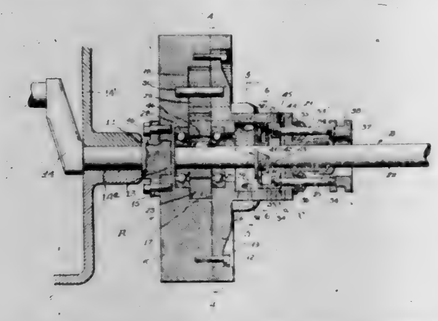
1. A tool for tearing hog heads apart comprising a base, a drum, a means for rotating said drum, a tool on said drum for removing the meat, a tool for removing the skin, and a tool for breaking the jaw bones on said drum, and a means for exposing a hog's head to the action of the said tools.

1,561,548. HOG CARRIER. ARCHIP KARPENKO, New York, N. Y. Filed Mar. 5, 1925. Serial No. 13,157. 2 Claims. (Cl. 280—44.)



1. Hog-carrier comprising a wheeled frame, an inclined trough hingedly secured intermediate its ends to said frame, a movable and adjustable end wall for said trough, a means for locking the end wall in any of its adjusted positions to said trough, an inclined rod secured at the upper end of said trough, an operating rod having a forked upper end engaging said inclined rod, and foot operated means for operating said operating rod to lift said trough to any desired angle.

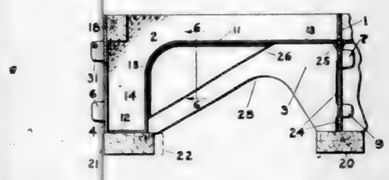
1,561,549. HYDRAULIC CLUTCH. SELMER A. KRAFT, St. Paul, Minn. Filed Feb. 11, 1922. Serial No. 535,904. 4 Claims. (Cl. 192—61.)



1. In a clutch, a rotary driving member including a body having an axial and radially arranged gear receiving compartments therein, also an axial fluid chamber, a driven shaft journaled in said body and passing axially through said fluid chamber, a gear fixed to said shaft and fitted within said axial compartment, planetary gears journaled in said body within said radial compartments and meshing with said axial gear, passage-ways leading from and returning to said fluid chamber, each passage-way being intercepted by a planetary gear and the adjacent meshing portion of said axial gear, a piston slidable in said chamber and adapted to simultaneously obstruct said passage-ways and a valve member associated with said piston to retard the movement thereof in a direction to obstruct said passage-ways, said member being slidably and revolubly mounted on said shaft.

1,561,550. MOLD FOR MAKING LUG STONES. ROSCOE F. LEE, Indianapolis, Ind. Filed Dec. 15, 1924. Serial No. 755,983. 6 Claims. (Cl. 25—121.)

1. A mold for concrete blocks, having a floor which corresponds to the normally inner surface of said blocks; end plates for forming the end surfaces of said blocks, having slots therein; side plates for forming the normally upper and lower surfaces of said blocks, having beak hooks which engage said slots in "bedstead" manner

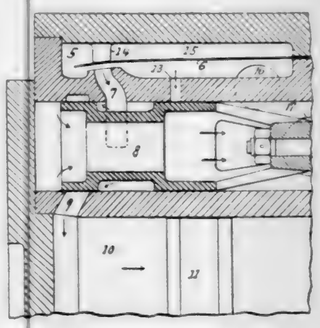


whereby the lowering of said end plates degage same from said side plates; and removable means for preventing the lowering of said end plates.

1,561,551. SPRING ROLLER FOR SUN VISORS. ATLEE J. LEWIS, Mansfield, Ohio. Filed June 19, 1922. Serial No. 569,227. 1 Claim. (Cl. 156—36.)

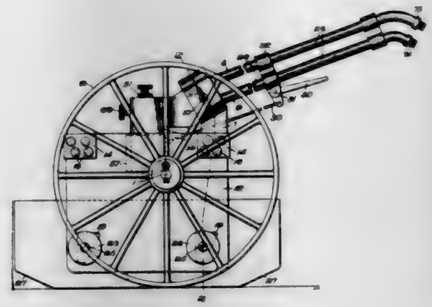
In a device of the class described, a tubular casing having a longitudinal slot, a combined spring-anchor and bearing, of U-shape, located within the casing and including an end plate and arms projecting from the end plate, the arms having trough-shaped extensions fitting closely in the casing and spaced to register with the slot, for the reception of a curtain, a securing element connecting one extension with the casing, a cap about the casing and retaining the securing element, a cap having an inwardly extended flange, a shaft journaled in the end plate and having an enlarged head journaled between the end of the casing and the flange and a spring disposed about the shaft and located within the anchor, one end of the spring being connected to the head, and the other end of the spring being connected to one arm of the anchor.

1,561,552. INLET CONTROL FOR RECIPROCATING ENGINES. KURT LIGNIEZ, Mannheim, Germany. Filed Oct. 10, 1923. Serial No. 667,611. 2 Claims. (Cl. 121—145.)



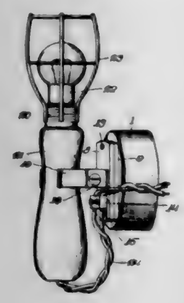
1. An inlet control for reciprocating engines comprising a chest with a steam inlet, a chamber provided with a slide valve, an inlet port in the steam chest communicating with the chamber, a cut-off plate arranged in the steam chest to normally open the inlet port, and a relief port located in the wall of the slide valve chamber leading from the steam chest into the chamber opened by the side valve when the inlet is closed so as to relieve the pressure on the plate to open the port.

1,561,553. PNEUMATIC HIGHWAY MARKER. PHILIP K. LINDSAY, Somerville, Mass., assignor to Spray Painting & Finishing Equipment Sales Co., a Corporation of Massachusetts. Filed Nov. 30, 1921. Serial No. 518,979. 15 Claims. (Cl. 91—45.)



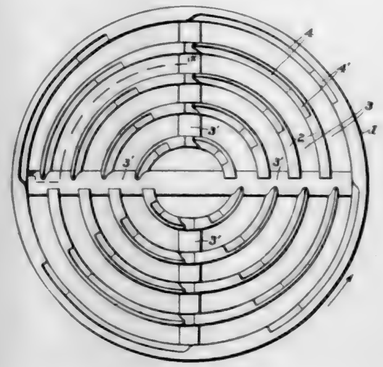
1. A highway marker comprising in combination, a wheeled support, a housing mounted thereon, and having a mark-defining portion yieldable substantially vertically, spraying means carried by the parts, and means to supply coating material under pressure and a motive agent to the spraying means.

1,561,554. MAGNETIC FIXTURE. FREDERICK B. LITTLE, Chicago, Ill. Filed Sept. 2, 1921. Serial No. 498,120. 3 Claims. (Cl. 173—341.)



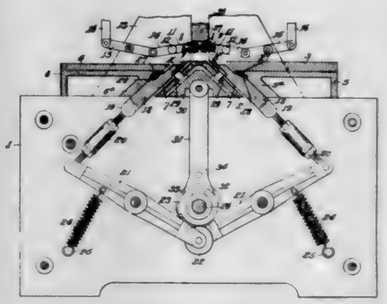
1. A magnetic structure for supporting an electric hand lamp comprising a magnetic shell; a magnetizing coil therein; a hand lamp having a handle; a clip on the shell to clasp and hold the handle; a duplex cord wire for connecting the lamp to a source of current supply; sharp pointed terminals for the magnetizing coil mounted on said shell and adapted to pierce the insulation of the duplex wire for connecting said coil and lamp in parallel circuit and a clamp member having hollow projections overlying said pointed terminals.

1,561,555. EMERY WHEEL. DANIEL FREDERICK MCGOVERN, Montpelier, Vt. Filed July 22, 1924. Serial No. 727,558. 2 Claims. (Cl. 51—209.)



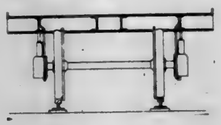
1. An abrasive wheel having on its working face a plurality of spaced flanges, the space between said flanges constituting abrasive feed channels, said flanges having an abrasive lead extending from their forward ends opening inwardly into said feed channels, the rear walls of said leads being rearwardly beveled.

1,561,556. MACHINE FOR FORMING SHEET-METAL LATH. JOSEPH R. MCMAHON, Glendale, W. Va., assignor of one-fourth to himself, one-fourth to J. T. McMahon, one-fourth to R. A. McMahon, and one-fourth to C. P. McMahon, all of Glendale, W. Va. Filed Mar. 10, 1923. Serial No. 624,114. 11 Claims. (Cl. 153—25.)



1. A machine for forming sheet-metal lath having dovetail channels therein, comprising upper and lower sets of dies, the upper dies being reciprocable into and out of seated relation to a sheet interposed between said sets and having rabbets presenting outwardly facing acute angles, and the lower dies being movable in upwardly and inwardly inclined directions into cooperative relation to said upper dies for pressing the metal of the sheet into said angles, means for automatically actuating said dies at definitely spaced intervals, and means for intermittently advancing the sheet.

1,561,557. CONSTRUCTION OF RAILROADS AND TRAMWAYS. GOTTFRIED H. J. MAAS, Berlin-Steglitz, Germany. Filed Sept. 19, 1923. Serial No. 663,624. 2 Claims. (Cl. 238—15.)

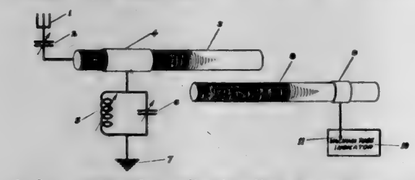


1. In a railroad and tramway for curves, rails having their tread surfaces inclined downward toward the center of the curves, in parallel planes, in combination with rolling stock with wheels having convex tire surfaces bearing on said tread surfaces.

1,561,558. COMBINED MOLD AND SCOOP. JOHN MANOS, Toronto, Ohio, assignor of one-fifth to J. E. Parker, Toronto, Ohio. Filed Mar. 3, 1925. Serial No. 12,812. 2 Claims. (Cl. 107—48.)

1. An ice cream scoop comprising a tubular casing, means reciprocable within the casing for expelling the contents of the latter, a longitudinally slotted handle attached to said casing, said casing having therein a slot in communication with the slot of said handle, a lever disposed in the handle slot and having pivotal connection with said expelling means, said lever being pivoted to said handle adjacent to the rear end of said slot and having a gear segment on the rear end thereof, a pivoted member having a gear segment operatively engaged with that of said lever, and a spring associated with said member serving to maintain the latter in outwardly thrust relation to said handle.

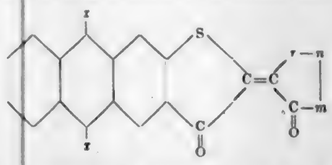
1,561,559. ELECTRICAL SIGNALING. JOSEPH O. MAUBORGNE, LOUIS COHEN, and GUY HILL, Washington, D. C. Filed Apr. 8, 1921. Serial No. 459,530. 5 Claims. (Cl. 250—20.)



1. In a system for radio signaling, an antenna, a wave coil adapted for the production of wave development effect thereon by signal energy, and operatively associated with said antenna, means for transferring said signal wave energy through an electrostatic coupling to another wave coil which is operatively associated with a detecting instrument.

1,561,560. INDIGOID DYESTUFFS. BERTRAM MAYER, Basel, and JAKOB WÜRGLER, Neuewelt, near Basel, Switzerland, assignors to The Society of Chemical Industry in Basle, Basel, Switzerland. Filed Jan. 4, 1924. Serial No. 684,449. 7 Claims. (Cl. 260—53.)

1. As new products of manufacture the herein described new indigoid dyestuffs of the general formula:

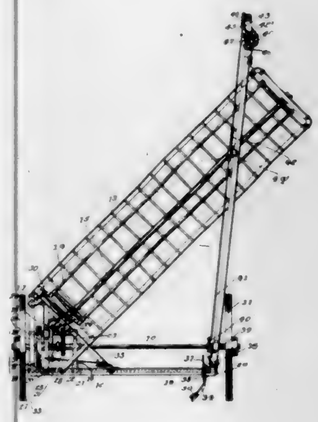


wherein *x* represents a hydrogen atom or an oxygen atom, and *r*, *n* and *m* atoms of which two are carbon atoms adjacent to each other which at the same time appertain to an aromatic ring system, and of which the third is NH—, —S— or C, which products form red to green and green-black powders soluble in concentrated sulphuric acid to orange-red to green and brown solutions, yielding with hydrosulphite and caustic soda solution orange-brown to green vats which dye cotton fast blue-red to green and grey tints.

1,561,561. PIPE-MOLD COATINGS. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Feb. 24, 1925. Serial No. 11,369. 4 Claims. (Cl. 22—192.)

1. The method of protecting a rotating cylindrical mold, consisting in first sand blasting the wall of the mold, then heating the mold well above the boiling point of water, then brushing the roughened and heated surface with a wash containing a little sodium silicate in solution and a considerable quantity of fire clay in suspension.

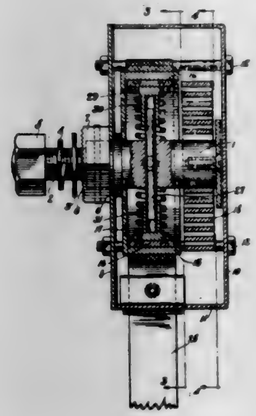
1,561,562. COMBINED RAKE AND TEDDER. EDWARD MOWRY, Sterling, and Norman E. Bunting, Chicago, Ill., assignors, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed July 29, 1918. Serial No. 247,322. 3 Claims. (Cl. 56—377.)



1. In a hay rake, the combination of a frame, raking means supported on the frame, an axle having carrying wheels, a pair of levers pivoted at one end to the frame and midway of their ends to the axle, a rock shaft on

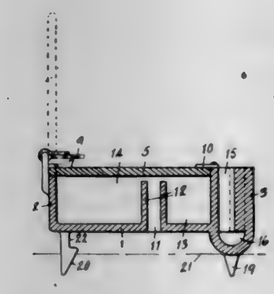
the frame, and cooperating means on said rock shaft and the other ends of said levers adapted to be actuated for bodily and vertically adjusting the frame and raking means with respect to said axle.

1,561,563. SNUBBER. HARRY O. NINE and RAYMOND A. KNIGHT, Canton, Ohio. Filed June 6, 1925. Serial No. 35,343. 4 Claims. (Cl. 267—10.)



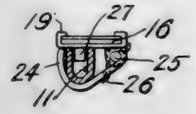
1. A snubber for vehicles including a stationary stud, a drum rotatably mounted upon the stud and having an inner cam surface, friction shoes for engagement with said cam surface of the drum, a casing surrounding said drum and friction shoes, a spring for rotating the drum in one direction, a belt wound upon the drum for rotating the drum in the opposite direction, and means within the casing for continuously supplying lubricant to the friction surfaces of the drum.

1,561,564. COMBINATION KNAPSACK, SHIELD, AND GUN REST. EPTHIMIOS NIZAMIS, Kalamazoo, Mich. Filed June 29, 1925. Serial No. 40,290. 8 Claims. (Cl. 224—9.)



8. A structure of the class described comprising a metal receptacle adapted as a knapsack and having a wall constituting a cover, and an outer wall having a ventilating slot therein with inwardly projecting flanges in the edges of the slot constituting partitions.

1,561,565. IDENTIFICATION NAME PLATE FOR UMBRELLAS. ALBERT PEYIBIL, 2d, New York, N. Y. Filed Jan. 19, 1921. Serial No. 438,316. Renewed Apr. 13, 1925. 5 Claims. (Cl. 40—10.)

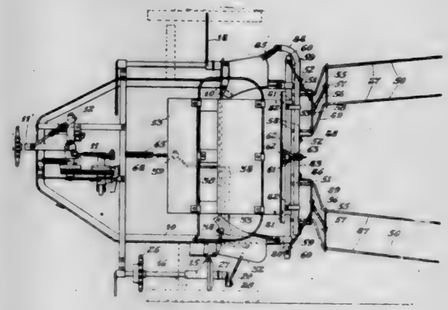


1. The combination with a channel brace or stay of an umbrella, of an elongated card holder comprising a slideway for a card and a fin or rib on said holder for engagement within the channel of the brace.

1,561,566. TUNING PEG FOR STRINGED MUSICAL INSTRUMENTS. BERTRAM THOMAS PURDY, Brockley, England. Filed July 20, 1923. Serial No. 652,666. 2 Claims. (Cl. 84—306.)

1. A tuning peg for stringed instruments, comprising a tapered three part shank and an enlarged head integral with one part of said shank, a spindle mounted for rotation in two of said shank parts, the remaining part being secured to said spindle for rotation therewith, manually operable means carried by said head, and means between said manually operable means and spindle for rotating the latter.

1,561,567. GRAIN SHOCKER. CLEMMA R. RANEY, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 22, 1923. Serial No. 647,065. 12 Claims. (Cl. 56—429.)

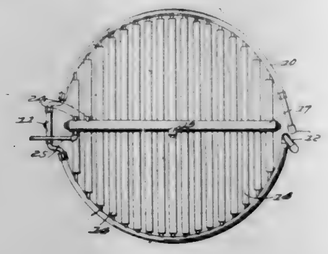


1. A shocking machine comprising a frame, a shock discharging mechanism carried thereby, a butt spreading mechanism pivotally mounted on said shock discharging

mechanism, and means for actuating said butt spreading mechanism from a position forwardly of its pivot to a position laterally of its pivot.

---

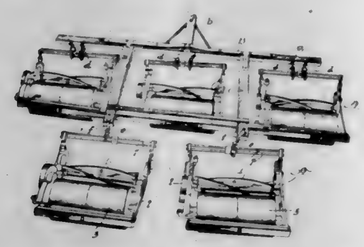
1,561,568. WATER-TUBE BOILER. JOHN A. RINGLEY, Parker, S. Dak. Filed Sept. 29, 1922. Serial No. 591,237. 1 Claim. (Cl. 122—349.)



A flash boiler comprising an annular base header, a plurality of parallel sections each consisting of upper and lower headers and upright generating tubes connecting the same, the lower headers gradually diminishing in length in opposite directions from a diametral line on the base header and disposed in the plane of the base header and being terminally connected to the same, the upper headers being of diminishing lengths corresponding to the lower headers and having their ends free and unattached, the base header having diametrically opposed water supply connection and blow-offs, a steam header arranged in diametrically spanning relation with respect to the base header and at right angles to the upper headers and in communication with said last named headers at intermediate points in their lengths, and a steam delivery pipe connected to said steam header.

---

1,561,569. POWER MOWER. JOSEPH A. ROSEMAN, Evanston, Ill. Filed Apr. 15, 1922. Serial No. 553,175. 6 Claims. (Cl. 56—249.)

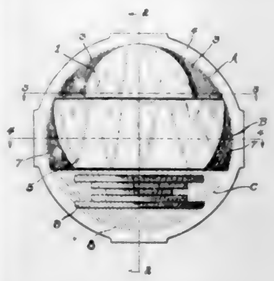


1. In a mower of the character described, the combination of a carriage comprising side frame members, a rotary cutter journalled in said side frame members, a transverse frame member extending parallel with and adjacent to said cutter, a shoe mounted on said transverse frame member, means at the ends and intermediate the ends of said shoe for adjusting the same relative to said frame member and cutter, and a knife fixed to said shoe.

---

1,561,570. AUTOMOBILE LENS. HARRY M. SARDONELL. Detroit, Mich. Filed Feb. 28, 1925. Serial No. 12,239. 1 Claim. (Cl. 240—48.4.)

A lens having three integral sections, a plurality of transverse prisms on one section whose front faces are arranged to retract downwardly all rays passing therethrough and whose under faces are disposed substantially perpendicular to the plane of the lens, there being grooves on the opposite face of said section arranged to refract the rays in lateral diverging directions, another section having an outwardly and downwardly inclined projecting flat portion, and inwardly curved integral side portions



on opposite sides of said projecting portion, said flat portion and inwardly curved portions being colored and rendered translucent, and the third section having an outwardly inclined projecting portion and a flat transverse bottom portion, the opposite face thereof being hollow and conforming to the shape of the projecting portion, and integral outwardly and inwardly curved side portions on said projecting portion.

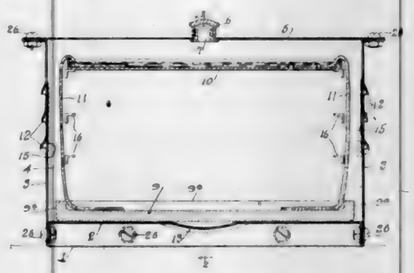
---

1,561,571. PLASTIC FIRE BRICK. WILLIAM A. L. SCHAEFER, Chicago, Ill., assignor to Plibrico Jointless Firebrick Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1919. Serial No. 288,745. 2 Claims. (Cl. 106—10.)

1. A plastic fire-brick comprising a clay rich in alumina apportioned into raw and calcined parts in the proportion of nine and two mixed together and with ground burner fire-brick in the proportion of eleven and eighteen.

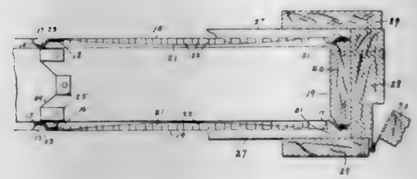
---

1,561,572. ICELESS REFRIGERATOR. ELISHA H. SCOTT, Richmond, Ind. Filed July 21, 1924. Serial No. 727,360. 2 Claims. (Cl. 45—71.)



1. In an iceless refrigerator, the combination with a compartment formed of enclosing walls, some of said walls having louvres for the admission of air drafts, of a water container near the top, an absorbent basin near the bottom, and wicks extending from the container to the basin and adapted to deliver attenuated supplies of water to the basin, such water supply and basin being adapted to give off evaporation.

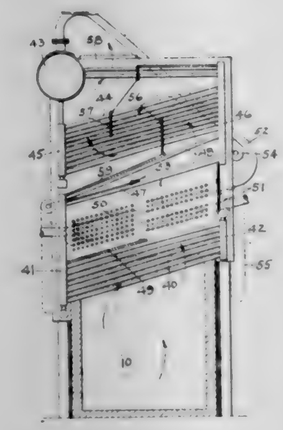
1,561,573. BUILDING CONSTRUCTION. HENRY COLLIER SMITH, St. Marys, Ohio. Filed Mar. 29, 1924. Serial No. 702,739. 10 Claims. (Cl. 72—48.)



1. In a building construction, a wall embodying two parallel vertical sets of sheet metal plates to form vertical surfaces, the plates of each set extending the height of the wall and having its vertical edges bent to constitute hooks, and upright spacing members extending across between the two sets of sheets and having their vertical edges in the form of hooks which inter-engage with the hooks of two adjacent sheets of each surface.

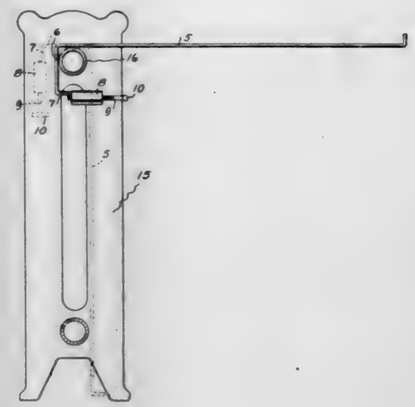
---

1,561,574. STEAM BOILER. ARTHUR SPYER, London, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 14, 1925. Serial No. 9,069. 6 Claims. (Cl. 122—476.)



1. A steam boiler having banks of water tubes, said banks being spaced apart to form a superheater chamber therebetween, fixed baffles to direct the furnace gases from one end of one bank across such space into the other bank, a pair of heating devices in said space, a movable baffle in said space and movable into either one of two extreme positions, said movable baffle in one extreme position being interposed in the path of the gases normally flowing across said space and across one of said heating devices, and in the other extreme position being positioned to direct all of the gases first across all of one of said heating devices and then across all of the other of said heating devices, and means to move said movable baffle.

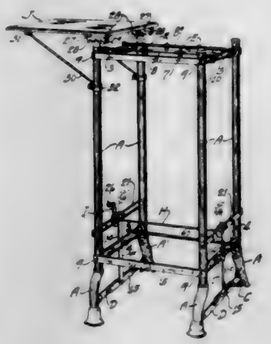
1,561,575. CLOTHES-DRYING RACK. PETER J. SWANSON, Seattle, Wash. Filed May 21, 1925. Serial No. 31,753. 5 Claims. (Cl. 34—26.)



4. In a clothes drying rack of the class described, a substantially U shaped member, holding means having threaded engagement with one end of said U shaped member and a wooden bar arranged for telescopic connection with the other end of said U shaped member.

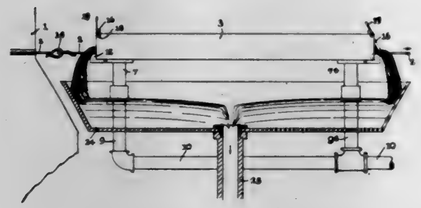
---

1,561,576. STAND. HIERO G. TIFFANY, St. Louis, Mo., assignor to Tiffany Adjustable Stand Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 2, 1922. Serial No. 591,937. 5 Claims. (Cl. 280—44.)



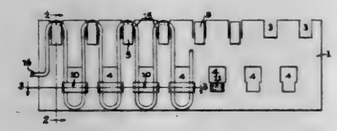
1. A stand, comprising legs provided with vertically-movable members that effect the raising and lowering of the stand, rockable actuating devices, for moving said members, a pair of vertically-reciprocating operating bars arranged at opposite sides of the stand and each combined with a pair of said actuating devices, a horizontally-disposed operating shaft, arranged transversely of the stand and gears combined with said shaft and arranged in mesh with racks on the edges of said operating bars.

1,561,577. QUENCHING DEVICE. OSCAR C. TRAUTMAN, Lakewood, Ohio. Filed Apr. 2, 1924. Serial No. 703,648. 11 Claims. (Cl. 266—3.)



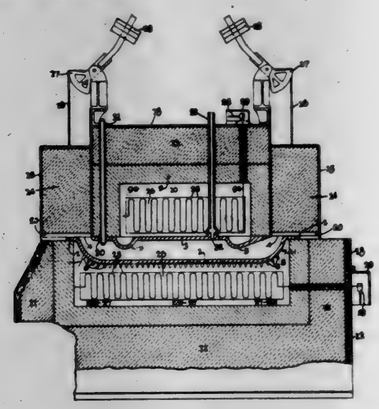
1. A quenching bath for the purpose described comprising a substantially horizontal trough, means for delivering cold quenching liquid continuously thereto, and means at the receiving end of said trough for producing a deep and unbroken outflow of such liquid with a minimum initial velocity along a horizontal component.

1,561,578. ELECTRIC HEATING ELEMENT. OSCAR C. TRAUTMAN, Lakewood, Ohio. Filed Apr. 2, 1924. Serial No. 703,649. 12 Claims. (Cl. 204—64.)



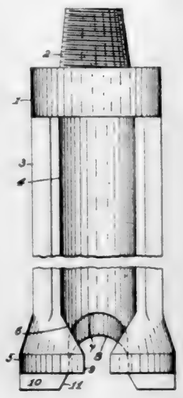
1. A resistor support comprising a refractory plate having slots, and blocks of refractory material having slots to interfit with said first slots in dovetailed relation and heads to receive the resistors.

1,561,579. METHOD AND APPARATUS FOR HEATING WIRE. OSCAR C. TRAUTMAN, Lakewood, Ohio. Filed Apr. 2, 1924. Serial No. 703,650. 3 Claims. (Cl. 148—15.)



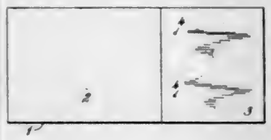
1. The method of heat treating wire which contains the step of drawing the same through a mass of molten metal electrically heated by radiation while protecting such mass from loss of heat by convection.

1,561,580. DRILL BIT. GEORGE R. WATSON, Waterloo, Iowa, assignor to Armstrong Manufacturing Company, Waterloo, Iowa. Filed June 19, 1924. Serial No. 720,975. 3 Claims. (Cl. 255—63.)



1. A drill-bit having a flat crushing-face, and having side grooves terminating above said crushing-face in an arcuate anticlinal ridge, and said crushing-face having anticlinal ridges extending across it.

1,561,581. ROOFING SHINGLE. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Co., a Corporation of New Jersey. Filed Apr. 8, 1924. Serial No. 704,962. 4 Claims. (Cl. 108—8.)

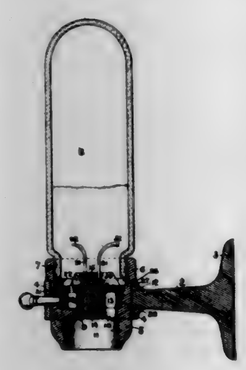


1. A roofing shingle adapted with similar shingles to be laid in overlapping courses having a substantially uniform lap, each comprising a flexible waterproof backing and a slate sheet facing adhering to the backing in registration with an end and the adjacent sides thereof, the slate sheet being of a length, measured longitudinally of the shingle, greater than the depth to which the shingle is intended to be exposed when laid, and the backing being of a length greater than three times said depth of exposure.

1,561,582. DISPENSING DEVICE. WENDELL P. ANTHONY, Ridley Park, Pa., assignor to The Mynol Chemical Company, a Corporation of Delaware. Filed Aug. 15, 1923. Serial No. 657,487. 8 Claims. (Cl. 221—108.)

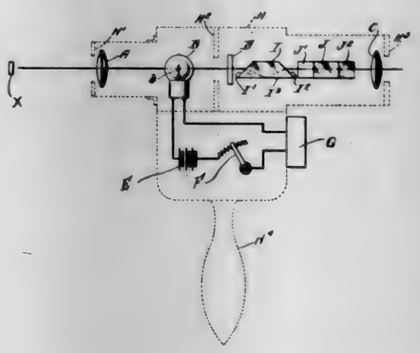
1. In a dispensing device, the combination of a tubular body having a transverse floor provided with an aperture and an annular shoulder at a higher elevation than the floor and also having a transverse handle slot opening through the wall of the body, a disk detachably fitted into the tubular body and resting upon the shoulder

at a distance above the floor and provided with an aperture out of alinement with the aperture in the floor, a disk shaped distributor arranged between the floor and the underside of the disk and provided with an aperture, said distributor journaled for oscillation whereby its aperture may be alternately brought into alinement with the aperture in the disk and the aperture in the



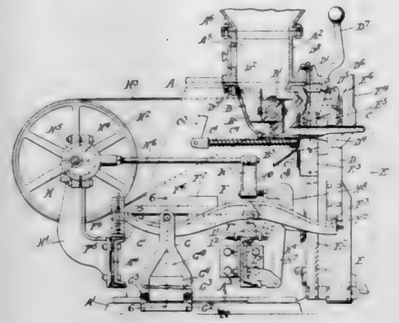
floor, a handle secured to the distributor and projecting through a slot in the side of the body with freedom of movement within definite limitation for operating the distributor and for holding it in position under the disk within the body, and a container secured to the body above but out of contact with the disk for supplying materials to be dispensed therethrough.

1,561,583. OPTICAL PYROMETER. FRANCIS EDWIN BASH, Morristown, N. J., assignor to Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1923. Serial No. 680,383. 2 Claims. (Cl. 88—14.)



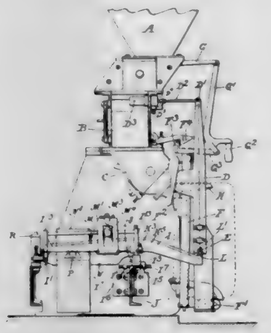
1. In an optical pyrometer comprising a lamp of regulable intensity, an object lens for forming a real image of an object under observation in the plane of the lamp, and an ocular lens through which said image and the lamp are visible, the improvement which consists in optical means cooperating with the said lenses to make the object appear to the observer with its parts in the non-inverted positions.

1,561,584. PLASTER MACHINE. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 26, 1920. Serial No. 384,380. 42 Claims. (Cl. 249—60.)



1. In a bag filling machine, a propeller pocket having a discharge throat, a filling tube mounted for movement into and out of register with the throat and a dust guard surrounding and mounted for movement with the tube.

1,561,585. PACKER. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 26, 1922. Serial No. 563,932. 22 Claims. (Cl. 265—49.)

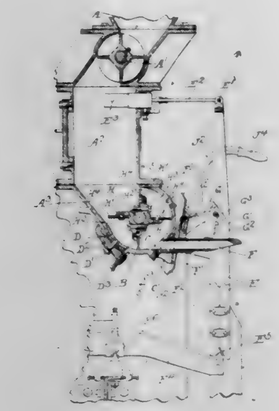


1. In a scale mechanism, a main frame, a supporting member mounted upon said frame, and a scale beam pivotally mounted upon said member, said member forming the sole support of said beam and being horizontally adjustable, with relation to said main frame, both axially and radially of said pivotal mounting.

1,561,586. CEMENT PACKER. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 26, 1922. Serial No. 563,933. 4 Claims. (Cl. 226—48.)

1. In a bag filling mechanism, a material impeller mounted about a rotary shaft and comprising a central hub provided with a plurality of laterally extending arms each having a longitudinal groove, in combination with a plurality of blades each provided with a longitudinal corrugation adapted to lie within one of such grooves, and a single bolt passing through each corrugation into the arm and fixing the blade in position.

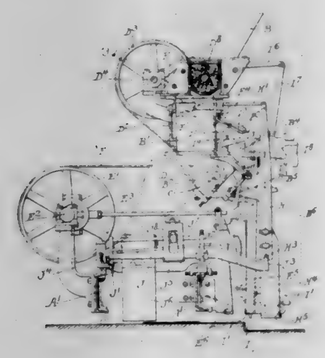
4. In a material supply system, a rotary impeller and a casing therefor having a removable segment, means for adjustably securing said segment upon said casing, said means including an arm removably attached to the



outside of said casing and provided with a set screw whereby said detachable side may be vertically adjusted, and a removable lining within a part of said casing, said lining being held in position by the main holding means for such removable arm.

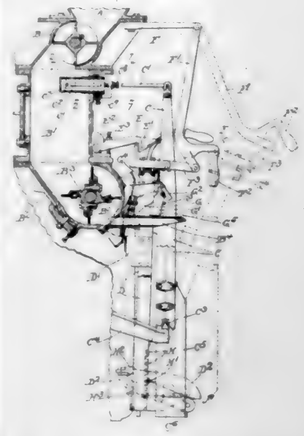
---

1,561,587. JIGGING DEVICE FOR BAG-FILLING MACHINES. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed June 2, 1922. Serial No. 565,352. 2 Claims. (Cl. 226—53.)



1. In a bag filling machine, apparatus adapted to suspend and fill a bag, a substantially horizontal rod, means to reciprocate the rod, a jigging foot attached to one end of the rod in position to contact a bag in filling position, and a rocker bar mounted upon a fixed pivot beneath the jigger foot and pivoted at its upper end to the jigger foot at a point above the bag contacting surface of the foot.

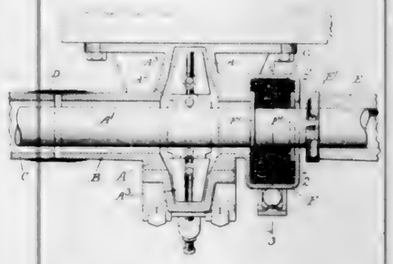
1,561,588. CEMENT PACKER. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed June 24, 1922. Serial No. 570,666. 6 Claims. (Cl. 226—48.)



1. In a bag filling machine, a bag support mounted upon weighing means and adapted to support a bag in filling position, said support including means to remove a filled bag, a handle supported independently of the weighing means, and a link connecting the handle to the bag removing means.

---

1,561,589. DUSTPROOF SHAFT CASING. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 26, 1922. Serial No. 563,934. 4 Claims. (Cl. 64—12.)

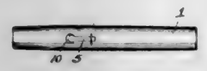


2. A plurality of casings enclosing apparatus for operating on dusty materials, a common operating shaft extending loosely through roughly aligned openings in said casings, substantially dust-proof joints between the adjoining casings, and dust retaining packing surrounding the shaft at the outer sides of the end casings.

---

1,561,590. FOUNTAIN PEN. ANDREAS BIENENSTEIN, Toledo, Ohio, assignor to The Conklin Pen Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 25, 1924. Serial No. 694,824. 7 Claims. (Cl. 120—46.)

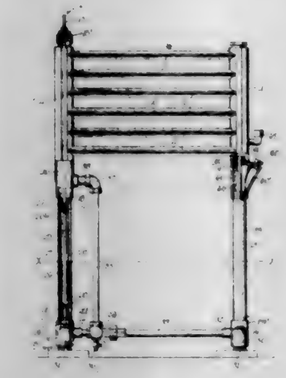
1. In a fountain pen, a barrel having an opening in a side thereof, a sleeve mounted in the barrel and having a longitudinally extending opening in register with the barrel opening, and a cross slot transverse to the barrel opening, a compressor bar operating lever mounted for swinging movements in the barrel and sleeve openings.



and a fulcrum member for the lever disposed within the barrel bore and within said cross slot and held in position within the barrel by the sleeve.

---

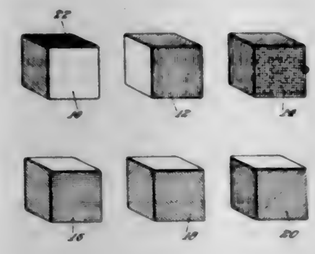
1,561,591. COMBINED RADIATOR AND BOILER. LOUIS G. BOSTEDO, Oak Park, Ill. Filed July 12, 1924. Serial No. 725,592. 9 Claims. (Cl. 219—38.)



4. In a combined radiator and boiler, the combination with a tubular heat radiating structure, of an electric steam generator including a water electrode underlying and supporting said heat radiating structure and supplying steam to one end of the latter, and a pipe for returning condensed steam from the opposite end of said heat radiating structure to said boiler; said elements unitedly constituting an independent heat generating and radiating unit.

---

1,561,592. GAME. LEO PEYTON BOTT, Jr., Little Rock, Ark. Filed Feb. 19, 1925. Serial No. 10,259. 4 Claims. (Cl. 273—146.)



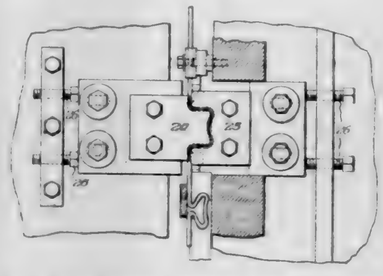
1. A game, including a plurality of dice, all but one of said dice being similar and having distinctive colors on the respective faces thereof, the odd dice having one of its faces colored with an additional distinctive color, said color being substituted for one of the original colors.

1,561,593. THERMOELECTRIC COUPLE. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 5, 1923. Serial No. 661,041. 3 Claims. (Cl. 136—29.)

1. A thermo-electric couple comprising in combination a primary couple and two extension elements thereto, one of said elements being formed of an alloy containing approximately 54% of copper, approximately 45% of nickel and from .25% to 1% of manganese.

---

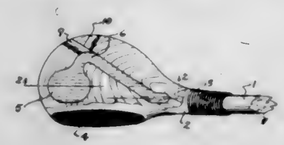
1,561,594. AUTOMATIC WIRE MACHINE. JAMES A. CIVIS and ELMER J. GOVANUS, Chicago, Ill., assignor to Titchener-Diehl Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1923. Serial No. 673,290. 9 Claims. (Cl. 140—102.)



4. In a wire shaping machine, the combination of means for laterally deflecting a portion of wire, both ends of the wire being relatively free during the deflecting operation, a templet normally out of the path of travel of said wire and adapted to be projected into the space within said deflected portion, and means for shaping said deflected portion about said templet.

---

1,561,595. GOLF CLUB. THOMAS JAMES DAVIS, Brooklyn, N. Y. Filed Dec. 29, 1923. Serial No. 683,412. 3 Claims. (Cl. 273—77.)



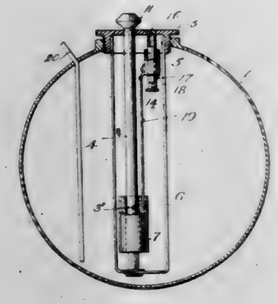
3. A head for golf clubs provided with a channel, a portion of which extends parallel with the face and a portion of which is at right angles to the face and a movable member in said channel, adapted to approach the face of the head, during the stroke, said channel being of cylindrical form and having a well of greater diameter adjacent the face.

---

1,561,596. INDICATING DEVICE FOR FLUID TANKS. LEE DE FOREST, New York, N. Y. Filed June 13, 1919. Serial No. 304,034. 7 Claims. (Cl. 116—110.)

7. The combination with a fluid tank, and a removable cap therefor, of a hollow tube carried by said cap, and extending therethrough, said tube being of such length

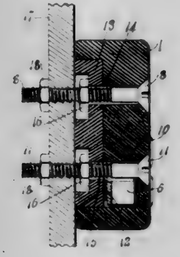
that when said cup is in normal position relative to the tank, the end of the tube within the tank is out of contact with the bottom thereof, and a whistle located in said tube to be actuated by air passing therethrough,



a float slidably mounted on said tube, an auxiliary air inlet, a valve for closing said auxiliary inlet, and a connection between said valve and float for obtaining simultaneous movement thereof.

---

1,561,597. RADIO APPARATUS. CHARLES W. DENNY, WILLIAM E. MCLAUGHLIN, and GEORGE HELWIG, Middletown, Ohio, assignors to The Barkelew Electric Manufacturing Company, Middletown, Ohio, a Corporation of Ohio. Original application filed Aug. 13, 1923, Serial No. 657,174. Divided and this application filed June 16, 1924. Serial No. 720,186. 2 Claims. (Cl. 173—334.)

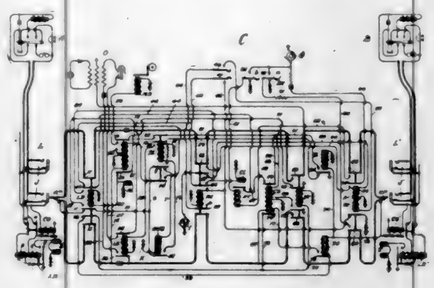


1. In a radio phone post, a cup adapted to receive phone tips, yielding means to maintain said phone tips in position, a second cup mounted in the first, adapted to maintain said yielding means in the first cup, retaining and conducting screws passing through said cups and connected to said yielding means, said screws being adapted to mount said posts on a panel, means on said screws to retain said posts on said panel, and means on said screws for maintaining said cups in engagement with one another.

---

1,561,598. TELEPHONE SYSTEM. GEORGE R. EATON, Oak Park, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1921. Serial No. 526,196. 13 Claims. (Cl. 179—58.)

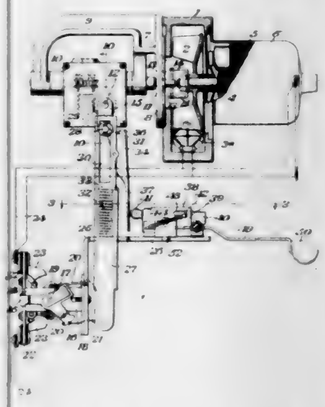
9. In a telephone system including a calling telephone line terminating in a plurality of operators' positions, a link circuit at each operator's position, a pair of relays individual to said link circuit, one of said relays operable when its associated link circuit is connected to said line, and the other of said pair of relays then operable providing a pair of relays in another link circuit connected



to said line has not operated, and energizing circuits of different battery voltages for said pair of relays including a contact of said pair of relays.

---

1,561,599. COIN-OPERATED RECIPROCATING TIME SWITCH. LLOYD C. EPPLER, Groton, N. Y., assignor to Airdry Corporation, Groton, N. Y., a Corporation of New York. Filed Mar. 19, 1923. Serial No. 626,111. 9 Claims. (Cl. 200—33.)

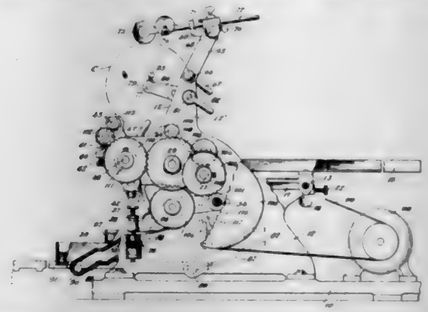


1. A time switch for an electric motor comprising a motor, a reduction gearing including a high speed shaft and a low speed shaft, means for driving the high speed shaft from the motor shaft, a rocking switch, a spring tending to move said switch to its closed position, means for locking said switch in its open position, means for releasing the said switch locking means, and a bar operated by the rotation of the low speed shaft to force the switch into its open position, said switch opening bar resetting the switch closing spring and the means for releasing the switch locking means.

---

1,561,600. CAN-LABELING MACHINE. MARTIN FEYBUSCH, New York, N. Y., and PAUL W. FEEISCHER, Weehawken, N. J., assignors to New Jersey Machine Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Sept. 19, 1922. Serial No. 589,079. 11 Claims. (Cl. 216—60.)

1. A can labeling machine comprising means for feeding a label, means for applying an adhesive to said label, a pair of can-rotating rollers, and means for engaging the can from above and pressing it into firm contact with said can-rotating rollers, said means com-



prising a pair of can engaging rollers, said last-named rollers being adjustable toward and from each other and also toward and from said can-rotating rollers.

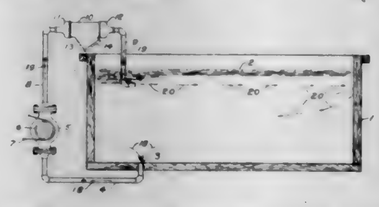
---

1,561,601. CLOSURE. JOSEPH J. GANNON, St. Clair, Mich., assignor to Diamond Crystal Salt Company, St. Clair, Mich., a Corporation of Michigan. Filed June 18, 1923. Serial No. 646,185. 1 Claim. (Cl. 221—11.)

The combination with a container having a rectangular opening in the wall thereof and a projecting tongue in said opening separated by parallel slots from the adjacent side portions of the wall, of a closure for said opening having a top pivotally engaged with one end thereof and having parallel depending substantially triangular shaped side wings, pointed projections extending forwardly from said wings and adapted to engage said container to limit the upward swinging movement of said closure, the lower edges of said projections being formed by the rounded upturn of the lower edges of said wings and the upper edges of said projections being disposed at an angle to said top, and notches in the forward ends of said wings with edges parallel to the top of said closure for applying the closure to the container, the lower edge of said notches being an angled continuation of the upper edges of said projections.

---

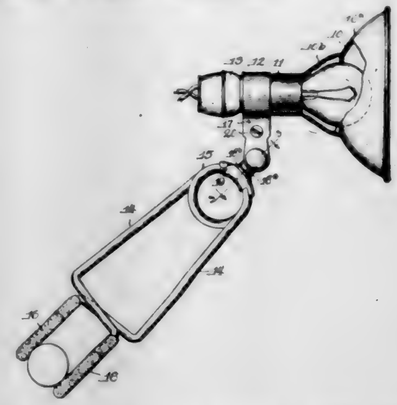
1,561,602. ELECTROPLATING APPARATUS. JULIUS M. GAUSS, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 4, 1923. Serial No. 649,389. 5 Claims. (Cl. 204—5.)



1. In an electro-plating apparatus, a tank containing an electro-plating solution, means comprising a centrifugal pump for continually drawing off a portion of said solution, means for driving said pump, a filter, and discharge means leading from said filter directly to said tank and terminating in a horizontal direction below the surface of said solution in said tank, said centrifugal pump causing the solution drawn from said tank to be forced through said filter and discharged into said tank to continuously agitate the solution in said tank.

---

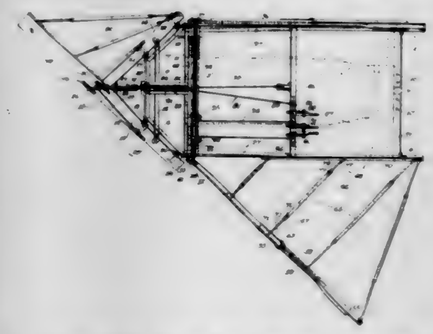
1,561,603. AUTOMOBILE LIGHT. GEORGE H. GLADE, Jr., Chicago, Ill. Filed Dec. 17, 1923. Serial No. 681,041. 6 Claims. (Cl. 248—20.)



1. In a device of the class described, a bracket adapted for supporting a lamp, a clamp adjustably engaged by said bracket and being adapted to support the same in any position of adjustment, and a single means for tightening said bracket on said lamp and said clamp.

---

1,561,604. ROAD SPREADER OR PLOW. ALEXANDER L. GREENABAUM, Chicago, Ill., assignor to O. F. Jordan Company, East Chicago, Ind. Filed Apr. 25, 1921. Serial No. 464,126. 11 Claims. (Cl. 37—108.)



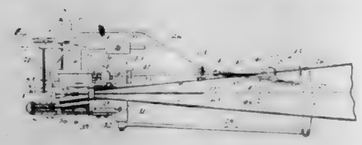
1. An apparatus of the kind described comprising in combination with the frame of a self propelled vehicle, a rectangular plow spreader frame rigid connected to and supported by said vehicle frame, a plow at the front end of said plow spreader, a front spreader wing operatively connected to the plow and extending forwardly and outwardly thereof, and means bracing said front spreader wing.

9. An apparatus of the class described embodying therein a vehicle having a frame, a plow, means separate from the vehicle frame for supporting the plow, and a toggle brace extending between the plow and its supporting means.

11. An apparatus of the class described embodying therein a vehicle having a frame, a V-shaped plow, means separate from the vehicle frame for supporting a plow, and a supporting plate arranged at the bottom of the V-shaped plow.

---

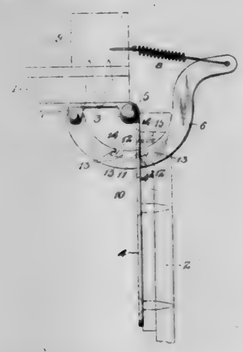
1,561,605. BEAD-SEWING MACHINE. JOSEPH A. GROEBLI, New York, N. Y. Filed July 16, 1923. Serial No. 651,770. 27 Claims. (Cl. 112—99.)



1. The combination, in a sewing machine embodying fabric feeding means, means for supplying a thread with beads loosely strung thereupon, stitch forming means, and means for producing relative movements of the beads and thread, of positively acting means for feeding the beads and thread while permitting relative movement of the beads and thread.

---

1,561,606. MEANS FOR AUTOMATICALLY LOCKING AND RETAINING OPENING CLOSURES IN AN OPEN POSITION. CORNELIUS H. HAYS, Cleveland, Ohio. Filed Sept. 27, 1924. Serial No. 740,248. 15 Claims. (Cl. 292—271.)



1. In means of the character described, the combination, for use with two supports of which one is a movable opening closure, of a rigid member adapted for pivotal attachment at one end to one of said supports; means tending to swing the free end of said member in one direction relative to said support; a second member adapted for attachment to the second support, said second member opposing said swinging means; and automatic interlocking means formed on said two members and adapted under the action of said swinging means, when said opening closure is moved, to become engaged and retain the closure in a desired position relative to the other support.

---

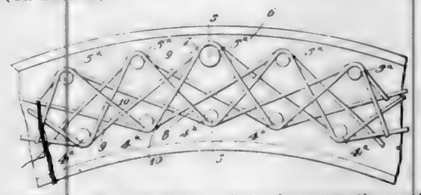
1,561,607. EMBOSSING AND PRINTING MACHINE. GEORGE W. HEENE, Cleveland, Ohio. Filed Dec. 10, 1923. Serial No. 679,607. 21 Claims. (Cl. 197—6.4.)

1. An apparatus of the character described, including, a base, a bracket extending rearwardly and upwardly from each end of said base, a lug on the upper end of each of said brackets, a tie bar connecting both of said lugs, a table on said base to support the object to be operated upon, a type support member having one end thereof hinged to one of said lugs and the other end thereof guided in the other of said lugs, and a type

wheel mounted in said type support member intermediate the ends thereof and movable toward and away from said table.

---

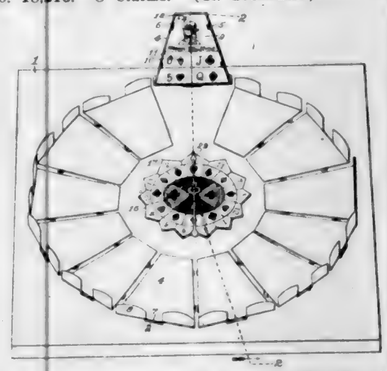
1,561,608. RESILIENT RING AND METHOD OF MAKING SAME. WILLIAM EDGAR JOHN, Philadelphia, Pa., assignor to Hall Wheel Corporation, Philadelphia, Pa. Filed Nov. 26, 1923. Serial No. 676,886. 4 Claims. (Cl. 154—2.)



1. The herein described method of constructing resilient rings consisting in reeling a cord or cords about an outer and an inner series of pins, the cords passing successively from a pin in one series to a pin in the other series; adding a filler, and molding the filler about the cords and pins.

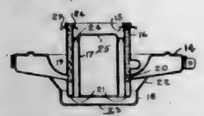
---

1,561,609. GAME APPARATUS. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed Mar. 25, 1925. Serial No. 18,216. 8 Claims. (Cl. 273—135.)



1. In a game apparatus, a movable indicating device, and a plurality of movable sign-carrying flaps positioned within the scope of indicating movements of said device and each movable from a sign-disclosing to a sign concealing position.

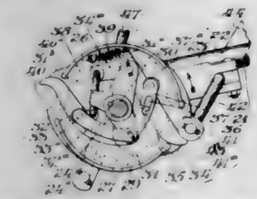
1,561,610. CAMP STOVE. WALTER C. LINDEMANN, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 1, 1922. Serial No. 565,229. 6 Claims. (Cl. 67—81.)



1. The combination of a font for liquid fuel, having a horizontal diameter in excess of its depth and provided with a depressed interior portion extending below mid-height of the surrounding portion, vertical wick tubes spaced to provide a wick space therebetween connected with the font at the said depressed portion, and having the space in communication with the interior of the font and extending below and above the upper surface of the portion of the font which surrounds the depressed portion, said point of communication between the wick space and the font being at the lower part of said depression and leading directly into the wick space above the lower end thereof.

---

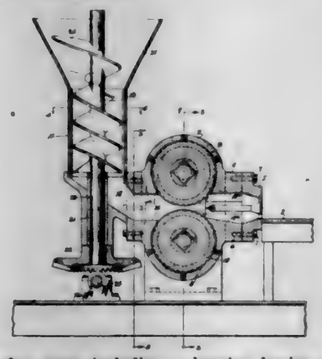
1,561,611. CLUTCH. ALEXUS C. LINDGREN, St. Charles, Ill., assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, both of Chicago, Ill. Original application filed Apr. 30, 1919, Serial No. 293,756. Divided and this application filed Nov. 27, 1922. Serial No. 603,413. 4 Claims. (Cl. 192—62.)



1. A clutch for power lift plows comprising a normally rotatable element and a normally stationary element mounted on a shaft, one element being journaled on the shaft, the other fixed on the shaft, one element having internal depressions, the other element having oppositely directed members for engaging said depressions hinged about a point eccentric to the shaft, and means for locking the two elements together and for locking the stationary member in a fixed position including a trip member engaging the periphery of said elements.

---

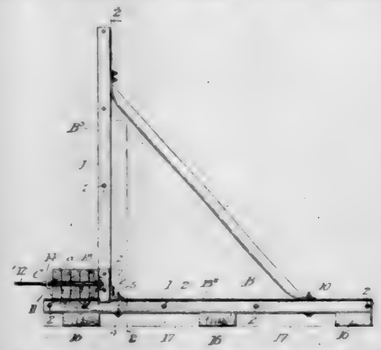
1,561,612. CLAY PRESS. PAUL F. LOICHOT, Canton, Ohio. Filed Dec. 17, 1924. Serial No. 756,442. 11 Claims. (Cl. 25—11.)



1. A clay press including a housing having a die in one side, a pair of rolls within the housing for forcing clay through the die in a column and an auger in the housing at an angle to the axis of the rolls for feeding clay to the rolls.

---

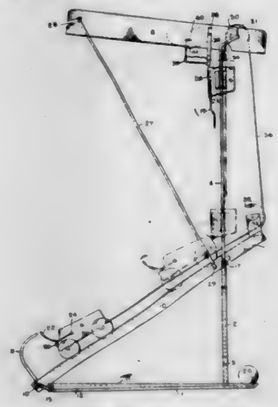
1,561,613. BENDING AND CLAMPING FRAME. JOHN L. MCKEOWN, Winnetka, Ill. Filed Feb. 15, 1924. Serial No. 693,053. 18 Claims. (Cl. 144—256.)



1. A bending and clamping frame consisting of a plurality of units, each comprising a fixed base member and a separate post member, means for supporting said post member in upright position on said base member, and clamping means in association with said post member, said units as erected for use being arranged so that the post members thereof will define the shape of the structure to be formed thereon.

---

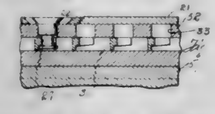
1,561,614. GRAVITY TOY. JAMES J. MAHAN, Jersey City, N. J. Filed Apr. 15, 1922. Serial No. 553,174. 15 Claims. (Cl. 46—37.)



1. The combination of an upright frame, a car mounted to reciprocate thereon, a bin located at the upper part of said upright frame having an opening and an inclined portion leading thereto and adapted to contain loose material and to permit it to gravitate down said inclined portion to said opening, said opening being located adjacent to the position of the car when the said car is at the upper limit of its reciprocating movement, a gate mounted to reciprocate vertically adjacent to the said opening and normally located in the path of said material, and a member connected with and mounted to move with said gate and constructed and arranged to be interposed into the path of the material in the bin when the gate is opened, and means whereby the upward movement of the car causes the said gate to open

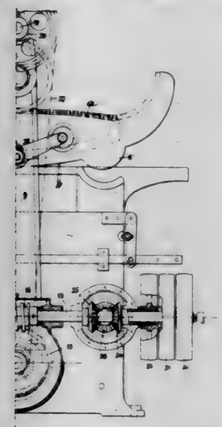
and the said member to be simultaneously interposed into the path of the material, said member having a portion which is in the path of the downward movement of the material as it passes from the bin.

1,561,615. PRINTING-PLATE HOLDER. EDWARD PALMER, Bexley, Ohio. Filed June 13, 1925. Serial No. 36,845. 7 Claims. (Cl. 101—385.)



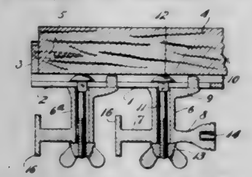
1. The combination with a printing plate support having a plurality of openings therein, of locking plates slidably associated therewith, clamping plates for the printing plate, means passable through the clamping plates and engageable with the locking plates for holding the clamping plates engaged with the printing plate, and means for shifting the locking plates, as and for the purpose set forth.

1,561,616. MACHINE FOR MAKING IMPRESSIONS. GEORGES PETER, Malakoff, France. Filed Mar. 25, 1924. Serial No. 701,752. 4 Claims. (Cl. 101—12.)



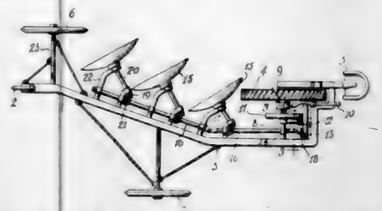
1. In a machine for making impressions a fixed table, a movable table curved on its surface facing the fixed table, means to dispose the form to be reproduced between the said tables and means to apply a rolling motion to said movable table at a strong pressure against the fixed table, to produce the necessary impression.

1,561,617. CURTAIN BRACKET. EDWARD L. RENZENBRINK, Canton, Ohio. Filed Sept. 28, 1923. Serial No. 665,325. 3 Claims. (Cl. 156—24.)



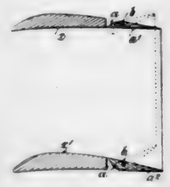
1. A bracket of the character described, including a stem, an angular arm upon the stem and a rearwardly and downwardly inclined, elliptical plate upon the arm arranged to be received in the end of a channel shaped curtain rod.

1,561,618. ROTARY DISK PLOW. M. T. SKINNER, Cleburne, Tex., assignor of one-fourth to Julian B. McCauley and one-fourth to Charles A. Nabors. Filed Nov. 17, 1924. Serial No. 750,273. 1 Claim. (Cl. 97—34.)



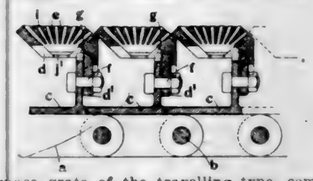
A rotary disk plow comprising a frame, supporting wheels carried by the forward end of said frame, a drive shaft journalled within the rear end of said frame and extending transversely thereof, a drive wheel for said shaft, a driven shaft extending longitudinally of and journalled upon said frame, rotary disks operatively connected to said driven shaft, an intermediate driven shaft extending longitudinally of said frame and operatively connected to said driven shaft, a gear wheel journalled upon said drive shaft, a clutch arranged between said gear wheel and drive shaft, means for operatively connecting said gear wheel with said intermediate driven shaft, and a manually controlled lever for operating said clutch.

1,561,619. BALANCED CONTROL SURFACE OF AIRCRAFT. HERBERT SMITH, Kingston Hill, England. Filed Apr. 10, 1925. Serial No. 22,083. 2 Claims. (Cl. 244—29.)



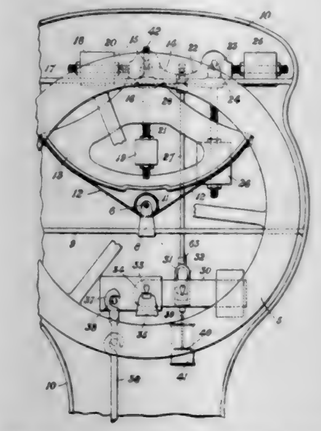
1. In an aeroplane, forming the opposed ailerons of the wing aerofoil with oppositely arranged cambers so that one aileron will open downwards and the other aileron will open upwards so that a gap is made by some portion of both cambers immediately the ailerons are moved whereby both assistance is given to open and the air resistance is balanced, as set forth.

1,561,620. FURNACE GRATE. LOUIS JOHN STEELE and EDGAR FROSTICK KENT, Portsmouth, and GEORGE ALBERT MADDEN, Southsea, England. Filed Mar. 20, 1923. Serial No. 626,353. 3 Claims. (Cl. 110—40.)



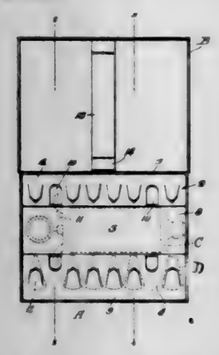
1. A furnace grate of the travelling type, comprising grate elements consisting of frames having integral straight end walls and a plurality of integral transversely disposed grate bars extending between said end walls, said transversely disposed grate bars being wider at the top than at the bottom, and having the interstitial spaces between them diverging outwardly towards opposite sides upwardly, and a conveyor upon the transversely disposed members of which the said grate elements are supported in transverse series and members disposed at one side of said frames and integral therewith by which said frames are supported upon said conveyor, substantially as described.

1,561,621. INDICATING MECHANISM OF WEIGHING APPARATUS. CAMERON MCGREGOR SYKES, Birmingham, England, assignor to W. & T. Avery, Limited, Birmingham, England. Filed Oct. 1, 1923. Serial No. 665,845. 4 Claims. (Cl. 265—62.)



1. An indicating mechanism for weighing apparatus comprising an indicator adapted for rotation about a fixed axis, oppositely wound flexible ribbons connected to and forming the suspension for substantially the whole of the weight of the said indicator, pendulous members mounted on and adapted to oscillate about a fixed axis and connected to said ribbons and means for imparting an oscillatory motion to the said members.

1,561,622. DISPLAY BOX. LOUIS WAGNER, Woodhaven, N. Y.; Erna C. Wagner, executrix of said Louis Wagner, deceased, assignor to Frederick Schneider, Brooklyn, N. Y. Filed May 7, 1924. Serial No. 711,616. 1 Claim. (Cl. 206—44.)

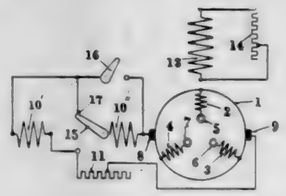


A display box of the character specified comprising a body portion, a hinged lid, a supporting display rack mounted in the body, said rack comprising a central longitudinally disposed trough-like portion having perpendicular side walls and downwardly and outwardly inclined side members extending from the upper edges of the perpendicular side walls to the upper face and outer side edges of the bottom of the box and a series of longitudinally spaced integral supporting lugs or tongues extending along each side member and formed by slitting the material of which the side members are composed, the upper edges of the central trough-like portion and those of the side members being formed, at opposite ends, with transversely oppositely disposed notches, alternating with the adjacent supporting lugs or tongues.

1,561,623. MANUFACTURE OF HONEYCOMB FOR BEEHIVES. GEORGE WILLIAM WATSON, London, England. Filed June 24, 1924. Serial No. 722,678. 3 Claims. (Cl. 6—11.)

2. A method of making a honeycomb which comprises the operation of providing parallel ribs on a sheet of wax, corrugating portions of the sheet at opposite sides of each rib for the purpose described, superposing a succession of such sheets identical with one another in such a manner that the sheets form a pile in which their ribs coincide, effecting relatively displacement between each two superposed sheet along the line of their ribs through a distance such that the depressions on the top of the lower sheet each register with the corresponding elevations in the upper sheet, thereafter causing the sheets to adhere to one another, and severing the pile of superposed sheets into sections along planes of severance midway of each pair of ribs and parallel to them.

1,561,624. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 21, 1924. Serial No. 751,243. 4 Claims. (Cl. 172—280.)

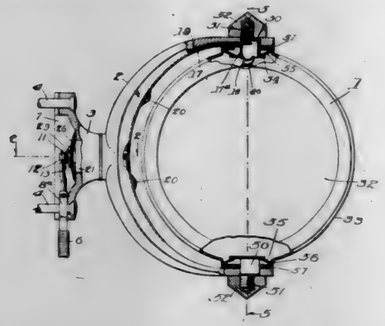


1. In a synchronous motor, the combination of a primary member provided with a commutator, a secondary member provided with a multi-part exciting winding in circuit with the commutator, said parts of the exciting winding being connected in parallel during the starting period, means for connecting said winding parts in series for synchronous operation, and means for supplying alternating current to the primary member.

1,561,625. VEHICLE SEARCHLIGHT. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 1, 1922. Serial No. 585,582. 7 Claims. (Cl. 240—61.)

1. A vehicle searchlight comprising a trunnioned body and a bail for carrying it by engagement with its trunnions, the bail having a stem; a base in which the stem

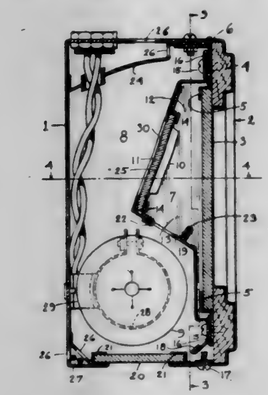
is journaled for swiveling the bail to the base; a circuit wire entering the base; a thrust member extending insulated through the stem of the bail, with the said circuit wire connected to the outer end thereof; a contact strip insulated in the bail extending from the stem around to one trunnion bearing; means holding the inner end of



said thrust member in contact with said strip; a lamp socket in the body, and a circuit member mounted insulated in the body having one end positioned for contact with one of the lamp contacts and the other end positioned for contact with the contact strip of the bail at the trunnion.

---

1,561,626. ILLUMINATED SIGN. ROY R. WILEY, Buffalo, N. Y., assignor to Flexlume Corporation, Buffalo, N. Y., a Corporation of New York. Filed Jan. 27, 1922. Serial No. 532,238. 8 Claims. (Cl. 40—133.)



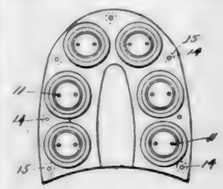
1. In an illuminated sign, in combination, a sign box having a wall provided with a clear glass panel, a sign board visible through and inclined at an acute angle to said panel, an illuminating chamber of which said board forms the rear wall and said panel the front wall and which is otherwise provided with upper, lower and end walls, the upper and lower walls being of different area owing to the inclination of said board and the wall of greater area being inclined between said board and said panel and having an opening, an opaque barrier between said opening and said panel and a flange in front of said opening and projecting into said chamber, said flange being of sufficient depth to conceal said opening from view, and a source from which light is admitted through said opening into said chamber.

1,561,627. CROSS-WEAVING LOOM. JOSEPH WILKINSON, East Fairhaven, Mass. Filed Apr. 13, 1925. Serial No. 22,894. 5 Claims. (Cl. 139—53.)

4. As an article of manufacture, a U-shaped metal doup needle having an elongated aperture at one end of each leg and an apertured portion connecting the other ends of said legs.

---

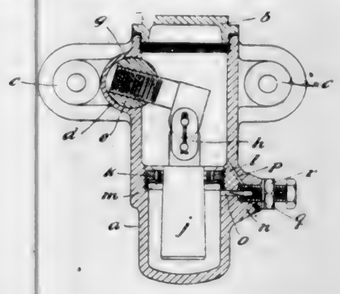
1,561,628. SHOE HEEL AND CUSHION PLUG THEREFOR. HARRY S. WILLIS, Philadelphia, Pa. Filed Aug. 21, 1923. Serial No. 658,526. 1 Claim. (Cl. 36—59.)



A shoe heel having threaded holes each terminating in a recess at one end and threaded rubber plugs in said holes, each plug having a head provided with a groove and flange, said flange engaging the inner surface of the recess to produce a frictional resistance against turning.

---

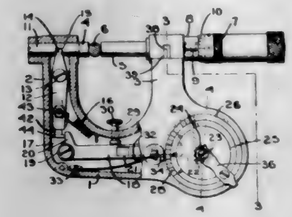
1,561,629. SHOCK ABSORBER FOR MOTOR CARS AND LIKE VEHICLES. HENRY JOHN WILSON, Newton Abbott, England. Filed Dec. 18, 1924. Serial No. 756,795. 4 Claims. (Cl. 188—88.)



1. A shock absorbing device comprising a hollow cylindrical body member closed at one end and containing a suitable fluid, means for securing the body member to a part of a vehicle, an internal annular restriction in the bore of the body member, valve controlled passages through the restriction, a tapered plunger working through the restriction and means connecting the plunger to a part of the vehicle having movement relative to the part to which the body member is secured, so that movement of the said part causes reciprocation of the plunger within the body member.

---

1,561,630. MICROMETER CALIPERS. ROBERT A. WILSON, Waltham, Mass. Filed Nov. 14, 1924. Serial No. 749,859. 6 Claims. (Cl. 33—147.)



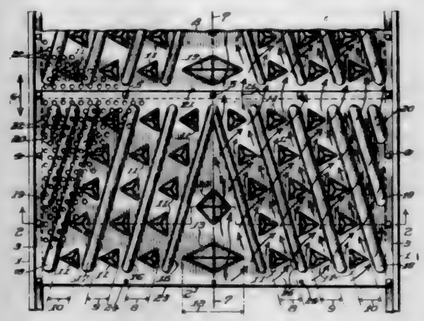
1. In micrometer calipers, the combination with a yoke-shaped frame having two arms rigid with respect to each other, of a jaw mounted in one arm thereof, a micrometer screw for operating said jaw, a second jaw slidably mounted in the other arm, a lever pivoted in said other arm and engaging said second jaw, a spring acting on said lever and tending to move said second jaw away from the first jaw, an elbow lever pivotally mounted in the frame, one arm of which elbow lever operatively engages the first-named lever, a spring acting on said elbow lever and tending through said levers to move the second jaw toward the first-named jaw, and a push pin carried by the frame and by which the elbow lever may be moved in opposition to its spring.

---

1,561,631. ANTITHUMB-SUCKING DEVICE. GEORGE H. WINTER, Chicago, Ill., assignor to W. Moore Thompson, Chicago, Ill. Filed Oct. 5, 1921. Serial No. 505,670. 8 Claims. (Cl. 128—133.)

4. An anti-thumb sucking device, consisting of a structure made of unyielding material adapted to extend over the major part of the first joint of the thumb to protect said joint from contact with the interior of the mouth, said structure including an adjustable band for attaching it to the thumb back of said joint, and a comparatively large element of unyielding material capable of flexible attachment to said device and adapted to block insertion into the mouth.

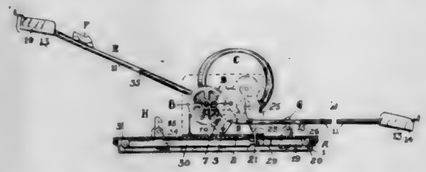
1,561,632. PERFORATED INDENTED SCREEN. HERBERT S. WOODWARD, Carbondale, Pa. Filed Feb. 27, 1924. Serial No. 695,391. 14 Claims. (Cl. 83—56.)



1. A shaker screen comprising a perforated metal sheet or plate having rows of indented triangular pyramidal projections disposed over the upper surface thereof a base line of each pyramid being parallel to the axis of the screen.

---

1,561,633. MECHANICAL TOY. CARL C. BAIN, Mount Lebanon Borough, Pa., assignor to Wolverine Supply and Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1925. Serial No. 11,197. 4 Claims. (Cl. 104—55.)



1. In a mechanical toy for use in connection with a travelling object, the combination of a support, a unitary track structure mounted on said support to oscillate on a horizontal axis, said track structure being comprised of a pair of tangents in angular relation to each other and a helix interposed between and connected to the same, power-means for oscillating said track structure, and means whereby the track structure is caused to dwell at the completion of a movement until the travelling object has traversed the helix.

---

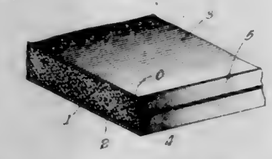
1,561,634. ADJUSTABLE SHADE HOLDER. JOSEPH S. BEENECK, Nanticoke, Pa. Filed Aug. 1, 1923. Serial No. 655,053. 1 Claim. (Cl. 156—22.)

A bracket adapted to be mounted upon a rod formed with a longitudinally extending slot leading from one end intermediate its width, said bracket including a foot adapted to fit against the forward face of said rod and formed with a longitudinally extending slot to register with the slot of said rod, a backing plate adapted to fit against the rear face of said rod for the

full width thereof and having flanges at its sides to engage opposite edge faces of the rod, and a longitudinally extending rib extending from said backing plate intermediate said flanges and extending through and secured in the slot of said foot, said rib adapted to be slidably received in the slot of said rod.

---

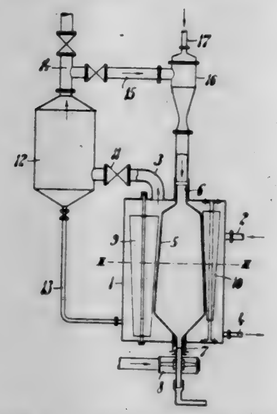
1,561,635. PLASTER BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,651. 3 Claims. (Cl. 154—45.9.)



1. A plaster board of the kind described comprising a body of suitable material, and cover sheets arranged at each side thereof, said sheets folded over the side edges of the board, the extreme edges of said sheets, terminating adjacent each other and the folded over sheet portions on each side edge lying in the plane of that edge.

---

1,561,636. METHOD OF AND MEANS FOR TREATING LIQUIDS BY HEAT. GUSTAV BOJNER, Karlstad, Sweden. Filed Feb. 11, 1924. Serial No. 692,162. 4 Claims. (Cl. 159—25.)

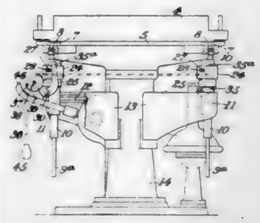


1. A method of evaporating liquids, which comprises enclosing the material to be evaported in the space between a rotary heating element and a surrounding receptacle, so that said element is substantially wholly immersed in the liquid, heating said rotary element directly by means of hot combustion gases, and rotating said heating element at a sufficient velocity relatively to said liquid to substantially prevent the production of crust upon the surface of said heating element.

---

1,561,637. MEANS FOR SUPPORTING THE MOLDING BOX OR PATTERN PLATE OF FOUNDRY MOLDING MACHINES. JOSEPH CASH, Tipton, England. Filed Apr. 3, 1924. Serial No. 704,036. 3 Claims. (Cl. 22—29.)

1. In a jar ram molding machine, a pedestal, a molding table, guide members adjustably mounted in said pedestal, sleeve members adapted for reciprocation within said guide members and with said table, a plurality of notched rods constituting the molding box support and adapted for a vertical motion within said sleeve members, means for supporting said rods relative to said



sleeve members during the reciprocation thereof, means for supporting said rods in their fully raised position and means for withdrawing one or both of said rod supporting means.

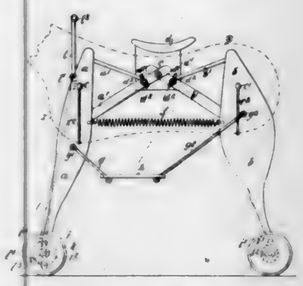
---

1,561,638. BOOK COVER. ORBY BERTRAM CROWELL, Toronto, Ontario, Canada, assignor to The Canadian I. T. S. Rubber Company, Limited, Toronto, Ontario, Canada. Filed Sept. 18, 1922. Serial No. 588,868. 3 Claims. (Cl. 281—35.)

1. A book cover formed of a moulded sheet of flexible rubber material having a portion of the cross sectional area of a reduced thickness to produce a portion of a greater flexibility than the main body to form a hinge.

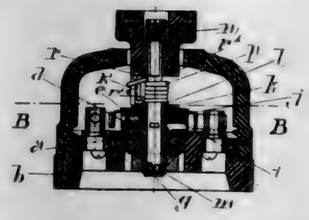
---

1,561,639. ANIMAL TOY. EVA CONSTANCE MACNAB EDGAR, Chatham, England. Filed Apr. 7, 1925. Serial No. 21,362. 2 Claims. (Cl. 208—42.)



1. An animal toy comprising a pair of front legs and a pair of rear legs, each carried by a pair of triangular shaped frames, transverse shafts on which the legs pivot, a saddle frame pivoted on a transverse shaft connecting together the adjacent apices of the triangles of the leg frames, springs acting between the front and rear legs so as to cause them to approach each other, a body part with attached head enveloping the upper part of the leg frames and carried by the transverse shafts, links pivoted to the front and rear legs and to foot rests in such manner that depression of the foot rests draws the legs together, wheels carried on the lower ends of the legs, means for preventing said wheels rotating in a backward direction and a steering handle carried by a post passing through the body and connected with means for steering the toy, as set forth.

1,561,640. ELECTRIC SWITCH. JOSEPH FRANÇOIS EYRAUD, Lyon, France, assignor, by mesne assignments, to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 14, 1921, Serial No. 444,804. Renewed Apr. 7, 1925. 18 Claims. (Cl. 200—66.)



2. A rotary snap switch having a reversibly rotatable switch blade, a reversibly rotatable spindle, a driving spring operatively interposed between the same, and an escapement mechanism for temporarily detaining the switch blade during the rotation of the spindle in either direction, said mechanism including a series of fixed stops spaced around the spindle, a rotatable latch for detaining the switch blade and normally engaged between adjacent stops in substantially radial position with respect to the spindle, and means operated by the spindle upon its rotation in either direction for withdrawing the latch in non-radial position from the stops, the engaging faces of the latch and stops being shaped to afford an inwardly divergent angular clearance therebetween which permits the latch to freely assume a non-radial position with respect to the spindle during the withdrawal operation.

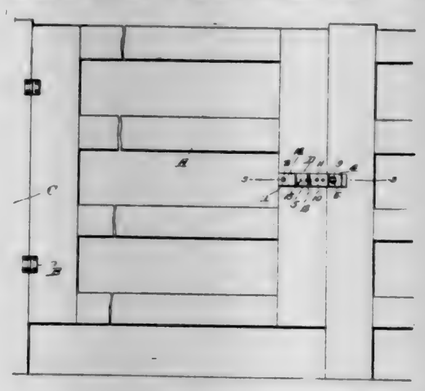
---

1,561,641. REFRACTORY COMPOSITION. WILLIAM A. FARISH, Brooklyn, N. Y. Filed May 31, 1918. Serial No. 237,403. 5 Claims. (Cl. 106—9.)

1. A non-recrystallized refractory composition, consisting of a refractory, electric furnace product, a carbonizing binder, and borax.

---

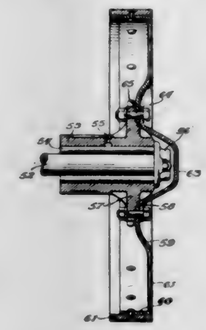
1,561,642. ADJUSTABLE DOOR AND GATE LATCH. JAMES FELKNER, Centerville, Iowa. Filed May 7, 1924. Serial No. 711,637. 1 Claim. (Cl. 292—145.)



A latch of the character specified, comprising a bearing strip secured to one edge of the door and extending over the supporting frame, a bolt extending through the supporting frame and the free end of said bearing strip, a latch bar slidably mounted for endwise movement on the bearing strip, said latch bar having a longitudinal slot to snugly receive the shank of the bolt when in locking position, and an eye to receive the head of the bolt when in retracted position, a keeper for the latch bar and a bolt carried by the latch bar and extending through and beyond the door or gate for actuating said latch bar from the opposite side, the bearing strip provided with a longitudinal slot to receive the shank of the bolt and whereby movement of the latch bar is limited in either direction.

---

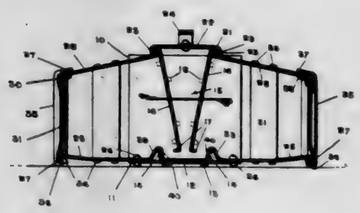
1,561,643. WHEEL FOR ROAD GRADERS. EDWARD C. GLEDHILL, Galion, Ohio. Original application filed Aug. 28, 1923, Serial No. 659,763. Divided and this application filed Mar. 3, 1925. Serial No. 12,926. 1 Claim. (Cl. 301—63.)



In a road grader, the combination of an axle, a hub fitted upon the end of the axle and having an annular flange adjacent its outer end, a retaining cap secured on the outer end of the axle and bearing against the outer end of the hub, a tread member, a disk secured at its outer edge to the said tread member and at its inner edge to the annular flange on the hub, the intermediate portion of said disk being flush with the outer edge of the tread member, and a hub cap enclosing the retaining cap and the end of the hub and having its edge portion secured over the inner edge portion of the disk.

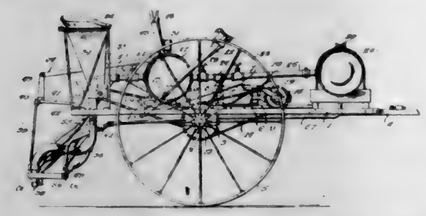
---

1,561,644. KNOCKDOWN FEEDER. BENNIE P. HANSON, Cedar Falls, Iowa. Filed Aug. 1, 1923. Serial No. 655,050. 4 Claims. (Cl. 119—52.)



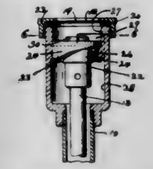
1. A feeder comprising end members, a feed trough between and secured to said end members, a hopper above said trough between and secured to said end members, a slide cover on the hopper, and a housing including a bottom, top and portions between and connecting said top and bottom, the housing bottom being detachably conected with said end members and trough and the top having a portion to be engaged by said slide cover for holding the top assembled with the hopper.

1,561,645. SPRAYER. MENTOR HOWARD, Weatherford, Tex. Filed June 2, 1924. Serial No. 717,408. 2 Claims. (Cl. 43—147.)



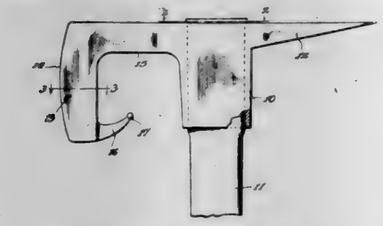
1. A spraying machine comprising a wheeled supporting frame, an air tank mounted thereon, a liquid tank also mounted thereon, an air compressor mounted on the frame and driven from the wheels thereof, the discharge of the air compressor being in communication with both the air tank and the liquid tank, a powder container mounted on the frame, discharge pipes leading from the air tank, the liquid tank and the powder container respectively and having their ends in proximity to each other, nozzles mounted on the ends of all the discharge pipes, the nozzle on the pipe leading from the air tank being coupled into the nozzle on the pipe leading from the powder container, and a support for all the nozzles carried by the rear end of the supporting frame.

1,561,646. SPRAYING DEVICE. JOHN C. HULL, Gasport, N. Y. Filed Dec. 18, 1919. Serial No. 345,745. 7 Claims. (Cl. 299—150.)



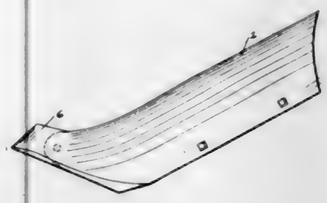
2. A spray nozzle comprising a body formed with a pressure chamber, a perforated nozzle disc carried by the body, a valve located at the upper end of the pressure chamber, and slidable therein for controlling the fluid discharge, said valve being longitudinally movable within the body and having cam faces integrally formed thereon which provide spiral passageways, means coacting with the cam faces of the valve for moving the valve longitudinally within the body on rotation of said valve, a valve plug carried by the valve and engageable with the disc, and means located at the lower end of the tube for controlling the valve.

1,561,647. FIREMAN'S AX. CHRIST JOHNSON, Shelby, Mont. Filed Mar. 6, 1925. Serial No. 13,480. 2 Claims. (Cl. 7—9.)



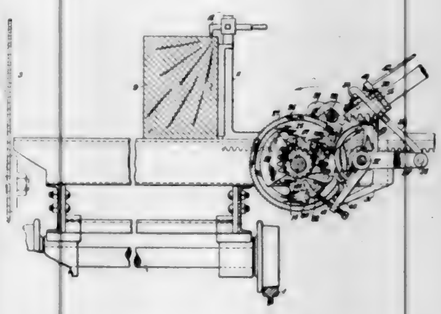
1. A tool comprising a shank having an eye at one end and a bit at the opposite end, both the bit and the eye extending laterally from the same side of the shank in parallel relation, and the bit having a projection at its free end in the plane of the shank and extending toward the eye and curving toward the eye and shank and terminating in an enlargement.

1,561,648. REPAIR TIP FOR STEEL PLOWPOINTS. HENRY KASAL, Kewaunee, Wis. Filed Jan. 5, 1922, Serial No. 527,142. Renewed Oct. 1, 1925. 2 Claims. (Cl. 97—125.)



1. A repair tip for a plow having a worn point and a laterally projecting flange comprising a landside portion and a curved upper portion having an aperture the landside and upper portions having their landside faces beveled to merge into a common plane, said repair tip comprising a cutting edge, a landside portion adapted to register with the landside portion of the plow, and a curved upper portion adapted to contact throughout its face with the landside face of the curved upper portion of the plow, said curved upper portion of the tip being provided with an aperture adapted to register with the aperture in the plow, whereby said tip may be first riveted in position upon the plow and then welded thereto wholly upon one side thereof to form an integral unit with such plow.

1,561,649. SETWORKS FOR SAWMILLS. CHARLES H. KNIGHT, Canton, Ohio. Filed June 26, 1925. Serial No. 39,685. 4 Claims. (Cl. 74—54.)

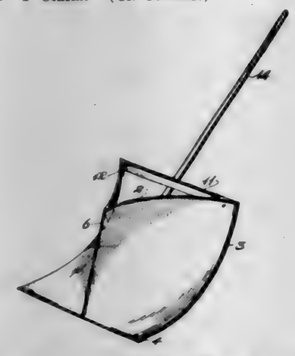


1. In a sawmill set-works, a shaft, a ratchet wheel fixed thereto, a lever journaled upon the shaft, pawls carried by the lever for engagement with the ratchet wheel, means for moving the pawls out of engagement with the ratchet wheel, an elliptic pinion loosely mounted upon the shaft, a pawl carried by said pinion for engagement with the ratchet wheel, an elliptic quadrant journaled adjacent to the shaft and meshing with the pinion, means upon the quadrant for normally holding the last named pawl out of engagement with the ratchet wheel and means operated by the pawl disengaging means for operatively connecting the quadrant to the lever when said first named pawls are disengaged from the ratchet wheel.

1,561,650. ANTITARNISH COMPOSITION. THOMAS HOLMES LASHAR, Chicago, Ill. Filed Apr. 23, 1924. Serial No. 708,354. 22 Claims. (Cl. 252—2.)

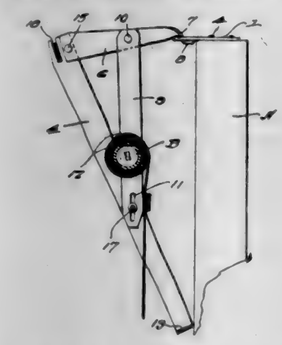
1. A new anti-tarnish composition comprising a solution of a metal salt capable of absorbing hydrogen sulfide in a hygroscopic non-volatile solvent.

1,561,651. SCOOP SNOWPLOW. ROBERT J. LAVELL, Cincinnati, Ohio. Filed Oct. 10, 1923. Serial No. 667,685. 1 Claim. (Cl. 57—53.)



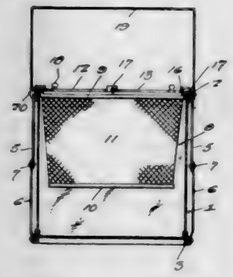
A scoop plow comprising a blade formed from a blank of sheet metal having a straight horizontal lower forward edge disposed at a right angle to the median dimension of the blade and provided with an intermediate bulged area having an incising edge disposed at a right angle to the forward edge and extending at an upward and rearward inclination from a point directly over the latter, a horizontal transverse frame bar attached to the forward edge portion of the blade and having a socket which is disposed under the bulged area of the latter, a second horizontal transverse frame bar attached to the upper portion of the blade and bridging the bulged area thereof and having an eye which is disposed in alignment with the activity of the socket and a handle member insertable through the eye and into the socket.

1,561,652. WINDOW SHADE AND CURTAIN FIXTURE. WILLIAM LE BLANC, Sheridan, Me. Filed June 18, 1924. Serial No. 720,818. 3 Claims. (Cl. 156—24.)



1. In a shade and curtain fixture, an apertured plate secured to the top of the window casing, an arm detachably supported at one end in said apertured plate and extending laterally therefrom, a shade bracket extending downwardly from the arm in a plane parallel to the window casing, and a curtain bracket secured at its upper end to the outer end of said arm, the intermediate portion thereof being secured to the lower end of the shade bracket, the lower end of the curtain bracket engaging the window casing.

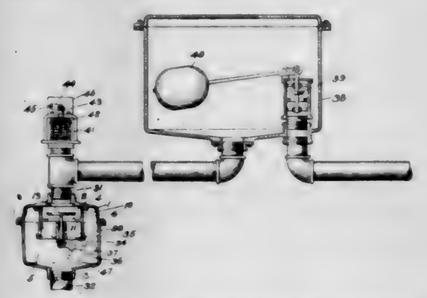
1,561,653. FOLDING MINNOW PAIL. LOUIS LINGUIST, Fort Worth, Tex. Filed June 29, 1925. Serial No. 40,292. 4 Claims. (Cl. 43—56.)



4. A folding minnow bucket comprising an outer pail including a collapsible bag of water proof material, upper and lower metallic frames associated therewith, pivotally connected links associated with the upper and lower frames for holding the bags extended, an inner pail comprising a foraminous bag, upper and lower metallic frames associated therewith, the lower frame being smaller than the upper frame of said inner pail, the upper frame of the inner pail being smaller than the upper frame of the outer pail so as to be disposed therein, means for movably supporting the inner pail in the outer pail, said means comprising upstanding lugs associated with the sides of the upper frame of the inner pail and adapted to engage the respective sides of the upper frame of the outer pail.

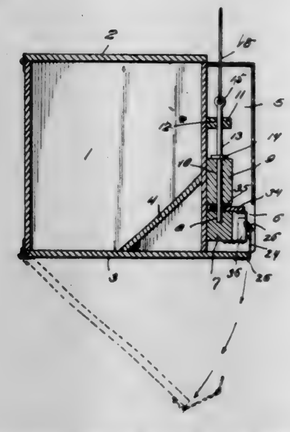
1,561,654. [WITHDRAWN.]

1,561,655. LIQUID-DISPENSING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa. Filed May 22, 1924. Serial No. 715,089. 1 Claim. (Cl. 73—167.)



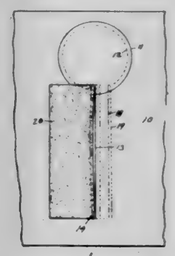
In liquid-dispensing apparatus the combination of a liquid container provided with a bottom orifice, a vertically reciprocable valve arranged above said orifice and adapted on descent to effect closure thereof, yielding means constantly exerted upon said valve and tending constantly to sustain it at an interval above said orifice, and means for maintaining a constant head upon a body of water filling said container.

1,561,656. AUTOMATIC STOCK AND POULTRY FEEDING DEVICE. FRED L. MOODY, Oneonta, Ala. Filed June 29, 1925. Serial No. 40,311. 2 Claims. (Cl. 119—56.)



1. An automatic feeding device of the class described comprising in combination, a feed hopper, a hinged closure for the discharge end thereof, a vertically slidable locking rod, a slidable plate hingedly associated with the hopper and through which the locking rod is adapted to pass, a hook associated with the slidable plate, a ring carried by the free end of the hinged closure and normally engaging said hook, and means for actuating said locking rod to disengage the same from said slidable plate simultaneously permitting the disengagement of the ring from the hook and causing the hinged closure to swing downwardly whereby the feed is discharged from the hopper.

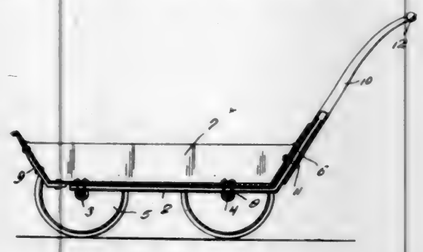
1,561,657. PLACKET FACING. SAMUEL M. MOSES, Portland, Oreg. Filed Mar. 8, 1922. Serial No. 541,903. Renewed Jan. 7, 1925. 1 Claim. (Cl. 2—121.)



A method for forming plackets consisting of double seaming a rectangular piece of cloth over the location for the placket, cutting said seams apart and turning the flaps inwardly through the opening in a manner to form a placket facing and placket extension.

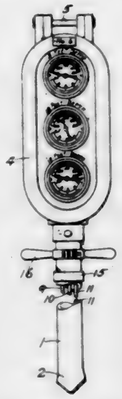
1,561,658. CART. PETER MOSIER, Grand Rapids, Mich. Filed Feb. 12, 1925. Serial No. 8,792. 1 Claim. (Cl. 280—50.)

A cart of the class described comprising a pair of parallel spaced I-beams, front and rear axles supported transversely across said beams, ground engaging wheels on the ends of the axles, an elongated shallow body supported on said beams, the forward and rear ends of the body being inclined upwardly, the rear ends of the I-beams being inclined upwardly and spaced slightly from the upwardly inclined rear end of the body, tubular handle bars having their lower ends disposed over the upwardly inclined rear ends of the I-beams, and a substan-



tially U-shaped clamp encircling the lower portion of each of the tubular handle bars and extending through the upwardly inclined rear portion of the body for adjustably securing the handle bars on the upwardly inclined rear ends of the I-beams, and a handle extending across the upper end of the handle bars.

1,561,659. COAL-TEMPERATURE INDICATOR. ROBERT P. NICHOLS, New Rochelle, N. Y., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Jan. 24, 1921. Serial No. 439,444. 2 Claims. (Cl. 73—118.)



1. In an instrument for indicating temperatures within a mass of loosely piled material, an elongated tubular casing having an end shaped to facilitate its insertion into the mass, an indicator housing connected to the other end of the casing and adapted for disposition exteriorly of the mass, a plurality of indicators housed therein, heat sensitive devices located within the casing at varying distances from said indicators and each operatively connected to one of said indicators.

1,561,660. HACK-SAW FRAME. LOUIS E. PECK, Greenfield, Mass., assignor to The Threadwell Tool Company, Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1925. Serial No. 10,377. 6 Claims. (Cl. 145—34.)

6. In a hack-saw frame, the combination with a handle having a groove in the top, of a U-shaped bar constituting a part of the frame located and fitting in said groove,

an end piece having a horizontal top part located in the interior of the U-shaped bar and pivoted to it and projecting down from the bottom of the U-shaped bar and

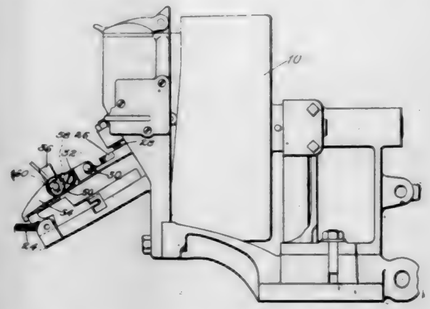
having a sqare opening at the bottom a slide having a pin for holding the end of the saw blade and located in said opening, and a screw having a round head screwing into the slide longitudinally for adjusting it.

1,561,661. FLYTRAP. ELISHA DAVID PEPPER, Pickens, Miss. Filed June 22, 1923. Serial No. 647,107. 1 Claim. (Cl. 43—118.)

A fly trap comprising an outer casing formed of a substantially rectangular sheet of foraminous material disposed edgewise and bent until one vertical edge portion thereof overlaps the other vertical edge portion, said lapped edge portions being secured together, the side portions of the outer casing being bent to converge together at their upper edges, thereby drawing the lower edges of the sides of the outer casing upwardly above the level of the lower edges of the ends of the casing and providing inlet spaces between said lower edges of the sides of the outer casing and a flat supporting surface on which the outer casing rests, means permanently securing the converging upper edge portions of said outer casing together for part of the length of the outer casing and releasably securing the convergent upper edge portions together for the remainder of the length of the outer casing, and an inner casing made separately from the outer casing, said inner casing having substantially the shape of a truncated cone and being adapted at its lower end to closely fit in the lower end portion of the outer casing when the body of the inner casing has been inserted in the outer casing at the lower end of the latter, said inner casing having a relatively small opening at its upper end, and means securing the lapped lower end portions of said inner and outer casings in contiguous relation to each other at all points around the lower end of said inner casing.

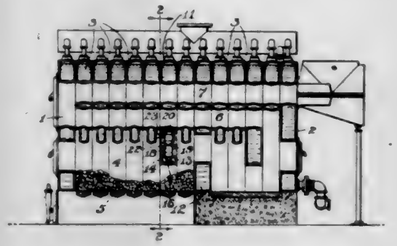
1,561,662. FASTENER-SUPPLYING MECHANISM. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 20, 1922. Serial No. 569,581. 30 Claims. (Cl. 1—6.)

6. A distributing device comprising, in combination, a set of raceways, a separator plate reciprocating across the raceways, an end block having a portion overlying the plate, simultaneously or individually operable members for closing one or more of the raceways, and a lock



for the end block constructed and arranged to be released by simultaneous operation of said members to close the raceways.

1,561,663. BOILER. HERMAN C. PROX, Terre Haute, Ind. Filed July 3, 1922. Serial No. 572,537. 2 Claims. (Cl. 122—225.)

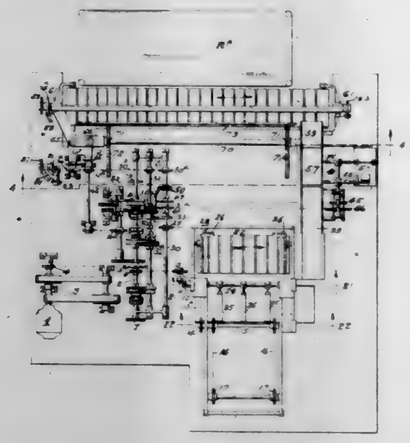


1. In a sectional boiler the combination with front and rear sections and intermediate sections, each of the intermediate sections having vertical water ways and transverse horizontal water ways extending between the vertical water ways, of a pair of integral supplemental horizontal water ways extending between and communicating with the vertical water ways of one of the intermediate fire box sections, said supplemental water ways being spaced apart from each other from front to rear to form therebetween a throat, and arranged below and spaced from the bottom transverse water way of the section, walls formed of refractory material each supported on one of said supplemental water ways spaced apart from front to rear to form an air passage therebetween and extending to the bottom transverse water way of the section to completely fill the space between said transverse water way and the supplemental water ways, said air passage being arranged to have communication with the atmosphere.

1,561,664. BREAD-RACKING MACHINE. ROBERT CURTIS RATHWELL, Strathroy, Ontario, Canada. Filed July 13, 1925. Serial No. 43,376. 11 Claims. (Cl. 214—41.)

1. In combination with a racking frame including a plurality of shelves; a machine of the class described comprising a conveyor adapted to receive and convey pans of bread as received from an oven; means for inverting the pans of bread delivered by the conveyor, whereby the bread may fall from the pans; a second conveyor adapted to receive the bread as it drops from the

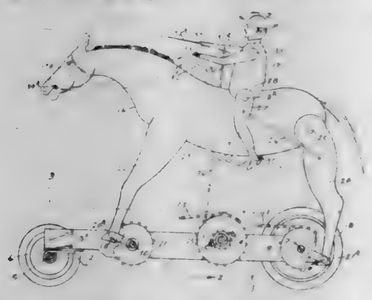
pans; an elevator for receiving the loaves of bread delivered by the second conveyor; a vertically adjustable horizontal conveyor adapted to receive the bread from the



elevator and to travel in a step by step manner until the entire length of the conveyor is filled with bread; and means for pushing the row of bread from said last named conveyor onto the shelves of the racking frame.

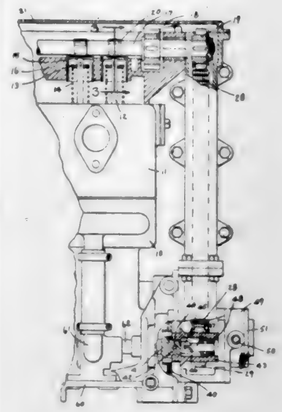
---

1,561,665. MECHANICAL TOY. JOHN W. RICHMAN, San Jose, Calif. Filed Jan. 3, 1925. Serial No. 341. 3 Claims. (Cl. 46—45.)



1. In a mechanical toy of the class described, a frame, a turntable adjustably mounted on front end of said frame, means for holding said turntable in adjusted position, a front axle secured to said turntable, ground wheels turnably mounted on said axle, a rear crank axle turnably mounted through said frame; a ground wheel secured rigid to said crank axle and a second ground wheel turnable on said axle; a second crank axle turnably mounted through said frame near the front end thereof and turnable in unison with the first mentioned crank axle; a power shaft; means for keeping said second mentioned crank shaft in geared relation to the power shaft; an automaton, resembling a horse, mounted on said crank axles and positioned above said frame; bearings in the feet of said automaton by which it is mounted to said crank axles; means whereby the automaton can accommodate itself to the cycle of the crank axles; a second automaton, resembling a man, secured rigid to said first mentioned automaton; a movable leg on said second mentioned automaton; a movable arm on said second mentioned automaton and means for moving said leg and arm when the first mentioned automaton and crank axles are in motion, substantially as shown and described.

1,561,666. OVERHEAD TRANSFORMATION FOR FORDS. ROBERT M. ROOF, Anderson, Ind. Filed Sept. 2, 1924. Serial No. 735,456. Renewed July 27, 1925. 6 Claims. (Cl. 123—173.)



1. In an internal combustion engine transformation, the combination of a Ford cylinder block having a crank case and a cam shaft therein, a detachable Ford head replacing over-head valve type head positioned thereabove, an overhead cam shaft, a chamber forming overhead cam shaft enclosing cover therefor detachably positioned above said head, a tubular housing communicating at its upper end with said chamber and at its lower end with the crank case, and a power connection in said tubular housing and operable by a shaft mounted in the original cam shaft bearing for driving the over-head cam shaft in timed relation with the engine.

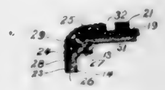
---

1,561,667. PROCESS OF DIGESTING MATERIALS FOR MAKING FERTILIZERS AND STOCK FOODS. LOUIS F. SCHMELZER, Carteret, N. J. Filed Oct. 30, 1922. Serial No. 598,029. 4 Claims. (Cl. 71—6.)

1. The process of preparing materials containing nitrogen compounds or proteins, for fertilizer or stock food purposes, consisting in digesting the material in a closed steam tight container subjected to heat, in steam derived substantially entirely from moisture contained in said material.

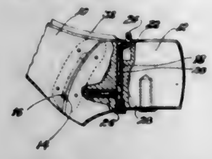
---

1,561,668. STEP TREAD. FRANK H. STANWOOD, Wilmette, Ill., assignor to Stanwood Equipment Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 21, 1921. Serial No. 446,785. 8 Claims. (Cl. 20—79.)



1. A safety step tread for steps of automobiles, railway cars and the like, comprising a reversible nonslipping covering having on its upper surface a series of upstanding yieldable ribs and provided on its front and rear edges with a nosing-engaging marginal portion, and a separate non-slipping nosing member adapted to overlie and closely engage either of said marginal portions of said reversible covering in edge to edge contact, to provide a maximum of wear of said step tread.

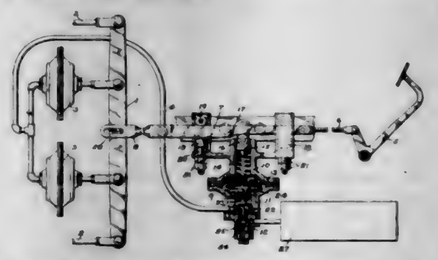
1,561,669. LAST. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 2, 1918, Serial 264,953. Divided and this application filed June 16, 1921. Serial No. 478,005. 5 Claims. (Cl. 12—141.)



1. In a last having a lateral surface arranged to support a shoe upper during ordinary shoemaking operations, a thimble adapted to cooperate with a jack pin and a socket in the heel part of the last; a pin slidably fitting the socket and permanently mounted therein, said pin being of substantially uniform cross-section and arranged either to be projected substantially from the heel seat face of the last by a rectilinear sliding movement to cooperate with a hole of corresponding size in a shoe part, or to remain in a retracted position, at will.

---

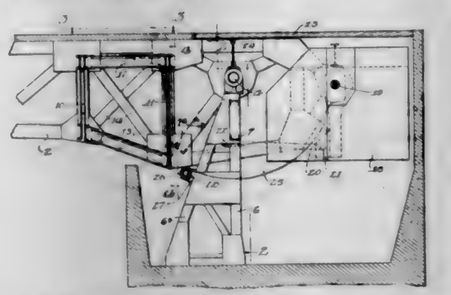
1,561,670. VEHICLE BRAKE. CARLTON D. STEWART, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1922. Serial No. 592,284. 5 Claims. (Cl. 303—54.)



1. In an automotive brake, the combination with a valve device having means for regulating the pressure of fluid supplied for braking and a movable member for operating said means, of a mechanical brake controlling mechanism having a moving connection provided with an incline adapted to engage said member.

---

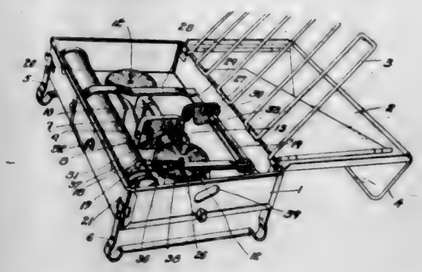
1,561,671. BASCULE BRIDGE. JOSEPH B. STRAUSS, Chicago, Ill. Filed Jan. 9, 1924. Serial No. 685,078. 7 Claims. (Cl. 14—38.)



1. A bascule bridge comprising a cantilevered lifting section or bascule leaf having trusses mounted on trunnions, a counterweight at the rear end of said trusses, a support for the leaf comprising vertical trunnion posts at the trunnions and supporting said trunnions, cross bracing on the leaf extending from the lower flange of the trusses toward the trunnions, bracing for the trunnion posts to take the horizontal forces on the trunnion, said bracing adapted to clear the leaf and its bracing as the leaf is opened and closed.

---

1,561,672. STOVE. HIRAM W. STRONG, Wichita, Kans., assignor to Coleman Lamp Company, Wichita, Kans., a Corporation of Kansas. Filed Mar. 2, 1925. Serial No. 12,750. 10 Claims. (Cl. 126—38.)



7. A stove comprising a mixing chamber, having a hydro-carbon fuel inlet port and an air port, a burner communicating with the mixing chamber, a flat baffle plate between the burner and the mixing chamber, and a vaporizing tube carried by the plate, having its discharge end movable into and out of line with the inlet.

---

1,561,673. CLOCK ARBOR OR SHAFT. CLARENCE EVERETT ULERY and FRANK CARPENTER FITCH, Terrell, Tex. Filed Apr. 3, 1924. Serial No. 704,000. 2 Claims. (Cl. 58—52.)

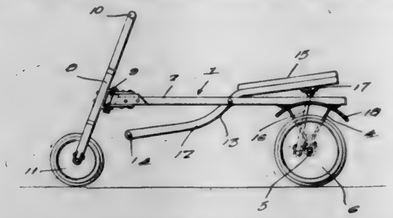
1. An arbor of the class described comprising a tubular section, another section telescopically engaging one end of said tubular section and detachably connected therewith and a screw threaded in the other end of said tubular section to form a bearing extension for the arbor.

---

1,561,674. TOY VEHICLE. PETER WAYERSKI, Junction City, Wis. Filed May 27, 1925. Serial No. 33,259. 1 Claim. (Cl. 208—33.)

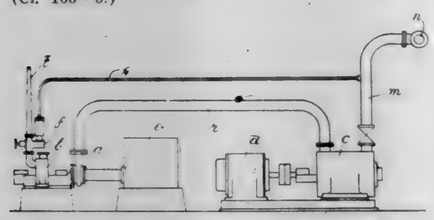
A toy vehicle of the class described comprising a frame, said frame including a pair of spaced beams, a crank shaft supported below the rear ends of the beams, driving wheels on the respective ends of the crank shaft, a steering wheel at the forward end of the frame, an elongated lever having its end portions offset with respect to each other, means for pivotally supporting the intermediate portion of the lever between said spaced beams at a point intermediate the ends of the frame, the forward end portion of the lever being disposed below the frame, a foot engaging member carried by the forward end of the lever, a seat on the rear end portion

of said lever, and means connecting the lever with the crank shaft whereby the oscillatory movement of the lever will be converted into a rotary movement of the crank shaft and the driving wheels, said means comprising a pitman connected at its upper end to the rear end of the lever extending downwardly between the spaced beams of the frame, the lower end of the pitman being secured to the crank portion of said crank shaft.



---

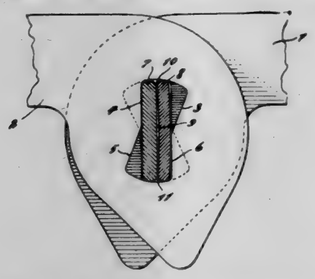
1,561,675. BOILER-FEEDING APPARATUS. JAMES GEORGE WEIR, Cathcart, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Cathcart, Glasgow, Scotland. Filed Mar. 10, 1924. Serial No. 698,326. 4 Claims. (Cl. 103—5.)



1. The combination with a feed pipe for boilers of a constant-speed pump, a variable-speed pump arranged in series with, and on the suction side of, the said constant-speed pump and co-acting with it to deliver feed water into the said feed pipe, and means whereby the said variable-speed pump is controlled by the pressure in the said feed pipe.

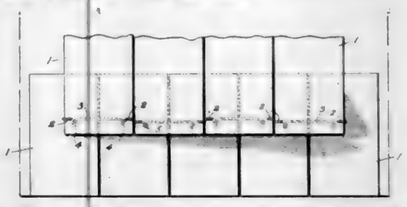
---

1,561,676. CHAIN AND PARTS THEREFOR. CHARLES E. WERTMAN, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Nov. 1, 1923. Serial No. 672,050. 10 Claims. (Cl. 74—32.)



1. In a chain of the silent link type, a plurality of overlapping links having registering openings in the overlapping ends and a split pin in said openings with a space between the adjacent sides of the pin members, one of the sides of said pin being flexible whereby the pin lends resiliency to the joint.

1,561,677. SHINGLE FASTENER. HENRY W. WHITE, New Orleans, La. Filed Jan. 2, 1925. Serial No. 189. 3 Claims. (Cl. 108—33.



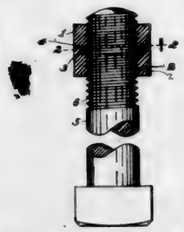
1. The herein described shingle fastener made from a single piece of wire having a main body portion provided with an open ended loop adapted to overlie a shingle, and with hooked end portions disposed in the same plane said plane being at right angles to the plane of said loop.

---

1,561,678. [WITHDRAWN.]

---

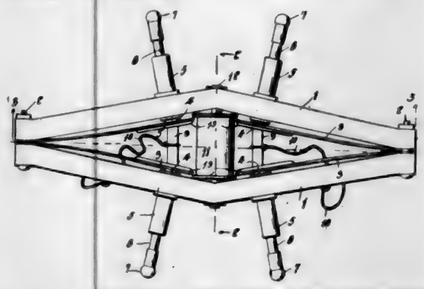
1,561,679. SELF-LUBRICATING NUT. ALBERTO I. WOODRING and WILLIAM G. LAMB, Waterloo, Iowa. Filed Sept. 29, 1923. Serial No. 665,682. 1 Claim. (Cl. 85—32.)



In combination, an interiorly threaded nut, and a threaded shaft whose threads are meshed with the nut threads and extend continuously through the nut, the nut having one or more threads intermediate its ends removed to provide an annular space around the shafts removed in isolation from the ends of the nut, said annular space being provided to receive an initial charge of a pasty lubricant to continuous lubricate the shaft threads as turned therethrough, the lubricant being thereby held between said nut and shaft in said annular space to close their interspace against the transmission past said annular space of comminuted particles.

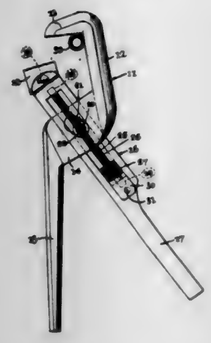
---

1,561,680. GAME TRAP. GEORGE A. BARNARD, Pembine, Wis. Filed Mar. 19, 1925. Serial No. 16,750. 4 Claims. (Cl. 43—94.)



1. In an animal trap, plates spaced apart intermediate of their ends, spring fingers secured between the plates, spring actuated plungers engaging said spring fingers, and a trip block adapted to be inserted between the spring fingers in setting the trap.

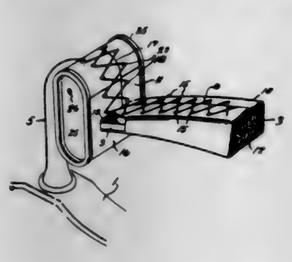
1,561,681. WRENCH. CHARLES W. BARNES, Mansfield, Ohio. Filed Nov. 22, 1924. Serial No. 751,483. 14 Claims. (Cl. 81—83.)



1. A wrench comprising a frame provided with a handle, a first jaw operatively connected to said frame, a lever provided with a handle disposed adjacent the handle of said frame, a second jaw pivotally connected to said lever to form with said lever a toggle based on the pivotal connection of said lever and said frame and the area of engagement of said second jaw with the article between said jaws, and means pivotally connecting said lever to said frame comprising a pin on said lever and a slot in said frame and so arranged that, in any adjusted position of said lever relative to said frame, said lever may be operated, by approachment of said handles, to move said second jaw into cooperating relation to said first jaw, and may then be further operated to translate said pivot to a point nearer the engaging area of said first jaw to thus cam said second jaw toward said first jaw and simultaneously straighten said toggle, to thus firmly clamp between said jaws the article there disposed.

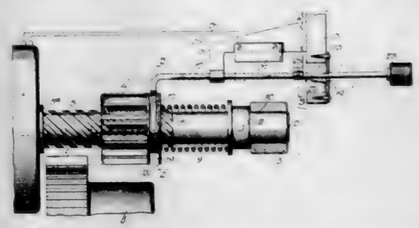
---

1,561,682. VEHICLE SPRING AND SHACKLE CASING. ALBERT B. BEITMAN, Cleveland Heights, Ohio, assignor to The Albe Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 4, 1922. Serial No. 541,007. 13 Claims. (Cl. 267—37.)



1. A combined spring and shackle casing comprising a cover of pliable material for the spring, said cover throughout its length fitting snugly about the spring and conforming in shape therewith, and a second cover similarly fitting the shackle and having an opening through which the end of the spring extends, said opening being a little larger than the cross sectional area of the part of the spring which extends through it, the covers being secured together about said opening and capable of yielding with respect to each other substantially according to the relative movements of the spring and shackle.

1,561,683. ENGINE STARTER. VINCENT BENDIX, Chicago, Ill. Filed Apr. 6, 1921. Serial No. 459,037. 11 Claims. (Cl. 290—38.)



1. An engine starter drive including a rotatable shaft, a driving member mounted thereon for longitudinal movement thereof and rotary movement therewith, and adapted for automatic engagement with and automatic disengagement from a member of the engine to be started, means tending to shift the driving member into engagement with such engine member, said driving member being mounted to rotate on the shaft as an incident to such longitudinal shifting by said means, and mechanism for restraining such means.

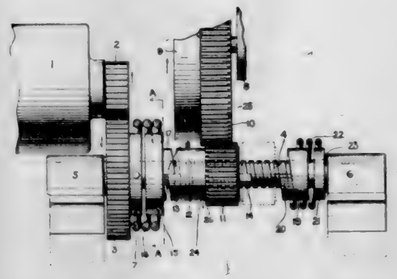
---

1,561,684. BEAD CORE FOR PNEUMATIC TIRES. FRANK H. BEYEA, Akron, Ohio assignor to John R. Gammeter, Akron, Ohio. Filed Sept. 12, 1921. Serial No. 500,123. 18 Claims. (Cl. 245—1.5.)

1. A circular gromet comprising wire wound upon itself in a plurality of convolutions lying closely together, the wire having tapering sides.

---

1,561,685. STARTING APPARATUS. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Nov. 5, 1914, Serial No. 870,357. Renewed Jan. 10, 1925. 15 Claims. (Cl. 74—7.)



2. In apparatus of the class described, in combination, an internal combustion engine, a motor, a threaded shaft driven from said motor, a gear threaded upon said shaft, a gear connected with said engine, said gears being posi-

tioned to come into mesh as said shaft is driven from said motor, and a disc spring surrounding said shaft and positioned to permit an endwise movement of said threaded shaft and tending to return it to normal position.

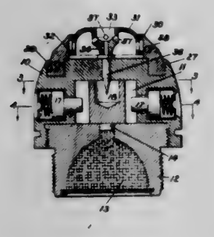
---

1,561,686. DEVICE TO PREVENT ROTATION OF BOBBINS. HAROLD L. BLANCHARD, Northbridge, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1924. Serial No. 703,605. 10 Claims. (Cl. 139—245.)

1. In a weft replenishing mechanism for looms, a guideway to hold reserve bobbins as they await movement toward transfer position, a wall for said guideway mounted for pivotal movement about an axis substantially parallel to the direction in which the bobbins move in said guideway and extending adjacent the reserve bobbins, and means to move said wall pivotally to engage the bobbins in the guideway.

---

1,561,687. POINT-DETONATING FUSE. HAROLD M. BRAYTON, Dover, N. J. Filed Aug. 5, 1924. Serial No. 730,296. 5 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



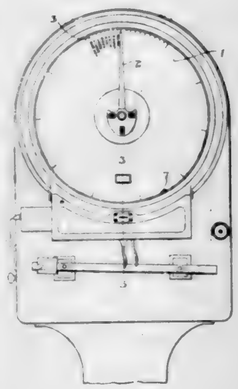
1. A fuse including a body formed with an eccentric cavity, a centrifugally released rotor mounted in the cavity, said rotor provided with a primer detonator and a blind cavity, said body being further formed with an annular groove in its forward face, an annular cap firmly held in the groove and formed with a fixed inturned rim, an air balanceable striker head movable within the cap, a fixed firing pin carried by the striker, the point end of said firing pin being normally disposed in the blind cavity but adapted to be withdrawn therefrom before rotation of the rotor, and a booster container threadedly secured to the body and closing the cavity.

1,561,688. ADJUSTABLE CONNECTER BETWEEN A SCALE BEAM AND SHELF LEVER OR PENDULUM. GEORGE W. BRITTON, Hamilton, Ontario, Canada, assignor to James P. Steedman, Hamilton, Ontario, Canada. Filed May 13, 1925. Serial No. 30,127. 4 Claims. (Cl. 265—62.)

1. A scale beam connecter, comprising the combination with the scale beam and pendulum, of a shackle having adjustable bearing blocks at the ends adapted to engage said members.

---

1,561,689. TYPE-REGISTERING SCALE. GEORGE W. BRITTON, Hamilton, Ontario, Canada, assignor to James P. Steedman, Hamilton, Canada. Filed May 13, 1925. Serial No. 30,128. 2 Claims. (Cl. 265—5.)



1. In a type registering scale, a dial having special classifying insignia thereon, and a printing ring having numerals corresponding with the numerals of the dial and type corresponding with the classifying insigna on said dial.

1,561,690. SKYROCKET. EDWARD H. BUCKLEY, Philadelphia, Pa. Filed Mar. 10, 1925. Serial No. 14,370. 4 Claims. (Cl. 102—23.)

1. A rocket stick consisting of a separable tube of light sheet material and containing granular material.

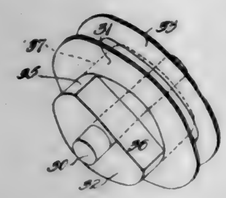
---

1,561,691. BUILDER MECHANISM FOR WINDING MACHINES. JOHN S. BURNHAM, Biddeford, Me. Filed Nov. 21, 1923. Serial No. 676,075. 2 Claims. (Cl. 242—43.6.)

1. A gain control device for winding machines comprising a triple tread reversible pulley or drum, one tread being flattened to serve in the filler winding operation, and means rotatively supporting the pulley and permitting its reversal to eliminate the flattened tread so that the other two treads may be employed as in warp winding.

---

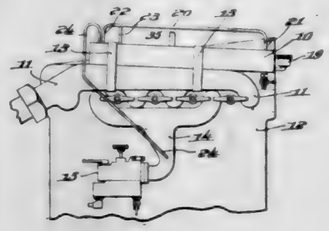
1,561,692. BUILDER MECHANISM FOR WINDING MACHINES. JOHN S. BURNHAM, Biddeford, Me. Filed Nov. 27, 1923. Serial No. 677,305. 2 Claims. (Cl. 242—43.6.)



1. A gain control device for winding machines comprising an adjustable drum or pulley having an outer annular tread member and an inner core member, the inner core member being removable and reversible and having a flat for filler winding purposes, the shape of the core member being such that arranged in one position it provides a tread part circular and part flat for filler winding and it also provides a hub for the outer tread member, means for securing the parts in said position but permitting their reversal so that the filler winding tread of the core becomes the hub of the outer tread member.

---

1,561,693. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. ERNEST CARTER, Melrose Highlands, Mass. Filed July 18, 1924. Serial No. 726,869. 3 Claims. (Cl. 123—25.)



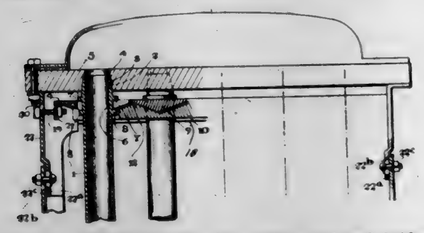
1. A humidifier for internal combustion engines comprising a tank having a steam generating chamber, and a steam superheating chamber horizontally arranged and separated by a partition and in contact with a heated portion of an engine; said generating chamber having a plurality of outlets so arranged each with respect to the other that said chamber may assume an angular position causing the liquid therein to substantially seal one of said outlets while the other is unsealed and operative and arranged to conduct steam to said heating chamber.

---

1,561,694. SCOOP ATTACHMENT FOR POWER-OPERATED EXCAVATING APPARATUS. BIRD C. CLUTTER, Akron, Ohio. Filed May 26, 1923, Serial No. 641,532. Renewed Apr. 18, 1925. 21 Claims. (Cl. 214—138.)

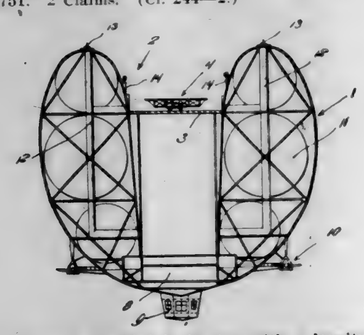
1. In a power operated excavating apparatus, a shiftable scoop, a shiftable boom having its lower end pivotally connected with the body of the apparatus, a hanger means pivoting on a support carried by the boom below the top thereof, a forward hanger element pivotally connected respectively to the scoop and with said means, rear hanger elements pivotally connected to the scoop and to said support, and an actuating device pivotally connected with the body of the apparatus and to said means for shifting the latter on said support to maintain the scoop horizontal, during the shifting of the latter.

1,561,695. AUTOMOBILE RADIATOR. CLINTON COSTELLOE and SHERM G. STOLL, Hammond, Ind. Filed June 13, 1921. Serial No. 477,137. 12 Claims. (Cl. 285—25.)



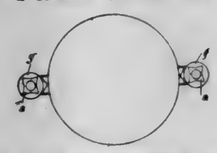
12. In combination with the casting and end bridges of a radiator, a tube having a flange, a sealing plate having a vari-sized opening of which the smaller is to fit around the tube for engagement of the plate with the flange, means by which said plate is attached at one end to an adjacent bridge, the other end of the plate being free, a companion sealing plate having a vari-sized opening of which the larger part is in position to enable movement of the tube, contacting wedge means on the confronting faces of the sealing plates, means by which the lower sealing plate is attached to the other end bridge, the other end of the plate being free, said attaching means being operable to cause movement of the lower sealing plate and the elevation of the tube into an opening in the casting, and means for sustaining the sealing plates.

1,561,696. DIRIGIBLE AIRSHIP. FRANK L. COVERT, Kirkwood, N. Y. Filed Dec. 13, 1924. Serial No. 755,751. 2 Claims. (Cl. 244—2.)



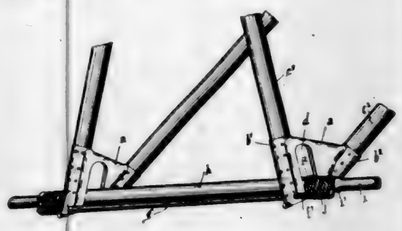
2. An airship provided in its top with a longitudinal centrally disposed depression forming a runway and a landing for aeroplanes, said depression increasing in width and decreasing in depth at its rear end, a vertical elevator shaft in the ship in communication with said runway, and in an elevator adapted to travel in said shaft.

1,561,697. AEROPLANE CONSTRUCTION. EMILE DEWOITINE, Toulouse, France. Filed July 8, 1924. Serial No. 724,856. 2 Claims. (Cl. 244—30.)



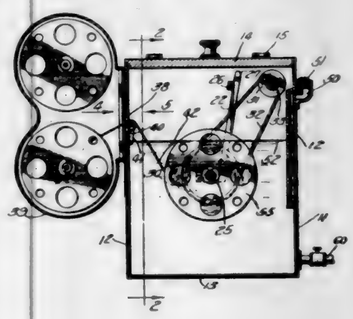
1. An engine frame for areoplanes which is mounted in the overhang position at the side of the main body and consists of discs, tubes, and cables connecting the said discs, forming a rigid structure to which is secured the plate supporting the engine, and tubes connecting the said structure with the aeroplane body.

1,561,698. LANDING CHASSIS AND TAIL SKID FOR AEROPLANES. EMILE DEWOITINE, Toulouse, France. Filed July 8, 1924. Serial No. 724,857. 3 Claims. (Cl. 244—2.)



1. A landing chassis for aeroplanes, comprising an axle carrying the landing wheels, struts secured to the aeroplane body, fittings assembling the ends of the said struts, said fittings having therein suitable slots open at the bottom, rods or studs disposed on either side of the said slot and perpendicular to the said fittings, elastic means connecting the ends of axle inserted into the slot with the said studs disposed on either side of the slot, and means closing the opening at the bottom of the said slot.

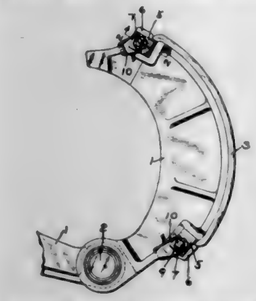
1,561,699. METHOD AND APPARATUS FOR DEVELOPING FILMS. VINCENT C. DE YBARRONDO, Los Angeles, Calif. Filed Sept. 21, 1923. Serial No. 664,020. 13 Claims. (Cl. 95—90.5.)



1. In a method of treating motion picture films in the development thereof, the step which consists of winding the film into roll formation in a bath of liquid, the convolutions of the roll being separated only by such of said liquid as is not forced from between said convolutions during the winding of the film.

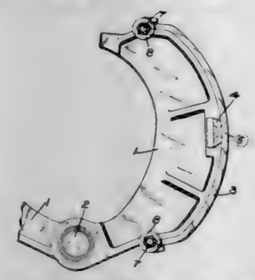
1,561,700. BRAKE-SHOE CONSTRUCTION. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,117. 2 Claims. (Cl. 188—234.)

2. The combination with a brake head having an arcuate face and a thickened portion at each end of the arcuate face with a transverse slot between said thickened portion and the body of the brake head, of a brake shoe engaging said arcuate face and having an inwardly turned flange at each end engaging in the corresponding transverse slot in the brake head, a lug formed from each flange,



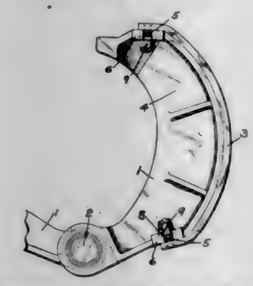
and a stud secured in each thickened portion of the shoe and adapted to engage in an opening in the corresponding lug.

1,561,701. BRAKE-SHOE CONSTRUCTION. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,119. 3 Claims. (Cl. 188—234.)



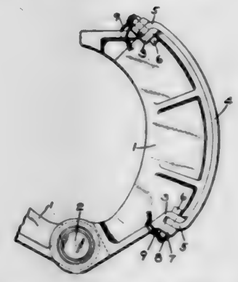
2. The combination with a brake head having an arcuate face and provided with a lug at each end of said face having a transverse recess, of a brake shoe formed to engage said arcuate face and having its opposite ends adapted to engage in said recesses, and a bolt extending through a transverse bore in each lug for securing said shoe in place.

1,561,702. BRAKE-SHOE CONSTRUCTION. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,120. 2 Claims. (Cl. 188—234.)



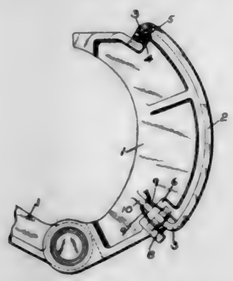
2. The combination with a brake head having an arcuate face and having a lug at each end of the arcuate face provided with a transverse slot, of a brake shoe formed to engage said face and provided with openings adapted to register with said slots, a bolt extending through each opening and slot for clamping said shoe against the brake head, and a washer on each bolt and engaging in a recess in each lug for preventing transverse movement of said shoe relative to said brake head.

1,561,703. BRAKE-SHOE CONSTRUCTION. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,121. 2 Claims. (Cl. 188—234.)



2. The combination with a brake head having an arcuate face and apertured lugs at opposite ends of said face, each provided with a transverse slot, of a brake shoe formed to engage said face and having upturned ends adapted to engage in said slots and a wedge extending through the aperture in each lug and through an aperture in each brake shoe end, so as to present a wedging face to said brake shoe end for drawing the shoe into engagement with the brake head.

1,561,704. BRAKE-SHOE CONSTRUCTION. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,122. 4 Claims. (Cl. 188—234.)

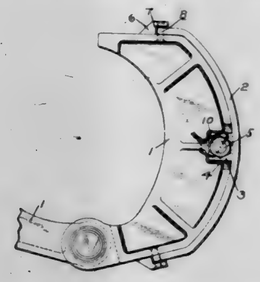


3. The combination with a brake head having an arcuate face and provided with longitudinally disposed dowel pins adjacent to opposite ends of the arcuate face, of a brake shoe formed to engage said arcuate face and having its opposite ends inwardly bent and provided with recesses adapted to receive said dowel pins.

1,561,705. BRAKE-SHOE CONSTRUCTION. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 7, 1923. Serial No. 679,232. 2 Claims. (Cl. 188—234.)

2. The combination with a brake head having an arcuate face, of a brake shoe engaging said face and

provided with an inwardly extending centrally disposed lug, means for securing said lug to the brake head,



transversely slotted lugs on the brake head for receiving the opposite ends of the brake shoe, and pins associated with said lugs for engaging notches in said brake shoe.

---

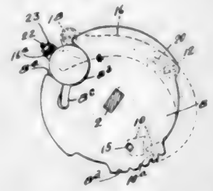
1,561,706. ELECTRIC WATER HEATER. ALLEN M. DUFFIE, Buffalo, N. Y., assignor to William H. Robinson, Buffalo, N. Y. Filed June 5, 1923. Serial No. 643,560. 7 Claims. (Cl. 219—39.)

2. In an electric water heater, in combination, a cylinder delimiting a heating chamber closed at its ends, said cylinder having an internal reflecting surface, an inlet pipe and an outlet pipe arranged at the opposite ends of said heater, a plurality of tubes connected to said pipes and having convolutions lying closely adjacent one another and arranged to form a cylinder which is fitted within said cylinder first named, said tubes being each of small diameter as compared with said pipes, and an electrical heating element arranged within the cylinder formed by said tubes.

---

1,561,707. CHECK-CONTROLLED MECHANISM. ARTHUR H. DU GRENIER, Haverhill, Mass., assignor of one-half to Harold B. Woods, Hudson, Mass. Filed June 20, 1924. Serial No. 721,205. 4 Claims. (Cl. 194—102.)

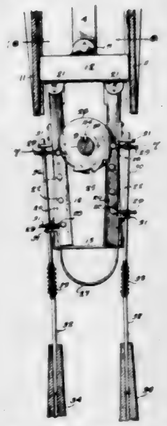
1. In a check-controlled mechanism, a check-carrier comprising a rotatably mounted disk having an abutment and a peripheral check-receiving recess and operatively movable to carry a check therein from a receiving to a delivering position, a locking lever having means for normally holding one arm thereof in position to be engaged by said abutment to lock said carrier against operative movement at a point intermediate said positions, a supplemental lever engaged with said locking lever and having one arm thereof extending



transversely of the outer periphery of the path of movement of the checks, said arm having an adjusting screw therein arranged to extend normally into said path and to be moved therefrom by the check to move said locking lever out of locking position.

---

1,561,708. MECHANICAL MOVEMENT. JOHN HENRY FEAGAN, Atlanta, Ga. Filed Nov. 10, 1924. Serial No. 748,980. 5 Claims. (Cl. 74—54.)



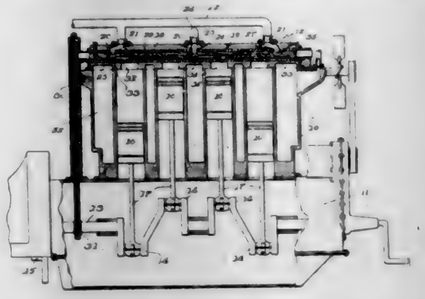
1. In a device of the character described, a reciprocating member, a pair of bars hingedly connected thereto, spaced pins mounted in said bars, a driven shaft, a ratchet wheel mounted on said shaft and adapted to be alternately engaged by said bars to revolve said shaft in one direction, and timing mechanism connecting said reciprocating member to said shaft.

---

1,561,709. SLEEVE-VALVE MOTOR. EMMET W. FORAN, Custer, S. Dak. Filed Sept. 10, 1923. Serial No. 661,984. 1 Claim. (Cl. 123—190.)

In a multiple cylinder internal combustion engine, a head common to and closing the ends of all the cylinders, said head having a cylindrical bore therein, a sleeve stationarily mounted within said bore, the head having chambers communicating with the bore, and with the respective cylinders, said sleeve having a pair of ports at each chamber communicating therewith, and a solid cylindrical valve rotatably mounted within the sleeve and constrained from longitudinal movement, said valve having a central groove in its periphery and passages communicating at their inner ends with said groove, the valve having ports at its outer ends of said passages and at points intermediate the ends of the passages for communication with certain of said first named ports, the end portions of the valves being

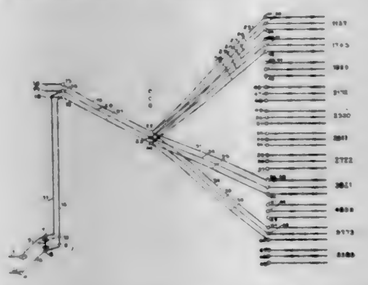
provided with peripheral grooves registering constantly with exhaust passages formed in the head, said first named peripheral groove registering constantly with an intake passage formed through the head and the valve



being provided with longitudinally extending passages communicating at their outer ends with said exhaust ports and communicating at their inner and intermediate points with the remaining ones of said first named ports.

---

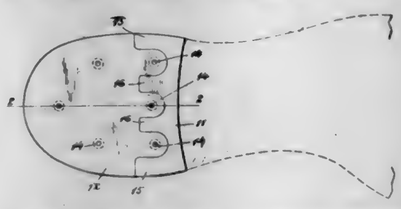
1,561,710. TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Portland, Oreg. Filed Dec. 21, 1916. Serial No. 138,149. 37 Claims. (Cl. 179—18.)



1. In a telephone system, a plurality of subscribers' signal devices selectively responsive; a line extending to a central exchange and there branching to connector bank numbers having no numerical relationship, said connector bank numbers being accessible to connectors designed to impress currents of characters adapted to selectively actuate said signal devices.

---

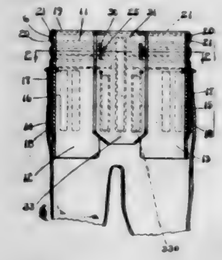
1,561,711. SHOE HEEL. JOHN R. GAMMETER and HARRY DEWHIRST, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 11, 1922. Serial No. 560,021. 1 Claim. (Cl. 36—35.)



A rubber heel comprising a hard-rubber attaching member forming the top and breast portions of the heel and extended downwardly to the lower tread surface at the breast edge, and a soft-rubber tread portion vulcanized to said attaching portion and formed with nail holes, the said breast portion being formed with indentations occupied by forward projections on the soft-rubber portion in which are located the front row of nail holes.

---

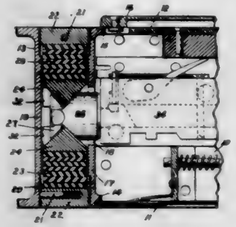
1,561,712. PROTECTIVE GARMENT. HUGO GOLDSMITH, Cincinnati, Ohio, assignor to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 20, 1923. Serial No. 613,832. 2 Claims. (Cl. 2—23.)



2. In a protective garment a waist band comprising a pair of elongated fabric strips, for jointly encircling a wearer's waist, the ends of the strips meeting at substantially the centers of the front and back of the garment, a felt pad for each fabric strip, parallel rows of stitching connecting the pads to their respective fabric strips and providing a plurality of vertically spaced elongated pockets extending substantially circumferentially of the garment at the waist thereof, flexible protective strips in the pockets, a spine protector comprising a waist portion disposed at the adjacent rear ends of the fabric strips, and a depending portion flexibly connected with the waist portion thereof, means for detachably and adjustably connecting the waist portion of the spine protector to the adjacent ends of the fabric strips, and flexible thigh guards depending from the waist band.

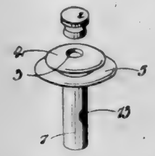
---

1,561,713. BUFFER MECHANISM FOR MACHINE GUNS. WALTER T. GORTON, U. S. Army. Filed July 11, 1924. Serial No. 725,439. 12 Claims. (Cl. 89—2.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



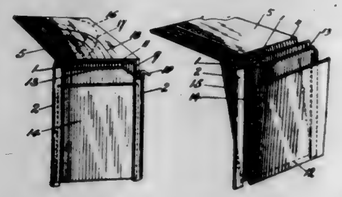
1. A buffer mechanism embodying a plug, said plug formed with opposite notches and opposite wings which are spaced by converging guides, and a plurality of buffer cams each of which is formed with an inclined surface and a slot converging with said surface at right angles theerto.

1,561,714. NONRETURN VALVE FOR FLUIDS. WILLIAM OLIVER SHAKESPEAR GREENER, Salcombe, South Devon, and JABEZ CLIFF TIBBITS, Walsall, England. Filed Dec. 10, 1923. Serial No. 679,764. 1 Claim. (Cl. 152—12.)



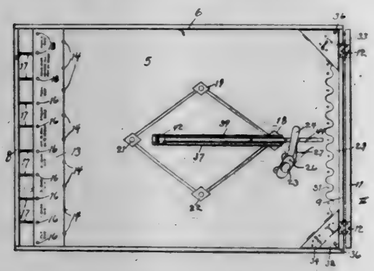
A non-return valve for fluids comprising an elastic tube having one end solid, its middle portion hollow, and its other end open, the walls of the tube being of unequal thickness, said tube having a slit arranged longitudinally in the thick part of the wall of the tube and intermediate its ends.

1,561,715. TOY BOOMERANG. CHARLES RICHARD GREGORY, London, England, assignor of one-half to Neil McBeath, London, England. Filed June 20, 1925. Serial No. 38,550. 1 Claim. (Cl. 124—12.)



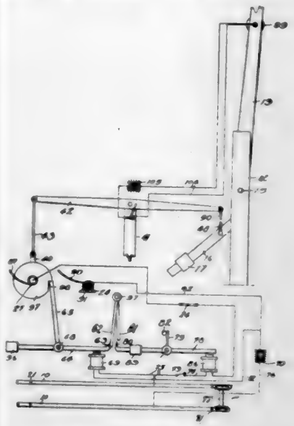
A toy comprising a base having a spring thereon, means, such as inturned flanges on the base for retaining a cover for the spring, a folder of which one end portion is held to the base by insertion between it and the aforesaid cover, its intermediate part constituting a facing or backing for the other side of the base, and its free end portion constituting a support for boomerangs in position to be discharged therefrom, said parts constructed and combined substantially as described.

1,561,716. BASEBALL GAMES. PORTER M. GRIFFITH, San Francisco, Calif. Filed July 16, 1924. Serial No. 726,353. 3 Claims. (Cl. 273—87.)



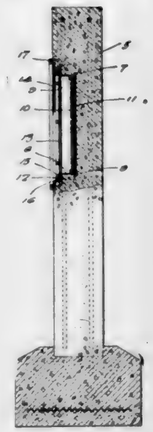
1. In a device of the character described, a box adapted to have its base inclined, a diamond formed on said base, an inclined runway positioned within said diamond, a trigger mounted within said runway, means for manipulating said trigger from a point beyond said runway, a pivoted batter positioned adjacent one end of said runway, and means for indicating the result of a ball propelled over said runway through contact with the bat of said batter.

1,561,717. AUTOMATIC CROSSING GATE. WILLIAM HARDER, Remsen, Iowa. Filed June 16, 1924. Serial No. 720,237. 14 Claims. (Cl. 246—128.)



1. In an automatic crossing gate, a balanced gate pivoted for movement in a vertical plane, a pair of rails insulated from the remaining rails in a railway track, a relatively small spring motor having a driven shaft, a crank arm thereon, operative means connecting the crank arm to the gate so as to move it from open to closed position and from closed to open position by rotation of the arm through periods of 180° respectively, means for locking the motor against movement when the gate is in open position, means actuated by the establishing of a circuit across the rails for releasing the locking means, second means for again locking the motor when the arm has rotated through 180°, and second means for releasing the motor, said second releasing means being actuated by the breaking of the circuit across the rails.

1,561,718. RECORD HOLDING AND DISPLAYING FRAME FOR TOMBSTONES, MONUMENTS, ETC. MELVIN T. HARMON, Price, Utah. Filed Dec. 1, 1924. Serial No. 753,319. 1 Claim. (Cl. 40—124.5.)

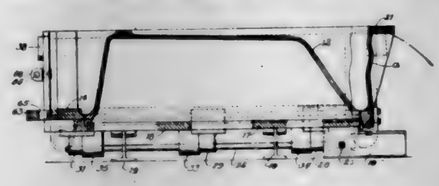


In combination with a monument, a relatively pan-shaped body embedded within one face of the monument and including an inner wall and side walls, said inner wall being bent over upon itself at its edges and said bent over portions merging into the side walls, a transparent closure for the pan-shaped body, nuts embedded into the monument, and bolts for engaging into the nuts and holding the transparency in place.

1,561,719. JACK. JOHN L. HARPER, Seattle, Wash. Filed May 17, 1922. Serial No. 561,596. Renewed Mar. 25, 1925. 5 Claims. (Cl. 138—9.)

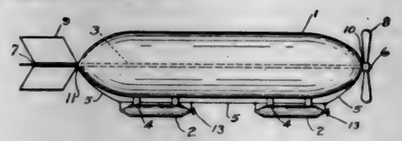
1. A jack of the class described, comprising a base cylinder, a piston movable within the cylinder and extending therefrom, a pump tube pivotally connected with the piston, a piston operable within said tube whereby a liquid pressure medium may be pumped from within the piston into the cylinder, a by-pass valve within the upper end of the piston having a stem extending therefrom, and means movable with the pump tube adapted to engage with the said stem to open the valve and permit a return flow of the liquid from the cylinder into the piston.

1,561,720. SAND MOLD. THOMAS A. HUGHES, Chicago, Ill., assignor to Wolff Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1923. Serial No. 665,264. 17 Claims. (Cl. 22—163.)



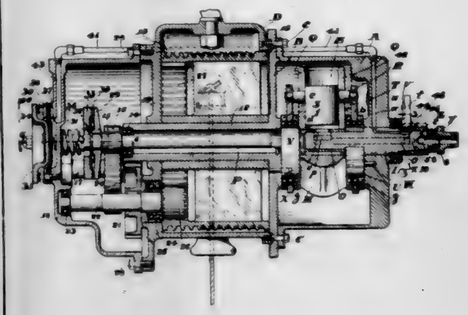
1. A flask member for use in forming sand molds having one or more outer walls formed to give a shape to the sand body rendering difficult vertical draw thereof, said one or more outer walls being mounted for movement away from said sand body prior to the drawing operation.

1,561,721. TOY DIRIGIBLE. JOSEPH A. HUMPHREY, Seattle, Wash. Filed Nov. 18, 1924. Serial No. 750,556. 1 Claim. (Cl. 46—37.)



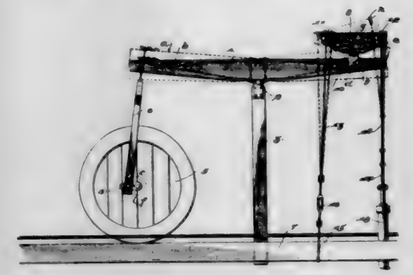
In a toy, a large cigar shaped bag with a plurality of smaller objects suspended below it, a stiffening bar extending through the bag, a propeller rotatably mounted on the forward end of the bar, vanes on the rear end of the bar, other propellers on the smaller objects and tubes connecting the smaller objects to the large bag.

1,561,722. MOTOR. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 10, 1924. Serial No. 705,416. 3 Claims. (Cl. 188—170.)



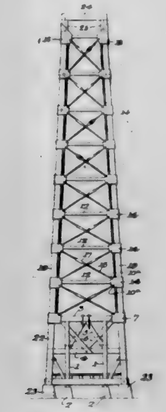
1. In a motor, the combination of a casing, a driving shaft, a brake disc for the shaft, a brake plate movable to and from the disc, a brake plunger, means connecting the plate and plunger to move together, springs interposed between the brake plate and the casing normally tending to force the plate against the disc, a pressure chamber opposite the plunger, a flexible diaphragm secured over the chamber and cooperating with the plunger and means for controlling a supply of pressure fluid to said chamber to control the operation of the diaphragm and the brake.

1,561,723. WALKING BEAM. JOHN O. KEEPOVER, Tulsa, Okla. Filed Aug. 3, 1925. Serial No. 47,963. 3 Claims. (Cl. 74—5.)



1. In combination with a main walking beam and pump rod, an auxiliary walking beam rockably mounted above and upon the main walking beam, means connecting one extremity of the auxiliary walking beam with the pump rod, and means to restrain the opposite end of the auxiliary walking beam producing an independent rocking motion of the auxiliary walking beam on rocking of the main walking beam and causing reciprocation of the pump rod, said means consisting of a flexible member having one end attached to the opposite end of the auxiliary walking beam and the other end to a fixture.

1,561,724. DERRICK. AMOS LEA KELTNER, Tulsa, Okla., assignor to Walker S. Estes, Tulsa, Okla. Filed Jan. 19, 1924. Serial No. 687,304. 6 Claims. (Cl. 20—0.5.)



1. A derrick comprising a frame work, reinforcing legs associated with the frame work but freely movable relative thereto, and separate foundations for the frame work and reinforcing legs.

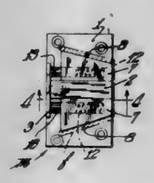
---

1,561,725. PENCIL. ALBERT C. KERLEY, Oakland, Calif. Filed Aug. 23, 1923. Serial No. 658,913. 2 Claims. (Cl. 120—84.)

1. In combination with a pencil, an outside casing, said casing having a longitudinal slot therein, a map within said casing, a roler having said map attached thereto, a plate, a lip formed thereon adapted to protrude through the slot, a shaft extending through said plate and said roller, and means to actuate said roller and map.

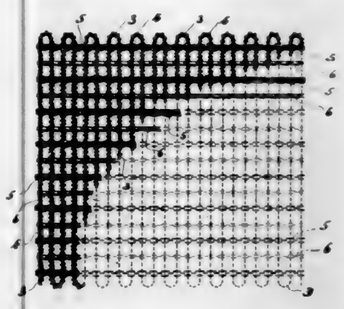
---

1,561,726. ADJUSTABLE DOVETAIL. GEORGE W. KERR, Springfield, Mass. Filed Jan. 7, 1924. Serial No. 684,764. 9 Claims. (Cl. 292—74.)



1. A self-adjusting dovetail comprising, a socket having inwardly converging walls, and a dovetail member adapted to be moved relatively thereto in a certain path into engagement therewith, said dovetail including a plate having a wedge guided therein adapted to move in a plane parallel to said path.

1,561,727. ABRASIVE FABRIC. RUSSELL B. KINGMAN, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Original application filed May 16, 1924, Serial No. 713,724. Divided and this application filed May 2, 1925. Serial No. 27,410. 2 Claims. (Cl. 66—4.)



1. An abrasive fabric comprising weft threads gimped with metallic wire, yarn threads interconnected to and across said weft threads to produce an open mesh, and all-metal threads also interconnected across said weft threads in separated and alternated parallel relation to said yarn threads at desired intervals relative to the length of said gimped weft threads.

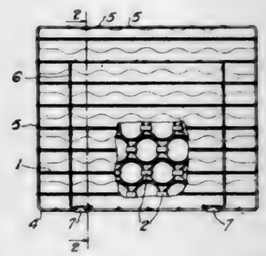
---

1,561,728. WATERPROOF AND GREASEPROOF PAPER. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Aug. 16, 1922, Serial No. 582,315. Renewed Apr. 30, 1925. 5 Claims. (Cl. 92—21.)

1. A paper consisting of fibrous web, bituminous material and the conversion product of sulphite liquor and formaldehyde.

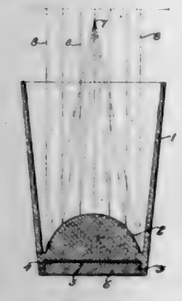
---

1,561,729. SPRING CUSHION OR MATTRESS. HARRY H. KNEPPER, Detroit, Mich. Filed Apr. 16, 1921. Serial No. 461,990. 1 Claim. (Cl. 5—353.)



In a cushion or mattress, a resilient body comprising a plurality of rows of coiled springs, the springs of each row being hingedly connected together, a separate fabric container for each row, the springs being normally of greater length than the depth of the container whereby the fabric of the container is held taut, and means for holding the several rows in assembled relation comprising a top and bottom border frame defining the outline of the cushion or mattress secured to the fabric containers and overlying the border springs of the group, and a secondary frame within the upper border frame overlying the springs adjacent the border springs and hingedly connected with the upper border frame at one side only.

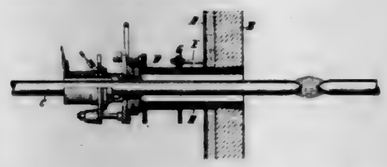
1,561,730. DRINKING GLASS. ISAMI KODAMA, Meadow Brook, Pa. Filed Mar. 24, 1924. Serial No. 701,326. 5 Claims. (Cl. 272—8.)



1. A drinking glass having a perceptible object secured to its flat outer bottom face and having its inner bottom face substantially curved whereby the object is invisible or unrecognizable to one looking into the empty glass but clearly visible to one looking into the glass when filed or partly filled with a transparent liquid.

---

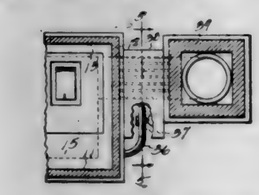
1,561,731. ELECTRIC-ARC FURNACE. FRITZ KOSTKA, Dusseldorf, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed Dec. 30, 1924. Serial No. 758,863. 4 Claims. (Cl. 204—64.)



1. In electric arc furnaces for melting metals the combination of an electrode with a tube surrounding the part of the electrode lying in the furnace wall and a sleeve of non-conducting material surrounding the tube, one end of the sleeve being embedded in the fire-proof furnace wall while the other end holds the metallic part of the packing for the electrode at such a distance from the wall of the furnace that short-circuiting is prevented.

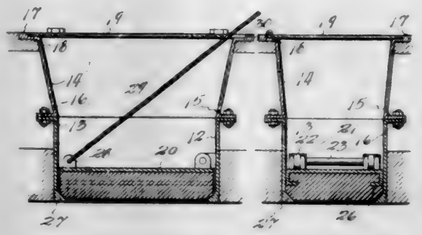
---

1,561,732. FORCED-DRAFT SYSTEM FOR INCINERATORS. GUS F. LENK, Dallas, Tex. Filed Aug. 1, 1924. Serial No. 729,649. 2 Claims. (Cl. 110—56.)



1. The combination in an incinerator of a burning chamber having grates and ash pits thereunder, a tunnel extending under the chamber, a stack spaced in close relation to the end of the tunnel, ducts connecting the end of the tunnel with the stack, a housing covering the ducts and having an air admitting opening on one side of said ducts, a suction fan drawing air through said opening transversely between the ducts, and means for conducting the air from the suction fan to the ash pits of the burning chamber.

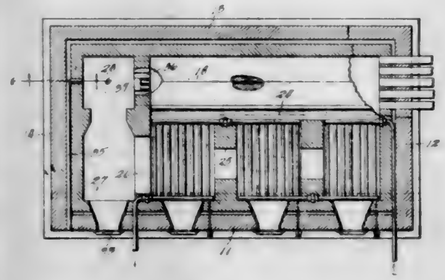
1,561,733. CHARGING HOPPER AND COVER FOR INCINERATORS. GUS F. LENK, Dallas, Tex. Filed Aug. 1, 1924. Serial No. 729,650. 3 Claims. (Cl. 110—8.)



1. In a charging hopper and closure for incinerators, a hopper composed of an upper flaring portion and a lower vertical-sided portion detachably fastened to the upper portion, inwardly directed lips at the lower edge of the lower portion of the hopper, and a closure hinged in the lower portion of the hopper and having a removable facing of refractory material resting upon the lips.

---

1,561,734. INTENSIFYING AND COMBUSTION CHAMBER FOR INCINERATORS. GUS F. LENK, Dallas, Tex. Filed Aug. 1, 1924. Serial No. 729,651. 4 Claims. (Cl. 110—8.)



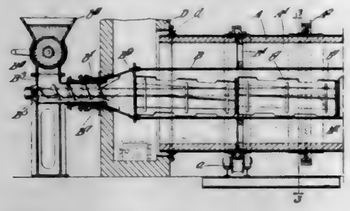
1. In an incinerator, the combination with a burning chamber, of an intensifying chamber having its forward portion connected with the burning chamber, a pair of superposed doors in the front wall of the intensifying chamber, a combustion chamber in rear of the intensifying chamber, a transverse partition separating the last two chambers and having a restricted opening, an outlet leading from the combustion chamber, and an arched roof extending over the intensifying and combustion chambers above the inlet and outlet thereof and above the opening in the partition wall.

---

1,561,735. RETORT FURNACE. OWEN DAVID LUCAS, London, England, assignor to Vickers Limited, Broadway, Westminster, England, a British Company. Filed Mar. 31, 1924. Serial No. 703,309. 4 Claims. (Cl. 263—34.)

4. In a retort furnace, the combination of a rotory heat insulated cylinder, a second rotary cylinder mounted within the former cylinder so as to leave an annular space between it and the first-mentioned cylinder, the material to be treated passing through the second cylinder and the heating medium passing through said an-

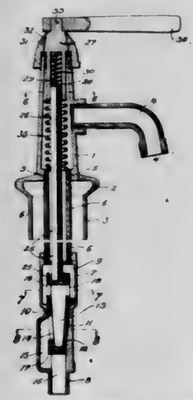
nular space, a stationary perforated tube supplied with steam and located within said second cylinder, and breaker and conveyor elements carried by said tube,



said elements at certain points in the rotation of the cylinders coming into contact with the inner wall of the second cylinder to prevent the formation of scale thereon.

---

1,561,736. HYDRANT. CHARLES W. MENIGE, Philadelphia, Pa. Filed May 6, 1922. Serial No. 558,865. 3 Claims. (Cl. 137—13.)



1. A hydrant including a valve casing having an inlet, an outlet chamber, a frusto-conical valve seat converging downwardly from the outlet chamber and a conduit offset from and communicating with the inlet and valve seat; a turn plug in the seat provided with parts forming a passage between the conduit and outlet chamber, and means connected with the top of the plug for turning the plug.

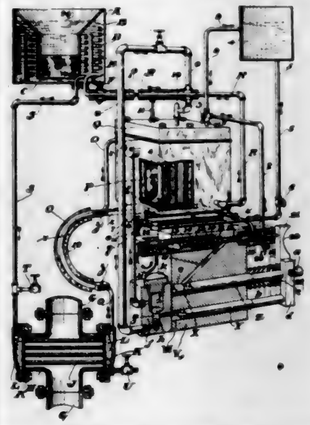
---

1,561,737. BARRIER FOR FERRYBOATS. JOHN H. MEYER, Union Hill, N. J. Filed May 22, 1922. Serial No. 562,630. 2 Claims. (Cl. 39—1.)

1. A device of the character described comprising a hollow cylindrical stanchion, a flared base plate integral with the bottom of said stanchion, a buttress web formed integral with said stanchion and base plate and extending from the top of said stanchion to said base plate, a cap piece adapted to be rigidly mounted in the top of said stanchion and having a guide passage therethrough, a block disposed for vertical movement in said stanchion, flexible barrier chains connected to said block and extending through said guide passages, and a compression spring disposed within said stanchion between said block and cap piece.

---

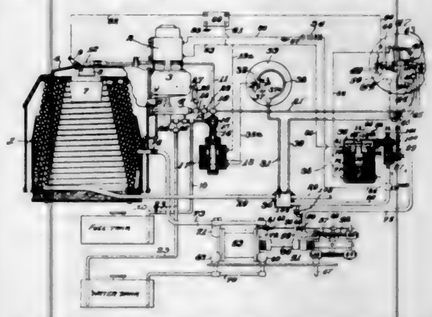
1,561,738. APPARATUS FOR FEEDING FUEL IN INJECTION ENGINES. RALPH MILLER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,688. 5 Claims. (Cl. 123—32.)



1. Apparatus for directly injecting high viscosity crude oils in a liquid state into a direct injection engine, comprising in combination with mechanical liquid fuel injection mechanism, of a fuel supply tank and means for heating the same, a heated preliminary pressure tank connected with the supply tank and means for subjecting the oil to preliminary pressure in said pressure tank without vaporization, and maintaining it under pressure in the said pressure tank in a liquid state, and means connecting the said heated pressure tank with the fuel injecting mechanism and engine.

---

1,561,739. STEAM-GENERATING PLANT. EDWARD C. NEWCOMB, Scituate, Mass., assignor, by mesne assignments, to Standard Steam Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 1, 1920. Serial No. 370,365. 5 Claims. (Cl. 122—428.)



5. In a steam generating plant, in combination with a generator, a liquid fuel burner for heating the same, a water pump operated by steam from the generator for supplying water to the latter, fuel feeding means, a motor for actuating the same, a magnet switch in the circuit of said motor, a valve interposed in the steam-line to the water pump, means for actuating said valve from the armature of said magnet switch, means responsive to

generator conditions for making and breaking the circuit of said magnet switch, whereby to automatically control the operations of said motor and said water pump, and a valved by-pass inserted in the steam line of the water pump for rendering the operation of said pump independent of the control of the magnet switch at the will of the operator.

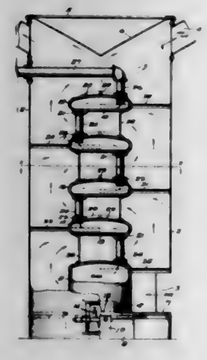
---

1,561,740. PROCESS FOR MAKING BRAKE SEGMENTS. IZADOR J. NOVAK, Bridgeport, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 21, 1922. Serial No. 596,153. 7 Claims. (Cl. 18—47.5.)

1. A process of making curved friction elements consisting in saturating a blank with a fusible binder capable of having thermo plastic properties under given conditions, subjecting the saturated blank to an initial treatment by hot presses, then while the binder still possesses thermo plastic properties, forming the blank to desired curvature and then curing the same to make the binder infusible.

---

1,561,741. AIR HEATER. MILLARD L. PAGE, Redwood City, Calif. Filed Oct. 17, 1923. Serial No. 669,026. 3 Claims. (Cl. 126.)



1. An air heater comprising an outer casing having an air inlet opening adjacent the bottom and an outlet opening adjacent the top, a combustion chamber arranged within the casing adjacent the bottom, a plurality of vertically spaced oval drums arranged within the casing above the combustion chamber, said drums being provided with oppositely disposed inlet and outlet openings, nipples engaging in said openings and connecting the drums together in series and connecting the lower drum to the combustion chamber, an outlet conduit connected to the upper drum and baffle walls arranged in said casing and engaging said drums, to cause the air to travel freely in a smooth circuitous path sweeping the upper and lower surfaces of the drums.

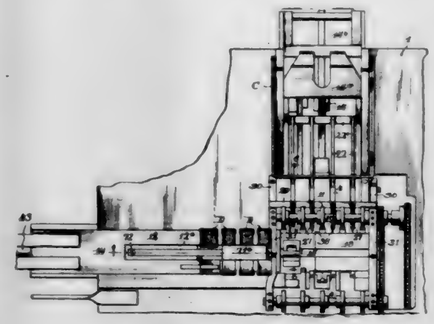
---

1,561,742. BOOK AND SIMILAR BINDING. WILLIAM P. PITT, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 11, 1921. Serial No. 444,188. 9 Claims. (Cl. 281—37.)

1. In a device of the kind described, a cover member comprising a flat body, a channel hinge member embracing one end of the body, a space adapted to receive a pintle being provided between the hinge member and the adjacent edge of the body, and a binding sheet embracing the hinge member and the body, substantially as set forth.

---

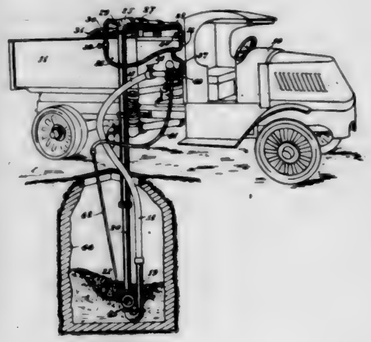
1,561,743. MACHINE FOR APPLYING WRAPPED ARTICLES TO FOLDERS. WILLET B. RANNEY, Chicago, and ARTHUR E. JOHNSON, Maywood, Ill., assignors to Wm. Wrigley, Jr., Co., Chicago, Ill., a Corporation of West Virginia. Filed July 9, 1925. Serial No. 42,352. 30 Claims. (Cl. 93—1.)



1. A machine of the character described, comprising means for feeding cards, provided with a package engaging tongue, along a predetermined path through the machine, and means for feeding wrapped packages into the path of said cards where the packages are attached to the cards by the passage of said tongues through said wrappers.

---

1,561,744. EDUCTOR. GEORGE B. RAYMOND, Danbury, Conn. Filed June 27, 1922. Serial No. 571,269. 1 Claim. (Cl. 214—65.)

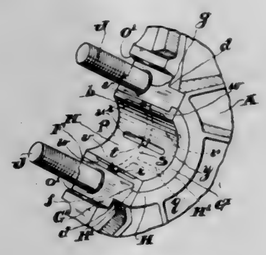


In an apparatus of the character described, an elongated settling bed having a material receiving section at the rear end thereof, material conducting means having an inlet at one end and adapted to deposit at its other end into said material receiving section of the settling bed, and comprising a vertically disposed pipe section extending upwardly from said inlet, a transverse pipe section extending from the vertical section at the forward end of said settling bed, and a horizontal pipe section extending from said transverse section longitudinally of said settling bed to said depositing end, a hydraulic pump.

an ejector at said inlet end, conduit means connecting said ejector to said hydraulic pump for feeding water under pressure, said ejector adapted to lift material through said vertical section, an auxiliary ejector at the junction of said vertical and transverse sections directed axially through said transverse section, a second auxiliary ejector at the junction of said transverse and horizontal sections directed axially through said horizontal section, and conduit means connecting said auxiliary ejectors to said hydraulic pump for feeding water under pressure, valve means for controlling the feed of water to said auxiliary ejectors, and said auxiliary ejectors forming parts of the fittings which connect the pipe sections at their junctures.

---

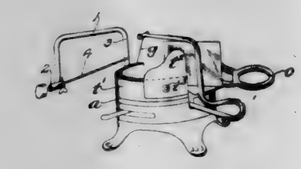
1,561,745. MAIN BEARING. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 4, 1923. Serial No. 629,767. 4 Claims. (Cl. 308—124.)



1. A main bearing comprising a main frame having a bearing seat, the opening of said seat being at an angle to the vertical, a cap covering said opening, means for securing the cap in place and a bearing in said seat, said bearing including two symmetrical bearing shells, and lubricating means for the inner bearing surface of said shells, said means including a lubricant recess in said cap; outer longitudinal grooves on said shells communicating circumferential cross grooves on said shells, said cross grooves communicating with the inner bearing surface, and inner longitudinal grooves adapted to distribute the lubricant throughout the bearing surfaces.

---

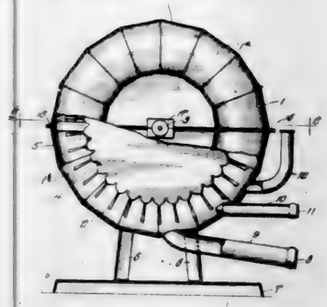
1,561,746. CHEESE-SLICING MACHINE. LUCIEN ARISTIDE JEAN JOSEPH REY and FRANÇOIS VICTOR ANDRÉ JOSEPH REY, Roquefort-sur-Soulzon, France. Filed Mar. 8, 1923. Serial No. 623,677. 1 Claim. (Cl. 31—22.)



A machine for slicing cheese vertically and horizontally comprising: a horizontal plate with a diametrical slot therein, a cutting member mounted in the slot, a cheese conveying member mounted in the plate, a steel wire carried on the cutting member to slice the cheese vertically and moving in the diametrical slot of the plate; a movable shovel with an adjustable shutter to receive and carry away the cut cheese slices; a socket secured at the periphery of the plate, an adjusting screw or bolt in the socket, a supporting member pivoted in the socket, a wire supported on the said member for horizontal cutting; and a guide-shutter, made of two parts serving to hold the cheese during vertical and horizontal slicing.

---

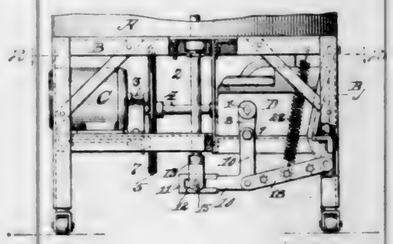
1,561,747. TOY TURBINE. WESLEY J. RHEINFRANK, Chicago, Ill. Filed Nov. 6, 1924. Serial No. 748,010. 6 Claims. (Cl. 253—136.)



1. A toy turbine comprising a rotor, and buckets therefor, said rotor being stamped from a piece of sheet metal in the form of a circle which is radially slotted and circumferentially slotted at the tip of the buckets for the purpose of bending and forming said slotted portions into said rotor buckets, the metal adjacent to said circumferential slots being bent to form sides and lips for the rotor buckets.

---

1,561,748. MECHANICAL MOVEMENT. JAMES G. SHERMAN, Belvidere, Ill., assignor to National Sewing Machine Company, Belvidere, Ill., a Corporation of Illinois. Filed Feb. 2, 1924. Serial No. 690,104. 3 Claims. (Cl. 74—14.)



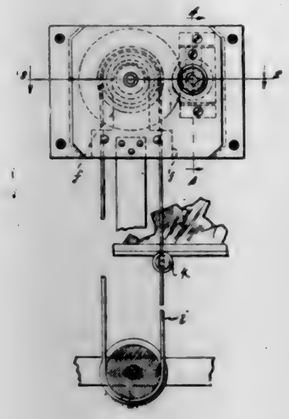
1. A mechanical movement comprising a rotatable driving shaft, a crank arm on said shaft, a bent arm one end of which is pivotally connected to said crank arm, a fixed support, a link pivotally mounted at one end upon said support, said link being connected to and affording a movable fulcrum for the bent arm, a flexible tension member connected to said link and a pivotal and slidable connection between the other end of the bent arm and the driven shaft.

---

1,561,749. WINDOW REGULATOR. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed July 17, 1922. Serial No. 575,460. 3 Claims. (Cl. 268—4.)

1. In a window regulator, the combination of a supporting member, a relatively large rotatable driven member, connections therewith for lifting the window,

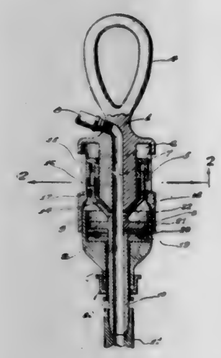
a relatively small rotatable driving member having a driving relation with the driven member to reduce the rotations of the driven member considerably with relation to the rotations of the driving member, and a mul-



tiple plate friction clutch for interposing resistance to the operation of the regulator parts by forces coming from the window in conjunction with the resistance achieved by the adverse leverage existing through the proportions of the driving and the driven members.

---

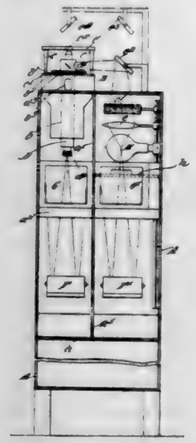
1,561,750. SWIVEL. ROBERT L. SMITH, Houston, Tex. Filed Sept. 19, 1923. Serial No. 663,623. 3 Claims. (Cl. 255—25.)



1. A rotary swivel comprising an upper hollow section, an eye projecting centrally therefrom, a cylindrical projection within the upper section having a through passage, a lower section screw threaded to the upper section, a rotary section having a shank rotatable in the lower section and projecting in same for engagement with the drill stem, a hollow head formed on one end of the rotary section encircling said projection, gasket means securing said head to said projection, a ring encircling the head and engaging against the interior surface of the upper section, a collar formed on said shank, an anti-friction means arranged between the collar and lower section.

---

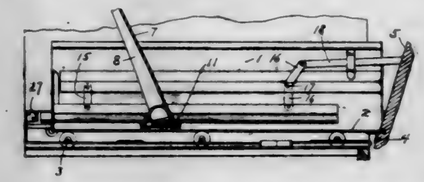
1,561,751. MICROSCOPE. ROBERT LOW SMITH, Westminster, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Feb. 14, 1925. Serial No. 9,075. 16 Claims. (Cl. 88—39.)



1. In a microscope of the inverted type, an integral block member formed with an axial hole adapted to receive the microscope tube and with its upper surface faced accurately at right angles to the tube hole.

---

1,561,752. VERTICAL FILING DRAWER. FREDERICK L. G. STRAUBEL, Green Bay, Wis. Filed Feb. 25, 1922. Serial No. 539,083. 9 Claims. (Cl. 45—2.)



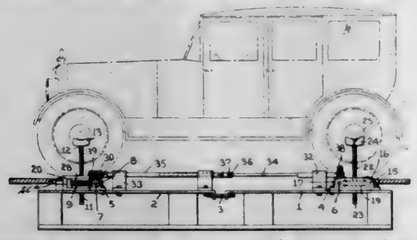
9. A drawer having a tiltable front, a tiltable follower, connections between the front and follower to cause a tilting or untilting movement of the front to impart corresponding movement to the follower, the said connections including a pair of members pivotally connected respectively on opposite sides of the drawer and both moved rearwardly of the drawer when the front is tilted out of its normal position, and an extension slide supporting the drawer and moving in the same direction therewith and having side portions disposed laterally of the drawer, the said side portions having a pair of stops disposed respectively in the path of the said members and adapted to engage the rear ends of the said members respectively to prevent a complete closing movement of the drawer while its front is tilted out of its normal position and to prevent the forward end of the slide from engaging the drawer front.

---

1,561,753. AUTOMOBILE JACK. THOMAS R. SWANNER, Luverne, Ala. Filed Mar. 18, 1924. Serial No. 700,103. 1 Claim. (Cl. 254—92.)

In an automobile lifting jack, the combination with a base, of forward and rear lifting jack screw rods, operating means for the jack screw rods, bearings for

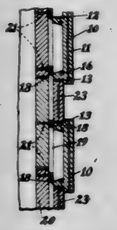
the jack screw rods, said bearings consisting of brackets, each bracket comprising upper and lower plates with a worm between the plates threaded upon the jack screw rod, the plates being disposed above and below the worm, each jack screw rod passing loosely through the base and similarly through the bearing, each bearing having ball



bearings, and means for fastening the upper and lower plates of the bearings together and to the base detachably whereby, upon removing said securing means and moving said worms away from the jack screw operating means, the jack screw rods may be quickly and easily withdrawn from the base.

---

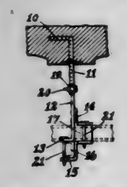
1,561,754. FACING BLOCK FOR FRAME BUILDINGS. JOHN TASEFF, Los Angeles, Calif. Filed Jan. 24, 1925. Serial No. 4,433. 2 Claims. (Cl. 72—20.)



1. A moulded facing block for frame buildings comprising a reinforced rectangular slab, ribs formed on the back side of said slab, locking pins fixed in said ribs so as to engage with adjacent blocks in the same course when being applied to a wall, and the wires fixed in said ribs, said tie wires being adapted to fasten said blocks to supplementary attaching means fixed to the side of a wall.

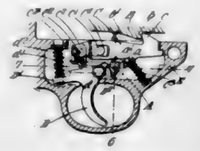
---

1,561,755. HANGER FOR SUSPENDED CEILINGS. JOHN TASEFF, Los Angeles, Calif. Filed June 23, 1925. Serial No. 39,008. 4 Claims. (Cl. 72—118.)



4. In combination with floorworks in buildings, hangers for suspended ceilings comprising anchor members fixed in the floorwork so as to project therebelow, extensible suspending members attached to said anchor members, two bifurcated holders formed on the lower end of said suspending members, one above the other and at right angles thereto, said bifurcated holders being adapted to receive the crossbars of a ceiling framework; retaining pins in said bifurcated holders and fastening means for holding metal lath or like material to said suspending members and crossbars.

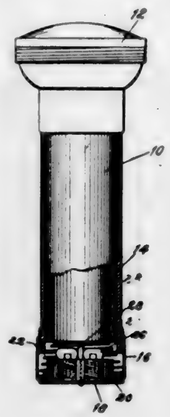
1,561,756. TRIGGER MECHANISM OF MACHINE GUNS AND AUTOMATIC SMALL ARMS. LEONARD TUCKER, Clapham Common, London, England, assignor to Vickers Limited, Westminister, England, a British Company. Filed July 27, 1925. Serial No. 46,190. 7 Claims. (Cl. 42—3.)



1. In trigger mechanism for machine guns and automatic small arms having an adjustable device for enabling the weapon to be converted, at will, from an automatic weapon into a single fire weapon, the combination with the trigger, the pivoted sear and the firing member with which said sear engages, of means for mounting said sear so that it can move bodily as well as rock about its pivot, and a spring which, when said adjustable device occupies the "single fire" position, moves said sear in a rearward direction, when disengaged from the firing member, so as to disengage it from the trigger.

---

1,561,757. ELECTRIC FLASH LIGHT. CAMERON TURNER, Beverly, Mass., assignor to Motor Industries, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1922. Serial No. 597,976. 16 Claims. (Cl. 240—10.5.)



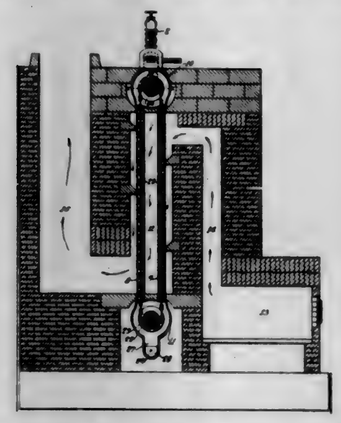
15. A flashlight comprising, in combination, a casing, a battery within the casing, a cap on the end of the casing, and a cylindrical spare-bulb carrier and a hollow spring concentrically arranged within the cap with the spring engaging the cape and the battery and urging the battery forward in the casing, the carrier being in the space longitudinally of the flashlight defined by the spring.

---

1,561,758. APPARATUS FOR DISTILLING OIL. GEORGE W. WALLACE, East St. Louis, Ill. Filed May 20, 1922. Serial No. 562,500. 6 Claims. (Cl. 196—122.)

4. A still for cracking oil, comprising a plurality of banks of tubes adapted to contain oil that is to be cracked, transversely-disposed headers at the ends of said tubes communicating with the tubes of the respective banks, a passageway in which said tubes are arranged,

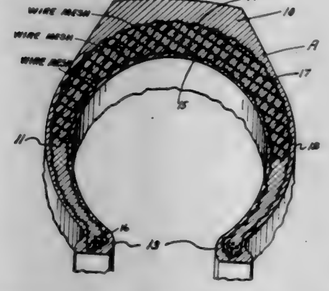
means for causing products of combustion to circulate through said passageway longitudinally of said tubes, endless chains arranged in oppositely-disposed tubes of the respective banks, sheaves or the like in said headers around which said chains travel, means for actuating



said chains so as to remove carbon that collects on the interior of said tubes, a carbon collection chamber at the bottom side of one header, an outlet from said chamber, and means operable from the exterior of said chamber for discharging the carbon that collects in said chamber through said outlet.

---

1,561,759. VEHICLE TIRE. WILLIAM O. WETMORE, Douglas, Ariz. Filed Oct. 22, 1923. Serial No. 670,196. 1 Claim. (Cl. 152—18.)

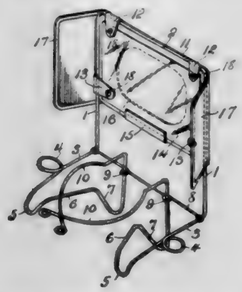


In a vehicle tire, a casing including a tread, side walls and beads formed on the side walls, inner and outer sheets of wire fabric embedded in the side walls and tread of the casing, the inner and outer sheets of fabric extending into the beads and connected together in said beads, longitudinally extending wire cables disposed in the beads between the inner and outer sheets of wire fabric, and sections of wire fabric disposed transversely of the casing connecting the inner and outer sheets of wire fabric together, the sections of wire fabric terminating in the side walls in spaced relation to the beads.

---

1,561,760. EYE PROTECTOR. MARTIN C. WHELAN, Kansas City, Kans. Filed Aug. 7, 1924. Serial No. 730,663. 6 Claims. (Cl. 2—11.)

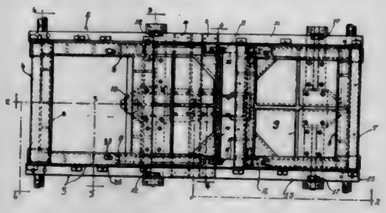
3. In an eye protector of the kind described, a wire frame having rearwardly extending arms adapted to rest on the shoulders and having resilient portions adapted to embrace the neck of a person, a plate carried by said frame having a hole therethrough, and a



transparent shield secured to said plate and extending across said hole in front of the eyes when the said arms are engaged with the neck and resting on the shoulders.

---

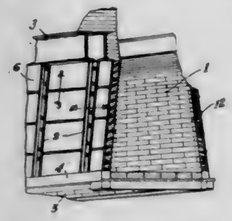
1,561,761. ASH GATE. FRANK B. ALLEN, Cynwyd, Pa., assignor, by mesne assignments, to Frank H. Dunbar. Original application filed June 28, 1922, Serial No. 571,404. Divided and this application filed Dec. 28, 1923. Serial No. 683,104. 11 Claims. (Cl. 110—165.)



7. A gate construction for a hopper having a bottom opening, comprising a gate frame having side members located on opposite sides of the opening, each side member having inwardly and outwardly extending flanges, a door for the opening having a set of wheels adapted to run on the said outwardly extending flanges and another set of wheels adapted to run on the said inwardly extending flanges, and means for actuating the door.

---

1,561,762. WALL CONSTRUCTION. FRANK B. ALLEN, Lower Merion Township, Montgomery County, Pa., assignor, by mesne assignments, to Frank H. Dunbar. Filed May 18, 1925. Serial No. 30,910. 7 Claims. (Cl. 189—8.)



1. A sectional metal wall for a hopper comprising a plurality of spaced metal uprights, a plurality of substantially rectangular imperforate cast iron wall plates disposed within and supported by the said uprights, each wall plate having a liner supporting flange cast inte-

grally with and extending at an acute angle to the inner side thereof, and a plurality of imperforate, yoke-like wall units engaging the inner surfaces of the said wall plates to press the same against the said uprights, the said units being secured to the uprights.

---

1,561,763. COMPOSITE LAMINATED STRUCTURE AND METHOD OF MAKING SAME. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923, Serial No. 658,943. Renewed Feb. 11, 1925. 7 Claims. (Cl. 154—2.)

7. A composite laminated structure comprising plies of veneer having their cells and pores evacuated, and a bonding ply of rubber uniting the veneer plies and occupying the evacuated pores and cells.

---

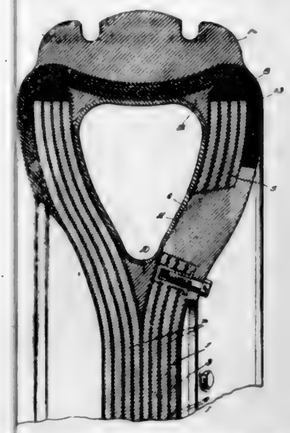
1,561,764. PNEUMATIC VEHICLE WHEEL. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923, Serial No. 658,944. Renewed Feb. 11, 1925. 23 Claims. (Cl. 301—63.)

9. In a vehicle wheel, a body comprising composite laminated sections of substantially circular form and each comprising a plurality of resilient body plies and intervening bonding plies, the mid portions of the sections being united and the peripheral portions thereof being outwardly turned to define the walls of a peripheral chamber surrounding the body, and a tread constituting the outer peripheral wall of the chamber and sustained by its first mentioned walls.

---

1,561,765. METHOD OF MANUFACTURING COMPOSITE VEHICLE WHEELS. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923, Serial No. 658,945. Renewed Feb. 11, 1925. 7 Claims. (Cl. 154—2.)

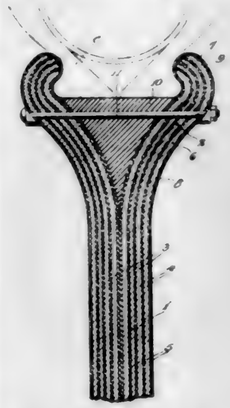
1. The method of manufacturing a composite wheel structure which comprises building up a body structure of body and bonding plies and shaping the peripheral portions of the plies to provide a peripheral chamber about the body, providing a cushioning air pocket in the



chamber, and building up a tread upon the assemblage thus formed closing the outer side of the chamber and adapted to be sustained by the air pocket.

---

1,561,766. PNEUMATIC VEHICLE WHEEL. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923, Serial No. 658,946. Renewed Feb. 11, 1925. 9 Claims. (Cl. 301—63.)



4. A vehicle wheel comprising a body and a tire seating rim constituting an integral structure and made up of plies of veneer and intervening bonding plies of rubber material, and a cushion of soft rubber extending circumferentially within the rim and constituting a yieldable sustaining means for a tire seated in the rim.

---

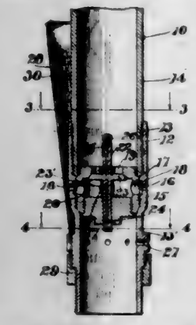
1,561,767. SULPHUR-CONTAINING ARTICLE. RAYMOND F. BACON and WILLIAM H. KOBRÉ, New York, N. Y., and PERRY H. BASCOM, Boundbrook, N. J., assignors to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Nov. 25, 1922. Serial No. 603,351. 2 Claims. (Cl. 91—68.)

1. A sulphur-containing article of the character described comprising a concrete structure having the interstices thereof throughout substantially its entire mass

filled with congealed sulphur, said article having a tensile strength at least ten times that of the concrete structure itself.

---

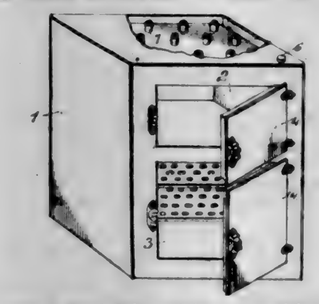
1,561,768. CEMENT BASKET. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, a Corporation of California. Filed May 1, 1924. Serial No. 710,302. 9 Claims. (Cl. 166—1.)



1. In combination with a well casing disposed in a shaft, of means for creating a surrounding barrier between the well casing and the shaft at a desired point, comprising a valve structure disposed at a point along the length of the shaft, said valve structure having ports communicating with the exterior of the casing, and a check valve acting to permit the cementitious material to be forced outwardly from the casing through the ports, and a supporting structure disposed around the casing at a point below the ports whereby the cementitious material may be caused to accumulate in the space between the casing and the wall of the shaft to form a permanent barrier within the shaft surrounding the casing.

---

1,561,769. VACUUM-INSULATED CONTAINER. NEUAL W. BALLEW, Kansas City, Mo. Filed Oct. 26, 1921. Serial No. 510,520. 1 Claim. (Cl. 220—15.)

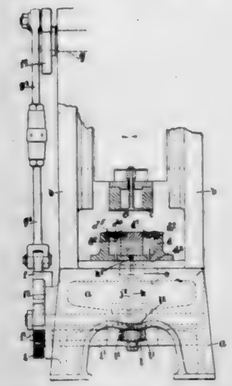


A vacuum insulated container comprising an outer air tight shell, two inner shells mounted therein and spaced apart therefrom and from each other, each inner shell having a doorway and a door therefor, the air between the shells being substantially exhausted, and insulating bracing members extending between the inner shells and between the latter and the outer shell, substantially as set forth.

---

1,561,770. DRAW PRESS FOR SHEET METAL. GEORGE WILLIAM BERRY, Wakefield, England, assignor of one-half to Charles Joseph Rhodes, Wakefield, England. Filed Feb. 21, 1924. Serial No. 694,221. 25 Claims. (Cl. 113—38.)

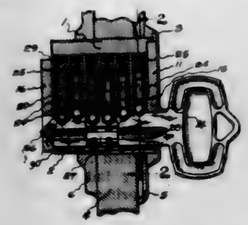
1. In a draw press for sheet metal, cooperating movable and stationary dies, a pressure ring embodied in and movable relative to one of said dies, rack and pinion mechanism operative from a moving part of the press, a cam having a fixed axis actuated from said rack and pinion mechanism, and operative connections



between said cam and pressure ring operative through the movement of the cam to control the movement of said pressure ring and maintain the same under a uniform pressure during the drawing operation.

---

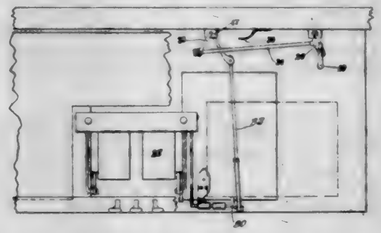
1,561,771. LOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Mar. 18, 1922. Serial No. 544,918. 12 Claims. (Cl. 70—47.)



1. In a pin tumbler lock, a lock core having a key plug recess and having aligned transverse perforations at opposite sides of said recess affording unobstructed passageways through said lock core for pin ejecting tools.

---

1,561,772. PLAYER PIANO. OSCAR H. CARLSON, New York, N. Y., assignor to Estey Piano Company, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,246. 5 Claims. (Cl. 84—76.)

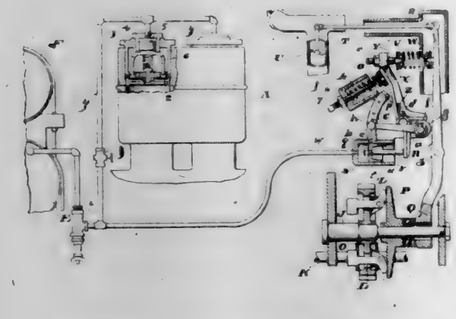


1. In a player piano, in combination, a case including a removable panel formed with a treadle opening, a movable closure carried by said panel, treadles arranged

for movement through said opening between idle position behind the panel and working position in front of the panel, means carried by said casing to move said treadles between said positions, mechanism carried by said panel and operable by said treadle-moving means when the panel is in place to close and uncover said opening subsequently to the movement of said treadles, and means to operatively connect said treadle-moving means with said closure-operating mechanism, said connecting means being arranged to permit the removal of said panel with the closure and the closure-operating mechanism carried thereby while the treadle-operating mechanism remains intact.

---

1,561,773. GOVERNOR CONTROLLER FOR INTERNAL-COMBUSTION ENGINES. ALLAN O. CARPENTER, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 21, 1923. Serial No. 658,598. 5 Claims. (Cl. 264—7.)



1. A unitary governor controller for regulating the operation of a centrifugal governor having a governor spring, said controller comprising a bracket adapted to be attached to an engine, a controller arm pivoted on said bracket, a device carried by and movable relatively to said controller arm for independently adjusting the tension of the governor spring, whereby the speed of the engine may be limited to a predetermined maximum without adjusting said controller arm, a pivoted controller lever and cam carried by the bracket for adjusting said controller arm, and means on the bracket cooperating with said controller lever for holding the lever in different positions of adjustment.

---

1,561,774. TREATMENT OF WOOD SEPARATORS. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed June 21, 1923. Serial No. 646,986. 3 Claims. (Cl. 136—150.)

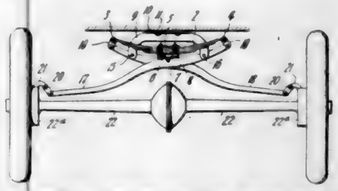
1. The process of treating wood battery separators which comprises treatment with ammonium hydroxide and eliminating the ammonia by treatment with caustic lime.

---

1,561,775. TREATMENT OF PLATES FOR STORAGE BATTERIES. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed June 22, 1923. Serial No. 647,191. 4 Claims. (Cl. 136—78.)

1. A process for treating storage battery plates which comprises applying sulphuric acid to the surface of the plate and simultaneously applying a rolling pressure to the plate surface.

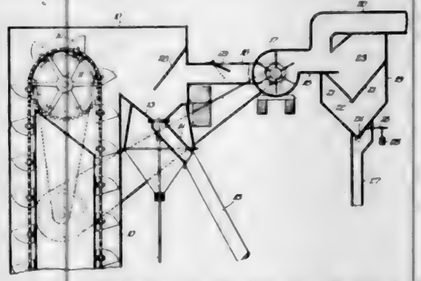
1,561,776. RESILIENT SUSPENSION DEVICE FOR AUTOMOBILES AND LIKE VEHICLES. VICTOR RAOUL COLLARD, Balaclava, Victoria, Australia. Filed Mar. 20, 1923. Serial No. 626,266. 5 Claims. (Cl. 267—19.)



1. In a resilient suspension for motor vehicles, the combination with the vehicle chassis and axle, of a pair of levers pivotally connected at their outer ends to a fixed part of the vehicle, springs coupled together at their ends and pivotally connected at said coupled ends to and suported by the levers, and said levers adapted to engage and exert pressure on the springs intermediate the ends thereof simultaneously with the exertion of pressure on the end portions of the springs under conditions of shocks transmitted to the traction wheels of the vehicle.

---

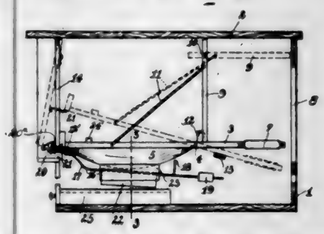
1,561,777. GRAIN CLEANER AND DUST SEPARATOR FOR ELEVATORS. ROY L. DOWDALL, Oberlin, Kans., assignor, by mesne assignments, of one-half to J. F. Martin, Oberlin, Kans. Filed Jan. 25, 1923. Serial No. 614,736. 3 Claims. (Cl. 130—17.)



1. In a grain cleaner of the character described, the combination with a grain elevator leg and head, of a fan connected on its suction side to said head, a discharge pipe for said fan, a grain receptacle directly communicating with the delivery end of said discharge pipe, and a dust discharge pipe communicating with said fan discharge pipe laterally of the latter and extending thence at a higher level than the top of said grain receptacle.

---

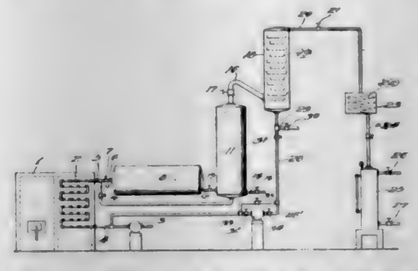
1,561,778. TRAP NEST. WILLIAM H. EDWARDS, Berkeley, Calif. Filed Apr. 16, 1923. Serial No. 632,216. 3 Claims. (Cl. 119—18.)



3. In a trap nest, a tilting nest, an exit door controlled by an egg-operated trigger, said trigger having a plate thereon and means to retain an egg on said plate to hold said trigger in released position until the hen leaves the nest and said nest tilts upwardly whereupon said egg is released.

---

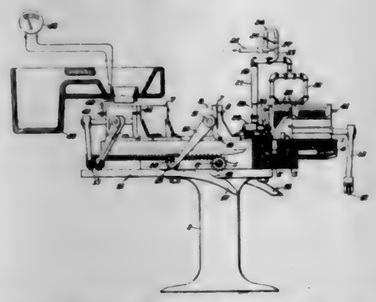
1,561,779. PROCESS FOR CRACKING PETROLEUM OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 19, 1923. Serial No. 669,451. 3 Claims. (Cl. 196—58.)



1. A process of cracking oil, consisting in passing the oil through a heating coil wherein it is subjected to cracking conditions of heat and pressure, in transferring a portion of the oil from said coil into a primary expansion chamber, in directing all of the oil constituents from said primary expansion chamber to a secondary chamber, and in introducing the remaining portion of the heated oil from said coil directly into the liquid oil in said secondary expansion chamber to increase the conversion therein.

---

1,561,780. CASTING MACHINE. FRANK ENGEL, Syracuse, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed July 8, 1918, Serial No. 243,759. Renewed Feb. 2, 1925. 19 Claims. (Cl. 22—77.)



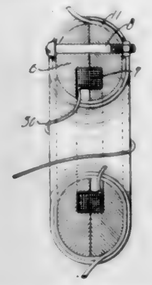
1. In a casting machine, in combination, conveying means, a plurality of moulds thereon having separable parts, and means associated with said moulds for automatically closing said parts upon one another and opening same with a shaking movement.

---

1,561,781. PROCESS OF TREATING CHEESE. WILLIAM FABHNDRICH, Brooklyn, N. Y. Filed Aug. 4, 1923. Serial No. 655,745. 3 Claims. (Cl. 99—8.)

3. The method herein described of treating cheese consisting in first cutting the cheese in small pieces, then treating these pieces in a hot bath until a doughlike mass is obtained, then adding to it an alkaline salt and milk sugar, inoculating the mass, while in a hot state, with a pure culture of the type of *Bacillus bulgaricus* and enclosing the same in sealed packages.

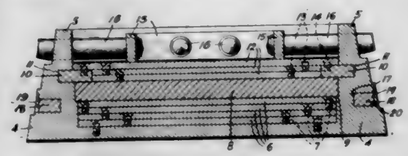
1,561,782. INDUCTANCE COIL. FREDERICK J. GIVEN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,702. 4 Claims. (Cl. 175—360.)



1. An inductance device comprising a solenoidal winding, a form for supporting said winding and a second winding wound around said form and said first winding, said second winding having its turns substantially at right angles to the turns of said first winding and being substantially uniformly distributed over the entire external surface of said form and said first winding.

---

1,561,783. SAFE CONSTRUCTION. GUSTAVE M. GOLDSMITH and CARL BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed Apr. 4, 1924. Serial No. 704,115. 8 Claims. (Cl. 109—1.)



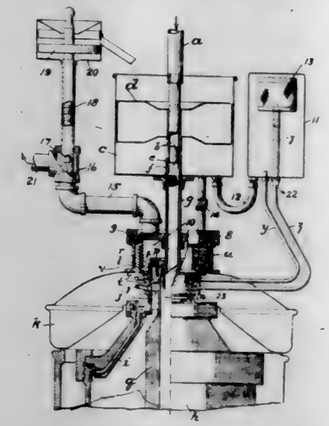
1. In safe construction, in combination, a metallic body constituting a front portion and jamb portions and having a central cavity, a metallic plate in the forward portion of said cavity, a section of material having special characteristics, highly resistant to drill or torch or to both, in said cavity to the rear of said plate, and a strip of material seated in an interior groove provided therefor in said body and extending beyond said groove and overlapping and abutting the rear edge portions of said section, whereby said section is held in place in said cavity.

---

1,561,784. NONAERATING APPARATUS FOR CENTRIFUGALLY PURIFYING LIQUIDS. SELDEN H. HALL, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 8, 1924. Serial No. 742,843. 35 Claims. (Cl. 233—1.)

35. In an apparatus for centrifugally purifying liquids, the combination with a centrifugal separating bowl having a neck through which the purified liquid is discharged, of means to feed liquid to said bowl and to control the feed to prevent overflow thereof and substantial contact of air therewith, a passage adapted to receive the purified liquid discharged from the bowl and having a liquid outlet but otherwise closed, means on said outlet to cause the pressure in said passage to be greater than atmospheric, a bearing around the neck of the bowl, means to supply liquid to said bearing

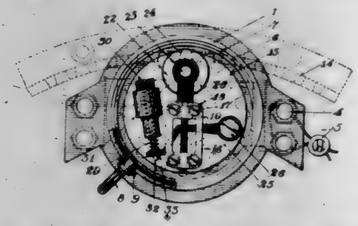
relatively near the liquid discharge end of said neck, means for escape of liquid from said bearing relatively distant from the liquid discharge end of said neck, means on said neck tending to cause a flow from said supply



means toward the liquid discharge end of said neck and toward the escape means and means tending to cause a flow of fluid from the end of the bearing most distant from the liquid discharge end of the neck toward the escape means.

---

1,561,785. AUTOMATIC SPEED CONTROLLER. JOHN W. HILL and HENRY C. HILL, Wyoming, Ohio. Filed Jan. 19, 1925. Serial No. 3,539. 4 Claims. (Cl. 200—80.)

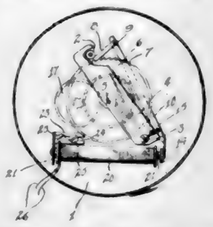


1. An automatic speed controller for automobiles, mounted upon and driven by the running gear of the vehicle, comprising a circular case closed by a hermetically sealed cap, a rotatable shaft mounted in the hub of said case, said shaft having a pinion on its outer end taking motion from the running gear, and provided at its inner end with a rigidly attached disc and driver mechanism rotating with said shaft, a radially sliding bolt mounted upon and actuated by said driver, an adjustable spring to resist the outward sliding movement of said bolt, a lever communicating motion from said bolt to said adjustable spring, an adjustable spring barrel to regulate the compression of said spring, a roller mounted upon the outer end of said bolt, and an insulated contact ring mounted in the rim of said case, which is impinged by said roller when the predetermined speed limit has been reached and closes an electric circuit.

---

1,561,786. CLOCK MECHANISM. HUBERT M. HUBMANN, Wallace, Idaho. Filed Dec. 8, 1924. Serial No. 754,580. 3 Claims. (Cl. 58—26.)

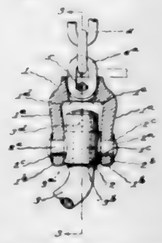
2. A clock mechanism comprising a base plate, a pair of posts carried thereby, a bar secured to said posts, a shaft journaled between said base plate and said bar, a ratchet carried by said shaft, a lever, a pawl pivotally connected with said lever and arranged to engage the teeth of said ratchet, one end of the pawl being movable into contact with one of said posts, a pivoted shaft, a



leaf spring extending through said pivoted shaft and bearing at one end on the other of said posts, and frictional means for mounting said lever on said pivoted shaft, said pivoted shaft being movable relatively to said lever to increase or decrease the tension of the spring.

---

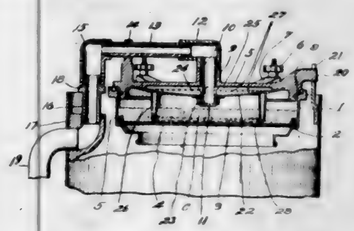
1,561,787. CHAIN COUPLING. DAVID W. JONES, Cleveland, Ohio, assignor to David Round & Son, Cleveland, Ohio. Filed July 23, 1924. Serial No. 727,650. 5 Claims. (Cl. 59—86.)



1. A chain shackle comprising a forged one-piece clevis having a pocket in its base portion the side walls of which diverge from the arms and the end walls of which converge from said arms to receive and support a chain link.

---

1,561,788. LEACHER BUCKET. HENRY D. KELLY, Kansas City, Mo. Filed July 13, 1925. Serial No. 43,213. 5 Claims. (Cl. 53—3.)



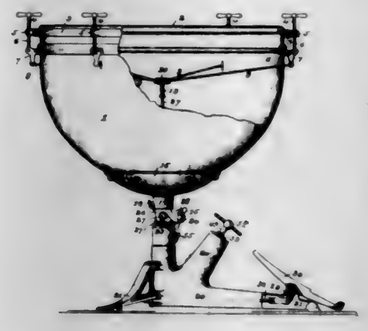
1. A leacher bucket, a cover for said bucket, and a partition depending from said cover and forming a plurality of compartments within said leacher bucket.

---

1,561,789. TUNING MEANS FOR DRUMS AND THE LIKE. WILLIAM F. LUDWIG and ROBERT C. DANLY, Chicago, Ill., assignors to Ludwig & Ludwig, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1923. Serial No. 662,400. 22 Claims. (Cl. 84—419.)

1. In a musical instrument, the combination of a resonant member, tensioning means for said member, a balancing means of the stored energy type, and a reverse

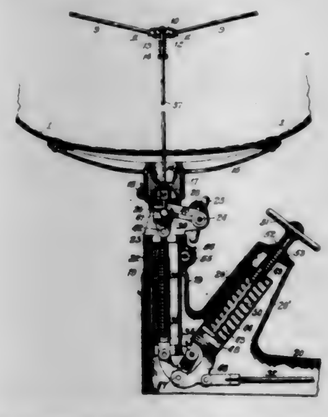
motion member, one side of which is connected to said tensioning means and the other side to said balancing means and operating to vary the force of the balancing



means in a manner corresponding with the variation in the stress of said tensioning means on the resonant member.

---

1,561,790. ADJUSTABLE SUPPORT FOR TYMPANI AND THE LIKE. WILLIAM F. LUDWIG and ROBERT C. DANLY, Chicago, Ill. Filed Jan. 2, 1925. Serial No. 76. 4 Claims. (Cl. 84—421.)

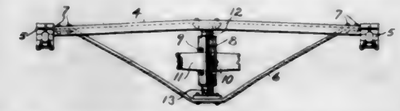


1. In a musical instrument, the combination of a main shell, a support, an adjustable connection between said support and said shell, a resonant head and its carrying hoop fitting an end of said shell, hand actuated means for adjusting the resonant head to the lowermost tone of the scale required, a pedal actuated mechanism mounted on said support and operatively connected to said hand actuated means by an adjustable connecting member, and means for effecting simultaneous and co-ordinate adjustment of said connecting member and the adjustable connection between the shell and support.

---

1,561,791. TRUSSED BRAKE BEAM. ALONZO C. MATHER, Chicago, Ill. Filed Sept. 19, 1923. Serial No. 663,634. 2 Claims. (Cl. 188—232.)

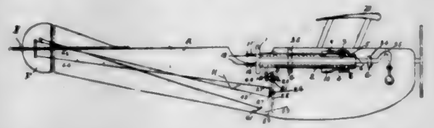
1. A trussed brake beam comprising a compression member having brake shoes secured to its ends, a tension member connected at its ends to the compression member adjacent the brake shoes, a strut between said compression and tension members, said strut comprising three members, one section connected rigidly to the compression member at its center and having a screw-threaded lug, a duplicate section connected rigidly to the tension mem-



ber at its center having a screw threaded lug and a third or intermediate section having screw-threaded ends to receive said lugs.

---

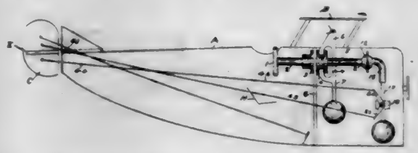
1,561,792. CONTROLLING MECHANISM FOR FLYING MACHINES. ROBERT ELVYN MITTON, Salt Lake City, Utah, assignor to The Mitton-Braley Aeroplane Control Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 6, 1923, Serial No. 611,096. Renewed May 19, 1925. 2 Claims. (Cl. 244—29.)



1. A controlling mechanism for flying machines of the character described comprising a control wheel and a pendulum for controlling said mechanism, said control wheel having a sleeve projecting therefrom, locking pins passing through said sleeve, spring means for holding said locking pins within said sleeve, means for securing said springs to said sleeve and locking pins, a shaft within said sleeve, lifting wedges having notches therein for holding said locking pins in an unlocked position, said lifting wedges having handles thereto, said handles resting in grooves in said sleeve, means for holding said handles in said grooves, said handles projecting through said control wheel in front of the pilot, said sleeve having hangers projecting therefrom for supporting a swivel bearing, a ball secured in said swivel bearing having a hole therein through which operates the upper end of the control lever, the control lever supported by a universal bearing, said universal bearing having shafts projecting therefrom, the ends of said shafts having horns secured thereto, said horns for receiving the wires running to the elevators, means on the lower end of said control lever for attaching the control wires to the ailerons, means for securing said mechanism to the aeroplane.

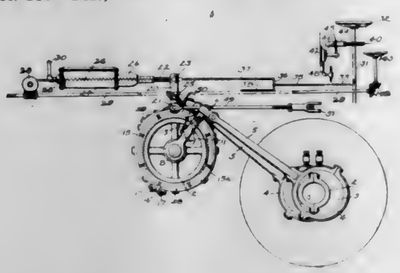
---

1,561,793. CONTROLLING MECHANISM FOR FLYING MACHINES. ROBERT ELVYN MITTON, Salt Lake City, Utah, assignor to The Mitton-Braley Aeroplane Control Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 6, 1923. Serial No. 611,097. Renewed May 19, 1925. 5 Claims. (Cl. 244—29.)



5. A controlling mechanism for flying machines of the character described comprising a control wheel and a pendulum, said pendulum to give a sliding movement to a shaft secured to said control wheel, said pendulum secured to said shaft by means of a ball and socket, said pendulum supported by a swivel bearing and means on said swivel bearing for operating the elevators.

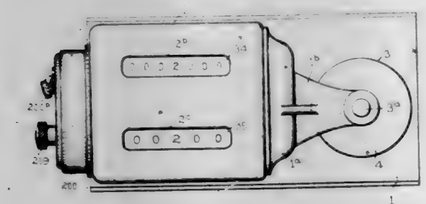
1,561,794. BRAKE. PETER L. PETERSON, Manti, Utah. Filed Dec. 29, 1922. Serial No. 609,691. 11 Claims. (Cl. 188—141.)



5. In a car brake, the combination with a braking member, of a pressure actuated member having connection with said braking member, a spring having connection with said braking member and with said pressure actuated member, manually controlled means for varying the tension of said spring, a brake drum arranged within the braking member, and means designed to rotate the brake drum from an axle of the car.

---

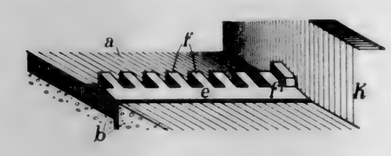
1,561,795. CONTROLLER FOR POSTAGE-METER MACHINES AND THE LIKE. ARTHUR H. PITNEY, Stamford, Conn., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed Oct. 2, 1923. Serial No. 666,113. 91 Claims. (Cl. 101—91.)



1. For a machine of the character specified having a meter, a removable controller adapted to be placed in the meter or removed therefrom, and means whereby when the controller is inserted in the meter the latter will be rendered operative, and when the controller is removed from the meter it is rendered inoperative.

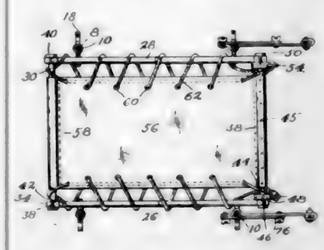
---

1,561,796. SPILLWAY APRON. THEODORE REHBOCK, Karlsruhe, Germany. Filed Mar. 30, 1925. Serial No. 19,468. 2 Claims. (Cl. 61—18.)



1. In combination with a spillway apron, a low sill disposed at the extreme down-stream end of said apron and at the exit of the water from the surface eddy formed by the water on said apron, said sill being provided with a series of teeth having a steeply inclined face directed up-stream.

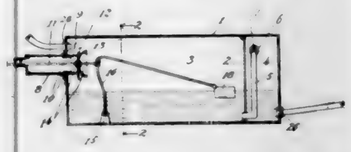
1,561,797. COMBINED TENT AND BED. JULIUS RUMPEL, Weston, Mo. Filed Apr. 18, 1924. Serial No. 707,417. 1 Claim. (Cl. 5—216.)



A bed consisting of a plurality of legs, brackets associated with said legs, two side rails carried by said brackets, an end rail connected to said side rails at one end thereof, a windlass operably associated with said side rails at the end opposite said end rail, a mattress connected to said end rail and windlass and adapted to be drawn taut by the latter, and cables rove through eyelets in the longitudinal margins of said mattress and extending around the end and side rails and connected to said windlass to secure the same from backward rotation.

---

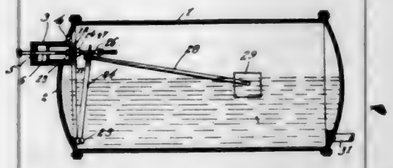
1,561,798. MEANS FOR SUPPLYING WATER. JOHN ELLERY SARGENT, Morgan, Ky., assignor of one-half to W. M. Northcutt, Morgan, Ky. Filed Sept. 19, 1921. Serial No. 501,653. 2 Claims. (Cl. 137—68.)



1. In a device of the character specified in combination with a tank adapted to be submerged in liquid in a repository, automatic valve mechanism arranged to be operated when the liquid in the tank falls below a certain level, and means for maintaining pressure in said tank to force liquid therefrom, a secondary chamber, means of communication between said tank and secondary chamber so that liquid in the tank is forced, under pressure, into said secondary chamber, and a valve arranged to close when the pressure in the tank falls below that in said secondary chamber.

---

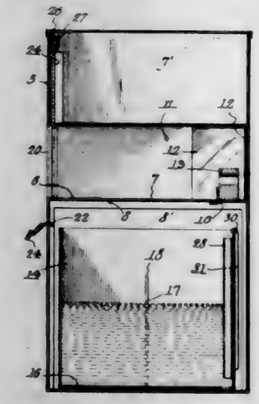
1,561,799. MEANS FOR SUPPLYING WATER. JOHN ELLERY SARGENT, Morgan, Ky., assignor of one-half to W. M. Northcutt, Morgan, Ky. Filed Dec. 19, 1923. Serial No. 681,535. 4 Claims. (Cl. 137—104.)



4. In a device of the character specified, valve mechanism comprising a housing, one end of said housing being arranged to form a valve seat, a bearing in the other end of said housing, a valve stem arranged to reciprocate in said bearing, a flexible valve secured to said stem, a bearing frame secured to said stem and arranged to bear slidably inside said housing, a valve plate having a convex surface arranged to bear against said valve to cause it to seat, a float, means for frictionally holding said valve stem in either open or closed position, and means whereby said float is arranged to operate said valve against said friction when liquid in the tank reaches predetermined levels.

---

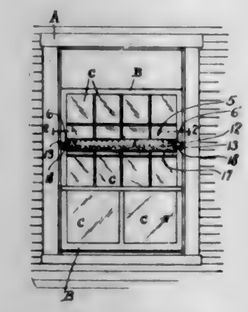
1,561,800. RAT TRAP. GEORGE SAVARD and MOSES E. ST. AMOUR, Faust, N. Y., assignors, by direct and mesne assignments, of one-half to said George Savard and one-half to Napoleon Grenier, Faust, N. Y. Filed May 17, 1924. Serial No. 714,100. 2 Claims. (Cl. 43—69.)



1. A trap including a body portion, a partitioning member in the body portion dividing the body portion into upper and lower compartments, a trap door in the partitioning member and adapted to operate under the weight of an animal to drop the animal into the lower compartment, a closure for closing the upper compartment, a tank disposed in the lower compartment, a float in the tank, means for connecting the float and closure to cause the closure to move to its closed position when the float is elevated.

---

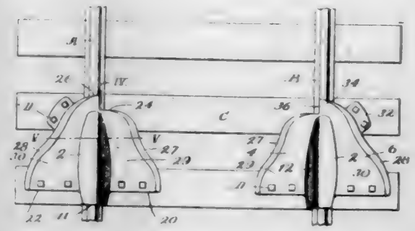
1,561,801. WINDOW-CLEANING DEVICE. ELMER E. SHIPLEY, Washington, D. C. Filed Sept. 29, 1924. Serial No. 740,556. 5 Claims. (Cl. 15—250.)



1. A window cleaning device of the character set forth, comprising an extensible bracket adapted to be removably attached transversely of a window, a brush supported by the bracket with its bristles directed toward the panels of the window, and a fabric wiper yieldingly supported against the panels of the window by the bristles of the brush.

---

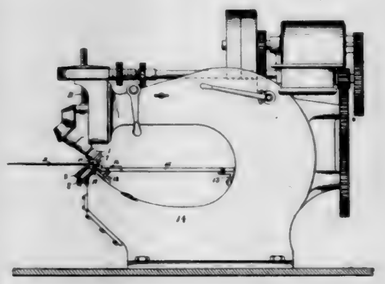
1,561,802. RERAILING FROG. HENRY D. SHIVELY, Trenton, Mo. Filed June 19, 1924. Serial No. 721,028. 1 Claim. (Cl. 104—270.)



In a car replacer a longitudinal rib adapted to fit over a rail, forwardly diverging wing plates extending from opposite sides of said rib and sloping upwardly towards their forward ends and longitudinal margins, a guide at the forward end of one of said wings which rests upon the ball of the rail and has one margin flush with the inner margin of said ball, and flanges sloping upwardly and forwardly from the margins of said wing plates and one of which extends to the forward end of and reinforces said guide while the other terminates in a line with the rear end of said guide.

---

1,561,803. STRIP-STRAIGHTENING ATTACHMENT FOR ROTARY SHEARS. HENRY COLLIER SMITH, St. Marys, Ohio. Filed Dec. 7, 1921. Serial No. 520,541. 20 Claims. (Cl. 164—61.)



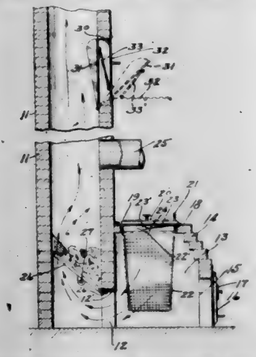
1. In combination with a shear provided with a pair of conical rotary cutters, and conical rolls co-axial with said cutters to grip severed strips between them.

---

1,561,804. INCINERATOR. CARL THEODOR STOHR, St. Paul, Minn. Filed Feb. 8, 1924. Serial No. 691,368. 6 Claims. (Cl. 110—18.)

1. The combination with a chimney, of an incinerator comprising a primary combustion chamber located at the exterior thereof, provided at its top with a damper-equipped door, and at its lower portion connected to the

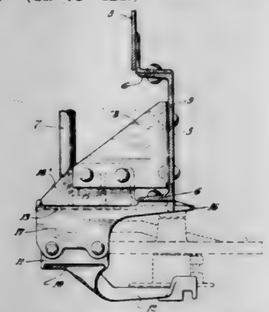
lower portion of said chimney, a removable garbage basket supported within said primary combustion chamber below the damper-equipped top thereof, the top door of said



primary combustion chamber being hinged and the damper thereof being arranged to slide to a closed position when said door is opened.

---

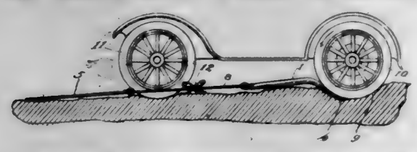
1,561,805. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,427. 4 Claims. (Cl. 74—121.)



1. A brake gear mounting structure comprising the combination with the end-sill of a railway car, of a gusset secured to and projecting downwardly from said sill, a top casting consisting of a plate of rectangular shape disposed beneath and secured to the bottom flange of the sill, a vertical wall integral with the upper surface of the plate parallel with and secured to said gusset, a bottom casting consisting of a plate secured in spaced relation to said top plate and an arm extending from the bottom plate inwardly with respect to the car, and gears journaled between said top and bottom castings.

---

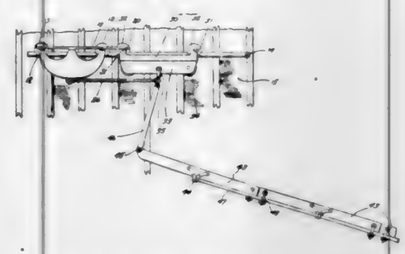
1,561,806. TRACTION DEVICE FOR AUTOMOBILES. EDWARD B. THOMAS, Cincinnati, Ohio, assignor of one-forth to Edward Disher and one-fourth to Sydney W. Williamson, both of Cincinnati, Ohio. Filed Dec. 19, 1923. Serial No. 681,477. 6 Claims. (Cl. 238—14.)



1. A traction device comprising a traction member adapted to be placed in relation to the rear wheel of a vehicle so as to afford traction therefor, a member arranged to be secured by the front wheel of said vehicle, and means variable in length for securing said members together when in position.

---

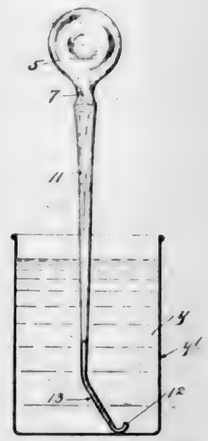
1,561,807. HAY CONVEYER. CARL THUNEMANN, Munnsville, N. Y. Filed Mar. 20, 1924. Serial No. 700,499. 3 Claims. (Cl. 214—5.)



1. A device of the class described comprising a wheeled carriage, a brace bar pivotally supported on said carriage, coupling levers pivoted on said carriage, the forward ends of said levers having hook projections, a spring connecting said levers forwardly of the point of rotation, cables connected to said levers and adapted to open the hook ends of the same when pulling on said cables, a hay transport carriage having ears thereon, the ears supporting wheels, said ears being engageable with the hook end of said levers to interlock both carriages, and means for stopping the travel of the first-named carriage when said coupling levers are spread apart.

---

1,561,808. PROCESS OF PRODUCING FISHLINE FLOATS AND THE LIKE. JUDSON R. TOWNE, Minneapolis, Minn. Filed Mar. 1, 1923. Serial No. 622,069. 5 Claims. (Cl. 49—77.)

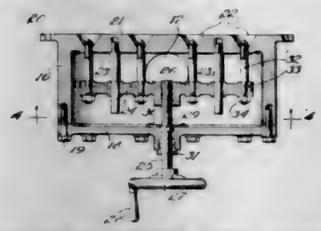


1. The process of forming glass bulbs and of injecting fluid thereinto which consists in forming a bulb on the end of a tubular glass stem, in closing the end of the stem while the bulb is hot, in scratching the stem to afford an easy point of breakage thereof, in immersing the end of said stem in a liquid to a point below said scratch, in breaking off said stem at said scratch while it is thus immersed, whereby the liquid will be drawn into said bulb by partial vacuum, and in thereafter closing said stem by fusion.

4. The process of forming glass bulbs and injecting fluid thereinto which consists in forming a bulb on the end of a tubular glass stem, in closing the end of the stem while the bulb is hot, in bending the end of said stem laterally to insure breaking thereof below the liquid level under downward pressure on the bulb.

---

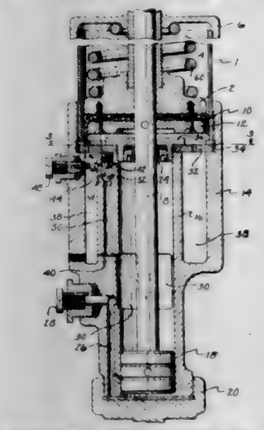
1,561,809. HYDRAULIC WASHING APPARATUS. THEODORE L. VALERIUS, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1921. Serial No. 515,497. 2 Claims. (Cl. 299—144.)



1. A jet head for hydraulic washing apparatus comprising, in combination, a housing forming a chamber to receive fluid under pressure, discharge orifices in a wall of said chamber, a movable pin normally positioned in each of said orifices and having lateral recesses to permit a limited flow of fluid through said orifices, a connecting member having said pins attached thereto, guides mounted in said chamber and slidably supporting said connecting member, and a shaft extending outwardly of said housing, said shaft having an operative connection with said pin connecting member whereby said pins may be moved into or out of said orifices.

---

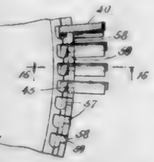
1,561,810. ELEVATOR-DOOR-OPERATING MECHANISM. WILLIAM WALLACE WEEKS, Brooklyn, N. Y., assignor to Elevator Supplies Company, Inc., a Corporation of New Jersey. Filed Oct. 18, 1923. Serial No. 669,268. 13 Claims. (Cl. 188—97.)



1. In a cushioning device adapted for cushioning the movements of elevator door operating mechanisms, a cylinder, a plunger in said cylinder, a passageway communicating between the upper portion of said cylinder and a lower portion thereof, and a by-pass connecting said passageway with a lower portion of the cylinder, permitting the passage of fluid to the upper portion of said cylinder to attain cushioning action of said mechanism when said plunger is returned to the upper portion of said cylinder after a limited movement toward the lower portion thereof.

---

1,561,811. ELASTIC-FLUID TURBINE. JOHN WILLIAM WHELLER, Elizabeth, N. J., assignor to L. J. Wing Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1923. Serial No. 667,802. 7 Claims. (Cl. 22—193.)



1. A device for assisting the making of molds for elastic fluid turbines having cast-in buckets comprising, a main portion having radial slots in its periphery each adapted to receive the tail portion of a bucket and being open at one side for the insertion and removal of the buckets, and a removable ring cooperating with the side of the main portion adjacent the open sides of the slots and having a projecting lip co-acting with a notch in each bucket to maintain the buckets accurately in position and against displacement from said slots while the mold is being made.

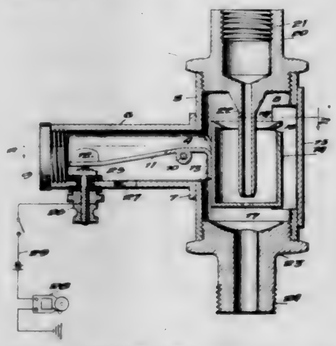
---

1,561,812. WRENCH. EBER B. WHITE, South Bend, Ind. Filed Mar. 19, 1924. Serial No. 700,292. 1 Claim. (Cl. 81—128.)

A wrench comprising a handle member and a hollow body portion projecting from the handle member in axial alinement therewith, said body portion having opposite diverging sides, a pair of jaws having outer divergent sides slidably engaging the diverging sides of the body, the jaws being provided in their inner sides with recesses the outer walls of which are parallel with the outer walls of the jaws, a head disposed between the jaws and having beveled ends engaging against the outer walls of the recesses in the jaws, and means within the handle member for shifting the head between and longitudinally of the jaws whereby to clamp the jaws against the sides of the body.

---

1,561,813. CIRCUIT CONTROLLER FOR FLOW INDICATORS. WALTER T. WILLIAMS, Topeka, Kans. Filed Nov. 16, 1923. Serial No. 675,177. 3 Claims. (Cl. 200—81.)



1. A device of the character set forth comprising a movable circuit controlling member, a receptacle mounted thereon and having an open top carrying an inwardly

extending splash preventing rim, a bleed port in its lower portion and an overflow outlet in its upper portion below the said rim, and means for delivering fluid into said receptacle.

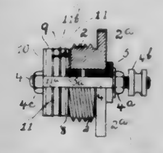
---

1,561,814. ELECTRIC HEATER AND VAPORIZER. LEONARD E. ASKE, Duluth, Minn. Filed June 19, 1923. Serial No. 646,336. 8 Claims. (Cl. 219—38.)

1. In an electric fluid heater or vaporizer, the combination of a frame or plate, of insulating material, having an arched lower edge, a resistance coil wound transversely upon said frame or plate, a housing for said coil open at the bottom and having arched lower edges conforming substantially to the arched lower edge of said frame, said coil being grounded at one end on said housing, a binding post insulated from said housing, said coil being electrically connected with the binding post.

---

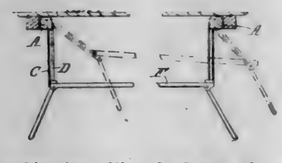
1,561,815. ELECTRIC HEATER OR VAPORIZER. LEONARD E. ASKE, Duluth, Minn. Filed Jan. 10, 1924. Serial No. 685,422. 8 Claims. (Cl. 219—38.)



1. The combination of a plug, a post extending through said plug, insulating members interposed between said post and said plug, a moisture absorbing asbestos sponge mounted on said post, an electric heating element mounted on said absorbing sponge, one end of said heating element being electrically connecte to said post, and the other end of said heating member being electrically connected to said plug.

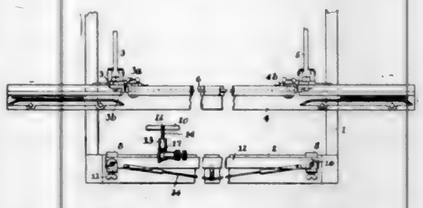
---

1,561,816. TONNEAU WINDSHIELD. HERBERT AUSTIN, Bromsgrove, and HERBERT CHALLENOR, Northfield, England; said Challenor assignor to said Austin. Filed June 27, 1924. Serial No. 722,792. 4 Claims. (Cl. 296—85.)



1. The combination with a fixed part of a vehicle of a pair of screen supporting arms pivoted to said parts with their pivots in axial alinement, a screen supported by the free ends of said arms, lugs projecting from said arms in the plane of their rotation, and telescopic compression members spring urged to expanded position and each having one end pivoted to a respective lug and its other end pivoted to the fixed part in such position that the lug pivot swings on one side of a line drawn between the remaining pivots upon the screen being raised and to the other side of said line upon the screen being depressed.

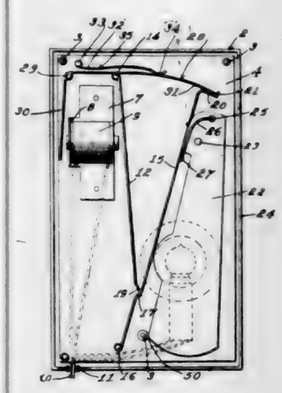
1,561,817. GAUGE FOR LOOMS. ERNEST BARBER, Paterson, N. J. Filed May 23, 1925. Serial No. 32,299. 3 Claims. (Cl. 73—51.)



1. In a means for detecting irregularity in the position of a reciprocating part relatively to a fixed part of a machine when the reciprocating part is at the limit of its working stroke, the combination of a support adapted to be fixed on one such part of the machine and a gauge-including structure including a movable gauge-actuator adapted to be engaged and moved by the other part, said structure being adjustable on the support substantially lengthwise of the path of movement of the reciprocating part.

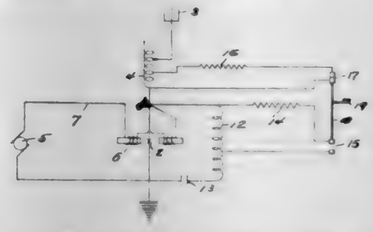
---

1,561,818. ROUTE INDICATOR. FRED R. BARBOUR, Los Angeles, Calif. Filed Apr. 11, 1922. Serial No. 551,707. 1 Claim. (Cl. 177—329.)



In a device of the class described, a support, oppositely extended first and second levers fulcrumed at their remote ends on the support, the first lever being engaged pivotally at its inner end with an intermediate portion of the second lever, a semaphore mounted intermediate its ends to swing on the support, the semaphore, when in inactive position, being disposed alongside of the second lever and in close relation thereto, means for connecting an intermediate portion of the second lever with one end of the semaphore, a bell crank latch fulcrumed on the support, one arm of the latch extending in the same general direction as the first lever, the other arm of the latch extending transversely of both levers in close relation to the fulcrumed end of the first lever and cooperating with the free end of the second lever to hold the semaphore in inactive position, and an electromagnet located between the first-specified arm of the latch and the first lever, the first-specified arm of the latch being responsive to one end of the magnet to release the second lever, and the first lever being responsive to the other end of the magnet to move the semaphore to active position.

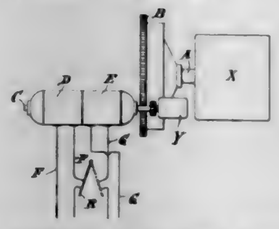
1,561,819. RADIOTELEGRAPHY. RALPH R. BEAL, Palo Alto, Calif., assignor, by mesne assignments, to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Jan. 5, 1920. Serial No. 349,474. 6 Claims. (Cl. 250—19.)



1. In a radio telegraphy transmission system, a source of oscillations, a radiating circuit containing inductance permanently connected to said source, a local oscillatory circuit containing inductance permanently connected around said source, a circuit shunting said radiating circuit inductance, a resistor in said shunt circuit, a circuit shunting said local circuit inductance, a resistor in said latter shunt circuit and means for opening and closing the shunt circuits.

---

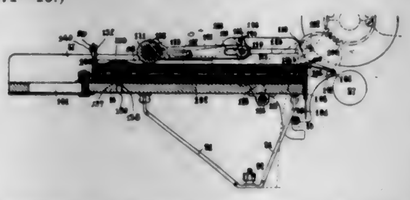
1,561,820. MEANS FOR STARTING INTERNAL-COMBUSTION ENGINES. DOUGLAS JAMES BEDFORD, Derby, England. Filed Jan. 21, 1925. Serial No. 3,765. 2 Claims. (Cl. 290—38.)



2. The combination of an internal combustion engine, a low voltage motor connecting when operating with the engine to start the same, a high voltage motor connecting when operating with the engine to start the same and means for selectively supplying low or high voltage current to the respective motors as desired.

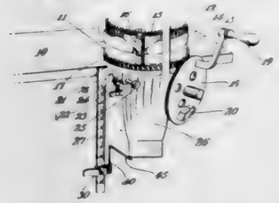
---

1,561,821. ATTACHMENT FOR PRINTING MACHINES. ADOLPHE BESSAT and LÉON LOUIS LIÉVENS, Nanterre, France. Original application filed Sept. 21, 1922, Serial No. 589,693. Divided and this application filed Nov. 23, 1923. Serial No. 676,543. 8 Claims. (Cl. 271—19.)



1. Sheet-feeding apparatus, comprising a feed table to support a pile of sheets; a stop for engagement with one end of the pile and adapted to move downward automatically as the height of the pile decreases, said stop having projecting means fixed to it; a pivoted shutter mounted adjacent the stop and resting at one end on said projecting means; and a device for feeding the sheets one at a time over said stop.

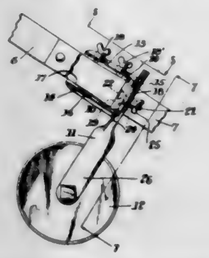
1,561,822. FOOT RULE. GOTTLIEB F. BILL, Minidoka, Idaho. Filed June 2, 1924. Serial No. 717,198. 2 Claims. (Cl. 33—169.)



1. An attachment to a knitting machine comprising a scale bar adapted to be secured to said machine in a pendant position, a spring slip slidable on said bar, and a gauge arm pivotally mounted in said clip, said arm being movable into the path of finished product produced by the machine.

---

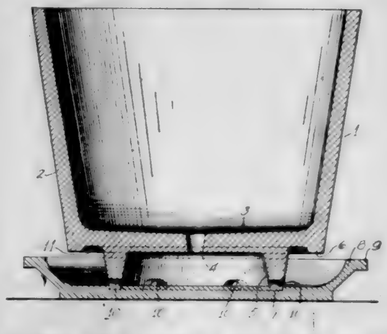
1,561,823. LAWN-EDGING ATTACHMENT. FRANK BISHOP, Los Angeles, Calif. Filed June 23, 1924. Serial No. 721,893. 3 Claims. (Cl. 97—227.)



2. In combination; a U-clamp adapted for engaging the lower extremity of a lawn mower handle between the bails thereof, the cross bar of said clamp having a serrated outer face with bolt projecting therefrom; a bifurcated colter support having a longitudinally slotted shank with a serrated face adapted for longitudinally adjustable attachment to said cross bar by means of said bolt; and a disk colter journalled between the extremities of said bifurcations.

---

1,561,824. FLOWERPOT. HENRY MARTIN BOEHM, Minneapolis, Minn. Filed Aug. 18, 1924. Serial No. 732,839. 2 Claims. (Cl. 47—34.)

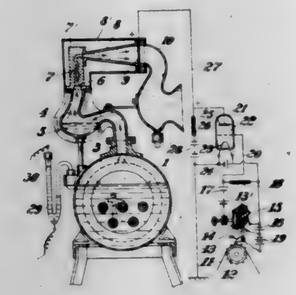


1. A flower pot comprising a body portion having a dirt retaining wall, a flange depending from the bottom of said flower pot, a saucer having a groove therein adapted to receive said flange, said flange spacing the

lower edge of said wall above the top of said saucer, said body portion having an opening to permit water to drain therefrom, and said flange having recesses therein to permit water to pass therethrough.

---

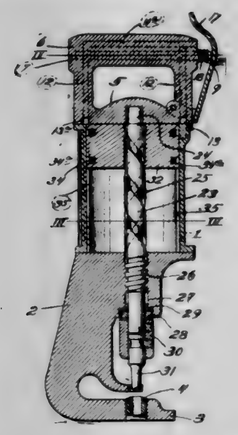
1,561,825. ELECTRIC SOUND-REPRODUCING DEVICE. OTTO BOTHE, Steglitz, near Berlin, and LUDWIG SCHIFF, Berlin, Germany. Filed June 6, 1924. Serial No. 718,303. 3 Claims. (Cl. 179—101.)



2. In a device for reproducing sounds, means for producing a continuous current of gas or steam, a perforated metal body in the path of said current, means for electrically charging said gas or steam and means to vary said charging in rhythm to sound waves.

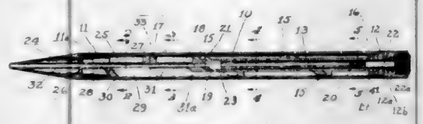
---

1,561,826. COMPOUND-SCREW-POWER DEVICE. HENRY R. BREMER, Kansas City, Mo. Filed Dec. 18, 1922. Serial No. 607,617. 7 Claims. (Cl. 121—3.)



7. In a power device, a support having a threaded bore and a piston cylinder at one end of said bore, a rod extending through said cylinder and journaled at one end in the support and having a set of right and a set of left hand threads, one of said sets of threads being in engagement with the threaded bore, a piston interlocked with the cylinder for reciprocation within the cylinder and having threaded engagement with said second set of threads, and means for controlling the admission of fluid under pressure to either end of said cylinder.

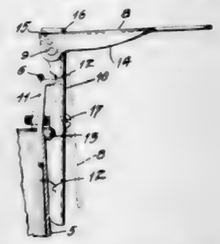
1,561,827. PENCIL. MAURICE D. BRODY, Chicago, Ill. Filed May 20, 1922. Serial No. 562,302. 14 Claims. (Cl. 120—14.)



1. In a pencil, the combination of an outer shell, a tube within said shell and spaced therefrom to form a magazine, lead feeding devices within said tube, a tip carried by one end of said shell, and a directing member within said shell adjacent said tip for directing leads from said magazine into the path of said feeding devices, said tube having an outwardly extending helical web providing a helical path for the leads in said magazine.

---

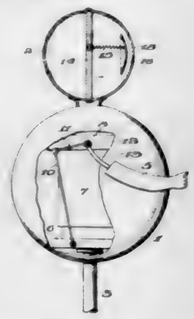
1,561,828. MILK-PAIL HOLDER. WILLIAM D. CHAMBERLAND, Minneapolis, Minn. Filed Oct. 8, 1923. Serial No. 667,173. 5 Claims. (Cl. 31—54.)



3. A milk pail holder comprising a channel upright having in its sides vertically spaced notches adapted to receive the rolled upper edge of a milk pail, an arm pivoted to the upright, a spring operative on the arm to fold the same onto the upright, and a clamp for attaching the upright to the milk pail, said clamp being vertically adjustable on the upright.

---

1,561,829. TOY WITH MOVABLE FEATURES. IRWIN E. COHN, New York, N. Y. Original application filed Oct. 6, 1924, Serial No. 742,049. Divided and this application filed Apr. 29, 1925. Serial No. 26,770. 3 Claims. (Cl. 46—40.)

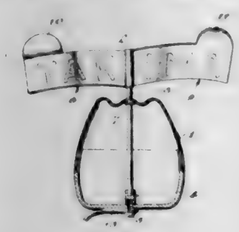


3. A toy, a hollow head portion having feature openings therein, a movable support in the head having a plurality of features disposed at the openings, means connecting the back of the support to the head portion, said connecting means being resilient and movable through a plurality of different angular positions from

its connection with the head, said resilient connecting means being sensitive to slight agitation of the toy so that the movable support will be agitated for causing the features to be moved readily and transversely of the opening and through arcs having radii passing substantially through the center of the opening.

---

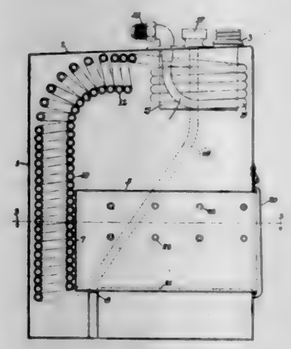
1,561,830. REVOLVING NAME PLATE. WALTER C. CONNELL, Yakima, Wash. Filed Jan. 7, 1925. Serial No. 1,074. 2 Claims. (Cl. 40—39.)



1. A device for the purpose described comprising a wire bracket with portions arranged to clamp upon the filling neck of a radiator, an emblem secured to the bracket, a shaft, means at which the emblem is secured to the bracket including a metallic piece constituting a bearing for the shaft, means on the shaft engaging a part of the emblem to keep the shaft in place, and a name plate carried by the shaft, said plate consisting of oppositely bent portions resembling a propeller, said portions having bent wings over which wind is intended to pass to produce revolutions of the name plate.

---

1,561,831. REFRIGERATING APPARATUS. EDMUND J. COPELAND, Flint, Mich., assignor to Copeland Products, Inc., Flint, Mich., a Corporation of Michigan. Filed May 5, 1924. Serial No. 710,994. 1 Claim. (Cl. (62—95.)



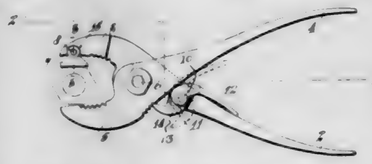
In refrigerating apparatus, a brine tank having a freezing chamber opening through the lower part of one of its walls and a thermostat chamber opening through one of its uppermost parts, and a refrigerating coil having its initial portion arranged in upright position in cooling relation relatively to said freezing chamber, and having its terminal portion arranged in cooling relation relatively to said thermostat chamber, the turns of said initial portion being substantially horizontal to prevent trapping of refrigerant therein and a portion of the coil between the two portions being non-horizontal to insure trapping of refrigerant in said terminal portion.

1,561,832. INSECT TRAP. NICOLA CORSI and ANGELO COSTANTINO, Brooklyn, N. Y. Filed July 20, 1925. Serial No. 46,814. 5 Claims. (Cl. 43,115.)

1. In a device of the class described, the combination with a core member carrying an adhesive coating, of a shield member having openings permitting insects to reach said core member, said shield member leaving an annular space around said core member sufficient for the passage of said insects, and parts projecting from the surface of said core member towards the inner surface of said shield member, to points within the reach of insects within said shield member.

---

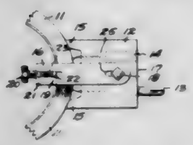
1,561,833. PLIER WRENCH. ALEXANDER CRUICKSHANK, Matsqui, British Columbia, Canada. Filed July 9, 1924. Serial No. 724,993. 3 Claims. (Cl. 294—41.)



3. A plier wrench comprising crossed levers pivoted together, a small lever pivotally mounted on one of the crossed levers and having an eccentric around the pivot, and a pawl mounted on the eccentric of the small lever and adapted to engage notches on the other crossed lever, substantially as specified.

---

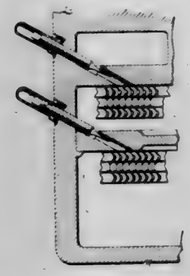
1,561,834. COIL MOUNTING. ELMER T. CUNNINGHAM, San Francisco, Calif. Filed Feb. 27, 1922. Serial No. 539,534. 1 Claim. (Cl. 175—359.)



A coil having an inner and an outer peripheral surface, a block engaging the outer peripheral surface and having terminals to which the ends of the coil are connected, a band fastened to the block at both ends of the band and passing around the inner surface of the coil, said band having slots adjacent the inner sur-

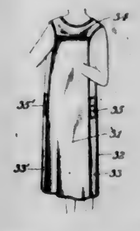
face of the coil, a flat clamping piece engaging the inner surface of the coil and having projections at each end guided in the slots in the band, a threaded member also having projections at each end guided in the slots, and a thumb-screw engaging the threaded member and passing through the band for tightening the flat clamping piece against the inner coil surface.

1,561,835. STEAM TURBINE. JOSEF YNGVE DAHLSTRAND, Wellsville, N. Y., assignor to Standard Turbine Corporation, Wellsville, N. Y., a Corporation of New York. Filed Sept. 11, 1922. Serial No. 587,304. 9 Claims. (Cl. 253—78.)



1. In a steam turbine, the combination of a rotor having buckets thereon, a plurality of nozzles adjacent thereto, and means for varying the flow of steam through and for varying the ratio of the throat and tip areas of said nozzles, said means including adjustable needles projecting into the throats of the nozzles and formed to progressively increase the nozzle area from the throat to points in the nozzle substantially short of the tips thereof, whereby when the needles are moved inwardly the throat areas are decreased and increased when moved outwardly, said needles being fixed in their adjusted positions.

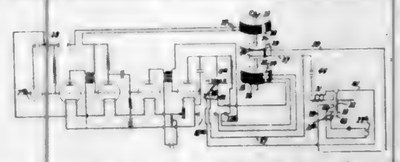
1,561,836. APRON. NELL Q. DONNELLY, Kansas City, Mo. Filed Apr. 3, 1925. Serial No. 20,350. 3 Claims. (Cl. 2—48.)



1. An apron having a yoke, front and back panels attached thereto in front and rear, the panels being of substantially oblong form with the upper edge shorter than the bottom edge, inserts of rectangular form joining said panels and extending from the bottom of the apron approximately half way to the shoulders, said inserts having a width approximately half that of the average width of said panels.

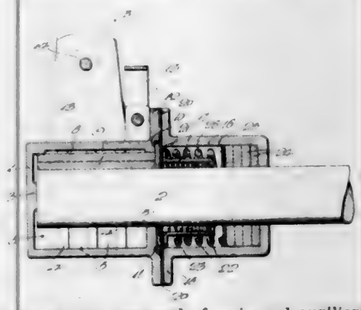
1,561,837. THERMIONIC INDICATING MEANS RESPONSIVE TO LIGHT VARIATIONS. JOHN JOSEPH DOWLING, Rathgar, Dublin, Irish Free State. Filed July 30, 1924. Serial No. 729,165. 6 Claims. (Cl. 250—2.)

1. Light responsive means of the kind referred to comprising a thermionic valve system, indicating means associated therewith, means for continuously subjecting the said system to electric current oscillations, persistence of which is necessary to prevent any indication being given that predetermined light conditions are departed from, and means automatically rendering the thermionic valve



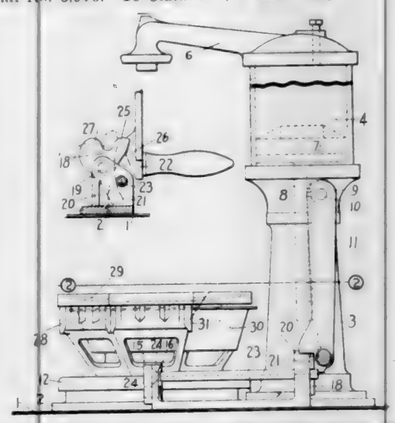
system responsive only at regular periods to the persistence of the electric oscillations to which it is continuously subjected.

1,561,838. STUFFING BOX FOR PIT BEARINGS. ORSON W. DUNHAM, Treece, Kans., assignor to Arminta A. Dunham, Baxter Springs, Kans. Filed May 11, 1923. Serial No. 638,383. 2 Claims. (Cl. 286—30.)



1. A stuffing box composed of main and auxiliary sections, said auxiliary section being disposed within said main section, packings within said sections, and a spring surrounding the auxiliary section and bearing at one end against the packing in said main section and at its opposite end against the auxiliary section to maintain the latter in place.

1,561,839. LOCK FOR FLUID-DISPENSING APPARATUS. EARL E. EICKMEYER, Dayton, Ohio, assignor to The National Recording Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 5, 1925. Serial No. 6,976. 16 Claims. (Cl. 221—72.)



1. The combination with a tank having an opening, a closure for said opening, and a pump mounted on said tank and having an operating handle, of means comprising a single lock for holding said closure and said handle against movement.

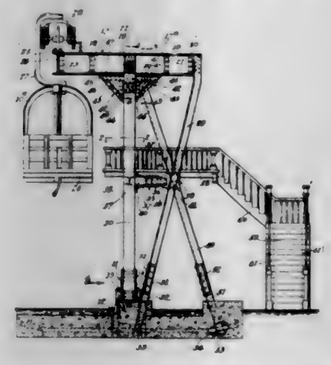
11. The combination with a pump having an operating handle, of a locking device having a part movable into and out of locking position with relation to said handle, and means for securing said part in said operative position, said locking device also having a part which is movable into and out of locking position with relation to said handle while the first mentioned part is out of locking position, said locking device being so balanced that the last mentioned part will be held in either its operative or inoperative position by gravity.

15. The combination with a tank having an opening, a closure for said opening, a pump mounted on said tank and having an operating handle, and a drip pan removably mounted on said closure, of a single lock for securing said handle against movement, retaining said closure in its closed position and preventing the removal of said pan.

1,561,840. CURTAIN AND DRAPERY PROTECTOR. ALFRED C. FAUL, Buffalo, N. Y. Filed Mar. 17, 1922. Serial No. 544,585. 2 Claims. (Cl. 156—33.)

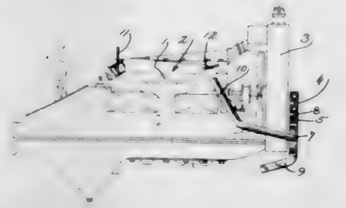
1. In a curtain protector, the combination with a window frame, of a bracket secured to the frame and having a diagonal slot disposed in a substantially horizontal plane and arranged at an acute angle to the face of the window frame, and a headed curtain-retaining rod slidable lengthwise in said slot and capable of assuming a pendent position or an extended position at an acute angle to the face of the window frame.

1,561,841. TOWER FOR SUSPENDED RAILWAYS. LEWIS A. FRYE, Los Angeles, Calif. Filed Mar. 5, 1924. Serial No. 697,015. 12 Claims. (Cl. 104—93.)



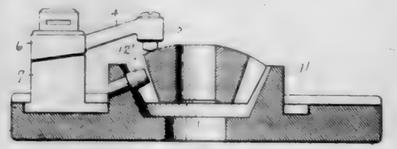
2. A tower structure for suspended railways, embodying a vertical column anchored at its base, a cantilever supported by the top of the column and extending oppocitely beyond its point of support on the column, a tension member secured to the cantilever extension and extending downwardly and inwardly towards the base of the column, and means for anchoring the tension member at a point substantially in alignment with the longitudinal axis of the column.

1,561,842. RADIATOR HEATER. CHARLES E. FULTON, Malta Bend, Mo. Filed Mar. 22, 1923. Serial No. 626,980. 1 Claim. (Cl. 123—174.)



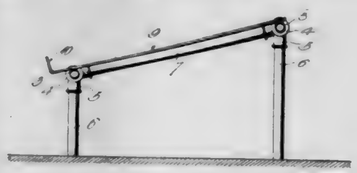
The combination with an internal combustion engine including an exhaust manifold and a radiator associated therewith; of a heater extending across the lower portion of the radiator and on the outside thereof, said heater comprising a frame formed of a single tube of metal designed square in cross-section and bent to form upper and lower horizontal tubes and vertical parallel end tubes, a plurality of spaced apart intermediate tubes connected with the end tubes to communicate with the latter, said intermediate tubes being also square in cross-section, a tubular connection between the exhaust manifold and the one end tube of the frame to convey exhaust gases to the latter, an integral extension formed on the opposite end tube of the frame directed downwardly and rearwardly of the radiator to form a discharge pipe, and cut off valves arranged in said exhaust manifold to supply the exhaust gases to the heater, as and for the purposes described.

1,561,843. CHUCK. ORLANDO GARRISON, Dayton, Ohio. Filed Aug. 27, 1923. Serial No. 659,587. 7 Claims. (Cl. 279—1.)



1. In a chuck for bevel gears, a seat therefor, a plurality of relatively fixed gear engaging studs of conical form with which the gear engages in an axial direction, carried by the supporting seat within the peripheral circle of the gear, and simultaneously engaging with the teeth of the gear upon the pitch line thereof at different radial points and means for holding the gear in engagement with the studs.

1,561,844. ROD RACK. CHARLES B. GIPSON, Tulsa, Okla. Filed June 11, 1923. Serial No. 644,744. 3 Claims. (Cl. 211—14.)

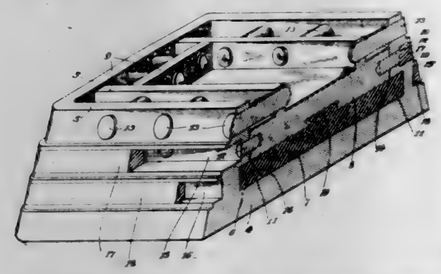


1. A portable rack for sucker rods comprising two longitudinal sections hinged together at their inner ends, whereby one section may be folded longitudinally upon the other, supporting legs having a detachable connection with said sections, the legs along one side of said sec-

tions being shorter than the legs of the other side whereby the top of the rack assumes an inclined position, and a series of transverse bars disposed at intervals across said longitudinal sections and fastened on top thereof, said transverse bars having their lower ends bent upwardly to form stops.

---

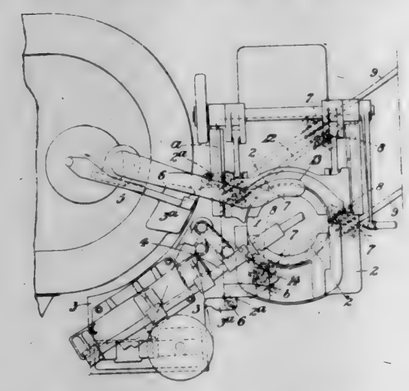
1,561,845. SAFE CONSTRUCTION. GUSTAVE M. GOLDSMITH and CARL BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed Feb. 5, 1924. Serial No. 690,723. 12 Claims. (Cl. 109—1.)



1. In safe construction, a door comprising, in combination, two interfitting metallic sections, one constituting the front and jamb edges of the door and the other constituting the rear wall of the door, a section of material having special characteristics, resistant to drill or torch, fitted into the interior of the door between said sections, and means, including pins extending through the jamb edge portions of the door and into the rear wall section, for maintaining said parts in assembled relation.

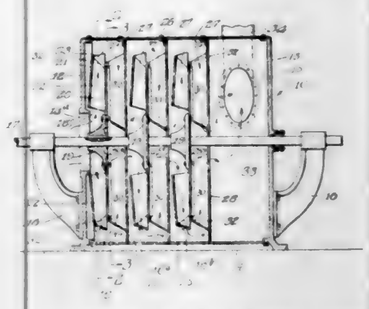
---

1,561,846. APPARATUS FOR CASTING CURVED STEREOTYPE PRINTING PLATES. BENJAMIN JOSEPH JOHN GOULDING, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a Company of Great Britain. Filed Aug. 28, 1923. Serial No. 659,731. 6 Claims. (Cl. 22—64.)



1. Apparatus for casting curved stereotype printing plates, having a molten metal delivery mouth-piece, a driving and trimming mechanism, and a plurality of interchangeable casting moulds adapted to be moved alternatively into and out of operative relationship to the said mouth-piece and mechanism each independently of another, characterized by the fact that the casting moulds can be thus moved in any order of succession.

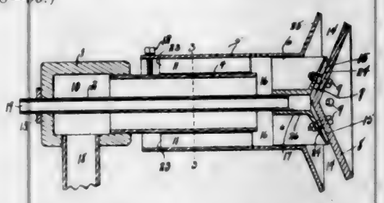
1,561,847. COMPOUND TURBINE BLOWER. EDWARD D. GREEN, Chicago, Ill. Filed Aug. 18, 1924. Serial No. 732,601. 6 Claims. (Cl. 230—11.)



1. A compound turbine blower comprising a cylindrical casing having an air inlet opening and an air discharge opening, and having a plurality of chambers separated by partition walls and connected by openings through said partition walls, a drive shaft, and fans mounted thereon, the fan blades of which have end tips that are inclined with respect to the remainder of the blades, there being one fan in each of said chambers, and located at one side thereof to leave a space at the other side thereof, the space between each fan and a partition wall being divided into an outer free and unobstructed annular air passage of relatively large cross sectional area, into which the air is deflected by said end tips of the fan blades, and a plurality of air passages leading from said annular air passage to the opening in the partition wall.

---

1,561,848. GAS BURNER. ELLIS GREEN, Mineral Wells, Tex., assignor to Fred W. Nuerwell, Tulsa, Okla. Filed Mar. 23, 1925. Serial No. 17,567. 2 Claims. (Cl. 158—99.)



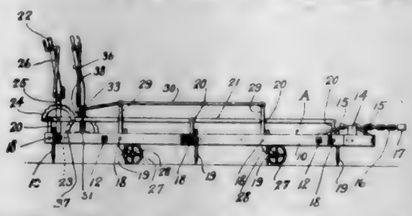
1. A burner comprising a body and a steam pipe stationary therewith, means for spreading steam consisting of a nipple screwed on said pipe and provided with a funnel-shaped flange and a spreader conforming to the contour of said flange spaced therefrom and bolted thereto, a gas directing pipe rigid with said body and concentrically arranged about said steam pipe and terminating with an open end, an air directing pipe open at both ends and concentrically arranged about said gas directing pipe and projecting beyond the gas pipe, forming a mixing chamber for air and gas and provided with a funnel-shaped flange for co-operating with said spreader and slidably mounted on said gas pipe and provided with wings spacing the air pipe from the gas pipe.

---

1,561,849. HARROW. CHARLES EDWARD GREGG, Jefferson, Pa. Filed May 31, 1924. Serial No. 717,176. 1 Claim. (Cl. 55—103.)

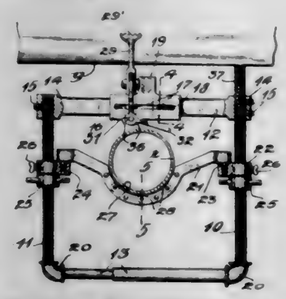
A harrow including a wheeled frame, a plurality of spaced transversely disposed bars journaled in said frame, a series of teeth carried by each bar and depending therefrom, means including a lever for adjusting said bars to vary the angle of the teeth with relation to the

ground, a yoke supporting each of said wheels, each yoke including a shank loosely mounted on one of said bars, said wheels being arranged in pairs, a connecting bar connecting the shanks of each pair of said yokes, a crank shaft journaled on the frame and having crank like extremities, links connecting the extremities with the adjacent yokes and arranged to form a continuation of said connecting bars, and a lever having a slot to receive the crank portion of said shaft, whereby said lever is utilized to adjust said wheels toward and away from the ground for the purpose specified.



---

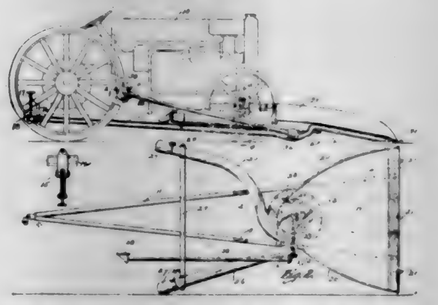
1,561,850. PIPE HANGER. LOUIS GUTTMAN, Minneapolis, Minn. Filed Feb. 23, 1923. Serial No. 620,627. 9 Claims. (Cl. 248—31.)



8. In a pipe hanger the combination with a rectangular frame comprising screw-threaded uprights connected by longitudinally adjustable cross tie bars, a suspending anchor for the frame, a pair of saddle bearings slidably mounted on the uprights, nuts on the uprights for vertically adjusting and supporting the saddle bearings, a saddle bar, and trunnions detachably securing the saddle bar to the saddle bearings.

---

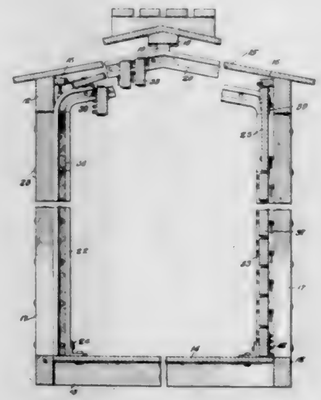
1,561,851. ROTARY SNOWPLOW. HENRY C. F. HAAGE, Akron, Iowa. Filed Jan. 30, 1925. Serial No. 5,743. 7 Claims. (Cl. 37—43.)



1. In a device of the class described, a snow shovel having an opening, a blower box below said opening and communicating with said opening, flanges on the sides of said shovel converging rearwardly so that the snow is directed into said opening, a centrifugal fan mounted within said blower box, means for rotating said fan, and outlet pipes communicating with said blower box, for the purposes stated.

---

1,561,852. BOX-CAR DOOR. LEWIS S. HARALDSON, Rowena, S. Dak. Filed Feb. 18, 1925. Serial No. 10,114. 6 Claims. (Cl. 20—32.)



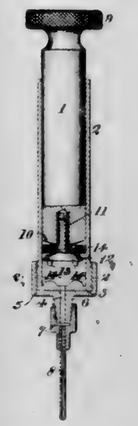
1. A device of the character described including a substantially U-shaped guide rail, a plurality of movable sections adapted to engage the said guide rails, a swinging section mounted above the uppermost of the movable sections, and means for readily opening or closing the said sections.

---

1,561,853. SUPPORTING FRAME FOR BEDSPRINGS. ROBERT B. HARRISON, Ingram, and JOSEPH SILVESTER, Pittsburgh, Pa., assignors to A. J. Logan Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 8, 1923. Serial No. 656,413. 1 Claim. (Cl. 5—209.)

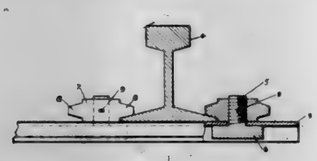
A bed spring supporting frame comprising a plurality of spaced transverse slats, contiguous slats being provided with elongated apertures disposed in alignment with each other, a supporting device pivotally suspended from and interposed between contiguous slats including a U-shaped stirrup having apertures in its terminal ears, a pivot rod extending through apertures in said ears and provided with elongated enlargements at its extremities beyond the said ears whereby to lock the rod to the stirrup, said enlargements being of such dimension as to permit passage of the same through the elongated apertures in the slats when the rod is moved to a predetermined angular relation with respect to the said apertures, the angular disposition of the elongated apertures and the enlargements being such that both enlargements cannot pass through the cooperating apertures simultaneously, the intermediate portion of the stirrup being offset to form a depression, and the inner end of the hanger being connected to the stirrup and neatly fitting within the said depression whereby to prevent pivotal movement between the stirrup and hanger.

1,561,854. ADJUSTABLE PACKING FOR HYPODERMIC SYRINGES. GEORGE N. HEIN, San Francisco, Calif. Filed Aug. 26, 1924. Serial No. 734,208. 3 Claims. (Cl. 128—219.)



1. A hypodermic syringe including a barrel substantially closed at one end providing a discharge port, a piston mounted for reciprocation and axial rotation therein, a packing retaining head threaded into the end of the piston, said piston and retaining head being provided with opposing walls affording a chamber within which a packing is positioned, said walls extending in opposite directions outwardly from each other, an elastic disk washer packing positioned within the chamber with its inner portion held between the piston end and retaining head walls and with its periphery lying parallel to the barrel surface and free to flex between the outer portions of the piston and retaining head walls, and means for affording a resistance to the head to retain the same substantially stationary on the imparting of relative rotary movement between the barrel and piston whereby the pressure of the packing against the barrel wall may be varied.

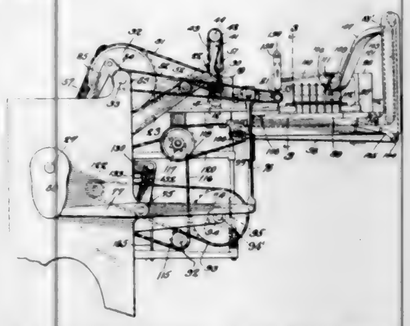
1,561,855. RAIL CLAMP. LEOPOLD F. HEPTNER, Johnstown, Pa. Filed May 20, 1925. Serial No. 31,593. 1 Claim. (Cl. 238—340.)



A rail clamp including a clamp body provided with a threaded bore and equipped with lugs the upper and lower face of each of which is tapered to conform to the shape of the base flange of a rail for engagement therewith.

1,561,856. TOBACCO-FEEDING MACHINE. ALBERT A. HEYMAN, Baltimore, Md., assignor to The Universal Cigar Machinery Co. Inc., Baltimore, Md. Filed Oct. 10, 1922. Serial No. 593,550. 22 Claims. (Cl. 131—39.)

1. In a tobacco feeding machine the combination with an apertured supporting plate, of pins having their points normally housed in the apertures, means for directing a layer of tobacco onto the plate, an apertured holding plate movable to position on the tobacco, and means for shifting the pins through the tobacco and into the holding plate.

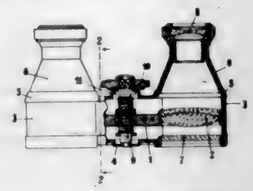


16. In feeding mechanism of the class described the combination with a delivering device, of a supporting plate, a holding plate, impaling means movable relative to the plates, a presser belt normally supported out of the paths of the plates, and separate means operating in timed relation for positioning the presser belt upon the supporting plate, directing a sheet of stock onto said plate to be conveyed by the belt along the plate, shifting the presser belt out of the paths of the plates, moving the holding plate onto the stock upon the supporting plate, impaling the stock, shifting the holding plate out of the path of the supporting plate, inverting the supporting plate above the delivering device, and releasing the stock from the impaling means.

1,561,857. TOOL FOR GUIDING AND SHAPING METAL AND THE LIKE. ERNST G. HONES, Dusseldorf, Germany. Filed June 29, 1925. Serial No. 40,454. 2 Claims. (Cl. 75—1.)

1. A tool of the character described, composed of a steel alloy containing admixtures of copper, from 0.1 to 3 per cent; zirconium from 0.1 to 3 per cent; and cobalt from 0.1 to 3 per cent.

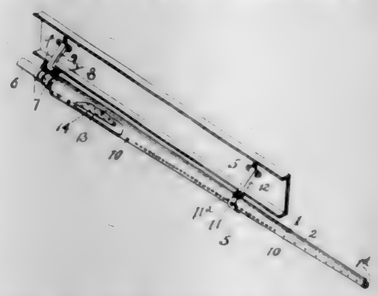
1,561,858. BINOCULAR. HEINRICH JACOB, Friedenau, near Berlin, Germany, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Feb. 4, 1922. Serial No. 534,052. 8 Claims. (Cl. 88—34.)



1. In a binocular with axially shiftable object-glasses a box-like casing, two object-glasses axially shiftably mounted therein in guiding contact with the wall of said casing and fastened to a non-rotatable carrier likewise mounted within said casing, means to shift said carrier with said object-glasses within said casing, and two ocular tubes separately and firmly mounted within said object-glass casing at a distance from each other.

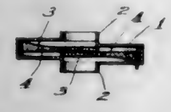
1,561,859. MUFFLER CONSTRUCTION. THOMAS S. KEMBLE, Cleveland, Ohio. Filed Nov. 12, 1921. Serial No. 514,566. 3 Claims. (Cl. 137—160.)

1. A muffler for internal combustion engines comprising an elongated tubular member adapted to be attached at one end to the engine exhaust pipe, said member forming a continuation of the exhaust conduit and serving as a pressure dissipating discharge section therefor, said member having apertures spaced longitudinally along its wall from end to end to permit escape of gases directly



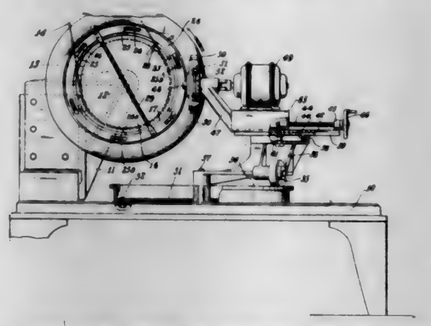
therefrom to the atmosphere whereby the pressure of each discharge is dissipated in its passage from the inlet toward the outer end of the tubular member, said apertures being greater in number per unit of area at the central portion of the tubular member.

1,561,860. OPTICAL INSTRUMENT AND LENS. JOSEPH J. KENNEBECK, Kansas City, Mo. Filed July 27, 1922. Serial No. 577,910. 9 Claims. (Cl. 88—57.)



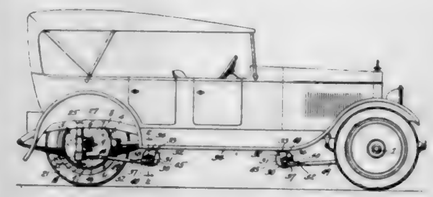
1. A guide having an aperture, a pair of duplicate lenses mounted in said guide, said lenses and aperture being so adjustably related that the combined power of the lenses when viewed through the aperture can be varied in one sign only from plano to the initial power of the lenses.

1,561,861. ABRADING MACHINE. WALDEMAR D. KMENTT, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1922. Serial No. 529,423. 17 Claims. (Cl. 51—33.)



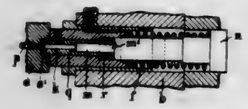
1. Apparatus for buffing an annular, rubber tire-core, said apparatus comprising means adapted to support and rotate said core upon a fixed axis, said means so fitting within the core as substantially to tension the same, an abrading wheel, and a support for said abrading wheel adapted to be swung transversely about the work.

1,561,862. JACK. WILLIAM N. KNOWLTON, Jackson Heights, N. Y. Filed Apr. 21, 1925. Serial No. 24,732. 9 Claims. (Cl. 254—86.)



1. The combination with a motor vehicle having a chassis and a body portion, and axles and wheels carried by said chassis, of means for elevating a wheel comprising a tubular housing secured to an axle and arranged substantially perpendicular thereto, and closure means for the upper end of said housing, a lining within said tubular housing having a head that abuts against the lower end thereof, means upon the upper end of said lining to engage the upper end of said housing, an externally threaded tube forming a jack element within said lining, a rod having telescopic, non-rotatable relation with said externally threaded tube, said rod being in fixed relation to said closure means, a worm gear mounted on said externally threaded tube and bearing against the lower surface of said lining head, a shaft hanger carried by said tubular housing, a worm shaft journalled in said shaft hanger and meshing with said worm gear, and means carried by said body portion for rotating said worm shaft whereby to lower or raise said externally threaded tube.

1,561,863. APPARATUS FOR MAKING IN THE COLD SCREW BLANKS, RIVETS, AND SIMILAR HEADED ARTICLES. JOSEPH KUHNE, Iserlohn, Germany. Filed Jan. 28, 1924. Serial No. 689,201. 3 Claims. (Cl. 10—26.)

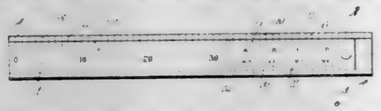


1. In an apparatus for making in the cold screw-blanks, rivets and similar headed articles, in combination; a stationary die comprising a head-forming matrix, a press-slide, a hollow plunger for inclosing the end of the stock to be upset, said plunger being slidably mounted in said press-slide, a preliminary stamping punch for pressing said stock-end out of said plunger into said head-forming matrix, said punch being guided in the bore of said plunger and resting against said press-slide, resilient means for coupling said punch and said plunger in the direction of their forward stroke, means for temporarily arresting said plunger in such a position that the distance between the bottom of said head-forming matrix and the front face of said plunger is greater than the finished height of the head to be formed, and means for positively coupling said punch and said plunger, said plunger, after being positively coupled to said punch forming together with the latter a final stamping die.

1,561,864. TABULATING SCALE FOR TYPEWRITING MACHINES. WILLIAM EDWARD LANE, St. Louis, Mo. Filed Mar. 18, 1925. Serial No. 16,541. 6 Claims. (Cl. 197—194.)

1. In a tabulating scale for typewriting machines, a flat plate of metal bent upon itself at its upper and

at its lower edge to form longitudinal flanges extending to open ends at each side portion thereof, the said plate



having formed upon one face the characters common to typewriter scales; in combination with linear graduations upon the said upper flange.

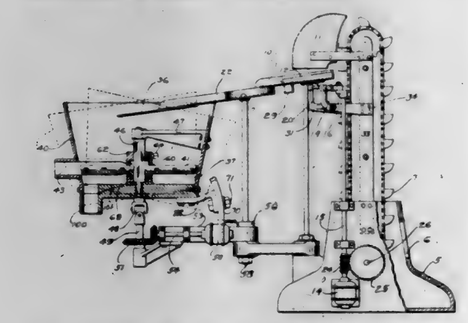
---

1,561,865. STENCIL SHEET. RICHARD LANT, Vienna, Austria, assignor to William Koreska, Vienna, Austria. Filed Nov. 16, 1922. Serial No. 601,416. 8 Claims. (Cl. 41—386.)

1. A stencil-sheet adapted for stencilization by pressure, comprising a base of open porous material with a type-impressible coating including cellulose derivatives, an oil and tallow.

---

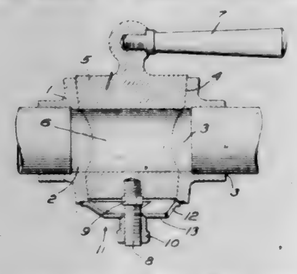
1,561,866. MATERIAL-HANDLING DEVICE. FRANK J. LARKIN, Chicago, Ill. Filed Mar. 16, 1925. Serial No. 16,029. 9 Claims. (Cl. 198—128.)



6. A material handling machine of the character specified comprising a hopper having a downwardly extending discharge spout and a gradually deepening groove for supplying material to said spout, a rotor arranged within said hopper, and a shaft extending through said rotor.

---

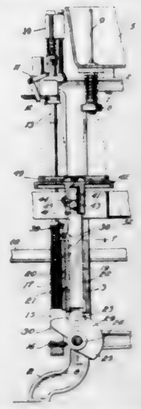
1,561,867. VALVE. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1922. Serial No. 599,619. 2 Claims. (Cl. 251—112.)



1. The combination of a valve casing having a tapered valve seat opening therethrough, a tapered valve plug operable in said seat, and means for retaining said plug in said seat comprising a stem secured in the smaller end of said plug and extending outwardly of said casing, an adjustable abutment carried on the outer portion of said stem, and a unitary compression member removably confined between said casing and said abutment, said member having spaced radial arms yieldingly abutting said casing and exposing the end of said plug therebetween, said member also having a slot in its center portion adapted to receive said stem and to permit the lateral withdrawal of said member from normal position of confinement, said member being recessed at the inner end of said slot for engagement with said abutment.

---

1,561,868. BOTTLE FILLING AND CAPPING MACHINE. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1923. Serial No. 665,988. 6 Claims. (Cl. 226—76.)



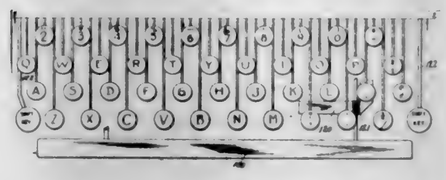
1. Apparatus of the class described comprising, in combination, a stationary supply tank, a plurality of filler valves supported on said tank and communicating therewith, a plurality of capping heads positioned in front of and normally above said filler valves, a vertically reciprocatory bar supporting said capping heads, a pair of upright reciprocatory rods carrying said support at their upper ends, a bridge member rigidly connecting their lower ends, resilient means for maintaining said rods in uppermost position, a revoluble table, a vertically reciprocatory support for said table, a rock-shaft, and a cam on the rock-shaft operable thereby to successively engage and raise said table support and to engage and depress said bridge member.

---

1,561,869. CAR SEAL. MARTIN J. LINS, St. Paul, Minn. Filed Jan. 5, 1924. Serial No. 684,587. 5 Claims. (Cl. 292—323.)

1. A car seal comprising a band having a housing thereon and a tongue adapted to be inserted into said housing, a locking plate fitting within said housing and permitting said tongue to be thrust into said housing to the limit of its initial inward movement, said tongue and plate having means for interlocking when said tongue is pulled backwardly a predetermined distance after its initial inward movement for moving said plate inwardly upon the second inward movement of said tongue, and said housing and said plate having means for interlocking to prevent backward movement of said plate and tongue at the completion of the second inward movement of said tongue.

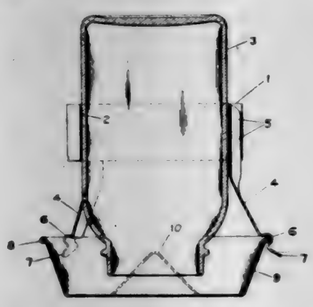
1,561,870. WORD-COUNTING ATTACHMENT FOR TYPEWRITERS. LOUIS M. LLORENS, Los Angeles, Calif., assignor to Automatic Word Counter, Inc., a Corporation of New York. Filed Oct. 12, 1922. Serial No. 594,214. 29 Claims. (Cl. 235—102.)



1. In a typewriter having a keyboard, a counting means for registering the actions of the typewriter in the writing of words or word equivalent, mechanism actuated by elements of the keyboard and operative upon the counting means, and a cut-out key for rendering said mechanism inoperative upon the counting means so that the keyboard elements may be actuated once only independently of the counting means, thereafter automatically returning to registering position.

---

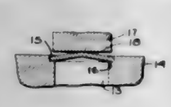
1,561,871. BUTTERMILK FEEDER FOR CHICKS. FRED W. LORD, Tipton, Ind., assignor to The Oaks Manufacturing Company, Tipton, Ind., a Corporation of Indiana. Filed Apr. 29, 1925. Serial No. 26,742. 1 Claim. (Cl. 119—77.)



A feeding device comprising a resilient corrugated band, a receptacle clamped thereon, a pan, and means for supporting said ring member carrying the receptacle in adjusted relation to said pan.

---

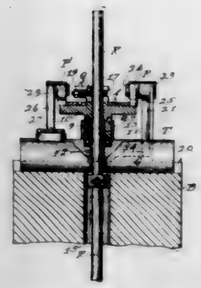
1,561,872. PROCESS OF PERMANENTLY SEALING AN APERTURE AND THE SEAL THEREFOR. RALPH M. LOVEJOY, Boston, Mass. Filed Mar. 26, 1925. Serial No. 18,469. 1 Claim. (Cl. 292—307.)



A closure for an aperture, the wall of which is provided with a cylindrical countersink, comprising a plate of rigid material, having a permanent set when expanded, of uniform thickness and of slightly conical form in which the outer and inner surfaces of the wall of the plate correspond respectively to paths of revolutions of straight lines about the outer and inner apexes of the conical plate.

---

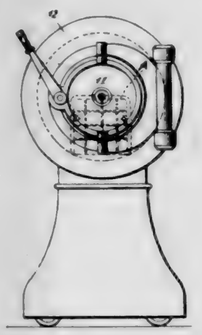
1,561,873. PUMP-ROD RATCHET FOR OIL WELLS. ERNEST E. LYNCH, Taft, Calif. Filed May 29, 1923. Serial No. 642,161. 2 Claims. (Cl. 255—14.)



1. In a device of the character described a walking beam, a T pivotally mounted thereon and having an extension on the upper side thereof, a bore in said extension, a bearing in said bore, a ratchet having a hub extended into said bore in contact with said bearing, a bracket mounted on said T, a pawl pivotally mounted on said bracket and engaging said ratchet, a bracket mounted on said beam, and a pawl pivotally mounted on said last mentioned bracket and engaging said ratchet whereby when said T is rocked on said beam said ratchet will be correspondingly rotated.

---

1,561,874. SAFE. WILLIAM C. MACFADDEN, Fargo, N. Dak. Filed Aug. 29, 1924. Serial No. 734,929. 3 Claims. (Cl. 109—4.)



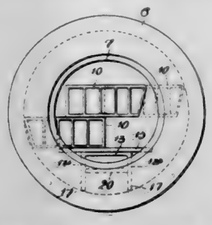
1. In a device of the class described the combination with a safe having a door, of a receptacle to be guarded adapted to be inserted through said door, said receptacle being disposed in spaced relation with the top of the safe, and a protective casing on the top of said receptacle, the front thereof being open to allow access to the contents through said door.

---

1,561,875. ATTACHMENT FOR SAFES. WILLIAM C. MACFADDEN, Fargo, N. Dak. Filed Oct. 17, 1924. Serial No. 744,174. 7 Claims. (Cl. 109—4.)

1. The combination with a safe having a restricted door opening in the front thereof, of a steel receptacle formed in separable sections adapted to be severally inserted

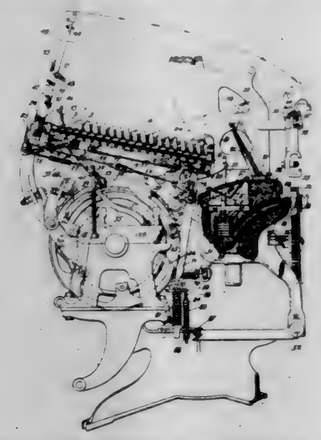
through said opening and extending from the front to the rear of the interior of the safe, the interior of said re-



ceptacle being readily accessible through said door opening, and a support formed to maintain said receptacle in spaced relation to the top of the safe.

---

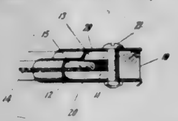
1,561,876. CRUCIBLE CHARGER. GEORGE E. MARLATT, Pasadena, Calif. Filed Aug. 8, 1922. Serial No. 580,448. 27 Claims. (Cl. 22—80.)



1. In a crucible charger, in combination, a melting pot to be replenished, an inclined semi-gravity support for pigs of replenishing metal for said pot, and a pair of coacting conveyer screws inclined with said support toward said melting pot for conveying the pigs of feed metal thereto, successive turns of the threads of said screws engaging successive pigs of metal so that said pigs of metal may be either advanced and released individually into the melting pot or retarded against gravity regardless of the inclination of their support.

---

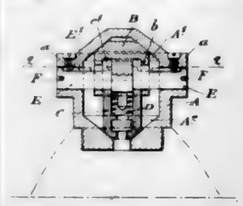
1,561,877. WINDOW SCREEN. CLEMENT S. MARTIN, Rockville, Md. Filed Apr. 24, 1925. Serial No. 25,638. 5 Claims. (Cl. 156—14.)



1. A frame of the character described having flanges at its inner edges projecting toward the center of the frame, the flanges at one side being wider than those at the opposite side and defining an opening of smaller size than the opening defined by the lastnamed flanges, in order that a panel slightly larger than the firstnamed opening may be inserted through the secondnamed opening and placed against the firstnamed flanges, and strips to fit tightly between said flanges and clamp the panel against the firstnamed flanges by movement away from the center of the frame.

---

1,561,878. FUSE. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Apr. 4, 1925. Serial No. 20,819. 7 Claims. (Cl. 102—39.)



7. A device of the class described comprising a body portion having a chamber therein, a primer holder, a striker having sliding telescopic engagement with the holder, said striker and holder being positioned in said chamber, one or more locking bolts having notches and grooves therein, means secured to the body portion and extending into said grooves, and resilient means secured to the body portion and having engagement with said bolt or bolts for normally maintaining the same between said holder and striker, one of the latter being adapted to engage the notched portion of said bolt or bolts.

---

1,561,879. WATCHCASE BEZEL. CHARLES E. MILLER, Edgewood, R. I., assignor to Payton & Kelley Co., Providence, R. I., a Corporation of Rhode Island. Filed Aug. 21, 1924. Serial No. 733,307. 2 Claims. (Cl. 58—91.)

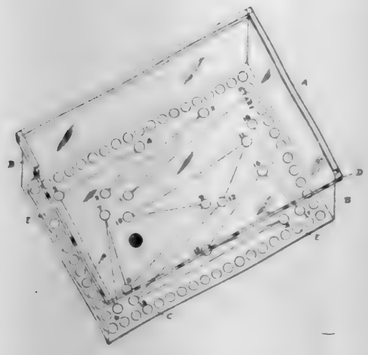
1. In a watch casing, a bezel-rim having an inturned flange about its outer edge, a crystal in said rim seated against the inner face of said flange, a bezel-frame seated about the edge of the crystal, and a set of bendable fingers on said flange adapted to be bent over into engagement with said frame and bind the crystal edge against said flange.

---

1,561,880. LOCKING NUT. MARK MORRISON, London, England, and THOMSON DENHOLM VASS and ARTHUR CHURCHILL FISHER, Vereeniging, Transvaal, South Africa. Filed Mar. 29, 1924. Serial No. 702,852. 1 Claim. (Cl. 151—19.)

A device for locking together complemental internally and externally threaded members, comprising a spring washer which is formed with radial slits to divide it into helical segments, and a central flange projecting from the washer and adapted to encircle the externally threaded member, said flange being formed with longitudinal slits to divide it into resilient segments adapted to be compressed radially directly into engagement with that member by the internally threaded member, the longitudinal slits being disposed out of alinement with the radial slits so that the device as a whole forms an unbroken annulus.

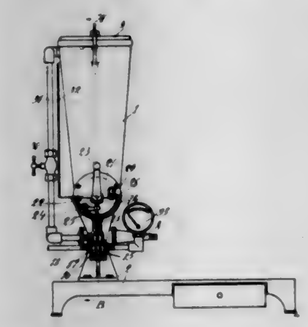
1,561,881. POCKET GOLF. CARL THEODOR OSTERBERG, Milwaukee, Wis. Filed Mar. 7, 1921. Serial No. 450,430. 7 Claims. (Cl. 273—87.)



1. A pocket golf game constituted as a box closure and comprising a ball and an enclosed field on which is laid out a golf course embracing a plurality of consecutively numbered holes, the said holes constituted as perforations in the bottom of the box to permit a portion of the ball to project therethrough to enable the ball to be dislodged from a hole by a stroke by the finger of the player from the underside.

---

1,561,882. MACHINE FOR PRODUCING MOLDING CORES. KNUT GUNNAR VALLENTIN PETTERSSON, Vasteras, Sweden. Filed July 7, 1924. Serial No. 724,722. 4 Claims. (Cl. 22—10.)

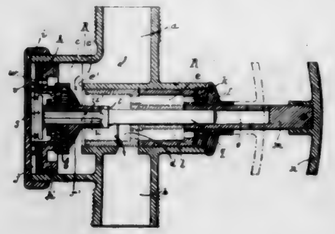


1. Machine for producing molding cores by means of core boxes, including a container for molding sand, an injector joined to the outlet of the container and using compressed air for throwing the sand out from the container into the core box, and an adjustable hand-valve for the injector arranged in such a manner as to be opened and closed intermittently or slowly, as desired, in order that small quantities of sand may be intermittently thrown into the mold.

---

1,561,883. LIQUID AND LIKE TAP. AIMÉ PILLON and ETIENNE RAVAZ, Oullins, France. Filed Oct. 26, 1921. Serial No. 510,531. 2 Claims. (Cl. 137—144.)

1. In a valve for predetermined delivery of a fluid and automatic closure, a chamber for the passage of fluid, an inlet pipe and discharge pipe in communication with said chamber, a piston valve to close said chamber, a closing device provided with a handle to close the discharge opening, a hollow rod between said handle and the closing device, a rod slidable in the hollow rod of the closing



device and connected with the piston valve which closes the first named chamber, and means for acting successively on the closing device and on the piston valve.

---

1,561,884. WHEELED TOY. CARL V. POHLSON, Pawtucket, R. I. Filed Feb. 24, 1925. Serial No. 11,133. 6 Claims. (Cl. 46—45.)

1. A toy vehicle comprising spaced wheel-carrying axles, a flexible element extending between said axles, concavo-convex body body sections strung on said element forming a body simulating the scales of a reptile and spacing members intermediate the body sections.

---

1,561,885. GREASE CARTRIDGE. ROBERT CORNELL PORTWAY, Beckenham, England. Filed Mar. 6, 1925. Serial No. 13,525. 2 Claims. (Cl. 206—56.)

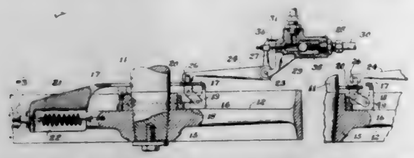
1. A grease gun cartridge case of variable diameter comprising a split tubular member having its longitudinal edges beveled and freely overlapping, said case being initially of less diameter than that of the barrel of the gun for which it is intended and said overlapping beveled edges being so proportioned as to abut against each other when the said case is diametrically expanded in the gun barrel.

---

1,561,886. SPEED-RESPONSIVE DEVICE. WARD RAYMOND, Easton, Pa., assignor to Pennsylvania Pump & Compressor Company, Easton, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1923. Serial No. 664,942. 7 Claims. (Cl. 264—15.)

1. A speed responsive device comprising in combination, a spring retained centrifugal element, a main driving shaft, a plurality of parallel pivotally mounted links obliquely disposed for attaching said element to the

shaft whereby movement radially of said element moves said element a short distance axially of said shaft, means contacting with an integral portion of said centrifugal



element and operated by the axial movement of said element to control a valve, and means to operate said valve when the centrifugal element moves away from axis of rotation.

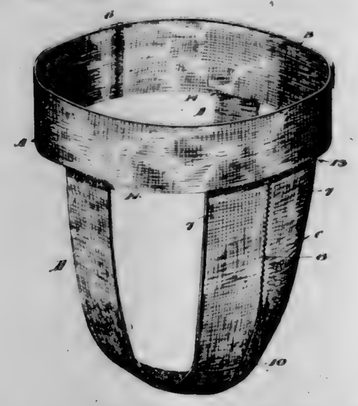
---

1,561,887. CUE TIP. JOHN W. STALDER, Lincoln, Nebr., assignor of one-fourth to Carl Steckelberg, Lincoln, Nebr. Filed Mar. 18, 1925. Serial No. 16,491. 1 Claim. (Cl. 273—70.)

In a cue, a stick having a reduced end, a ferrule threadedly secured upon said end and having a tool receiving opening therein, a beveled shoulder at the inner end of the reduced end, a beveled inner end for the ferrule to engage over said shoulder, a thimble, a tip threadedly engaging one end of the thimble and a reduced coupling section at the opposite end of the thimble for removable engagement with the outer end of the ferrule.

---

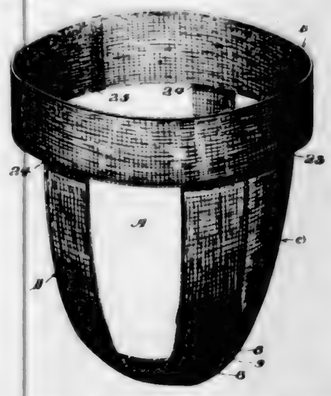
1,561,888. ATHLETIC SUPPORTER. JOSEPH L. STENGEL, Middlesboro, Ky., assignor to Martin-Page Company, Middlesboro, Ky., a Corporation of Kentucky. Filed May 23, 1925. Serial No. 32,395. 8 Claims. (Cl. 128—160.)



7. In a reversible athletic supporter formed from cut sections of elastic webbing, the combination with a waist band, sections of a pouch having its upper cut edge disposed in abutting relation to the lower edges of the band and stitched thereto, side straps connecting the waist band and pouch, the upper cut ends of the straps being disposed in abutting relation to the lower edge of the waist band and connected thereto, the lower ends of the straps being disposed in abutting relation to the lower edge of the pouch, and separate lines of stitches respectively extending transversely of certain of the sections adjacent the cut ends thereof to anchor the elastic parts of said sections.

---

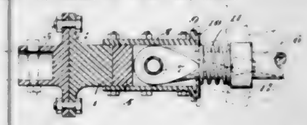
1,561,889. METHOD OF FORMING ATHLETIC SUPPORTERS. JOSEPH L. STENGEL, Middlesboro, Ky., assignor to Martin-Page Company, Middlesboro, Ky., a Corporation of Kentucky. Filed May 23, 1925. Serial No. 32,396. 10 Claims. (Cl. 128—160.)



1. The method of forming a pouch for athletic supporters consisting in first cutting two sections from an elastic webbing, then cutting the lower portion of each section on a curve extending from one side edge of the section to the other and covering said cut edge with a line of covering stitches which engage and anchor the elastic parts of the webbing, then positioning said sections side by side with their edges abutting, and finally joining said sections along their meeting edges and their curved cut edges by a line of stitches.

---

1,561,890. UNIVERSAL JOINT. JOSEPH A. TRAYLOR, Camp Meade, Md. Filed Mar. 19, 1923. Serial No. 626,179. 2 Claims. (Cl. 64—91.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

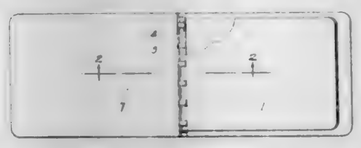


1. A universal joint, embodying a circular casing provided with an aperture, means for connecting the casing to a rotatable element, a yoke fitting within the casing, a shaft pivotally connected to the yoke and passing through the aperture, flanged plates closing the casing, a disc surrounding the shaft and resting on the casing and flanges and means carried by the shaft for holding the disc in close sliding contact with the casing and flanges.

---

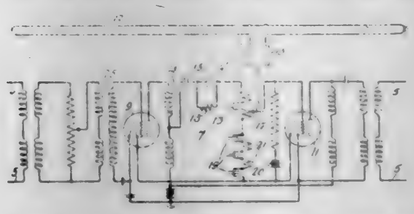
1,561,891. REFILL BOOK. EMORY A. TRUSSELL, Grand Rapids, Mich., assignor of one-third to Clarence D. Trussell, Poughkeepsie, N. Y. Filed Mar. 13, 1924. Serial No. 698,817. 3 Claims. (Cl. 281—19.)

1. A refill book including in combination a refill pad of leaves with a binder holding them together and a fastening means comprising flanges within which the binder can be inserted endwise, the sides of said fastening means being contracted at one end to stop the binder in a central position and hold it there.



---

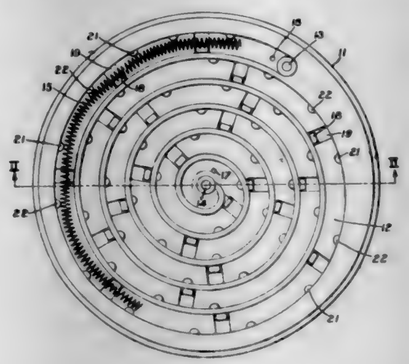
1,561,892. REGULATING REPEATER SYSTEMS. DONALD F. WHITING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1921. Serial No. 445,075. 50 Claims. (Cl. 179—171.)



1. The combination with an amplifier having input terminals and a source of electromotive force for said terminals of a potentiometer adjustable to different settings for causing changes in the electromotive force impressed on said terminals, said potentiometer comprising means for causing said changes in electromotive force to vary with frequency for a given change in the potentiometer setting.

---

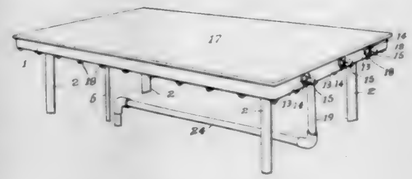
1,561,893. REFRACTORY HEATER PLATE. CLARENCE W. WILLIAMS, East Palestine, Ohio. Filed Jan. 30, 1924. Serial No. 689,467. 12 Claims. (Cl. 219—37.)



2. A refractory heater plate having a groove in one face thereof for receiving a resistor member, and embodying means for retaining the resistor member in said groove, said means permitting the free movement of said resistor into said groove in a direction substantially at right angles to the face of said plate, and embodying other means for holding the resistor member in its proper operative position in said groove.

---

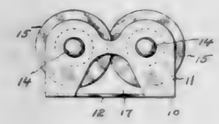
1,561,894. CANDY-COOLING TABLE. WILLIAM G. WILSON, Stratford, Conn. Filed Oct. 29, 1924. Serial No. 746,624. 1 Claim. (Cl. 257—257.)



A candy cooling table comprising a pan, a top secured over said pan by water tight means, a water supply pipe led into said pan, cross pipes within the pan at one end thereof and in communication with said supply pipe, straight parallel and removable distributing pipes leading from the cross pipes and extending through the opposite ends of said pan and having water tight closures at their free end and provided with water discharge orifices, and an overflow pipe leading into said pan and with its mouth extending above said orifices.

---

1,561,895. KNIFE SHARPENER. HERMAN L. WITTSTEIN, New Haven, Conn., assignor to The Atlas Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 2, 1925. Serial No. 6,331. 1 Claim. (Cl. 76—87.)



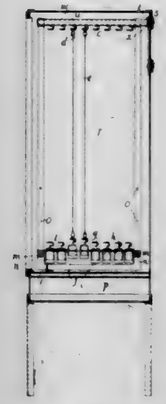
A knife sharpener composed of a flat base of relatively considerable length and width, parallel sides extending upwardly from the base and having openings of a size to readily admit a cleaning cloth, a pair of pins carried by the sides and extending transversely of the base, rolls carried by the pins, and lateral feet extending outwardly from the sides of the base and having openings to receive fastenings, said feet being disposed in the plane of the base and said rolls being spaced a distance above the base, whereby to enable cleaning of the base by movement of a cloth laterally of the base and through the openings of the sides and beneath the rolls, the ends of the sides terminating at the sides of the base so as to enable a cloth to be moved longitudinally of the base and beneath the rolls, the rolls being overlapped in a line coextensive with a line bisecting the feet, so as to cause the sharpening movements of the knife to occur in the vertical plane in which the last mentioned line lies.

---

1,561,896. DRYING APPARATUS. HARRY SIDNEY WOOD, London, England. Filed Aug. 26, 1924. Serial No. 734,183. 2 Claims. (Cl. 34—26.)

1. An apparatus for holding photographic films during the process of drying comprising an upper fixed member, carrying a standard, with a suspension hook on its upper surface and a series of hooks on its lower surface to which films are attached by means of clips at their upper ends, the lower ends of said films being secured by clips to a series of tension hooks provided with legs that pass freely through holes in a lower movable member and

carry weights whereby the films are maintained in a taut condition between the upper and lower members, the said movable member being capable of adjustment on the



standard and fixed in the required position according to the length of the film to be dried substantially as described.

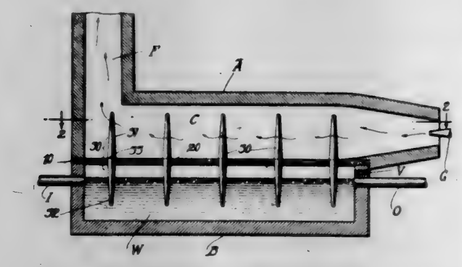
---

1,561,897. AUTOMOBILE TIRE-CHAIN CONNECTER. CHESTER T. ALLCUTT and HARRY R. VAN DEVENTER, Pittsburgh, Pa. Filed Feb. 6, 1922. Serial No. 534,334. 15 Claims. (Cl. 267—74.)

1. A device for connecting the ends of a vehicle tire chain comprising an extensible structure normally resiliently biased to contracted condition, means for holding the same in extended position and means for automatically locking the structure in contracted condition when released from said held position.

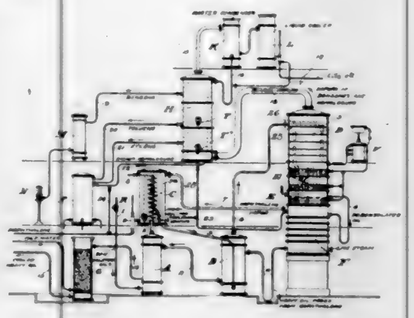
---

1,561,898. APPARATUS FOR CONCENTRATING LIQUIDS. FRANK L. ANTISELL, Perth Amboy, N. J. Filed Feb. 17, 1923. Serial No. 619,618. 12 Claims. (Cl. 159—29.)



8. Apparatus of the type described which comprises a combustion chamber, a chamber adapted to contain liquid, a partition separating said chambers above the normal level of liquid in said liquid chamber, and heat conducting elements extending from said combustion chamber through said partition sufficiently to dip into liquid when contained in the liquid chamber.

1,561,899. PROCESS FOR EXTRACTING BENZOLS FROM HEAVY OILS. EMILE AUGUSTIN BARBET, Paris, France. Filed Mar. 21, 1921. Serial No. 454,214. 1 Claim. (Cl. 196—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A process which comprises progressively heating a mixture including a heavy nonvolatile oil containing absorbed materials normally present as vapors in coke oven gas, first by the heat of the out-going stripped oil and by the vapors carrying naphthalene coming from the high heating of such oil as set forth below, thereafter running the somewhat preheated oil through a column still including a rectifying column and first heating the same by indirect steam heat to about 160° C., while drawing off the evolved vapors of the lower part of the rectifying column through which such vapors rise, further heating the unvolatilized oils by blowing therein superheated steam capable of raising the temperature of said oils to vaporize the naphthalene, and drawing off the mixed vapors containing naphthalene and superheated steam and cooling such vapors by indirect cooling with the lukewarm incoming oils, such vapors being kept separate from those passed through the rectifying column.

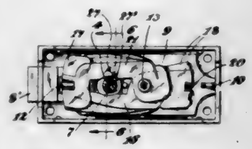
---

1,561,900. NICKEL-PLATED ARTICLE. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, New York, N. Y., a Corporation of West Virginia. Filed Mar. 20, 1924. Serial No. 700,715. 3 Claims. (Cl. 204—1.)

1. A nickel-plated article composed of a ferrous alloy containing sufficient chromium to render it substantially non-rusting under atmospheric conditions.

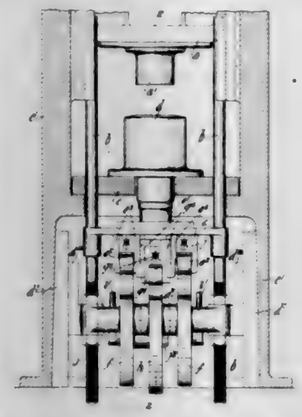
---

1,561,901. LOCK. EDGAR M. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Aug. 5, 1924. Serial No. 730,133. 5 Claims. (Cl. 70—72.)



1. In a lock of the character described, in combination, a pin, a plurality of tumblers commonly pivoted on said pin, a key tube, some of said tumblers being operable in one direction by one key when placed in said key tube and rotated in one direction and others of said tumblers being operable in the opposite direction by another key when placed in said key tube, and rotated in a direction opposite to said rotation of the other key.

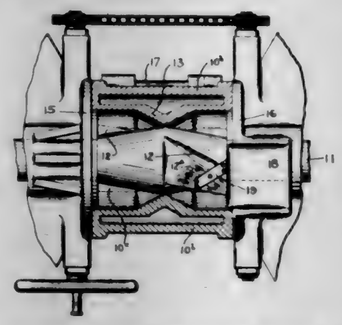
1,561,902. PRESS FOR DRAWING SHEET METAL. GEORGE WILLIAM BERRY, Wakefield, England, assignor of one-half to Charles Joseph Rhodes, Wakefield, England. Filed Feb. 29, 1924. Serial No. 695,931. 13 Claims. (Cl. 113—46.)



1. In a press for drawing sheet metal, reciprocatory and stationary co-operating dies, the stationary die comprising a fixed central member and a plurality of concentrically arranged members movable relatively to said central member and one relative to the other through the movement of the reciprocatory die, cams pivotally supported to have movement on an axis transverse to the direction of movement of the dies to control the movement of said members and place said members under a constant force to resist the movement thereof by the reciprocatory die, said cams being adapted to be reciprocated by the reciprocatory die in unison therewith, and means operative through the reciprocatory movement of the cams to effect actuation of the cams and movement of the movable members in successive sequence by the movement of the reciprocatory die.

---

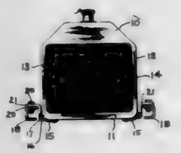
1,561,903. MACHINE FOR TREATING RUBBER OR OTHER PLASTIC MATERIAL. DAVID R. BOWEN, Ansonia, and CARL F. SCHNUCK, New Haven, Conn., assignors to Farrel Foundry & Machine Company, Ansonia, Conn., a Corporation of Connecticut. Original application filed July 11, 1919. Serial No. 310,020. Divided and this application filed Feb. 10, 1922. Serial No. 535,651. 11 Claims. (Cl. 18—2.)



7. A rubber mixer or like machine having a working chamber consisting of a single cylinder presenting a closed circumferentially extending cross-section at its middle portion and substantially throughout its length, a rotor for working the material back and forth in the cylinder against the inner surface of its cylindrical wall, a gravity-feed hopper on the end of the cylinder leading directly into the cylinder and providing for the charging by gravity of the entire mass of material to be treated, into said cylinder, said cylinder having a swingable wall section providing for the discharge thereof at its lower part.

---

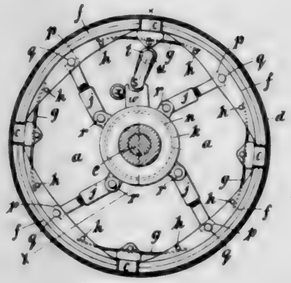
1,561,904. RADIATOR SUPPORT. GIUSEPPE BRACALE, New Haven, Conn., assignor to The G & O Manufacturing Company, New Haven, Conn. Filed Oct. 17, 1921. Serial No. 508,162. 4 Claims. (Cl. 180—68.)



1. In a vehicle, a frame provided with spaced frame members, brackets, each having a horizontal portion loosely secured upon the upper surface of one of the frame members and a vertical portion depending from said horizontal portion, a radiator body having a case member at the lower portion thereof, plates rigidly attached upon the lower side of the case member and projecting laterally beyond the sides of the radiator, and means for pivotally connecting said plates to the depending portions of said brackets to allow the radiator body to be relieved from lateral strains due to the differences in level between the upper surfaces of said respective frame members.

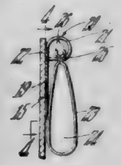
---

1,561,905. BRAKE. DONALD BROWN, Newcastle-upon-Tyne, England. Filed Oct. 8, 1923. Serial No. 667,151. 4 Claims. (Cl. 188—78.)



1. A brake comprising a brake drum, floating brake shoes oppositely disposed within said drum and normally out of engagement with the internal periphery thereof, fixed stops within said drum between said shoes but separate therefrom, the ends of said shoes coacting with said stops to limit rotation of said shoes when they come into action, pins near the ends of said shoes, springs for retracting said shoes carried by said fixed stops and bearing freely on said pins, and means for moving said shoes into engagement with the internal periphery of said drum, said means permitting the angular movement of the shoes whereby they are enabled to automatically adjust themselves to said periphery to compensate for wear.

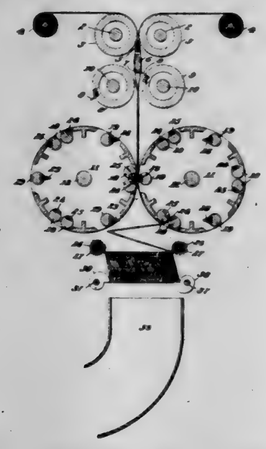
**1,561,906. CASE FOR KEYS AND THE LIKE.** WARNER R. BUXTON, Longmeadow, Mass., assignor to Buxton, Incorporated, a Corporation of Massachusetts. Filed May 19, 1922. Serial No. 562,132. 8 Claims. (Cl. 150—40.)



8. A key holding device which includes a plate having a slot therein adjacent one edge and an enlarged portion at one end of said slot, the portion of the plate adjacent said edge being bent around so that the enlarged portion of the slot is located at the rear of the plate, a key supporting element having an enlarged head to be inserted in the enlarged portion of said slot and then moved to lie in the smaller portion of the slot, and a folder to which said plate is fastened, the rear portion of the plate having the enlarged portion of the slot therein adapted to lie against the folder to substantially close the slot, whereby the element supporting the keys can move and rotate in the slot but is prevented from being removed therefrom.

---

**1,561,907. SHEET-INTERFOLDING MACHINE.** WILLIAM H. CANNARD and GLENN A. SHAFFER, Green Bay, Wis., assignors to said Cannard. Filed Sept. 29, 1921. Serial No. 504,023. 53 Claims. (Cl. 270—39.)

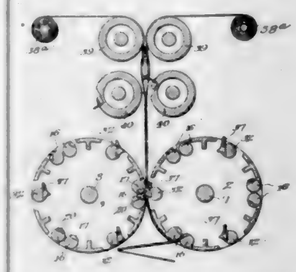


1. A sheet interfolding machine comprising a plurality of coacting drums, each drum being rotatable and having thereon pinch rolls and a pusher in alternate arrangement, one of the pinch rolls being rotatable and making a revolution to each revolution of the drum which carries it; and means for rotating the drums whereby a pusher on one drum will always coact with the pinch rolls on the other drum, these members being brought into operative relationship by rotation of the drums.

---

**1,561,908. INTERFOLDING MACHINE.** WILLIAM H. CANNARD and GLENN A. SHAFFER, Green Bay, Wis., assignors to said Cannard. Filed Aug. 16, 1924. Serial No. 732,422. 16 Claims. (Cl. 270—39.)

1. An interfolding machine including a plurality of intergeared drums, driving means associated therewith for effecting rotative movement of the drums in opposite directions, a plurality of sets of pinch-members on each drum, a plurality of rotatable tucker-members on each drum in alternate arrangement with respect to each set of pinch-members thereon, mechanism associated with and controlled by the driving means for rotating each tucker-member on its own axis and thereby maintain it in predetermined relation to the axis of the



drum by which it is carried and thereby accurately position it in respect to the bight-space between a set of pinch-members on another of the drums as that set is, by rotation of the drum, brought into register with the tucker, and independent mechanism associated with and active on each set of pinch-members for actuating the members of the set simultaneously and in respect to each other.

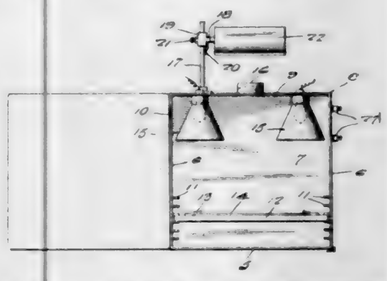
---

**1,561,909. METHOD FOR PRODUCING FLUID MEDIUMS OF HIGH DENSITY.** THOMAS M. CHANCE, Philadelphia, Pa. Filed Dec. 29, 1924. Serial No. 758,783. 3 Claims. (Cl. 83—85.)

1. A method for producing and maintaining fluid mediums of relatively high density, which consists in agitating a mixture of liquid and comminuted solid matter heavier than said liquid and substantially insoluble therein by a supply of said liquid introduced under pressure in the region at the lower part of said mixture, whereby a fluid medium of relatively high density is produced and maintained and whereby the smaller and lighter particles of said comminuted solid are continuously carried up through said fluid medium to form an upper division of said agitated mixture, in removing said smaller and lighter particles from said upper division and in introducing said smaller and lighter particles into said fluid medium at a region materially lower than the top of said fluid medium.

---

**1,561,910. PRINTING PROJECTOR.** THOMAS FRANK CHEANEY, Fort Lauderdale, Fla. Filed May 4, 1925. Serial No. 27,824. 4 Claims. (Cl. 88—24.)



1. A printing projector of the class described, including a casing formed from a bottom, ends, sides slanting upwardly toward each other, and a top, cleats

on the ends interiorly of the casing, a panel supported in said cleats, sources of illumination suspended from the top in the casing for directing rays of light onto the object on the panel, a lens disposed in the top between the sources of illumination to receive the image from the object, and project it outwardly of the casing.

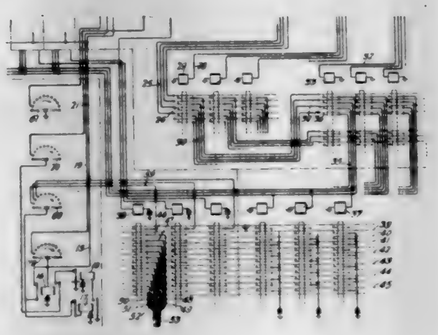
---

**1,561,911. METHOD OF REMOVING FREE SULPHUR FROM GREASE.** HUGH CHRISTISON, Methuen, Mass., and CLARENCE L. NUTTING, Salem, N. H., assignors to Arlington Mills, Lawrence, Mass., a Corporation of Massachusetts. Filed June 3, 1921. Serial No. 474,850. 6 Claims. (Cl. 87—12.)

1. The method of removing free sulphur from grease by heating and simultaneously agitating their mixture with an aqueous solution of a neutral alkali-sulphite in sufficient quantity to exhaust such free sulphur by chemically uniting therewith to become converted into a thiosulphate of the same alkali, and by subsequently separating the grease from the water holding in solution the alkali-thiosulphate thus formed, by means adapted to effect their assumption of relative positions according to their respective differences in specific gravity.

---

**1,561,912. REGISTERING SYSTEM.** EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1922. Serial No. 568,747. 18 Claims. (Cl. 179—18.)

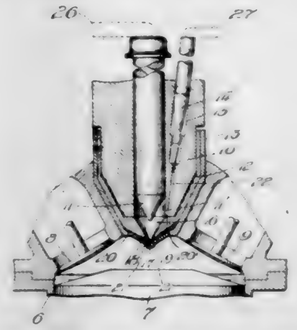


1. In a registering system, a translating device comprising a receiving and transmitting section, means to record a multi-digital registration on said receiving section, a registering device, a multi-contact relay in said transmitting section, and means to selectively position said registering device in accordance with said multi-digital registration in response to the energization of said last mentioned relay.

---

**1,561,913. OIL ENGINE.** CLESSIE L. CUMMINS, Columbus, Ind., assignor to Oil Engine Development Company, Columbus, Ind., a Corporation of Indiana. Filed July 30, 1924. Serial No. 729,143. 17 Claims. (Cl. 123—33.)

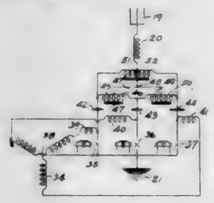
1. In an oil engine, the combination of a cylinder and a piston operable therein, a fuel vaporizing and injecting device comprising a chamber having restricted openings between it and the combustion space of the cylinder, a plunger operable in said chamber, means for discharging a charge of liquid fuel directly into said chamber and at a point where it forms a pool over said openings so that the charge of fuel is heated, vaporized and mixed with the air forced from the combustion space into said chamber through said openings, and means



for operating said plunger to eject the entire gasified mixture of air and fuel from said chamber through said communicating openings into said combustion space.

---

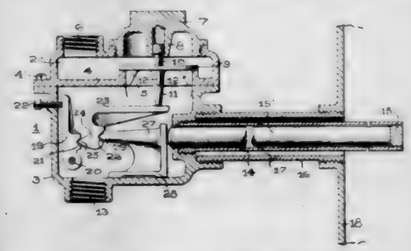
**1,561,914. RADIOFREQUENCY SYSTEM.** HAROLD F. ELLIOTT and JAMES ARTHUR MILLER, Palo Alto, Calif., assignors, by mesne assignments, to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Jan. 9, 1922. Serial No. 527,884. 8 Claims. (Cl. 250—36.)



1. In a radio frequency electrical system, means including a plurality of arcs operating in branch circuits for producing high freqency oscillations, an impedance in series with each arc of such value that it forms substantially all of the impedance in the branch circuit, and means for preventing cross currents between the arcs, comprising a device arranged to consume a substantial amount of energy when cross currents exist.

---

**1,561,915. AUTOMATIC GAS-CONTROL SNAP VALVE.** JOHN ELLIS, Westview, Pa. Filed Sept. 19, 1922. Serial No. 589,146. 6 Claims. (Cl. 236—102.)

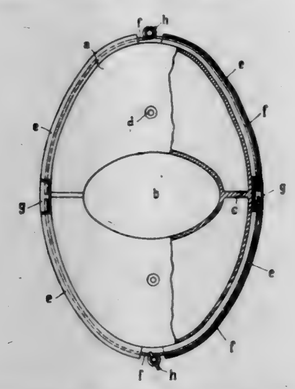


1. In a gas control snap valve mechanism for water heaters, the combination of a gravity gas-control valve adapted to be seated by the combined gas pressure and the gravity thereof, a thermostat and a single lever, the

thermostat adapted at intervals to automatically actuate said lever for overcoming the gas pressure and gravity acting on the valve to quickly snap it from its seat when the temperature of the water decreases to a predetermined degree and to automatically actuate said lever in an opposite direction to permit the combined forces of gas and gravity quickly snapping the valve to closed position when the temperature of the water rises to a predetermined degree.

---

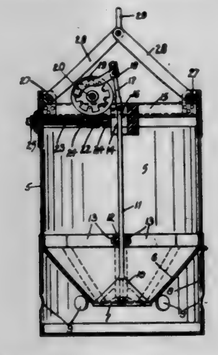
1,561,916. SWIMMING CUSHION. GOTTHARD ERNST, Wolmirstedt, Germany. Filed Aug. 3, 1925. Serial No. 47,984. 1 Claim. (Cl. 9—17.)



A swimming cushion, comprising in combination a hollow body of elastic material and of elliptic shape having a central opening, partitions for subdividing said hollow body into several cells, air valves one for each cell, a tubular extension along the periphery of said cushion, stiffening rods in said tubular extension, and means for connecting with one another the adjacent ends of said stiffening rods.

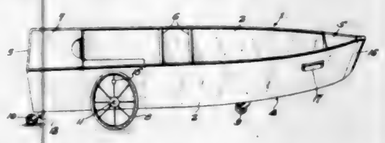
---

1,561,917. DISCHARGING SKIP. SAMUEL THOMAS FARNSWORTH, Rose Bay, near Sydney, and GERALD HASKINS, Avon Dam, via Bargo, New South Wales, Australia. Filed June 20, 1923, Serial No. 646,595. Renewed June 30, 1925. 2 Claims. (Cl. 294—72.)



1. A discharging skip, comprising an open topped bucket having a contracted bottom provided with a discharge opening therein, a vertically movable conical closure for said opening, means for raising and lowering said closure in relation to said opening thereby to control the rate of discharge from said bucket, and a protecting wall enclosing said bottom.

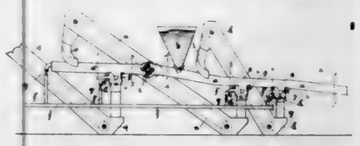
1,561,918. CHILD'S VEHICLE. ERLE D. FEDDERSEN, Belle Plaine, Iowa. Filed Apr. 11, 1925. Serial No. 22,482. 3 Claims. (Cl. 208—38.)



1. A child's vehicle, comprising a body to receive a child, an axle, wheels mounted on the axle and having peripheral portions located at different distances from the axle to produce a rise and fall of the body when the same is propelled, said wheels being also provided on their exterior with operating means located between the axle and the rim, and a castor wheel spaced from the axle and located beneath the body.

---

1,561,919. PLANT FOR WASHING COAL AND OTHER MINERALS BY MEANS OF LIQUID STREAMS. ANTOINE FRANCE, Liege, Belgium. Filed Feb. 26, 1924. Serial No. 695,262. 4 Claims. (Cl. 83—59.)

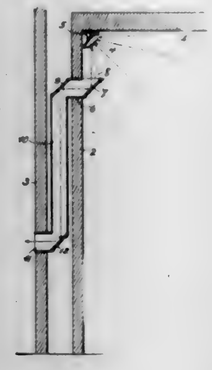


1. In a plant for washing coal and other minerals by means of liquid streams, the combination with a launder for the initial classification of the mineral under the influence of a liquid conveying stream having a slight downward slope in relation to the horizontal, means for feeding the raw mineral to the highest end of said launder, a plurality of adjustable wet sorting apparatus for completing the classification under the action of upward liquid streams, depending from and in communication with the launder, and mechanical means for removing the products discharged by the sorting apparatus closest to the low end of the launder and returning them into said launder immediately below the aforesaid feeding means, of: a launder extension leading to the highest end of the aforesaid launder, an additional adjustable upward stream wet sorting apparatus depending from and in communication with said launder extension, mechanical means for removing the products discharged by the sorting apparatus closest to the high end of the launder and discharging them into the portion of the launder extension leading to the additional sorting apparatus, and a crushing mill arranged in the aforesaid launder extension between the last named sorting apparatus and the high end of the launder, substantially as described.

---

1,561,920. OPTICAL DEVICE. FRED FULGORA, Pittsburgh, Pa., assignor of forty-five per cent to James N. McGrath, jr., and ten per cent to A. H. Leslie, Pittsburgh, Pa. Filed Sept. 2, 1921. Serial No. 498,121. 1 Claim. (Cl. 88—67.)

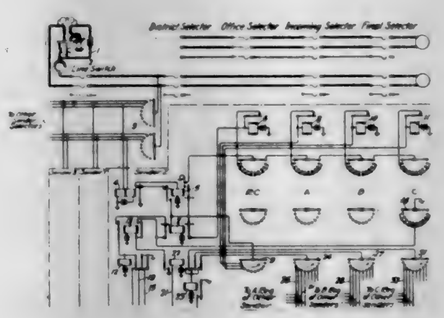
Means for observing the interior of an enclosure from a point outside the enclosure, comprising a convex mirror secured across a corner defined by the top and a side of the enclosure at an angle of approximately 45° to the side and top of the enclosure, a tube passing horizontally through the side of the enclosure below the convex mirror with one end projecting into the enclosure and having an opening in its upper side vertically under the convex mirror, and a plane mirror extending across the inner end of the tube below the opening in the upper side thereof at an angle of approximately 45° to the side of the enclosure, the lower end of said plane mirror being located at the side of the enclosure and the upper end of the mirror being spaced inwardly from the same



and there being a free unobstructed open space between the plane mirror and the convex mirror whereby the entire interior of the enclosure is within the range of the convex mirror.

---

1,561,921. REGISTERING SYSTEM. JOHN W. GOODERHAM, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 12, 1922. Serial No. 567,539. 7 Claims. (Cl. 179—18.)



1. In a selection controlling system, a plurality of registering devices, a set of relays common thereto, a circuit, remote control means to position said registers, a plurality of outlets for said circuit provided by different settings of any one of said registering devices, and means to extend said circuit to a desired one of said outlets through contacts of a certain one of said relays.

---

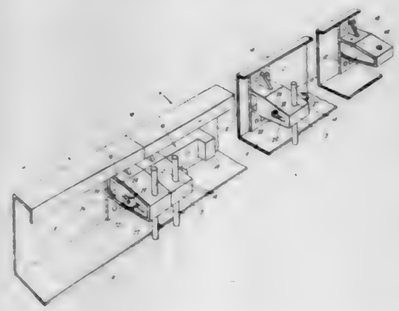
1,561,922. BEDCLOTHES SUPPORT. CHANCY F. HEATH, Grand Rapids, Mich. Filed Mar. 2, 1925. Serial No. 12,674. 4 Claims. (Cl. 24—72.5.)

1. In a clamping device for holding bed clothes securely at the foot of the bed, U formed clamping springs having a long arm and a shorter arm, a clamping block secured to the shorter arm and having an offset in the back side thereof, an auxiliary clamping block made to pass freely between the offset in the clamping block and the longer arms of the clamping springs, securing elements pivotally

mounted upon the upper ends of the longer arms of the clamping springs in position to be made to engage the upper surface of the auxiliary clamping block and hold it firmly in place, and means for securing the clamping device at the foot of the bed.

---

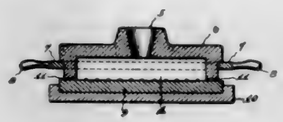
1,561,923. CONCRETE FORM. FRANCIS OSCAR HELTZEL, York, Pa., assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Feb. 20, 1925. Serial No. 10,624. 12 Claims. (Cl. 25—118.)



1. A concrete form having means for receiving two stakes, and a single element arranged to simultaneously clamp both stakes.

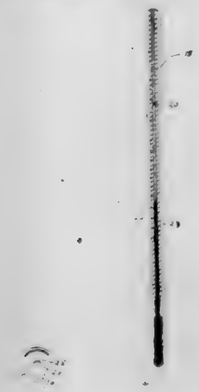
---

1,561,924. METAL FOUNDING. AUGUSTUS M. HENRY, Brooklyn, N. Y., assignor to William W. Weitling, trustee, College Point, N. Y. Filed Jan. 23, 1924. Serial No. 688,031. 2 Claims. (Cl. 22—188.)



1. A mold including a molding cavity having a permanent facing formed of a surface of a preformed block of a material having the qualities of being able to be pressed to such shape from granular components, and of having the ability to withstand repeated heat-shocks as the result of repeated casting operations.

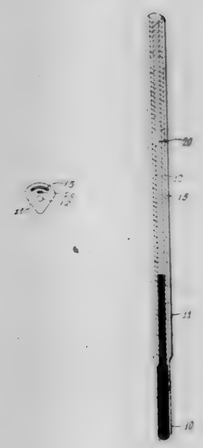
1,561,925. THERMOMETER. ALFRED T. HESPE, New York, N. Y. Filed Jan. 10, 1922. Serial No. 528,327. 2 Claims. (Cl. 73—52.)



1. A thermometer comprising a glass tube having a longitudinally arranged drawn glass colored member forming a portion of the wall of the bore at the back side only thereof and adapted to be covered by the fluid rising in the bore, when viewed through the front.

---

1,561,926. THERMOMETER TUBE. ALFRED T. HESPE, East Orange, N. J. Filed Jan. 6, 1925. Serial No. 785. 2 Claims. (Cl. 73—52.)



2. A thermometer tube having a light shield and a colored member arranged between the tube bore and said light shield and separated from both said bore and said light shield by intervening transparent glass, said colored member being of a visual width substantially equal to the width of said bore.

---

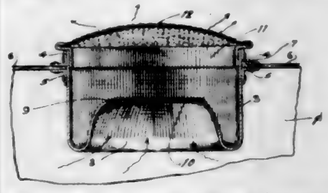
1,561,927. SURGICAL INSTRUMENT. STEPHEN HRANKOWSKY, Detroit, Mich. Filed July 18, 1923. Serial No. 652,346. 2 Claims. (Cl. 128—172.)

1. In a device for treating the ear, a hollow conical tube formed by spirally winding a strip of material, said strip being initially rectangular in plan view and having parallel sides and ends, the strip being formed of material having the inherent quality of being porous and pervious to air to promote natural combustion

thereof, and a solid layer of wax material applied to the outer surface of said tube for preventing the passage of air through the wall thereof during combustion.

---

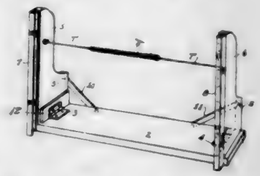
1,561,928. DUST BAG FOR VACUUM CLEANERS. CLARA M. JAQUITH, Denver, Colo. Filed May 28, 1924. Serial No. 716,291. 4 Claims. (Cl. 183—45.)



1. A dust bag for vacuum cleaners comprising, in combination, a flexible, substantially air tight fabric bag adapted to be secured to the exhaust opening of a vacuum cleaner and to receive the dust and dirt from the latter, said bag having an opening, a metal container projecting from opposite sides of the wall of said fabric bag and located within the opening and secured to the edges thereof by means forming an air tight seal, said container being adapted to receive a filter medium, the top and bottom of said container being foraminated whereby air may pass outwardly through the container.

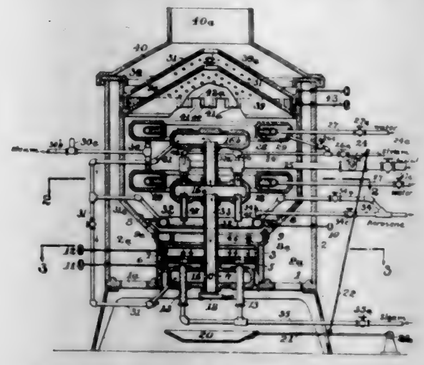
---

1,561,929. METHOD AND MOUNTING FOR ADVERTISING DISPLAYS. MARTIN T. C. JENTER, Mount Vernon, N. Y. Filed Aug. 15, 1924. Serial No. 732,240. 14 Claims. (Cl. 40—146.)



1. A display stand of the class described, comprising in combination, a base piece, card display holding uprights hingedly mounted thereon, means for locking said display in open position, and a resilient detachable tie between said uprights.

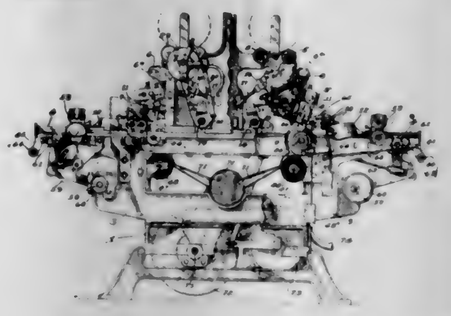
1,561,930. OIL BURNER AND GENERATOR. ANDREW W. JOHNSON, Chester, Pa. Filed Jan. 15, 1925. Serial No. 2,484. 13 Claims. (Cl. 158—56.)



1. In an apparatus of the character stated, the combination of a casing providing a combustion chamber, a vapor generator comprising a retort in which the oil to be vaporized is supplied, one or more steam nozzles for spraying the oil into the retort whereby it is delivered in a subdivided condition, an oil burner arranged at the bottom of the combustion chamber and directed upwardly toward the retort, said burner forcing the burner flame upwardly, a communication between a source of oil and the burner whereby the latter is enabled to provide combustive gases, an outlet from the retort directed downward toward the burner but terminating at a distance above the same whereby sprayed hydrocarbons may be projected directly into the combustion chamber and into the flame from the burner so as to be thoroughly consumed, and means for regulating the supply of air to provide air not only for the burner but to assist in the combustion of the gases from the retort.

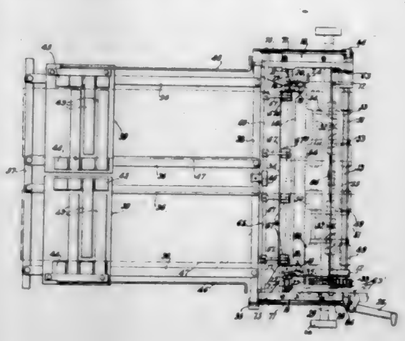
---

1,561,931. COTTON COMBER. JAMES JOLLY, Bolton, England, assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1923. Serial No. 612,929. 21 Claims. (Cl. 19—116.)



1. A double comber comprising oppositely disposed rows of comber heads and a drive-head including a power shaft, two gears driven by said shaft, means associated with each of said gears adapted respectively to be engaged thereto or released therefrom and respectively connected for driving one of said rows, and an operator's control member for each of said means situated adjacent the row of comber heads driven thereby.

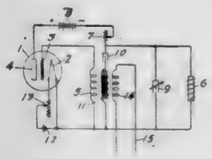
1,561,932. TYPEWRITING MACHINE. WILLIAM ASHLEY KELLY, Jersey City, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 457,965. 9 Claims. (Cl. 197—126.)



1. In a continuous billing typewriting machine, in combination, a displaceable unitary platen, means for guiding a pair of web-sets side by side to and around the unitary platen, line-spacing mechanism for said platen, two sets of feed-rolls cooperating with said platen, one set for feeding each web-set, the platen being separated from both sets of rolls at the platen-displacing operation, whereby both web-sets are released, means for throwing off one of said sets of feed-rolls to cause the web-set controlled thereby to be idle, so that operation of the line-spacing mechanism will feed only the other of the web-sets, and means for clamping the idle web-set against accidental misplacement while the platen is displaced.

---

1,561,933. SOURCE OF ALTERNATING CURRENT. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1918. Serial No. 248,713. 9 Claims. (Cl. 250—36.)



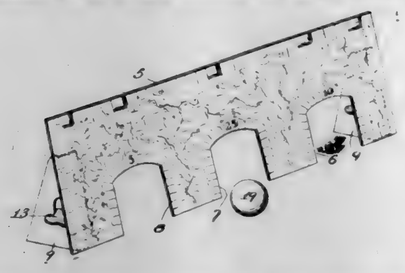
1. An oscillator comprising an electron discharge device having input and output circuits, an anti-resonant circuit, for determining the frequency of the oscillations generated, directly connected to said output circuit, said anti-resonant circuit containing a magnetic core inductance, and means for excluding unidirectional current from said inductance.

---

1,561,934. GAME DEVICE. WALTER J. KENNEDY, New York, N. Y. Filed Aug. 5, 1924. Serial No. 730,142. 2 Claims. (Cl. 273—127.)

1. A game device of the class described comprising an elongated board member provided longitudinally of one side edge thereof with spaced apertures, means foid-

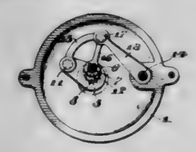
able onto one face of said board member for supporting the same when extended at right angles to the board members in an upright position, said means comprising



easels and members formed from said easels and cooperating therewith for retaining the same in an extended position.

---

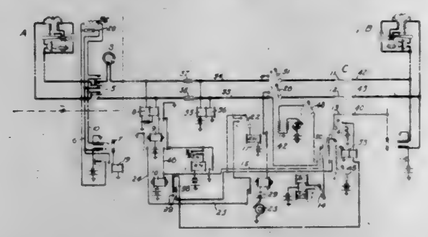
1,561,935. VALVE GRINDER. JOHN ERNEST KESSLER, Philadelphia, Pa. Filed Oct. 4, 1922. Serial No. 592,219. 3 Claims. (Cl. 74—14.)



2. Valve grinding mechanism for converting rotary motion into oscillation motion which comprises the combination of a driving spindle mounted for rotation a crank pin fast on said spindle, a follower spindle axially aligned with the first mentioned spindle and mounted for oscillation and provided with a crank pin, a rock-arm, a pivot fixed in respect to the elements mentioned and about which the rock-arm swings, and a pair of links concentrically pivoted to the rock-arm and respectively pivotally connected with the crank pin.

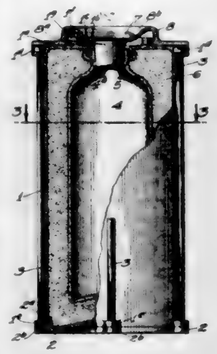
---

1,561,936. TELEPHONE-EXCHANGE SYSTEM. WALTER C. KIESEL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1919. Serial No. 334,638. 10 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a plurality of subscribers' lines, a manual and an automatic connecting circuit for extending a calling one of said lines to a called one of said lines, subscriber controlled switching means for selectively extending the calling line over said manual or said automatic connecting circuit, and a signaling device for the calling line placed in operative relationship with one of the connecting circuits in response to the actuation of the switching means to connect the calling line to the other of the connecting circuits.

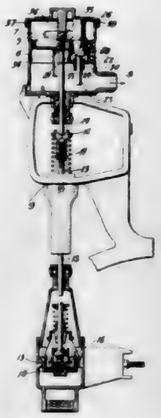
1,561,937. THERMOCONTAINER. WALTER C. KILIUS and JOHN F. RUDOLPH, Lompoc, Calif.; said Rudolph assignor to said Kilius. Filed Oct. 4, 1922. Serial No. 592,349. 5 Claims. (Cl. 215—12.)



1. A container of the class described, including a sectional casing, reinforcing and tie members extending the length of said casing securing said casing sections to each other and reinforcing said receptacles, a container positioned within said casing and a diatomaceous insulating material positioned in the space between the casing and said container positioning the same relatively to each other.

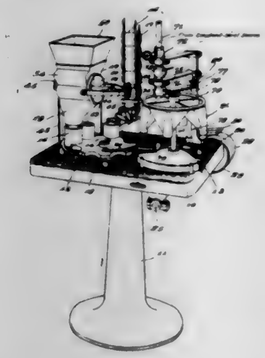
---

1,561,938. WATER VALVE FOR INSTANTANEOUS WATER HEATERS. JOHN H. KOLTS, Crafton, Pa., assignor to Pittsburg Water Heater Company, a Corporation of New Jersey. Filed May 19, 1922. Serial No. 562,058. 6 Claims. (Cl. 236—25.)



1. A water valve for an instantaneous water heater, comprising a chamber with water inlet and outlet; an apertured water piston in said chamber between said inlet and outlet, with actuating means for the gas supply control of the heater; movable valve means for the piston aperture opened by inlet pressure actuated movement of the piston and positively moved to close by return movement thereof; and means outside said chamber for returning the piston when the inlet pressure thereon falls off.

1,561,939. MEASURING AND FILLING DEVICE. HARRY W. LOWE, deceased, late of Indianapolis, Ind., by Mark W. Lowe, administrator, Buffalo, N. Y. Filed Mar. 1, 1920. Serial No. 362,589. 12 Claims. (Cl. 226—97.)



1. In a measuring and filling apparatus, two interconnected receptacle-moving devices, one being arranged to operate continuously and one intermittently, a stationary measuring device for measuring and discharging solids into successive receptacles while they are associated with the intermittent receptacle-moving device during the period when the latter is stationary, and a movable device for discharging measured quantities of liquid into successive receptacles while they are associated with the continuous receptacle-moving device, one of said receptacle-moving devices being arranged to feed receptacles to the other.

---

1,561,940. ADVERTISING SIGN. WALTER G. LUTHER, Cincinnati, Ohio. Filed July 11, 1923. Serial No. 650,945. 5 Claims. (Cl. 40—39.)

1. In a device of the class described, a stationary member having an opening therein, a disc attached to said stationary member and adapted to rotate continuously and having a detachable sign thereon, said sign having character designations thereon and adapted to appear intermittently before said opening and means for rotating said disc, substantially as described.

---

1,561,941. MOTION-PICTURE FILM. ANDRÉ NOËL MERLE, Paris, France, assignor to Pathe Cinema Anciens Etablissements Pathe Freres, Paris, France. Filed June 1, 1925. Serial No. 34,037. 1 Claim. (Cl. 88—19.5.)

In a motion picture film adapted to be driven by driving claw or claws the provision, upon the part of the film intended to come in front of said claw or claws when the film is inserted in the film gate of the motion picture apparatus, of driving perforations the length

whereof is greater than that of the standard perforations in the remainder of the film and is smaller than the stroke of said driving claw or claws.

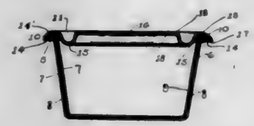
---

1,561,942. PROCESS OF SPLICING UNCURED RUBBER COMPOUNDS. ERWIN E. A. G. MEYER, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Feb. 24, 1925. Serial No. 11,167. 7 Claims. (Cl. 154—42.)

5. That method of splicing unvulcanized rubber articles incident to their manufacture which consists in severing the unvulcanized rubber, coating the freshly exposed surfaces with an aqueous dispersion of rubber, and subsequently joining the surfaces thus coated.

---

1,561,943. DISH AND COVER. FREDERICK S. MORRIS, Sheboygan, Wis., assignor to The Vollrath Co., Sheboygan, Wis., a Corporation of Wisconsin. Filed Jan. 10, 1922. Serial No. 528,225. 2 Claims. (Cl. 65—16.)



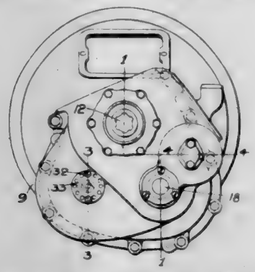
1. A sheet metal dish and cover of rectangular form in horizontal section and having seamless corner portions being nonfolded and formed of single thickness of metal, the cover having a rectangular groove on one side to receive the upper edge portions of the dish and being invertible for use on either side.

---

1,561,944. CHAIN-GEAR TRANSMISSION. FRANK L. MORSE, Ithaca, N. Y. Filed Jan. 10, 1920. Serial No. 350,502. 9 Claims. (Cl. 74—59.)

1. In a transmission mechanism, the combination of a power shaft having a sprocket gear, a driven shaft also having a sprocket gear, a lay shaft having corresponding sprocket gears, drive chains for said sprocket

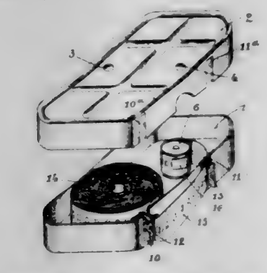
gears, a clutch device for one of said sprocket gears, another normally fixed shaft having additional sprocket gears loosely mounted thereon, a bushing on said shaft



for separating said sprockets, and a clutch device rotatably mounted on said bushing for connecting said additional sprockets together.

---

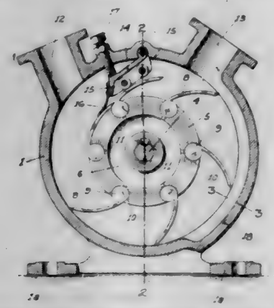
1,561,945. FILM HOLDER FOR CINEMATOGRAPH CAMERAS. EMILE CHRISTIAN PÉNIN, Joinville-le-Pont, France, assignor to Pathé Cinéma Anciens Établissements Pathé Freres, Paris, France. Filed May 7, 1924. Serial No. 711,551. 3 Claims. (Cl. 242—71.)



1. In a film holder for cinematograph camera, the combination with a box, of a roll of unexposed film adapted to be disposed in said box, a socket in said box, a revoluble cap mounted upon said socket, a transverse rod carried by and in the interior of said cap, a control axle, teeth mounted upon said axle and adapted to be engaged by said transverse rod, a control handle, a friction coupling connecting said control axle with said handle, and an elastic ring adapted to clamp the forward end of the film upon the said cap.

---

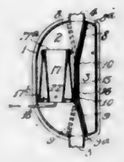
1,561,946. ROTARY ENGINE. LARS IBSEN RASMUSSEN, Westwood, Calif. Filed Apr. 12, 1923. Serial No. 631,628. 2 Claims. (Cl. 121—93.)



1. A fluid turbine comprising an enclosed casing having spaced intake and exhause passages, a rotor turnably mounted in the casing, vanes flexibly mounted on the rotor and extending therefrom to the casing, and adapted to fold down toward the rotor in one direction, and a combined fluid baffle and vane deflecting structure in the casing extending at an angle to a radial line and disposed between the intake and exhaust, said structure comprising a body member, rollers mounted therein and with which the vanes contact when being deflected, and a spring apron on the body at the end thereof nearest the rotor and bearing against the vanes as they are folded against the rotor after being deflected by the rollers.

---

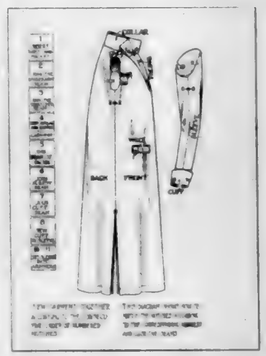
1,561,947. HEATER FOR AUTOMOBILES. JOSEPH RICHARDSON, Surrey Hills, and ALBERT LANCELOT HENDERSON, Kensington, Victoria, Australia. Filed Feb. 26, 1924. Serial No. 695,177. 3 Claims. (Cl. 257—246.)



2. In an automobile heating apparatus including an exhaust pipe, a boiler element and water circulation means, the combination of a casing adapted to allow the passage of exhaust gases therethrough and enclosing said boiler element, a partition in said casing comprising one fixed section and two swinging sections pivotally supported by opposite edges of said fixed section, and means for adjusting said swinging sections to allow desired quantities of exhaust gases to pass through and around said boiler element.

---

1,561,948. PATTERN CHART. MAYER ROHR, New York, N. Y., assignor to The McCall Company, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1924. Serial No. 704,439. 4 Claims. (Cl. 283—1.)

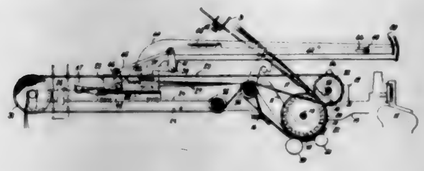


1. A pattern chart comprising an illustration of an assembled garment with the seams thereof marked with the symbols of a certain series in a determined consecutive order corresponding to the order in which the parts of the garment are to be assembled.

---

1,561,949. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 7, 1923. Serial No. 661,364. 29 Claims. (Cl. 197—126.)

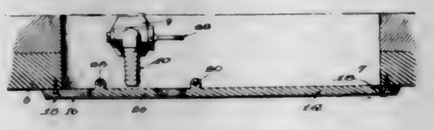
1. In a continuous billing typewriting machine, a carriage, a cylindrical platen therein, line-spacing mechanism for the platen, a rear carriage-extension, a carbon-carrier movable toward and from the platen for holding carbons interleaved with plies of a continuous work-web, and means acting independently of the work-web to draw the carbon-carrier forward, whereby tension



on the work-web and carbons at the line-spacing operation due to the inertia of the carbon-carrier and web, which would tend to cause slipping of the web relatively to the platen, is prevented.

---

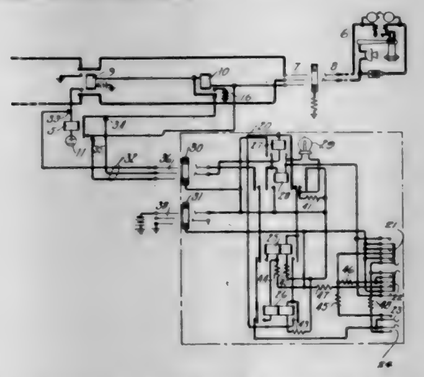
1,561,950. WALL PLUG FOR USE WITH GAS. WILKES SMITH, Waco, Tex. Filed July 26, 1924. Serial No. 728,387. 2 Claims. (Cl. 137—111.)



1. In a wall plug for use with gas, the combination of a valve positioned in an opening in a wall and having a body stem and a valve handle, a base plate extending over said opening and having a door pivoted directly thereon and arranged outwardly of said stem and adapted to be opened to permit a gas hose to be connected to the stem, said base plate being provided at one side of said first named door with a second door directly hinged to said base plate and affording access to the handle of said valve, said second named door being spaced from destructive contact with that portion of the base which is connected to said stem.

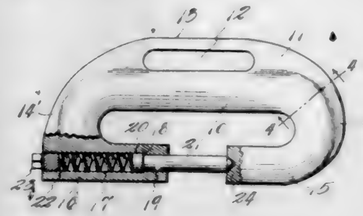
---

1,561,951. TESTING DEVICE. LELAND J. STACY, Caldwell, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1924. Serial No. 738,204. 12 Claims. (Cl. 175—183.)



1. A method of testing relays consisting in subjecting a relay to testing current from an alternating current source at the peak of a wave and indicating the result of the test.

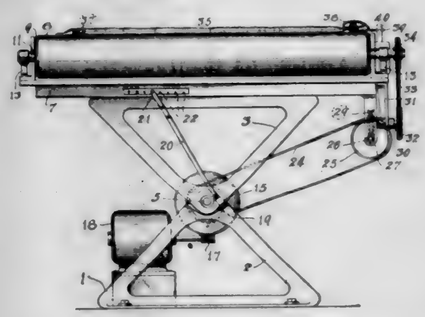
1,561,952. SAFETY C LINK. OSCAR C. STAPLES, Tulsa, Okla. Filed Oct. 13, 1924. Serial No. 743,878. 3 Claims. (Cl. 24—234.)



1. A C link for pumping rods comprising a link body having a hook-shape formation at each end thereof, and provided with a laterally projecting web having an opening therein and a hand grip contiguous to the opening.

---

1,561,953. METHOD OF AND APPARATUS FOR DEVELOPING FILMS. ERNEST J. SWEETLAND, Montclair, N. J. Filed Nov. 15, 1919. Serial No. 338,268. 15 Claims. (Cl. 95—94.)



1. In a film developing apparatus, the combination of a receptacle to receive film treating solution, means for holding a strip of film unrolled in position to be immersed in said solution, means for maintaining said solution in motion while the film is immersed therein, and means for moving said film transversely to its length simultaneously with said motion of the solution.

---

1,561,954. OPEN-AIR CRIB. EVELYN C. SWEETSER, Brooklyn, N. Y. Filed Oct. 8, 1924. Serial No. 742,287. 1 Claim. (Cl. 5—10.)

In an open air crib the combination of the following elements; a base frame member adapted to be secured to a window frame; sectional front and side members adapted to be locked in position on the said base frame member; means for locking the said front and side members on the said base frame member and comprising rotatable hooks mounted in the frame of the said base frame member and adapted to engage by their hooked ends with the frames of the said front and side members; means for locking together the said front and side members and comprising arched clamps adapted for engagement on their concave sides with the upright frame members of the said front and side members, and means for locking the said arched clamps in engagement with the said upright frame members; and means for holding the assembled structure against lateral or vertical movement comprising braces adapted to be secured at their upper ends to a window frame,

a rod mounted below the base-frame member of the crib and, means for locking together the lower ends

of the said braces and the ends of the said rod, and hooks adapted to lock together the side members of the base frame and the ends of the said rod.

---

1,561,955. ENZYMIC BEVERAGE. JOKICHI TAKAMINE, Jr., Clifton, N. J., assignor to Takamine Ferment Company, New York, N. Y., a Corporation of West Virginia. Filed Nov. 17, 1919. Serial No. 338,763. 3 Claims. (Cl. 99—11.)

1. The process of making an enzyme containing beverage having diastatic and proteolitic properties which comprises isolating a water soluble enzymic compound of vegetable fungus origin, and mixing therewith dissolved cane sugar to a thick syrup suitable for dilution with water.

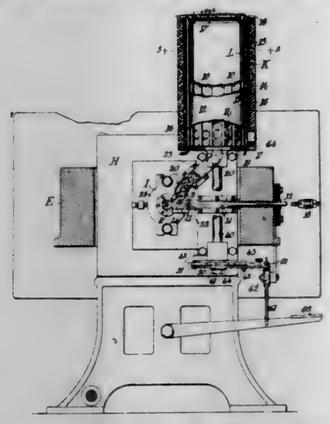
---

1,561,956. MANUFACTURE OF CORES. WILLIAM G. THOMAS, South Orange, N. J., assignor to H. H. Thomas, Summit, N. J. Filed Oct. 6, 1923. Serial No. 667,083. 3 Claims. (Cl. 22—188.)

1. A core compound comprising sand, emulsified asphalt and water.

---

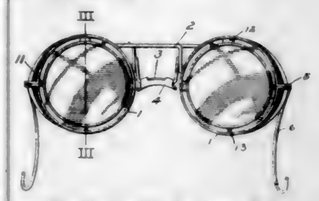
1,561,957. APPARATUS FOR HEATING AND FEEDING BLANKS. WALTER M. TOWNE, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Mar. 28, 1924. Serial No. 702,627. 20 Claims. (Cl. 266—5.)



1. An apparatus for heating and feeding blanks, comprising a series of conduits each receiving a plurality of blanks, a heating means adjacent said conduits and a feeding means for feeding the blanks successively from the respective conduits, with adjusting means for controlling the rate of heating and a rate of travel of the blanks, relatively to one another, to determine the temperature of the outfed blanks.

---

1,561,958. GOGGLES. GEORGE L. TULLY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 18, 1922. Serial No. 588,914 4 Claims. (Cl. 88—41.)



1. The combination with the lens frame, of a protection goggle, of an auxiliary frame having lugs extending from the periphery thereof, certain of said lugs having pivotal connection with the first frame, and certain of said lugs having frictional engagement with the first frame to retain the auxiliary frame in operative position.

---

1,561,959. NECKTIE. STEPHEN TURIGA, Beacon, N. Y. Filed Mar. 10, 1925. Serial No. 14,513. 1 Claim. (Cl. 2—144.)

A necktie of the class described including in combination an isosceles right triangular shaped frame covered with fabric material, a scarf having its knot secured to the frame at the center of its hypothenuse side, and a band attached to one end of the hypothenuse side of the frame and having its free end provided with means for detachably engaging the other end of the hypothenuse side of the frame.

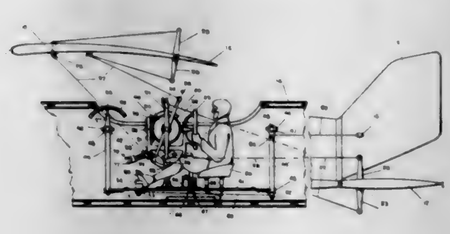
---

1,561,960. GOLF POSITIONING APPARATUS. HARRY A. UNGAR, Los Angeles, Calif. Filed Sept. 8, 1924. Serial No. 736,395. 19 Claims. (Cl. 273—35.)

1. In golf positioning apparatus, a support adapted to be fixed to the ground, a rod adjustably mounted in said support, means for holding said rod in adjusted position in said support, a second rod slidably carried by the first rod, and means carried by said second rod and adapted to be secured to and hold the body of a player.

---

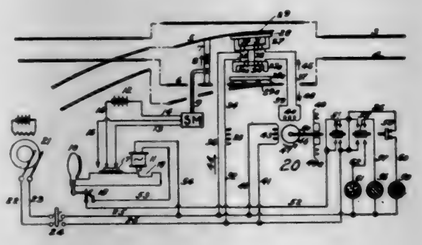
1,561,961. AIRCRAFT CONTROL AND STABILIZER. CHARLES WENDELKEN, Corpus Christi, Tex. Filed Mar. 22, 1924. Serial No. 701,071. 20 Claims. (Cl. 244—29.)



1. A control mechanism for aircraft including an elevator operating shaft, two aileron operating gear wheels rotatable on said shaft, a member arranged to turn with said shaft and adjustable angularly relatively to said shaft, and an intermediate gear wheel carried for rotation by said member and connected to the aforesaid gear wheels.

---

1,561,962. RAILWAY-TRAFFIC-CONTROLLING SYSTEM. GILBERT C. WHITNEY, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,146. 33 Claims. (Cl. 246—135.)

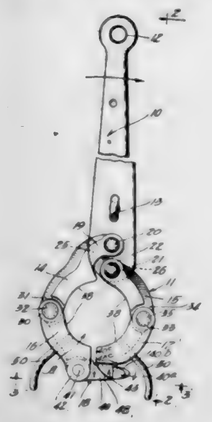


1. In a railway traffic controlling system, a circuit and a source of energy for supplying current to the circuit, means for inducing current from said circuit into an additional circuit, and a plurality of butt contact magnetic means for controlling the relative direction and value of current flow in said additional circuit.

---

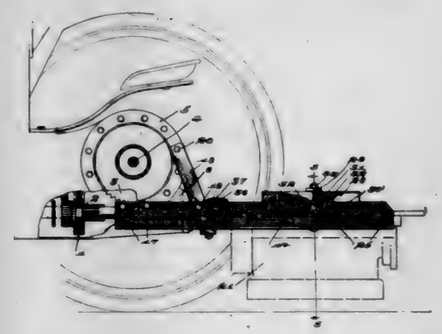
1,561,963. TONGS. ELIHU CLEMENT WILSON, Los Angeles, Calif. Filed Sept. 12, 1921. Serial No. 500,177. 14 Claims. (Cl. 81—66.)

1. A device of the character described, comprising a lever, and casing engaging means in connection with the lever, said means comprising two oppositely disposed symmetrical series of pivotally connected pipe engaging links pivotally mounted on the lever, means in connection with a link of each series to limit its pivotal movement, and means for detachably connecting the outer links of the two series, said links in their connected position being each curved about a common center and each adapted to engage a pipe.



---

1,561,964. TRACTOR ATTACHMENT FOR BURNING IN BEARINGS. RICHARD C. WITTMAN, HILARY FRANCIS WITTMAN, and EDWIN ANTHONY WITTMAN, St. Marys, Pa. Filed Apr. 17, 1925. Serial No. 23,986. 5 Claims. (Cl. 29—89.5.)



1. An attachment of the character described comprising a frame attachable to a fixed part of the rear end structure of a tractor, said frame being adapted to support an engine block, a shaft adapted to replace the usual worm drive shaft of the tractor, said substitute shaft being disconnected from the usual worm wheel of the transmission mechanism of the tractor, and means for coupling the crank shaft of said engine block to said substitute drive shaft.

---

1,561,965. WRINGER CLAMP. JOHN E. ANDERSON, Waukesha, Wis. Filed Jan. 12, 1922. Serial No. 528,717. 2 Claims. (Cl. 68—2.)

2. A closed wringer support adapted for attachment to a tub, comprising a pair of inverted U-shaped members arranged in parallel relation, a threaded element carried by one leg of each of the inverted U-shaped members and adapted to engage with the tub, a ver-

a rod mounted below the base-frame member of the crib and, means for locking together the lower ends

of the said braces and the ends of the said rod, and hooks adapted to lock together the side members of the base frame and the ends of the said rod.

---

1,561,955. ENZYMIC BEVERAGE. JOKICHI TAKAMINE, Jr., Clifton, N. J., assignor to Takamine Ferment Company, New York, N. Y., a Corporation of West Virginia. Filed Nov. 17, 1919. Serial No. 338,763. 3 Claims. (Cl. 99—11.)

1. The process of making an enzyme containing beverage having diastatic and proteolitic properties which comprises isolating a water soluble enzymic compound of vegetable fungus origin, and mixing therewith dissolved cane sugar to a thick syrup suitable for dilution with water.

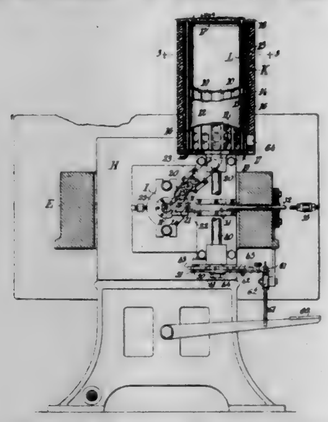
---

1,561,956. MANUFACTURE OF CORES. WILLIAM G. THOMAS, South Orange, N. J., assignor to H. H. Thomas, Summit, N. J. Filed Oct. 6, 1923. Serial No. 667,083. 3 Claims. (Cl. 22—188.)

1. A core compound comprising sand, emulsified asphalt and water.

---

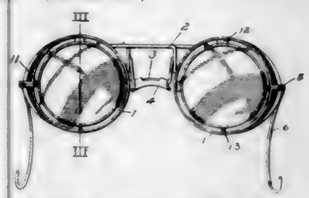
1,561,957. APPARATUS FOR HEATING AND FEEDING BLANKS. WALTER M. TOWNE, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Mar. 28, 1924. Serial No. 702,627. 20 Claims. (Cl. 266—5.)



1. An apparatus for heating and feeding blanks, comprising a series of conduits each receiving a plurality of blanks, a heating means adjacent said conduits and a feeding means for feeding the blanks successively from the respective conduits, with adjusting means for controlling the rate of heating and a rate of travel of the blanks, relatively to one another, to determine the temperature of the outfed blanks.

---

1,561,958. GOGGLES. GEORGE L. TULLY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 18, 1922. Serial No. 588,014 4 Claims. (Cl. 88—41.)



1. The combination with the lens frame, of a protection goggle, of an auxiliary frame having lugs extending from the periphery thereof, certain of said lugs having pivotal connection with the first frame, and certain of said lugs having frictional engagement with the first frame to retain the auxiliary frame in operative position.

---

1,561,959. NECKTIE. STEPHEN TURIGA, Beacon, N. Y. Filed Mar. 10, 1925. Serial No. 14,513. 1 Claim. (Cl. 2—144.)

A necktie of the class described including in combination an isosceles right triangular shaped frame covered with fabric material, a scarf having its knot secured to the frame at the center of its hypothenuse side, and a band attached to one end of the hypothenuse side of the frame and having its free end provided with means for detachably engaging the other end of the hypothenuse side of the frame.

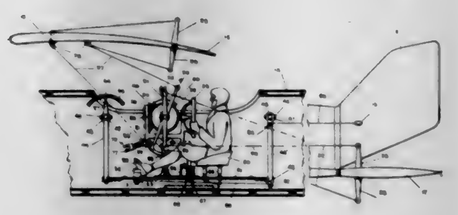
---

1,561,960. GOLF POSITIONING APPARATUS. HARRY A. UNGAR, Los Angeles, Calif. Filed Sept. 8, 1924. Serial No. 736,395. 19 Claims. (Cl. 273—35.)

1. In golf positioning apparatus, a support adapted to be fixed to the ground, a rod adjustably mounted in said support, means for holding said rod in adjusted position in said support, a second rod slidably carried by the first rod, and means carried by said second rod and adapted to be secured to and hold the body of a player.

---

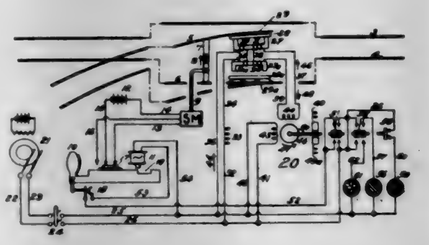
1,561,961. AIRCRAFT CONTROL AND STABILIZER. CHARLES WENDELKEN, Corpus Christi, Tex. Filed Mar. 22, 1924. Serial No. 701,071. 20 Claims. (Cl. 244—29.)



1. A control mechanism for aircraft including an elevator operating shaft, two aileron operating gear wheels rotatable on said shaft, a member arranged to turn with said shaft and adjustable angularly relatively to said shaft, and an intermediate gear wheel carried for rotation by said member and connected to the aforesaid gear wheels.

---

1,561,962. RAILWAY-TRAFFIC-CONTROLLING SYSTEM. GILBERT C. WHITNEY, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,146. 33 Claims. (Cl. 246—135.)

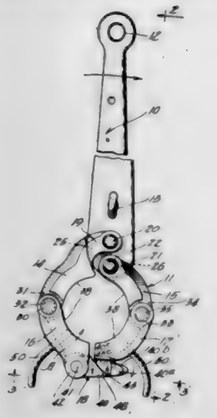


1. In a railway traffic controlling system, a circuit and a source of energy for supplying current to the circuit, means for inducing current from said circuit into an additional circuit, and a plurality of butt contact magnetic means for controlling the relative direction and value of current flow in said additional circuit.

---

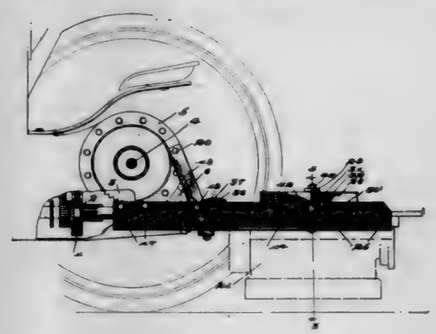
1,561,963. TONGS. ELIHU CLEMENT WILSON, Los Angeles, Calif. Filed Sept. 12, 1921. Serial No. 500,177. 14 Claims. (Cl. 81—66.)

1. A device of the character described, comprising a lever, and casing engaging means in connection with the lever, said means comprising two oppositely disposed symmetrical series of pivotally connected pipe engaging links pivotally mounted on the lever, means in connection with a link of each series to limit its pivotal movement, and means for detachably connecting the outer links of the two series, said links in their connected position being each curved about a common center and each adapted to engage a pipe.



---

1,561,964. TRACTOR ATTACHMENT FOR BURNING IN BEARINGS. RICHARD C. WITTMAN, HILARY FRANCIS WITTMAN, and EDWIN ANTHONY WITTMAN, St. Marys, Pa. Filed Apr. 17, 1925. Serial No. 23,986. 5 Claims. (Cl. 29—89.5.)



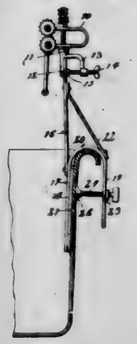
1. An attachment of the character described comprising a frame attachable to a fixed part of the rear end structure of a tractor, said frame being adapted to support an engine block, a shaft adapted to replace the usual worm drive shaft of the tractor, said substitute shaft being disconnected from the usual worm wheel of the transmission mechanism of the tractor, and means for coupling the crank shaft of said engine block to said substitute drive shaft.

---

1,561,965. WRINGER CLAMP. JOHN E. ANDERSON, Waukesha, Wis. Filed Jan. 12, 1922. Serial No. 528,717. 2 Claims. (Cl. 68—2.)

2. A closed wringer support adapted for attachment to a tub, comprising a pair of inverted U-shaped members arranged in parallel relation, a threaded element carried by one leg of each of the inverted U-shaped members and adapted to engage with the tub, a ver-

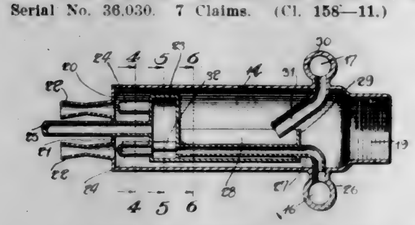
tical arm secured to one leg of each of the inverted U-shaped members and disposed in longitudinal alignment with one leg of the latter, a brace element attached to the opposite leg of each of the inverted U-



shaped members and having its upper end connected with its corresponding arm, the upper ends of the arms being adapted to be engaged by a clamp of a detachable clothes wringer.

---

1,561,966. COMBINED GAS AND OIL NOZZLE. GEORGE BAKER, Pershing, Okla. Filed June 9, 1925. Serial No. 36,030. 7 Claims. (Cl. 158—11.)



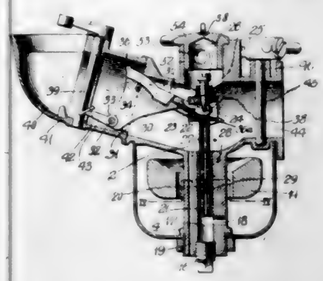
7. A gas burner drum having an inlet and provided in one wall thereof with a plurality of venturiform outlets arranged upon a circle, a steam chamber within the drum and opposing said wall, said chamber having an inlet and having outlet nozzles corresponding in number and arrangement to the outlet of said wall and directed axially thereof, said steam chamber having a further axially disposed outlet nozzle projecting through said wall of the burner drum and having its outer end extended beyond the outer ends of the outlets of the drum, the steam conduit communicating with the inlet of the chamber and extending longitudinally of the interior of the drum, an oil pan within the drum through which said steam conduit extends and outlets for the oil pan extending through the steam chamber and having their outer ends arranged between adjacent nozzles of the steam chamber.

---

1,561,967. CARBURETOR. DAVID D. BUICK, Detroit, Mich. Filed June 8, 1918. Serial No. 238,987. 12 Claims. (Cl. 261—41.)

1. A carburetor casing having a carbureting chamber therein and adapted to communicate with the atmosphere, a float chamber constantly in communication with the carbureting chamber and adapted to provide a constant supply of volatile fluid for engine idling purposes, a metering pin establishing communication between the float chamber and the carbureting chamber and having a groove in the wall thereof establishing an additional communication between said float chamber and said carburetor chamber for variable speeds of an engine, and means carried by said metering pin causing air to travel transversely of the direction of the flow of fuel to lift the fuel from said metering pin.

11. A carburetor casing having a carbureting chamber therein and adapted to communicate with the atmosphere, a float chamber adapted to supply the fuel content of the charge for the engine, a metering pin operative in the delivery of such fuel content to the carbureting chamber and formed to provide for and permit constant communication between the chambers and to provide for additional communication therebetween



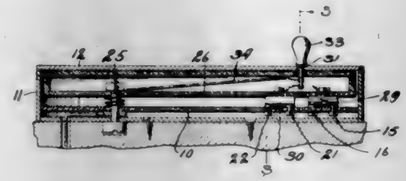
in presence of pin movements, said additional communication being inactive during periods of engine idling and made active during variable speed conditions of the engine, and means carried by the metering pin and permanently positioned with respect to the channel of constant communication of the pin and operative to cause air flow transversely of the direction of fuel flow to the outlet of such communication channel.

---

1,561,968. SOLDERING IRON. WALTHER BURSTYN, Berlin, Germany. Filed Feb. 6, 1923. Serial No. 617,411. 3 Claims. (Cl. 158—26.)

1. In a soldering implement, a metal burner member formed with an internal passage to receive a supply of illuminating gas, said passage terminating in an opening; and a burner tip of refractory material seated in said opening and formed solely with two diverging internal, gas-receiving apertures opening at their outer ends through the inner face of the tip, and two oppositely-located, converging holes of appreciably smaller diameter than said apertures leading from the inner ends of the latter and opening in extremely close relation to each other at their outer ends through the outer face of said tip, whereby the burning gases issuing through said converging holes will impinge against each other and unite in forming a thin, flat flame which is non-luminous and extremely hot.

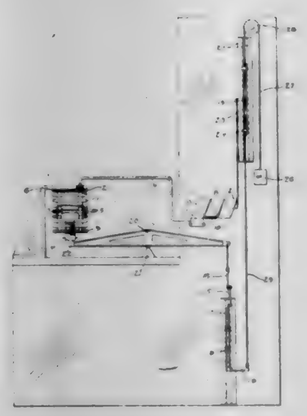
1,561,969. SECTOR SWITCH. JOHN B. CHRABKOW, Cincinnati, Ohio. Filed Oct. 14, 1924. Serial No. 743,571. 5 Claims. (Cl. 200—7.)



1. In a switch, a member mounted to reversely operate over a fixed path, a pair of contact series mounted adjacent said path, a pair of brushes carried by the member and each operating in continual engagement with one contact series and a handle for the member pivoted to the member forming the movable contact with a switch having movable and stationary contacts, the stationary contacts of said switch being electrically connected with said brushes.

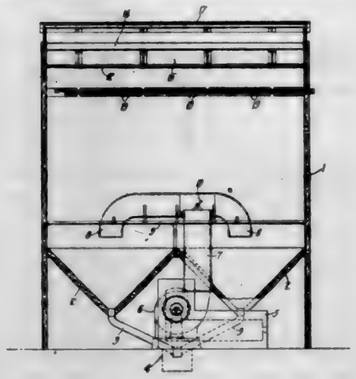
---

1,561,970. TESTING MACHINE. JOSEPH G. COFFIN, Hempstead, N. Y., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Sept. 1, 1922. Serial No. 585,612. 22 Claims. (Cl. 265—47.)



1. A closed elastic frictionless hydraulic system for determining forces applied in testing machines through pressure produced by the forces in the system including in combination, a unitary container with longitudinally collapsible peripherally inextensible side walls and freely shiftable substantially rigid end walls, a curved elastic tubular member having an anchored portion and an extremity movable in direct proportion to the change of pressure within the system, and a conduit establishing communication between the container and the curved tubular member, the liquid filling the conduit being substantially immovable throughout the range of operation of the system.

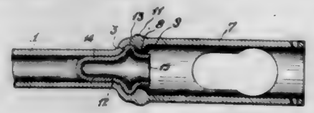
1,561,971. METHOD FOR TREATING PULVERULENT MATERIAL AND PRODUCT. JOSEPH G. COFFIN, Hempstead, and ALEXIS W. KEEN, New York, N. Y., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Oct. 16, 1923. Serial No. 668,957. 11 Claims. (Cl. 159—48.)



1. The method of treating clay which comprises forming a fluid suspension thereof, projecting the suspended clay in finely divided form into a heated drying medium, and drying while in suspension in the form of minute globular masses composed of lightly cohering particles of clay.

---

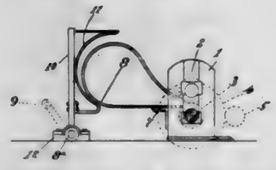
1,561,972. DRAG-LINK ELEMENT. FREDERICK C. CRAWFORD, Detroit, Mich., assignor to The Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 11, 1923. Serial No. 612,143. 6 Claims. (Cl. 74—17.)



1. In a device of the class described, the combination with a body member consisting of a main member provided with an end flange, and a tubular member welded to said flange to form a socket; of a separate member seated in said socket against the inner shoulder thereof and having a portion projecting into the socket cavity and beyond the weld.

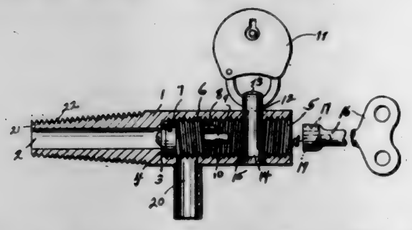
---

1,561,973. SHEET DOUBLER. WALTER M. CROWTHER, Middletown, Ohio. Filed Aug. 27, 1924. Serial No. 734,515. 6 Claims. (Cl. 153—28.)



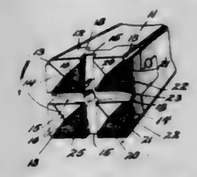
2. In a metal doubler, the combination with feed rolls, of a reversing drive for the rolls, a looped guide disposed in position to receive a piece from between the rolls, and to guide said piece into the shape of a loop, and means to move the looped piece to a position with the ends thereof between the feed rolls.

1,561,974. LOCK-CONTROL SPIGOT. ANGELO DEL GIUDICE, Youngstown, Ohio. Filed Sept. 24, 1924. Serial No. 739,681. 1 Claim. (Cl. 251—6.)



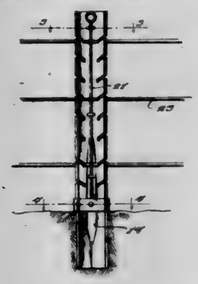
A valve mechanism of the character described, comprising a body member, a central opening in said body member, a valve seat formed at the inner end of the central opening, a threaded central opening in said body member, a threaded valve carrier functioning within said central threaded opening, a valve secured to said threaded valve carrier, three key pins secured to said threaded valve carrier, a depending exit leading from the central threaded opening, a lock bolt functioning through the outer end of said body member, means for holding said lock bolt in position, a key functioning with said key pins, substantially as described for the purpose set forth.

1,561,975. MINING DRILL. HILTON HENRY DES ROCHES, Butte, Mont., assignor of one-half to Frank F. Hayes, Butte, Mont. Filed Mar. 21, 1924. Serial No. 700,958. 10 Claims. (Cl. 255—64.)



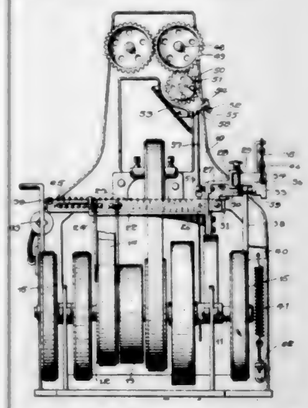
1. In a drill of the class described, in combination, a shank, an enlarged end and a cutting face formed of four spaced pyramids.

1,561,976. ALL-METAL FENCEPOST. MIKE J. DONAHOE, Jr., Sedalia, Mo. Filed Dec. 19, 1923. Serial No. 681,583. 1 Claim. (Cl. 256—52.)



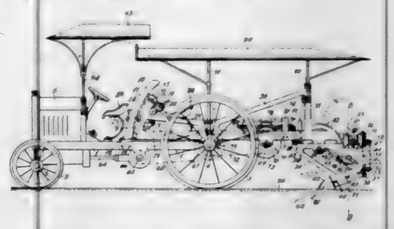
An all metal fence post comprising an angle bar having diverging flanges extending the full height of the bar and both adapted to engage and support fence wires, eye bolts engaged through the apex of the angle bar with their eyes between the flanges thereof, nuts mounted on the ends of said bolts to be turned home against the bar, a securing rod engaged through the eyes of said bolts in front of and in contact with the fence wires, a shoe encircling and adjustably secured upon the angle bar at the lower portion thereof, and a hook carried by the shoe and extending inwardly between the flanges of the bar and gripping the lower end of the securing rod.

1,561,977. MAGNETIC STOP FOR SPINNING MACHINES. ISAAC FIDLER and ROY CLERMONT PRESTON, High Point, N. C., assignors to Stehli Silks Corporation, New York, N. Y. Filed June 18, 1923. Serial No. 646,085. 5 Claims. (Cl. 192—116.5.)



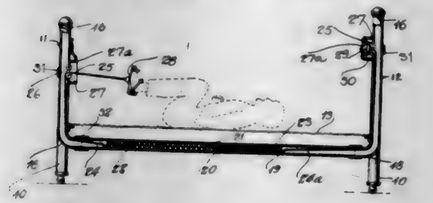
1. A stop action for spinning machines and the like comprising a counter shaft, a fast and loose pulley mounted upon said shaft, a driving belt positioned to operate in conjunction with said fast and loose pulleys, a brake drum mounted upon said counter shaft, a brake shaft journaled to oscillate in parallelism with the counter shaft, a brake shoe carried by the brake shaft positioned to engage the drum, a spring tending to move the brake shoe into braking engagement with the drum, an electric motor for driving the counter shaft, an electro-magnet introduced into the circuit of the electric motor tending to hold the brake shoe inoperative against the tension of the spring when the curren is normal, and moving means for shifting the belt, the movement of which is initiated by the braking movement of the brake mechanism.

1,561,978. PLOWING MACHINE. JOSÉ FERRY GARCIA, Habana, Cuba. Filed Nov. 12, 1923. Serial No. 674,328. 3 Claims. (Cl. 97—39.)



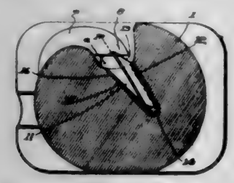
1. A plowing machine comprising a motor vehicle, a rocking frame mounted on the rear axle of the vehicle, means for controlling the position of the rocking frame with respect to the chassis of the vehicle, a frame pivotally mounted on the rear part of the rocking frame, an earth working element rotatably mounted at the lower part of said last named frame and means to actuate such element, such actuating means being operative in only one position of the last named frame but in any of the adjusted positions of the rocking frame.

1,561,979. EXERCISE BED. ROBERT HAYES GORE, Chicago, Ill. Filed May 2, 1925. Serial No. 27,606. 7 Claims. (Cl. 272—83.)



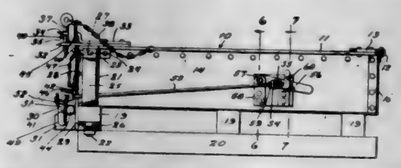
3. An exercising bed of the character described comprising a foot board and a head board including hollow, vertical members, contractile springs connected to the body of the bed and each held at one end from movement, a flexible connection passing from the other end of each spring and passing through a vertical member and out through an opening therein, and body-engaging means on the end of each flexible connection.

1,561,980. AUTOMATICALLY-THREADING SHUTTLE FOR LOOMS. ARTHUR S. JOHNSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 8, 1925. Serial No. 49,047. 10 Claims. (Cl. 139—223.)



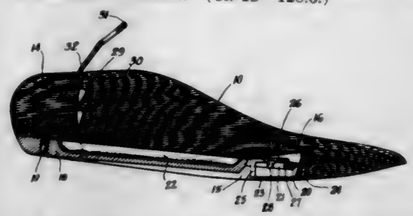
1. An automatically threading loom shuttle having a side delivery eye, a threading block formed with a longitudinally extending thread passage and provided with a thread director forming a passageway for the thread leading to the side delivery eye, and a spring actuated lock between the end of the thread director and side delivery eye normally closing the passageway between the longitudinal thread passage and side delivery eye and yieldable to the passage of the thread during loom threading.

1,561,981. DUMP-BODY TAIL-GATE MOUNTING. ALLEN A. JUELFS, McPherson, Kans. Filed May 13, 1924. Serial No. 713,023. 2 Claims. (Cl. 296—51.)



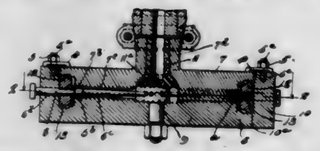
1. In a truck body open at its rear end, brackets mounted at the top of the rear end and projecting rearwardly therebeyond, notched brackets at the bottom of the rear end of the body projecting rearwardly therebeyond, an end gate provided at its top and bottom with trunnions removably engaged within said respective brackets, bearings at the rear end of the body below the open end thereof, a rock shaft journaled through said bearings and having laterally extending end portions engageable with the lower trunnions for retaining the same normally within the notched brackets, one of said lateral extensions being longer than the other and terminating in a horizontally extending portion, and means connected with said horizontal extending portion for rocking the rock shaft.

1,561,982. SHOE-TREE. JAMES E. KAYE, New York, N. Y., assignor to The Kaye Shoe Tree Manufacturing Co., Inc., New York, N. Y. Filed June 4, 1923. Serial No. 643,141. 7 Claims. (Cl. 12—128.6.)



1. A shoe tree comprising front and rear members, said front member being longitudinally recessed in its lower side, a rectangular bar rigidly fixed in said rear member to extend into the mentioned recess, and means carried by said front member adjustably engaging the end of said bar.

1,561,983. APPARATUS FOR CASTING METALLIC VEHICLE WHEELS. HARRY W. KELLER, Pittsburgh, and ALBERT T. KELLER, Bethlehem, Pa. Filed Oct. 9, 1924. Serial No. 742,628. 3 Claims. (Cl. 22—188.)



1. Apparatus for casting metal wheels having fellies with tire receiving flanges, comprising complementary mold members having mating wheel molding cavities, including a tire receiving flange cavity, a segmental core cooperating with said flange cavity, and a spoke core passing through said core.

1,561,984. ATTACHMENT FOR TEST RECEPTACLES. PERRY KIRK, Mankato, Kans. Filed Apr. 30, 1924. Serial No. 710,076. 1 Claim. (Cl. 73—51.)

An attachment for test receptacles of the class described comprising a band adapted to encircle the neck of the receptacle, the band being composed of malleable

material to permit it to be trimmed to vary the weight, and the free ends thereof being detachably connected together, and open top pockets connected to the band at substantially diametrically opposite points, said pockets being adapted for reception of additional weight.

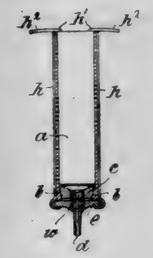
---

1,561,985. PROCESS FOR THE PRODUCTION OF SULPHURIC ACID. HANS KLENCKE, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y., a Corporation. Filed Mar. 28, 1924. Serial No. 702,690. 1 Claim. (Cl. 23—168.)

Process for the production of sulphuric acid which comprises bringing $SO_2$ containing cases into contact with nitrosyl sulphuric acid of a specific gravity in the neighborhood of 58° Bé. and of the highest possible concentration with respect to nitrogen-oxygen compounds and then bringing the resulting gas mixture into contact with nitrosyl sulphuric acid of a specific gravity approaching 66° Bé. and approaching the highest nitrogen-oxygen compounds concentration attainable.

---

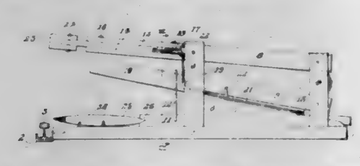
1,561,986. SYRINGE. KARL KÜPPERS, Aachen, Germany. Filed Aug. 18, 1924. Serial No. 732,834. 1 Claim. (Cl. 128—234.)



A syringe comprising a removable glass cylinder (*a*) a stopper (*c*) within said cylinder, a nozzle (*d*) fixed in the stopper, a surface (*b*) arranged on the end of the glass cylinder and serving to effect a tight joint between the stopper and the barrel, a transverse member abutting against the end of the cylinder, interengaging means on the nozzle and the transverse member for drawing the stopper and transverse member together, whereby the stopper is secured in position in the cylinder, and resilient means (*h*) on the transverse member having inwardly bent parts (*h'*) for limiting the stroke of the plunger and outwardly bent members ($h^2$) serving as handles.

---

1,561,987. MINE-CAR STOP. JOZEF LATOSZEWSKI, Plymouth, Pa. Filed Mar. 7, 1925. Serial No. 13,743. 5 Claims. (Cl. 104—249.)



2. In a mine car stop, a frame structure associated with a mine car rail, a rod slidably associated with the frame structure, a brake shoe shiftable between the spokes of a car wheel upon movement of the rod, means operated by a mine car and connected to the rod for shifting the same, and means associated with the rod for raising the same during shifting movement.

1,561,988. PRESERVATION OF STONE. ARTHUR PILLANS LAURIE, Edinburgh, Scotland. Filed Apr. 8, 1924. Serial No. 705,129. 2 Claims. (Cl. 91—68.)

1. A method of preserving stone consisting in soaking the stone with an undecomposed silicic ester dissolved in a volatile solvent therefor, and allowing the moisture of the air to hydrolyze the solution, whereby a continuous film of hydrated silica is formed in the stone and holds the same together.

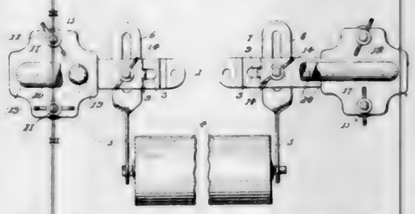
---

1,561,989. DIRECTION INDICATOR. HARRY B. McCAINE, Atlantic City, N. J. Filed Aug. 1, 1924. Serial No. 729,554. 1 Claim. (Cl. 116—46.)

An automobile indicator comprising a vertically disposed rotary shaft, an indicator head on the upper end of said shaft including a transparent housing, said housing being provided with slots, a light within the housing, the rays of light being adapted to pass through said slots, an indicating arrow carried by said housing and disposed within said slots, to permit the light rays to project therethrough and impinge upon said arrow, a laterally disposed crank arm connected rigidly to the lower end of the shaft for imparting motion to the latter, and a clamp carried by the free end of the arm and adapted to be connected to a part of the automobile steering gear.

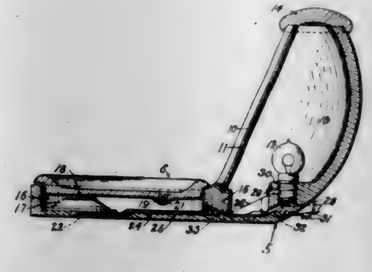
---

1,561,990. COMBINED SHADE-ROLLER AND CURTAIN-POLE SUPPORT. MICHAEL MACIEJKO, Meriden, Conn. Filed May 21, 1924. Serial No. 714,831. 2 Claims. (Cl. 156—24.)



1. In a combined shade roller and curtain pole support, a longitudinally slotted bracket plate, an arm slidable on the plate and having an opening therein registering with the plate, an angle lug extension on one end of the arm projecting into the bracket plate slot, a stud screw passing through the arm, opening and plate slot and cooperating with the arm lug to hold the arm horizontally alined with the bracket plate, a lug on the stud screw entering the plate slot to prevent rotation thereof, a thumb nut on the other end of the screw, a shade roller support clamped between the bracket plate and arm and a curtain pole support at the outer end of the arm.

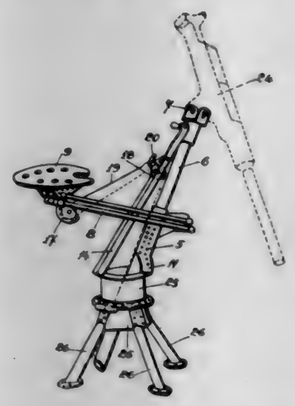
1,561,991. COMBINED CHANGE RECEIVER AND SIGN ILLUMINATOR. PHILIP MICHALOVE, Asheville, N. C., assignor of one-tenth to Sterling P. Buck, Washington, D. C. Filed Aug. 16, 1923. Serial No. 657,707. 8 Claims. (Cl. 40—130.)



1. A combined change receiver and sign illuminator which includes an integrally formed insulating body comprising a low front part and a relatively high rear part, said front part having an upwardly opening switch-chamber therein, said rear portion having a forwardly opening lamp-chamber therein and provided with upright grooves to receive a sign, also provided with a lamp-socket in rear of the grooves, also provided with a reflector in rear of the entrance of the lamp-socket; an electric switch in the switch-chamber; electric conductors connecting said lamp-socket to said switch and adapted to be connected to an electric energizing source; and a coin-receiving pan closing the opening of said switch-chamber and being depressable for closing the switch; whereby light is reflected from said reflector onto and through a translucent sign when such sign is in said grooves while an electric lamp is in said socket, upon depression of said pan.

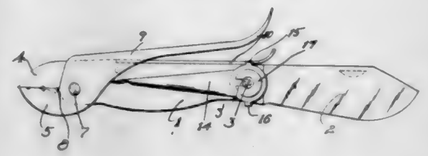
---

1,561,992. MACHINE-GUN MOUNTING. ETTORE MARAZZI, Milan, Italy. Filed May 26, 1924. Serial No. 716,054. 5 Claims. (Cl. 89—40.)



1. An automatic mounting for machine guns including a movable frame, a machine gun carrier slidable vertically in said frame, a vertically movable seat for the gunner, and means connecting the seat with the carrier for effecting vertical movement of the latter in response to movement of the seat.

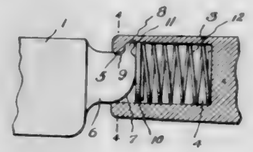
1,561,993. COMBINATION TOOL. FREDERIK NIELSEN, Bricceburg, Calif. Filed May 29, 1923. Serial No. 642,195. 2 Claims. (Cl. 7—11.)



1. A combination tool comprising a handle, a tool pivotally mounted thereon, means on the pivot to permit the pivot to be disengaged from the handle for the replacement of the tool, a spring for locking the tool in either the extended or folded-up position, and another tool pivoted to the handle at the opposite end thereof, the latter tool having a handle extending over the spring to aid in releasing the spring when the first tool is to be opened for use.

---

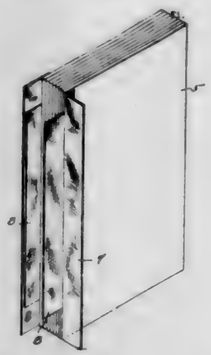
1,561,994. NOVELTY. EDWARD G. PATTERSON, Bismarck, N. Dak. Filed Sept. 24, 1923. Serial No. 664,624. 4 Claims. (Cl. 273—153.)



1. A novelty knife comprising a blade, a handle having detachable connection with the blade and a spring for pressing the blade from the handle when said connection is detached.

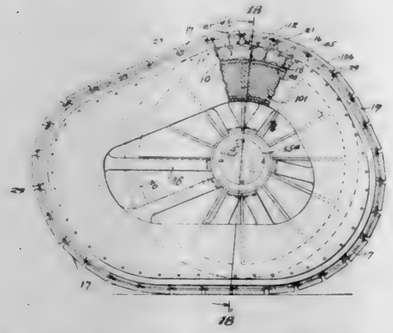
---

1,561,995. BOOKBINDING. WILLIAM B. PEARSON, Jacksonville, Ill. Filed Aug. 4, 1921. Serial No. 489,762. 1 Claim. (Cl. 281—21.)



The combination with book leaves, of a pair of adjacent strips of different lengths secured to a face of the leaves extending adjacent a longitudinal edge, the longer of the pairs of the adjacent strips extending to the transverse edge thereof and a stiff cover element secured between the strips, the strips contacting the surface of the cover element, one of said strips extending to the opposite ends thereof.

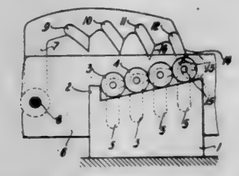
1,561,996. ENDLESS RUNNER FOR MOTOR TRUCKS. ELDIN M. PERRY, Washington, D. C. Filed Mar. 2, 1920. Serial No. 362,641. 7 Claims. (Cl. 305—4.)



5. A runner for motor vehicles comprising an endless chain type runner operatively supported on a grooved track, loose rollers between the track and the runner, and spacing blocks lying loosely between the rollers, said blocks being slidably supported in the groove of the track, and having concave portions in contact with the rail.

---

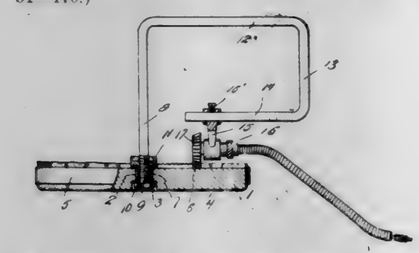
1,561,997. WEIGHING SCALE. FRANZ PEUKER, Vienna, Austria, assignor of one-half to the Firm: C. Schember & Söhne Brückenwaagen- u. Maschinenfabriken A. G., Atzgersdorf, near Vienna, Austria, a Corporation of Austria. Filed July 22, 1924. Serial No. 727,565. 6 Claims. (Cl. 265—48.)



1. A weighing scale comprising a weight supporting frame, a scale pan adapted to receive the weights, and a shifting device operatively connected with the frame adapted to successively transfer the weights from the frame to the scale pan and from the latter to the frame.

---

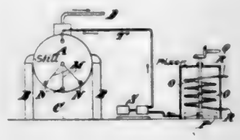
1,561,998. HAND SANDPAPERING AND POLISHING MACHINE. VALCOR G. PRINGLE, Jasper, Tex. Filed Apr. 9, 1924. Serial No. 705,280. 1 Claim. (Cl. 51—170.)



An abrading device of the class described, comprising a disc having a central opening provided therein, an abrading member extending over the bottom face thereof, means for securing the abrading member on said disc, a gear wheel for the upper face of said disc, a handle having one end thereof journaled in said opening, said handle comprising an upwardly extending portion, a lateral extension on the upper end of the upwardly extending portion, said lateral extension terminating into a depending portion, and an inwardly extending arm formed on the lower end of the depending portion, a bracket mounted on said arm, said arm extending parallel with the lateral extension and terminating a distance from the upwardly extending portion, a drive shaft journaled in said bracket, and a cog wheel carried thereby meshing with said gear wheel for rotating said disc and the abrading member mounted thereon.

---

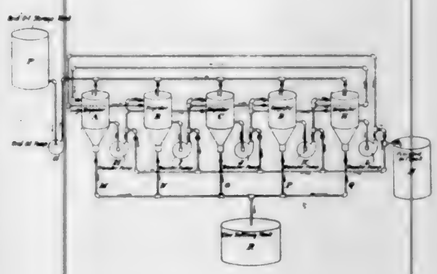
1,561,999. METHOD OF TREATING OILS. PAUL W. PRUTZMAN, Los Angeles, Calif., assignor to General Petroleum Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 2, 1922. Serial No. 586,030. 4 Claims. (Cl. 196—147.)



1. The method of purifying and partly decolorizing oil, which consists in mixing with a portion of the oil to be decolorized a powdered porous adsorbent material, allowing the mixture to rest until the air has been displaced from the pores of the adsorbent by the oil intermixed therewith, then heating the remainder of the oil to a temperature above 350° F. and intermixing therewith the above said mixture of oil and adsorbent, to permit the adsorbent to withdraw coloring matter from the oil, and finally separating the spent adsorbent with its contained coloring matter from the decolorized oil by mechanical means.

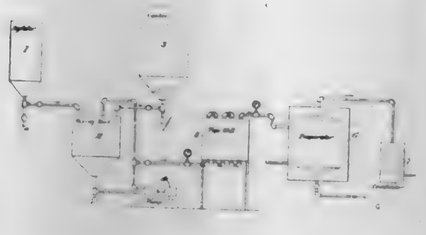
---

1,562,000. PROCESS FOR REMOVING ACIDS FROM OILS. PAUL W. PRUTZMAN and PAUL D. BARTON, Los Angeles, Calif., assignors to General Petroleum Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 2, 1922. Serial No. 586,040. 2 Claims. (Cl. 196—147.)



2. The method of removing acid-tar from acid-treated petroleum oil containing tar, which consists in the agitation with such oil of a powdered adsorbent, which adsorbent has previously expended its adsorptive value in removing impurities from tar-free oils and is charged with said tar-free oil.

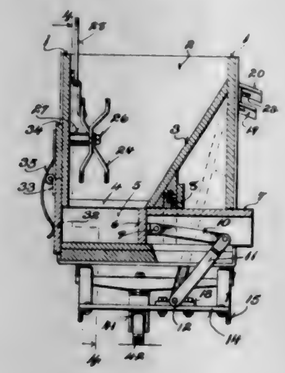
1,562,001. METHOD OF TREATING OIL. PAUL W. PRUTZMAN and CARL J. VON BIBRA, Los Angeles, Calif., assignors to General Petroleum Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 2, 1922. Serial No. 586,042. 1 Claim. (Cl. 196—147.)



The method of decolorizing oil which consists in preparing a mass of pulverulent solid decolorizing material in the form of an aqueous mud, whereby air is excluded from the pores of the decolorant, mixing such mud with the oil to be decolorized and heating the mixture until the water is driven out of the aqueous mud, whereby the solid decolorizing material is brought into intimate contact with the oil, and finally separating the spent solid decolorant from the decolorized oil.

---

1,562,002. PORTABLE FEED BIN. JOHN G. RIEFF, London, Wis. Filed May 31, 1924. Serial No. 717,131. 8 Claims. (Cl. 221—105.)



1. A portable measuring feed bin comprising a hopper having a measuring chamber located adjacent its lower portion, a reciprocatory plunger mounted within said chamber, a manually operable lever for reciprocating said plunger, and a plurality of independently actuable spring retracted stops for limiting the extent of motion of said plunger.

---

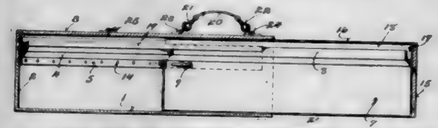
1,562,003. METAL WHEEL. CHARLES SCHENCK and LEWIS FINE, Bethlehem, Pa., assignors to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Jan. 3, 1922, Serial No. 526,570. Renewed Apr. 1, 1925. 8 Claims. (Cl. 301—64.)

3. A metal wheel comprising a rim, a hub member and two complementary parts, each part having an uninterrupted portion engaging the periphery of the hub member, spokes extending outwardly from the said uninterrupted portion and merging at their outer ends into a continuous web, a portion of said web forming part of the felloe of the wheel, T-shaped reinforcing

members secured in the web parts forming the felloe and supporting the rim, all of said spokes having concave faces facing toward the inner side of the wheel.

---

1,562,004. HAND GRIP FOR UNDERTAKERS. JOHN T. SCHEUERELL, Milwaukee, Wis., assignor to Ralph A. Smelser, Milwaukee, Wis. Filed Sept. 25, 1924. Serial No. 739,773. 4 Claims. (Cl. 217—5.)



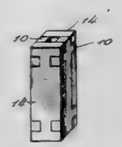
1. A hand grip for undertakers comprising a main body portion, a top hinged thereto, a handle secured to the top, and an extensible portion having a bottom part telescopically secured in the main body portion and having a top telescopically secured in the top of the main portion.

---

1,562,005. MEANS FOR SUPPORTING FLEXIBLE TUBES IN AN UPRIGHT POSITION. WALTER A. SELTMANN, Passaic, N. J. Filed May 28, 1923. Serial No. 641,822. 2 Claims. (Cl. 221—60.)

1. A tube of the class described fashioned to form a discharge member, a transverse end wall and a tubular supporting member fashioned from the material of the tube by turning the material of the tube backwardly upon itself, said supporting member extending beyond the discharge member of the tube.

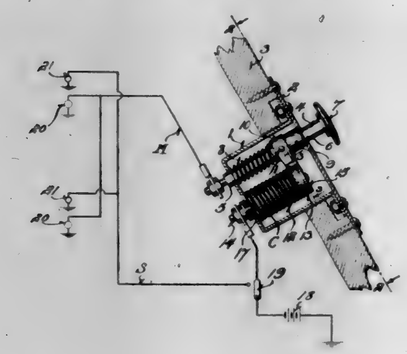
1,562,006. EDUCATIONAL BUILDING CONSTRUCTION SET. HERMAN SICHTERMAN, Greensboro, N. C. Filed Feb. 12, 1924. Serial No. 692,277. 18 Claims. (Cl. 46—35.)



4. An educational building construction set comprising a plurality of units of equal thickness, certain of said units being provided with notches the width and depth of which are equal to said thickness, and other of said units being provided with projecting arms the length and width of which is equal to said thickness, whereby said arms are adapted to engage snugly within and fill said notches to hold said units in various interlocked relative positions.

---

1,562,007. FOOT-CONTROLLED DIMMER. HARRY C. SMITH and PERCY ROBERT COCKCROFT, Milwaukee, Wis. Filed Mar. 1, 1924. Serial No. 696,334. 1 Claim. (Cl. 201—62.)



A foot control dimmer for automobiles comprising a plate adapted to be secured to the automobile, a casing suspended from said plate and secured thereto, a plunger slidably mounted in said plate and casing and having a foot operated knob, a spring urging said plunger upwardly, a pair of spring contact fingers of resilient material carried by said plunger, an insulating pillar secured within said casing, a resistance element wound about said pillar and embraced by said spring contact fingers, said pillar having a contact at its upper end contacting with one end of said resistance element.

---

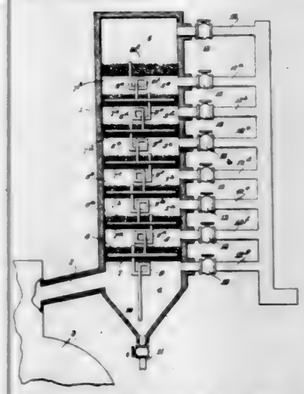
1,562,008. GAME. SIGUARD STEVENSON, Brooklyn, N. Y., assignor of one-third to Mathew Ranieri and one-third to Magnus Youngberg, both of Brooklyn, N. Y. Filed June 14, 1921. Serial No. 477,352. 6 Claims. (Cl. 213—135.)

1. In a game, the combination of a ball, an alley, an incline, a plurality of pockets at the end of said incline the upper ends of which pockets are below the level of said alley, a series of counter-balanced levers having the counterbalanced portion suspended under each of said pockets, a series of rods each carrying an indicating means supported by each of the upper portions of said levers, a head portion encasing said levers and rods having sight openings for each indicating means and into alinement with which openings said indicating means are to be dropped,

manual means for restoring said indicating means to the normal position, and automatic means for returning said ball to the starting point.

---

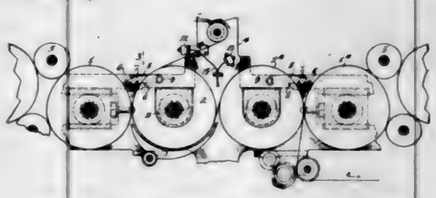
1,562,009. APPARATUS FOR THE FRACTIONATION OF PETROLEUM. HENRY P. STRAUS, New York, N. Y. Filed June 19, 1920. Serial No. 390,053. 11 Claims. (Cl. 196—139.)



1. In a fractioning apparatus, a closed chamber, a plurality of spaced, perforated plates therein dividing said chamber into a plurality of compartments, a layer of contact material on each of said plates and means for maintaining condensate at a substantial, predetermined height above said plates.

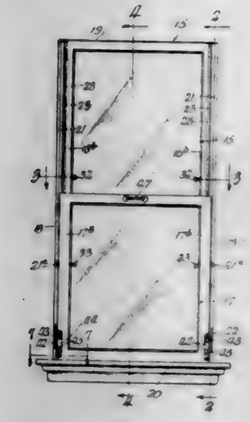
---

1,562,010. GUARD FOR PRINTING CYLINDERS AND THE LIKE. HERMAN STUKE, Hollis, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1922. Serial No. 547,396. 7 Claims. (Cl. 192—133.)



1. The combination with a pair of rolls, of a pivotally mounted guard normally extending across and between the rolls, said guard including a plate having oppositely disposed faces lying closely adjacent the peripheries of the rolls.

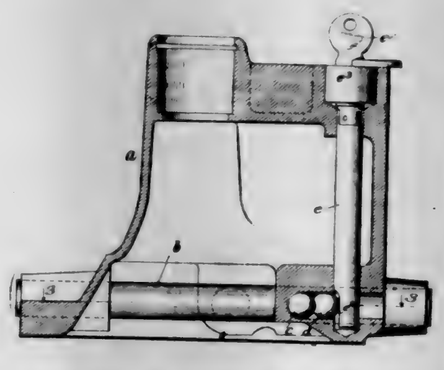
1,562,011. WINDOW CONSTRUCTION. JOSEPH SYLVAN, Cicero, Ill. Filed May 5, 1922. Serial No. 558,595. 7 Claims. (Cl. 20—49.)



1. In combination with a window frame and a sash which is capable of either a vertical sliding movement or an inward swinging movement about a horizontal axis with respect to said frame, means providing a sliding guiding bearing for the sash in the frame, and coacting hook members on the sash and frame respectively adapted for engagement with each other when the sash has been swung inwardly to lock said sash against vertical movement with respect to the frame.

---

1,562,012. GEAR LOCK FOR AUTOMOBILES. CHARLES G. TROSIEN, Pontiac, Mich. Filed Oct. 25, 1923. Serial No. 670,801. 4 Claims. (Cl. 70—126.)



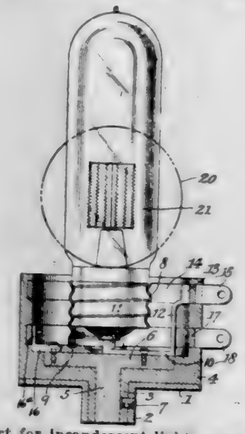
3. In a change speed gearing having a casing and two shifting rods reciprocating in bearings in said casing, a horizontal transverse passage extending between said rods, two loose reciprocating parts in said passage adapted to engage said rods, a horizontal longitudinal passage, a loose part adapted to reciprocate in the last named passage and a cam adapted to actuate the part in the longitudinal passage to project the same into said transverse passage and cause the parts in the latter to engage said rods.

1,562,013. HINGED HALF SOLE. HELIAS P. TSELENTIS, Chicago, Ill. Filed Feb. 21, 1925. Serial No. 10,766. 2 Claims. (Cl. 36—25.)

1. A pair of half-soles formed from adjacent portions of the same material and connected by an integral hinge of less thickness formed by cutting part way through said material and folded together on said hinge.

---

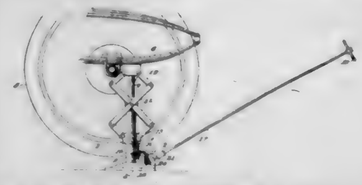
1,562,014. LAMP SUPPORT. THEODORE F. UHLEMANN, Glen Morris, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed July 2, 1920, Serial No. 393,603. Renewed Apr. 11, 1925. 4 Claims. (Cl. 240—44.)



1. A support for incandescent lights comprising a fixed part, a turntable supported thereon for rotary adjustment, a receptacle for the light bulb supported on said turntable at the center of the receptacle in alinement with the axis of the turntable, a contact supported on said turntable in position to be engaged by one terminal of the lamp bulb and electrically insulated from the said receptacle, an electrical conductor connected to said receptacle, fixed conductors mounted on said fixed part, and wiping contacts between the conductors on said turntable and said fixed conductors.

---

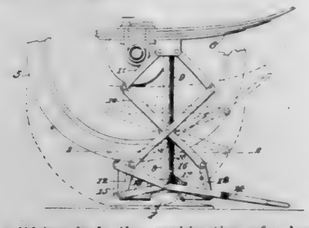
1,562,015. LIFTING JACK. STANLEY J. VESELY, Cedar Rapids, Iowa. Filed Jan. 25, 1924. Serial No. 688,401. 3 Claims. (Cl. 254—122.)



1. In a lifting jack, the combination of a base, a standard rising therefrom, a post slidable in the standard, a collar slidable on the standard, a toggle connecting

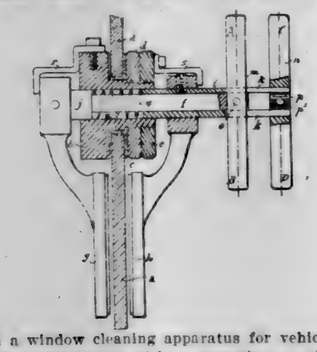
hingedly with the post, standard and collar, a winch mounted on the base, and a cable connecting the winch and collar.

1,562,016. VEHICLE JACK. STANLEY J. VESELY, Cedar Rapids, Iowa. Filed Jan. 25, 1924. Serial No. 688,402. 2 Claims. (Cl. 254—122.)



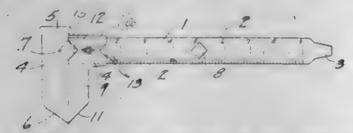
1. In a lifting jack, the combination of a base, a tubular standard rising therefrom, a post slidable in said standard, toggle levers connecting the standard and post, and an auxiliary toggle connecting said toggle levers with the base, a collar slidable on the standard, a link connecting the collar with the auxiliary toggle, a hand-lever connecting with the collar, and a link connecting the lever with the base.

1,562,017. APPARATUS FOR CLEANING WINDOWS. HANS VON LITTROW, Chemnitz, Germany. Filed May 24, 1924. Serial No. 715,608. 2 Claims. (Cl. 15—252.)



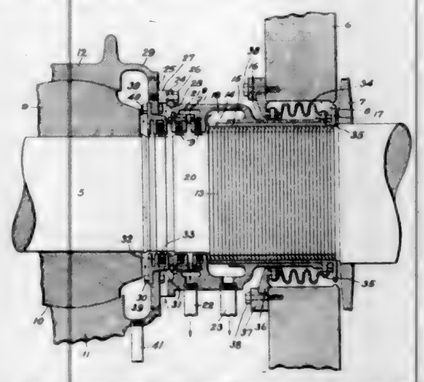
1. In a window cleaning apparatus for vehicles of any kind, the combination with a mounting, a plurality of wiper-carriers on said mounting adapted to clean the outer and inner surfaces of a window pane, of a central axle carrying the outer wiper, a sleeve surrounding said axle and carrying the inner wiper, a yielding means interposed between the wiper-carriers for normally holding the wiper-carriers a distance from the window pane, a plurality of stops on said mounting for cooperating with said yielding means for limiting the outward movement of the wiper-carriers, and means for separately moving the wiper-carriers into contact with the surfaces of the pane.

1,562,018. COMBINATION WRENCH. ROBERT WARFF, San Francisco, Calif. Filed Feb. 20, 1924. Serial No. 693,971. 1 Claim. (Cl. 7—7.)



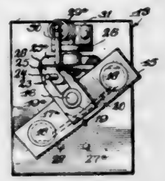
In a device of the kind described, a flat, rule-like main shank having nut-engaging apertures formed therein; a sliding jaw and shank mounted upon the main shank, the shank of the sliding jaw having notches formed therein adapted to register with the nut-engaging apertures of the main shank; and means for locking the sliding jaw in any set position upon the main shank.

1,562,019. SHAFT PACKING FOR ELASTIC-FLUID TURBINES AND THE LIKE. JAMES WILKINSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 5, 1922. Serial No. 586,097. 3 Claims. (Cl. 286—10.)



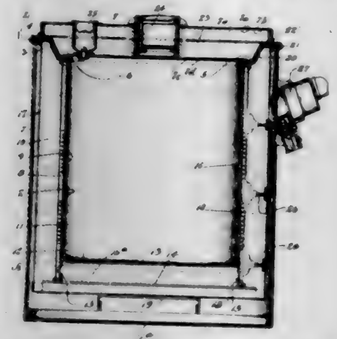
1. The combination with an elastic fluid turbine having a casing and a shaft projecting through an opening in said casing, of a concentric packing means for the shaft which extends exteriorly of the casing from a point adjacent the inner end of said opening, said means comprising a sleeve surrounding the shaft and lying in part within the opening, a flange at the inner end of the sleeve which forms substantially a closure for the opening, a concentric carrying sleeve which surrounds and supports the packing sleeve, the inner end of said carrying sleeve extending into abutting engagement with the flange, an adjacent stationary turbine part other than the casing, a ring adjacent the outer end of the carrying sleeve forming a rigid connection between the carrying sleeve and said adjacent stationary turbine part, said ring and part being spaced to provide passages between them, an annular chamber for which the ring forms a wall, and a corrugated flexible concentric ring surrounding the carrying sleeve and lying wholly within the opening in the casing, said last-named ring being connected at its outer end with the casing about the outer end of the opening and at its inner end with the inner end of the carrying sleeve.

1,562,020. ELECTRIC SWITCH. WARD G. WILLIAMS, Brandon, Wis. Filed May 8, 1925. Serial No. 28,781. 5 Claims. (Cl. 200—33.)



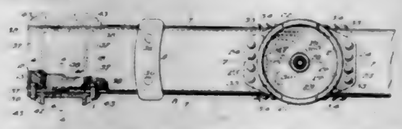
1. A switch comprising a base, a pin constituting one terminal of said switch, a block pivotally mounted on said pin, a contact fixed to said block and electrically connected to said pin, said contact having tines spaced at equal distances at either side of said pin, the block, being provided with like pockets spaced at equal distances at either side of said pin and connected by a restricted passageway on their bottom sides, a body of mercury adapted to be interchanged between said pockets through said passageway, means providing for a relative displacement of air in said pockets to permit said interchange, and means connected to the other terminal and including a contact point engageable between the tines of said contact plate for bringing said block to either of two primary positions inclined in opposite directions.

1,562,021. ELECTRIC COOKER. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio, a Corporation. Filed Mar. 28, 1925. Serial No. 19,024. 11 Claims. (Cl. 219—36.)



5. In a cooker of the class described, in combination, outer casing, a cooking well disposed therein, and spaced therefrom, thermal insulation between the two, a cover for the well and a heating unit between the outer casing and the well, and comprising a metal body reinforcing the well and heating body of composition having resistance wire embedded therein carried by the metal body, and disposed in contact with the outer surface of the well, said well being removable from the casing and from within the heating unit, and said heating unit being likewise removable from the outer casing.

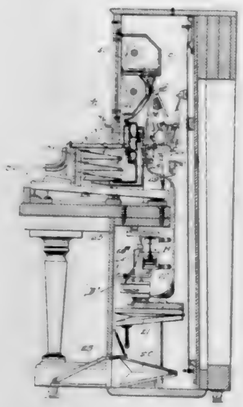
1,562,022. BOLSTER. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed June 7, 1922. Serial No. 566,614. 29 Claims. (Cl. 105—226.)



1. A bolster involving a beam member formed from a single sheet of metal and comprising spaced side walls united at their upper and lower edges, certain of said corresponding edges being integrally united by a portion of said sheet and other of said edges being united through flanges forming a portion of said sheet and extending toward each other, the said flanges being of a form affording openings permitting access to the space between said side walls, and said flanges being united at the ends of said openings.

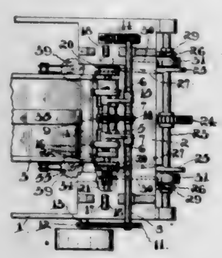
1,562,023. MECHANISM FOR REGULATING THE EXPRESSION IN APPARATUS FOR PLAYING MUSICAL INSTRUMENTS. OSCAR H. ANDERSON, Grand Haven, Mich., assignor to Story & Clark Piano Co., Grand Haven, Mich., a Corporation of Illinois. Filed Apr. 21, 1922. Serial No. 555,840. 10 Claims. (Cl. 84—41.)

1. In a device of the character described, a wind-chest, and means for controlling the degree of vacuum in the wind-chest, said means including a bellows, an exhausting mechanism, a communication between said bellows and exhausting mechanism, a series of valve controlled



ports of different sizes in said communication between said bellows and exhausting mechanism, and an adjustable stop pneumatic controlled by the degree of vacuum in the wind-chest for limiting the movement of said bellows.

1,562,024. MAGAZINE-WRAPPING MACHINE. DANIEL S. BAIRD, Hamilton, Ontario, Canada. Filed Jan. 24, 1924. Serial No. 688,319. 22 Claims. (Cl. 271—39.)



6. Magazine feeding mechanism comprising a feeding trough for the magazines; feed rollers at the top of the forward end of the trough adapted to feed substantially horizontally, the upper roller being vertically movable; adjustable means for limiting the movement of the upper roll towards the lower; and means for lifting the magazines one-by-one to be gripped by the feed rollers.

1,562,025. GAME APPARATUS. THOMAS A. KILLMAN, Nashville, Tenn. Filed Aug. 10, 1925. Serial No. 49,405. 3 Claims. (Cl. 273—13.)

1. A game apparatus comprising a board having a plurality of fields spaced one from the other and each divided by intersecting lines along which pieces are adapted to be moved from one "cross or intersection to the next adjacent "cross", a plurality of lines of each field extending into the next adjacent field

and intersecting each other at a point in the space between said fields to form a single "cross" or intersection in said space, a series of pieces adapted to be

moved along any of said lines from one field to another, and a single piece adapted to prevent said movement of pieces from one field to another.

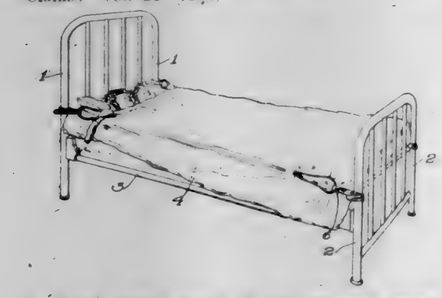
---

1,562,026. CARBIDE LAMP. CHARLES KARL KOVALCHIK, Bradley, Ohio. Filed Apr. 15, 1925. Serial No. 23,210. 3 Claims. (Cl. 48—4.)

2. In a carbide lamp, a lamp body constituting a water reservoir, a plurality of flexible gripping fingers depending below the lower end of the said body and respectively terminating in an eye, a carbide-container having a retaining rim adapted to be engaged by the said gripping fingers, a spring loop encircling the said gripping fingers and being supported in the eye of each finger, and means for expanding and contracting the said loop.

---

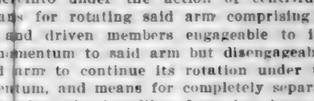
1,562,027. SAFETY BEDCLOTHES HOLDER. EDWIN C. LAIRD, Richmond, Va. Filed Feb. 11, 1922. Serial No. 535,719. Renewed Apr. 14, 1925. 2 Claims. (Cl. 24—72.5.)



1. A bed clothes holder of the character described, comprising a round metallic member of sufficient dimensions to receive a roll of bed-clothing and formed with horizontal outer ends welded together, an integral depending portion at each end of the horizontal portion, an integral divergent portion extending from each depending portion and convergent from said divergent portion to its inner end, a resilient band fixedly secured to said horizontal end, and means for adjustably securing said member to a bed post.

---

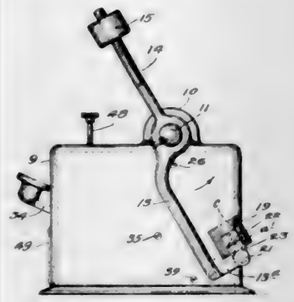
1,562,028. HEAD AND VALVE CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES. GLENN D. LANHAM, Bay City, Mich. Filed Dec. 7, 1922. Serial No. 605,493. 2 Claims. (Cl. 123—177.)



1. In a device of the class described, a cored detachable head located above the cylinders and having intake and exhaust ports above the center thereof, a hollow cylindrical rotary valve mounted therein, ribs on said valve and grooves in the head adapted to cooperate therewith, angular passages in the valve in spaced relation, said passages being formed to act as impellers to force water or other liquid therethrough, each passage registering with the intake port in one position and registering with the exhaust port in another position, and a connection between the interior of the head and the valve for forcing a cooling agent therethrough.

---

1,562,029. CASTING APPARATUS. CHARLES E. LARSON and MERRILL G. SWENSON, Minneapolis, Minn. Filed Jan. 29, 1923. Serial No. 615,584. 14 Claims. (Cl. 22—65.)



1. In a casting apparatus, a rotatable arm, a mold and a fusing cavity carried by said arm, the latter being radially inward of said mold and arranged to deliver thereinto under the action of centrifugal force, and means for rotating said arm comprising separable driving and driven members engageable to impart rotative momentum to said arm but disengageable to permit said arm to continue its rotation under the action of momentum, and means for completely separating said members when the impelling force has been exerted.

---

1,562,030. GOLF BAG. JOHN HENRY LAWRENCE, London, England. Filed Jan. 15, 1925. Serial No. 2,616. 6 Claims. (Cl. 150—15.)

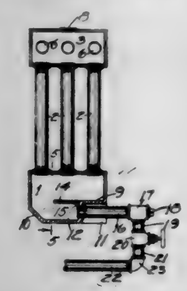
1. A golf bag comprising in part an elongated flexible pocket provided with a stiffened indeformable mouth in combination with a detachable hood adapted to envelop the heads of the clubs projecting from the open mouth

of the pocket, the said hood having its opening provided with a substantially rigid inextensible edge approximating in circumference to the indeformable mouth

of the pocket and having means for securing the substantially rigid inextensible edge of the hood to the indeformable mouth of the flexible pocket, as set forth.

---

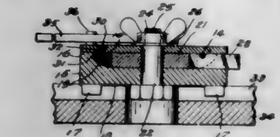
1,562,031. FURNACE-MOUTH LINING FOR BOILERS. WILLIAM H. LAWRENCE, Westfield, Mass., assignor, by mesne assignments, of one-half to Ethel L. Lawrence, Westfield, Mass. Filed Apr. 10, 1923. Serial No. 631,052. 1 Claim. (Cl. 122—6.5.)



In a furnace-mouth lining for boilers, a hollow base having a flat unbroken supporting bottom, openings in the top, and an overhanging front part, the lower portion of the rear wall extending straight downwardly and then forwardly to meet the back edge of said supporting bottom, and said base also having a wall between the front edge of said bottom and the bottom of said overhanging part, in which last-named wall is a blow-off opening, said bottom of said overhanging part being extended rearwardly to assist in forming a sediment pocket below, with an entrance between said rear wall and the rear edge of such extension, the top and bottom of said sediment pocket being parallel, also the sides of said pocket, and the front of the pocket being vertical and the back inclined upwardly and rearwardly.

---

1,562,032. MOLD FOR METALLIC PACKING. WALTER F. LOHMAN, Seattle, Wash. Filed June 1, 1925. Serial No. 33,989. 5 Claims. (Cl. 22—150.)



1. In a mold, a body having a circular recess therein, a core provided within said recess, a means engaging the core for positioning the same centrally of the recess, a cover for the body rotatably mounted upon said core positioning means, said cover having gates therein which communicate with said recess, cutting means provided at the under surface of the cover, and means to rotate the cover for actuating said cutting means to separate the sprues within the receptacle gates from the casting within the mold recess.

---

1,562,033. PISTON RING. STANLEY A. LUKASZEWICZ, South Milwaukee, Wis., assignor of one-half to Steven S. Lukaszewicz, Milwaukee, Wis. Filed Aug. 18, 1922. Serial No. 582,628. 1 Claim. (Cl. 74—109.)

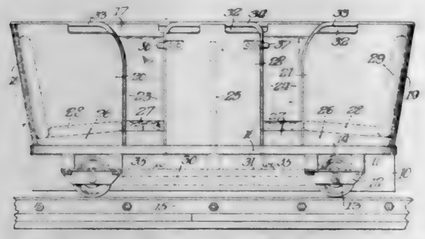
A piston having therein an annular groove adapted to receive therein packing, both side walls of said groove being partly inclined outwardly with respect to each other and the remaining portion of each wall being perpendicular to the base of the groove, a pair of split contractible rings positioned within said groove and coacting with the inclined portions of the side walls and provided with adjacent inclined faces which are of a greater angle than the first said inclined faces, and a split expansion ring arranged within the base portion of the groove and having its outer face provided with converging inclined faces adapted to coact with the adjacent faces of the contractible rings for forcing said rings upwardly of said inclined walls and outwardly in contact with the cylinder wall.

---

1,562,034. IMPLEMENT FOR HANDLING BALED MATERIAL. HENRY F. MIEHER, Carlinville, Ill. Filed Mar. 19, 1925. Serial No. 17,877. 1 Claim. (Cl. 294—26.)

An implement for handling and stacking baled hay or the like, comprising in an integral structure, a staff; a handle at one end of the staff; an upwardly extended and outwardly curved pointed hook; and an arm in the same plane with the staff and the hook and having an offset upwardly extending tapered terminal member adapted for easy insertion under the usual bale-tie, and also adapted to prevent slipping of the load carried on the arm; and also adapted for easy withdrawal of the arm from the edge of the carried bale.

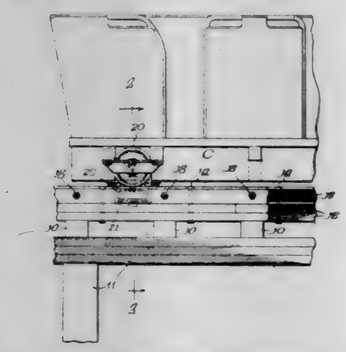
1,562,035. PLEASURE-RAILWAY CAR, JOHN A. MILLER, Homewood, Ill. Filed Dec. 11, 1924. Serial No. 755,134. 8 Claims. (Cl. 105—345.)



1. In a pleasure railway car, the combination of a substructure, supporting wheels thereon, a car body on said substructure comprising side and end enclosing walls, a transverse seat along each end wall and a longitudinal seat along one side wall of said body, the other side wall having passageway for passengers.

---

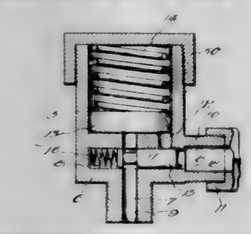
1,562,036. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed May 23, 1925. Serial No. 32,256. 7 Claims. (Cl. 238—24.)



1. In a pleasure railway track construction, the combination of stringers, and rail structures on said stringers comprising angle bars and flat bars, said angle bars engaging with their backs and bottoms against said stringers, and said flat bars seating on top of said stringers and angle bars and overhanging the angle bar bases.

---

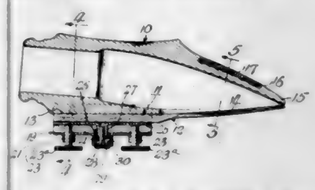
1,562,037. MEANS FOR DISTRIBUTING MEASURED QUANTITIES OF MATERIAL FROM A MASS IN BULK. GEORGE L. MOORE, Chicago, Ill. Filed May 29, 1922. Serial No. 564,305. 2 Claims. (Cl. 184—7.)



1. In combination a member having a measuring chamber, an outlet from said chamber, an inlet passage communicating at the inner end with said chamber; a spring pressed piston in said chamber normally tending to close communication between the outlet and the inlet passage; a conduit connected to the outer end of said passage; means for forcing a lubricant under pressure through said conduit towards said passage and subsequently relieving the pressure and leaving the lubricant in the conduit free to be pushed backward in the same; and means associated with said member, including a spring pressed part exposed to pressure in said passage, for closing the outlet when the lubricant enters said passage and opening the communication between the passage and said chamber and subsequently, when the pressure is increased, causing the piston to open the communication between the outlet and the inlet passage to the chamber and, when the pressure is relieved, causing the lubricant to be forced back out of said passage into the conduit and the outlet to be opened and communication between said passage and the chamber to be closed.

---

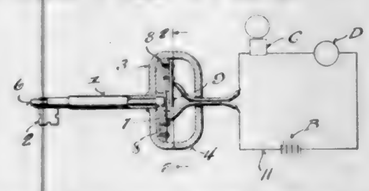
1,562,038. MOUTHPIECE FOR SAXOPHONES. JULIUS J. NEUMANN, Chicago, Ill. Filed July 14, 1922. Serial No. 574,950. 1 Claim. (Cl. 84—383.)



A reed clamp for a musical instrument, comprising in combination with a tubular mouthpiece body provided with a lay surface for a reed, a channel shaped housing member mounted on the body and enclosing the flattened rear end part of said lay surface which provides a base for the butt end of the reed, said housing member including a back wall spaced from said lay surface, a clamping plate in said housing member for engaging the butt end of said reed to hold the same against said base means carried by said back wall of the housing member for applying pressure to the clamping plate at a plurality of points along its median line, and coacting means on said back wall and on said clamping plate for withdrawing said clamping plate from the butt end of the reed when the pressure applying means has been released.

---

1,562,039. BURGLAR ALARM. JOHN NOWAKOWSKI, Milwaukee, Wis., assignor of one-half to Steve Lukaszewicz, Milwaukee, Wis. Filed Oct. 9, 1923. Serial No. 667,464. 1 Claim. (Cl. 200—55.)



A device of the class described comprising a door key having a hollow shank, a lock operating projection at one end of said shank, an oval shaped handle at the other end of said shank and having an opening concentric with the opening in said shank, said handle being formed of two cup-shaped parts, the inner of said parts being rigid with said shank, the outer of said parts being detachable and provided with a centrally located opening, screws securing the outer part to said inner part, a plunger slidably mounted within said shank and having an end projecting from the outer end of said shank

and having an enlarged head at its rear end positioned within the inner part of said handle, an insulating block secured within the inner part of said handle and having an opening surrounding the enlarged head of said shank, a contact spring carried by said block and bearing against the end of said head, a second contact spring secured to said block and located behind said first mentioned spring, and conductors connected to said spring and passing through the aperture in the outer portion of said handle.

---

1,562,040. HALF SOLE. CLIFFORD H. OAKLEY, Trenton, N. J. Filed May 21, 1921. Serial No. 471,473. 1 Claim. (Cl. 36—32.)

As an article of manufacture, tap sole material comprising a strip of molded composition, each longitudinal edge being curved and bevelled and having a strip of fabric embedded therein on the inner face of the curved portion substantially as described.

---

1,562,041. METAL AND ITS MANUFACTURE. ALADAR PACZ, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Sept. 26, 1918, Serial No. 255,790. Renewed Apr. 7, 1925. 12 Claims. (Cl. 75—17.)

1. The method of reducing one or more metals from compounds thereof which consists in briquetting said compounds intimately mixed with finely divided aluminum above 80 mesh, and igniting one or more of the briquettes.

---

1,562,042. PROCESS OF PREPARING BORON-IRON ALLOYS. ALADAR PACZ, Cleveland Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed May 3, 1919, Serial No. 294,456. Renewed Apr. 7, 1925. 6 Claims. (Cl. 75—1.)

1. The process of making an alloy containing boron which consists in briquetting a boron compound with a compound of another metal and finely divided aluminum, and igniting the briquette to cause the said materials to react.

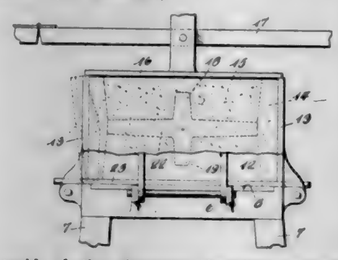
---

1,562,043. IRON-BORON ALLOY. ALADAR PACZ, East Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Mar. 7, 1922. Serial No. 541,837. 5 Claims. (Cl. 75—1.)

1. A casting, consisting predominantly of iron with from three-fourths to four per cent of boron, and having a tensile strength upwards of fifty thousand pounds per square inch.

---

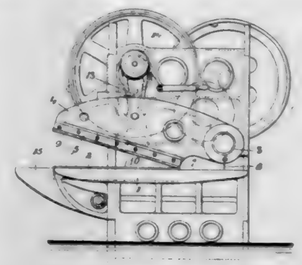
1,562,044. CONCRETE-BLOCK MOLD. WILLIAM H. PATTERSON, Cuyahoga Falls, Ohio, assignor of one-half to William O'Connor, Cuyahoga Falls, Ohio. Filed Apr. 9, 1924, Serial No. 705,243. Renewed June 11, 1925. 2 Claims. (Cl. 25—121.)



1. A mold of the character described comprising a base a separable vertical face plate arranged at one side of the base, side and end walls hinged to the base, ingots formed upon the inner faces of the end walls, an upstanding ingot removably arranged upon the base and having a central transverse recess, an ingot disposed above the upstanding ingot and having a central transverse recess to co-act with the first recess to form a vertical web in a block and said ingots being vertically spaced whereby to form a horizontal web in a block.

---

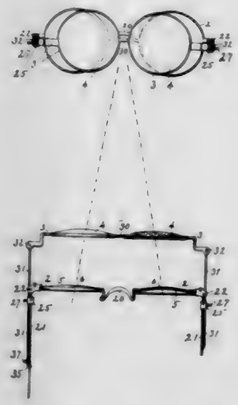
1,562,045. RECIPROCATING SHEARING MACHINE. HENRY PELS, Berlin-Charlottenburg, Germany. Filed July 7, 1924. Serial No. 724,709. 1 Claim. (Cl. 164—44.)



In a pivoted shearing machine, the combination of a machine frame having a U-shaped mouth and having an upper and a lower arm, a lower holder fixedly attached to the lower arm of said frame, a pivot pin fixed on said upper arm and projecting over the outer face of the machine frame and standing at a suitable distance above said lower holder, an upper holder pivotably mounted on said pivot pin both holders projecting over the machine frame, and knives fixed on the holders so that their ends project also over the machine frame.

---

1,562,046. OPTICAL INSTRUMENT. ARTHUR PERRIN, Brookline, Mass. Filed Jan. 4, 1924. Serial No. 684,424. 4 Claims. (Cl. 88—41.)

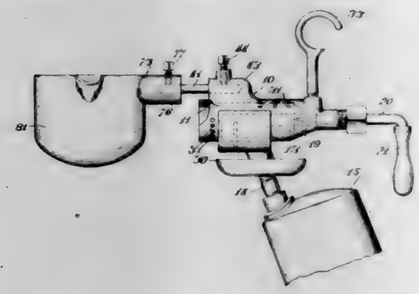


1. An optical instrument comprising front and rear spectacle frames containing objective and eye-piece lenses respectively, said frames each having bows hinged thereto, and the bows of the respective frames being connected by guides which accommodate a relative sliding movement by which the objectives may be moved towards and from the eye-pieces, said eye-piece lenses having near their central portion a concave or negative lens, and the objective lenses being convex and of large magnifying power, the optical centres of the objective lenses

being at substantially less distance apart than the optical centres of the eye-piece lenses whereby the lines of vision through the said eye-piece and objective lenses converge at an acute angle.

---

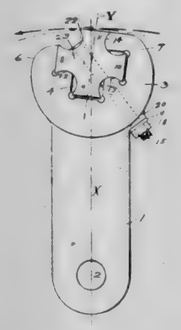
1,562,047. TORCH-SUPPORTED LADLE. JOHN PETERSON, Maywood, Ill., assignor to Combination Blow Torch Manufacturing Company, Melrose Park, Ill., a Corporation of Illinois. Original application filed June 24, 1921. Serial No. 480,017. Divided and this application filed Feb. 8, 1924. Serial No. 691,372. 2 Claims. (Cl. 126—240.)



1. The combination with a torch having a combustion chamber provided with an outlet through which the heating flame is adapted to pass, of a ladle having a bowl provided with an exteriorly rounded bottom and lower portion, a bifurcated supporting arm pivotally secured at its forward bifurcated end to opposite portions of said bowl near its upper edge and connected at its rear end to said torch at a point above said outlet, whereby the bowl will remain upright and in various positions of the arm and torch and the emitted flame will play constantly in all said positions upon the rounded lower portion of said bowl.

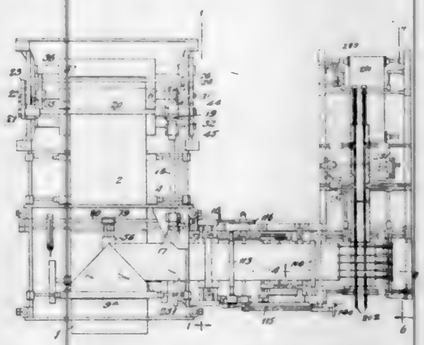
---

1,562,048. ROTARY PIVOTED HAMMER. HAROLD M. PLAISTED, St. Louis, Mo. Filed Feb. 23, 1923. Serial No. 620,676. 8 Claims. (Cl. 83—11.)



1. A rotary pivoted hammer comprising a shank adapted for pivotal mounting and having a solid head with a recess having three bearing portions, a cutter block adjustably mounted in said recess and having eight operative edges,—said head being adapted to protect from wear all edges except the one in operative position, and said block having eight bearing surfaces, three of which engage said bearing portions of the recess in each adjustment of the block,—and means detachably securing said block in said recess.

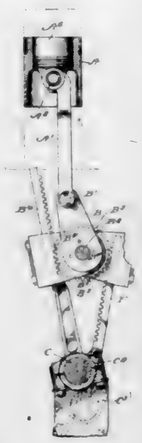
1,562,049. BAG-MAKING MACHINE. ROBERT H. PLASS, Upper Montclair, N. J., assignor, by mesne assignments, to Bemis Bro. Bag Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 4, 1920. Serial No. 401,103. 23 Claims. (Cl. 112—10.)



21. In a bag making machine having a sewing mechanism, and means for feeding a series of bag sections through the sewing mechanism and thereafter severing the connecting threads, the combination with said above recited elements of a delivery belt upon which the separated bags may be deposited of a length several times greater than that of any one of the bags delivered to it and means for intermittently feeding said belt, along the line of the sewing machine feed, at intervals of time sufficient for the accumulation thereon between movements of a predetermined number of bags, whereby a series of piles each containing a predetermined number of bags may be formed on said belt.

---

1,562,050. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor, by mesne assignments, to The A. L. Powell Power Company, Inc., Miles City, Mont., a Corporation of Montana. Filed Dec. 8, 1920. Serial No. 429,169. 7 Claims. (Cl. 74—14.)

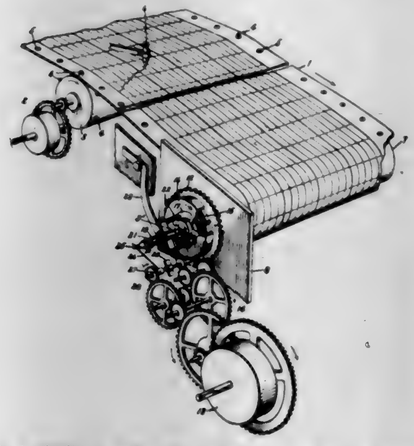


1. In an engine of the class described, a cylinder, a reciprocating piston therein having a bore extending longitudinally therethru, an inner piston slidable within said bore, a rod member attached to each of said pistons, a crankshaft, a reciprocating crankshaft, operating

members and gearing interposed between the rod members and the crankshaft operating members, whereby the stroke of the piston is greater than the diameter of the crank circle.

---

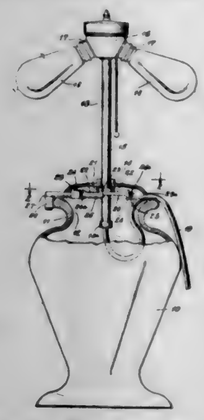
1,562,051. CONSTANT-TORQUE WINDING MECHANISM. JESSE J. POWERS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 23, 1922. Serial No. 570,366. 6 Claims. (Cl. 185—40.)



1. A shaft, a spring for driving said shaft, a torque motor for winding said spring and means for starting and stopping said motor comprising a cam mechanism having its relatively movable cooperating parts moved by said motor and said shaft respectively and a locking device for said motor moved in response to the relative position of said cam parts.

---

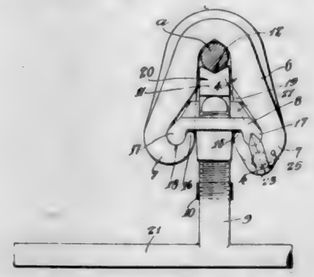
1,562,052. ELECTRIC-LIGHT LAMP FITTING. WILLIAM E. PRICE, White Plains, N. Y. Filed July 9, 1924. Serial No. 725,046. 5 Claims. (Cl. 240—52.)



1. In combination with a lamp base and an electric light outlet fitting having a supporting tube, of a device for rigidly mounting the fitting on the base in aligned relation, said device comprising a spider member mounted on said tube said spider having three short arms radially extending from said tube, a channelled clamping member formed at the outer ends of each arm, rods disposed in angular relation with and slidingly supported by each member, claws formed integral with the outer ends of said rods and a yieldable frictionally engaging surface provided on said claws for engaging the walls of said base, said rods being arranged to move in lines which enclose an equilateral triangle.

---

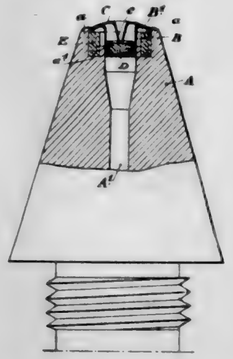
1,562,053. GRIP. JAMES P. RATIGAN, Walnut Park, Calif. Filed Feb. 16, 1925. Serial No. 9,508. 11 Claims. (Cl. 24—135.)



1. A grip comprising a body formed in sections, one section being channeled and the other section forming a wall for the open side of the channel and being movably secured to the first mentioned section, a screw threaded through one of the sections and projecting into the channel, and cooperating parts between the sections tending to pull the side walls of the channeled member toward each other when the screw is tightened.

---

1,562,054. FUSE FOR PROJECTILES. LÉON EMILE RÉMONDY, Ruell, France. Filed Apr. 6, 1925. Serial No. 21,136. 13 Claims. (Cl. 102—39.)



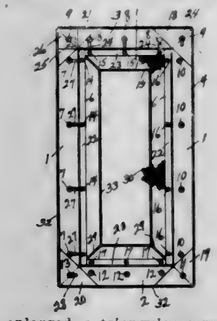
13. A fuse for projectiles comprising a fuse body having a duct leading to the interior thereof, an annular shoulder formed adjacent the outer end of the said duct, a carriage movably mounted in the duct, said carriage comprising a cylindrical body portion and an enlarged dome-shaped head, means interposed between the said enlarged head and the annular shoulder to yieldingly resist inward movement of the carriage, an annular flange formed adjacent the mouth of the duct to limit outward movement of the carriage, a striker formed centrally of and projecting inward from the enlarged head, and a detonator within the cylindrical body portion of the carriage in unrestricted communication with the said striker.

---

1,562,055. ADJUSTABLE SCREEN DOOR. GROVER E. RICHARDS, Youngstown, Ohio. Filed Apr. 24, 1924. Serial No. 708,690. 1 Claim. (Cl. 156—14.)

In a device of the class described, a screen support frame, a side member and an end member of said frame

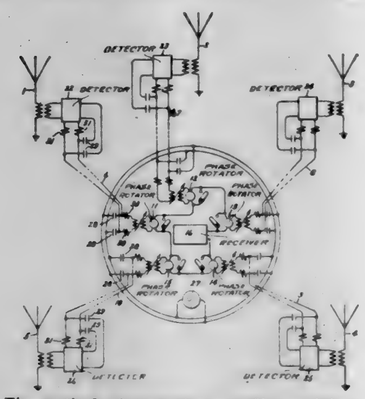
detachable, a side member and an end member attached to said support frame in a detachable and slidable manner, triangular corner pieces detachably arranged in each corner, two triangular corner pieces provided with a slot for adjustment of frame and to cover open corners



when frame is enlarged, a triangular corner piece formed with a squared opening, means for securing wire mesh to the interior portion of said frame, an inner rectangular frame with corner arms to support said inner rectangular frame, substantially as described for the purpose set forth.

---

1,562,056. RADIO RECEIVING SYSTEM. CHESTER W. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1921. Serial No. 463,102. 14 Claims. (Cl. 250—20.)

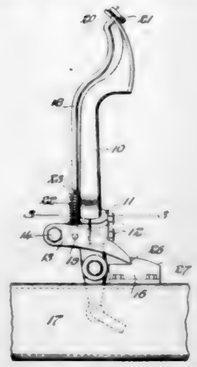


1. The method of operating a radio receiving system comprising a plurality of widely separated receiving antennæ and local detectors connected by transmission lines to a central receiving station which consists in transmitting over the transmission lines from the central receiving station to each local detector radio frequency currents, producing by means of the currents thus transmitted audio frequency currents, transmitting the audio frequency currents thus produced to the receiving station, selectively impressing upon the receiving apparatus the audio frequency currents thus transmitted, and selecting for the desired reception of signals the currents having the most favorable stray ratio.

---

1,562,057. CLUTCH-PEDAL LOCK. BURR S. ROGERS, Lindsey, Ohio, assignor of one-sixth to Edgar Rogers, one-sixth to Floyd Rogers, one-eighth to C. L. Bloker, one-eighth to R. E. Bloker, one-eighth to D. H. Overmyer, and one-eighth to Fred C. Magsig, all of Lindsey, Ohio. Filed Mar. 30, 1925. Serial No. 19,506. 3 Claims. (Cl. 74—81.)

1. In combination with a clutch pedal of an automobile, a bracket secured to said pedal, a pawl pivoted to said bracket, a stop member with which said pawl is adapted for engagement to prevent swinging movement of the clutch pedal in one direction, and a rod



for operating said pawl into and out of engagement with said stop member, said rod being slidable within a recess in said bracket and being retained within said recess by said pawl.

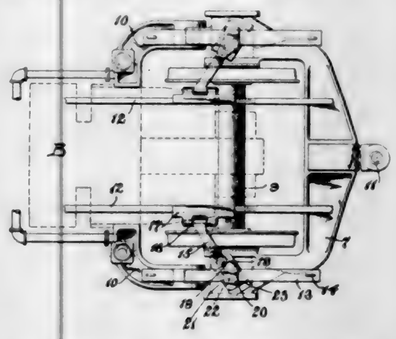
---

1,562,058. CUFF FASTENER. VICTOR H. SALZI, Richmond Hill, N. Y. Filed Mar. 13, 1925. Serial No. 15,225. 4 Claims. (Cl. 24—102.)

1. A clasp of the character described comprising pivoted arms, one of which is formed with an opening therein, a stud on the other arm and insertable through the opening, said stud having a post and a rounded head and a shoulder between said post and head, a spring member supported on one face of the arm having the opening and arranged to extend across the opening to engage the shoulder of said stud, and flange members extending from the wall of the opening and bent to engage the spring for holding the same in place.

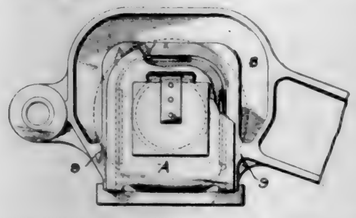
---

1,562,059. RAILWAY-TRUCK SPRING SUPPORT. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H.; said Schellens assignor to said Coffin, jr. Filed July 21, 1922. Serial No. 576,620. 9 Claims. (Cl. 105—82.)



1. In combination in a locomotive, a radial truck, a spring, and a spring support comprising a compression member disposed substantially centrally of the spring.

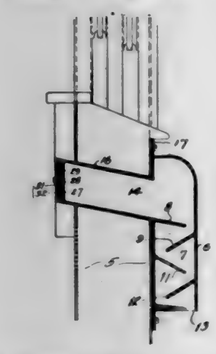
1,562,060. JOURNAL BOX. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H.; said Schellens assignor to said Coffin, jr. Filed July 21, 1922. Serial No. 576,618. 2 Claims. (Cl. 105—223.)



1. In combination, a journal box for railway vehicles, a part carrying the box and pads secured to the box at the sides thereof having a substantially vertical line contact with the carrying part.

---

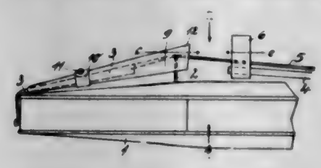
1,562,061. VENTILATING DEVICE. ALBERT SCHNEIDER, Portland, Oreg. Filed June 2, 1924. Serial No. 717,441. 1 Claim. (Cl. 98—22.)



In a train ventilating device, a casting adapted to be secured to the outer wall of a car, a pipe extending through the wall in said car and communicating with said casting, said casting having an inlet port formed in the bottom thereof, a plurality of downwardly and inwardly inclined baffles positioned in said casting, means for filtering the air passing through said device, said means comprising a screen, a filter pad in contact with said screen, means for holding said screen and said pad to said device, and means for regulating the rate of flow of air through said device, for the purpose specified.

---

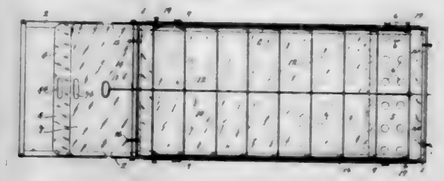
1,562,062. GUIDE FOR VIOLIN BOWS. LILLY SCHMIDT, Klotzsche, near Dresden, Germany. Filed Jan. 22, 1925. Serial No. 4,023. 1 Claim. (Cl. 84—283.)



A guide for violin bows consisting of a frame attached to the finger-board and of a guard possessing great stiffness and being of such a length as to protrude above and beyond the bridge; the said guard being placed over the lower end of the tail-piece and secured by means of a clasp so as to be kept in suspended position above the bridge and strings.

---

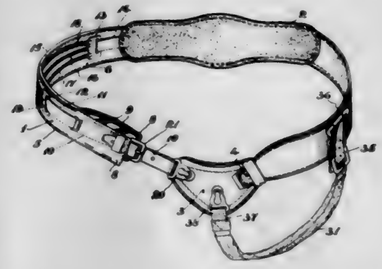
1,562,063. ARTICLE-FFEDING DEVICE. FRANK MATT SCHULER, Winona, Minn. Filed May 8, 1922. Serial No. 559,261. 23 Claims. (Cl. 107—7.)



1. An article feeder having in combination a hopper having an open bottom, guide means on which the hopper is supported extending at one end thereof, an imperforate plate supported on said means and slidable into and out of position beneath the hopper, a perforated member supported in said hopper above said plate, a second imperforate plate supported on said perforated member and slidable into and out of position in said hopper, and an agitating means in said hopper above said second mentioned plate.

---

1,562,064. SURGICAL TRUSS. FREDERICK SCHUTZE, London, England. Filed July 10, 1924. Serial No. 725,184. 5 Claims. (Cl. 128—101.)



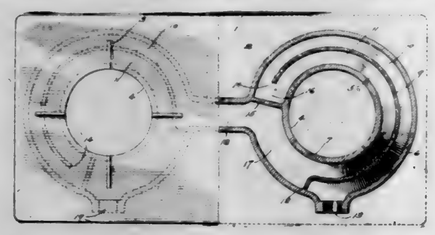
1. A surgical truss comprising a belt having a non-extensible back portion, a front portion carrying a pad, a plurality of springs connected between the back portion and the front portion, means for tightening the belt, and means whereby the springs come into action in succession as the belt is tightened in order successively to exert a direct pressure or pull upon the pad.

---

1,562,065. WATER BACK FOR GAS STOVES. JAMES G. SCOTT, Washington, D. C., assignor to Scott Gas Appliance Company, Washington, D. C., a Corporation of Delaware. Filed June 1, 1921. Serial No. 474,155. 1 Claim. (Cl. 126—53.)

A water back for gas stoves of the closed top type adapted and designed to be disposed below and spaced from the closed top of such stoves, comprising a substantially flat plate having a burner opening disposed therein, spaced annular vertical walls depending from said plate around said burner opening, the inner wall being shorter than the outer wall, a bottom plate inclined outwardly downwardly connecting said vertical walls to form an annular water chamber, said inner and inclined bottom wall serving to produce a "stack" effect on the air at the burner opening, said outer ver-

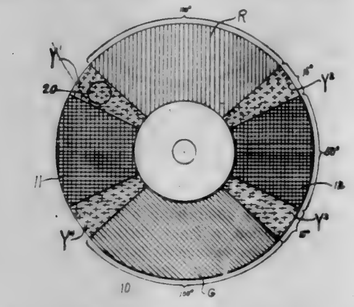
tical wall being provided with an inlet and an outlet water opening disposed materially less than 180° apart, an annular vertical partition connected with the outer side wall between the inlet and outlet openings and extending substantially centrally of the annular water chamber to a point adjacent the outlet opening and a transverse partition connecting the inner and outer walls adjacent to but spaced from the end of the annular partition, adjacent the outlet opening whereby



all water entering the water chamber through the inlet opening must pass in a circuitous course first along the outer side and then along the inner side of the annular partition before escaping through the outlet opening and whereby all of the water coming in contact with the inner wall of the water chamber and the portion of the inclined bottom plate adjacent thereto will be preheated by its passage through the outer passage of the water chamber.

---

1,562,066. METHOD OF PRODUCING MOTION PICTURES IN COLORS. JOSEPH SHAW, New York, N. Y., assignor to Kingdon Gould and Schuyler Neilson Rice, executors of the will of George J. Gould, deceased. Filed Oct. 19, 1920, Serial No. 417,862. Renewed Apr. 16, 1925. 11 Claims. (Cl. 88—16.4.)

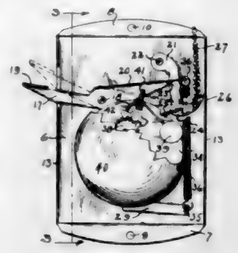


1. A method of producing motion picture negatives which comprises exposing successive image areas of a negative, through complementary color filters, and exposing each successive image area for a brief interval before and after each exposure through the respective complementary color filters, through a filter separating color values substantially intermediate the complementary color filters.

---

1,562,067. ALARM. VERNER E. SPROUSE, Indianapolis, Ind., assignor of one-third to Burley L. Parham and one-third to Earl Higginbotham, both of Indianapolis, Ind. Filed Apr. 13, 1925. Serial No. 22,643. 2 Claims. (Cl. 116—94.)

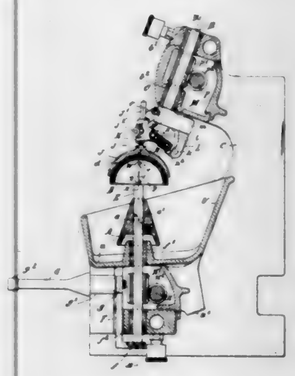
1. In an alarm, a base, an alarm signal secured to the base, a spring pressed control button projecting from the signal, a lever pivoted to the base, an outwardly turned flange on the lever adapted to contact said button, a trigger pivoted to the base adapted to swing into a slot formed in said flange, a stop on the trigger, a trigger spring normally holding said stop under said



flange, a spring pulling said lever against said button upon release of said trigger, and means of releasing said trigger from said lever.

---

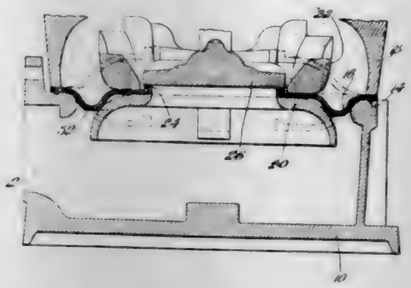
1,562,068. GRINDING AND POLISHING APPARATUS. WILLIAM TAYLOR, Leicester, England. Filed Apr. 9, 1918. Serial No. 227,563. 28 Claims. (Cl. 51—119.)



1. Apparatus for grinding and polishing spherically curved surfaces, comprising a pair of co-acting work and tool members, one having a convex and the other a concave surface, means for imparting a concentric rotary movement to one of said members, means for moving the other of said members bodily in a circular path about an axis which intersects the axis of rotation of the first said member substantially at the common center of curvature of the surfaces of the two co-acting members, and means for applying to the member which is moved bodily a force in a direction at an angle to the axis of the movement of said member and substantially toward the center of curvature of the co-acting member.

3. Apparatus for grinding and polishing spherically curved surfaces, comprising a pair of coacting work and tool members, one having a convex and the other a concave surface, means for imparting a concentric rotary movement to one of said members, and means for moving the other of said members bodily in an eccentric path on and about the surface of the first mentioned member, said moving means including a device adapted to engage and move the said member and being adjustable along a line radial to the common center of curvature of the two coacting members.

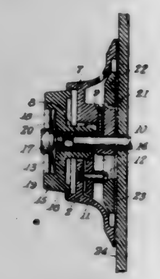
1,562,069. PUMPING APPARATUS. LEROY O. ARRINGDALE, Boston, Mass., assignor to Edson Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1924. Serial No. 685,463. 1 Claim. (Cl. 103—151.)



Pumping apparatus comprising a stationary pump housing, an annular diaphragm of rubber clamped at its outer periphery to the housing and molded with its inner and outer peripheries in substantially the same plane and with an annular depending fold intermediate the inner and outer peripheries, a pumping head occupying the major portion of the space within the housing and clamped to the inner periphery of the annular diaphragm, the pumping head being movable within the housing through the plane of the diaphragm and to opposite sides thereof, the annular depending fold of the diaphragm lying in the region of clearance between the housing and head when the latter is passing through the plane of the diaphragm and the fold providing sufficient material to permit movement of the inner periphery to the opposite limits of movement of the head.

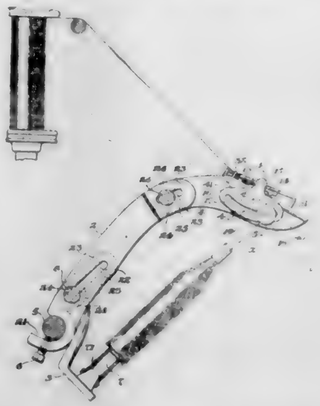
---

1,562,070. ADJUSTING DEVICE. LOUIS E. BALTELEY, Glen Ridge, N. J. Filed Jan. 15, 1925. Serial No. 2,493. 27 Claims. (Cl. 74—7.)



1. An adjusting device comprising a sleeve engageable over a shaft to be adjusted and provided with means for securing the same in adjusted relation on said shaft, rollers supported by said sleeve grouped about the axis of the same and independently adjustable along their own axes, a track member engaged by the inner ends of said rollers, a handle member journaled on the sleeve and adjustable lengthwise thereover into engagement with the outer ends of the rollers, a spring bearing on said handle member and a screw engaged with the outer end of the sleeve and bearing on the spring and accessible at the front of the handle member for varying the thrust of the handle member on the rollers and the consequent pressure of the rollers on the track member.

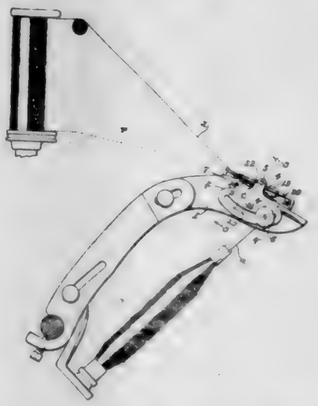
1,562,071. THREAD-TENSIONING MEANS. JOSEPH BARNES, New Bedford, Mass., assignor to L. V. B. Tension Company, New Bedford, Mass., a Corporation of Massachusetts. Filed July 10, 1923. Serial No. 650,637. 11 Claims. (Cl. 242—130.)



1. A tension device comprising, in combination, a plate over which the yarn or thread is adapted to pass, a presser provided with a yielding face plate cooperating with said plate, said face plate having one or more convex ribs to press the yarn or thread against the said plate, and said plate first mentioned having a slot or slots adjacent the said convex rib or ribs through which portions of the current of air produced by the traveling yarn or thread escape carrying with them particles of lint.

---

1,562,072. THREAD-TENSIONING MEANS. JOSEPH BARNES, New Bedford, Mass., assignor to L. V. B. Tension Company, New Bedford, Mass., a Corporation of Massachusetts. Filed Mar. 21, 1925. Serial No. 17,253. 3 Claims. (Cl. 242—149.)

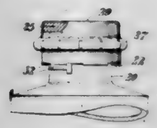


1. A tension device of the character described comprising a head; a presser-lever of sheet-material formed with a hole for a lever-pivot, a hole for a presser-pivot, and a slot providing for adjustable mounting of a tension-weight; a lever-pivot engaged with the said head and in one of said holes; a presser-pivot engaged in the other hole; a presser mounted upon the presser-lever

by means of the presser-pivot and cooperating with a backing surface in connection with the head; and a weight having securing means occupying said slot and adjustable along the same relative to the lever-pivot to vary the effective leverage of the weight.

---

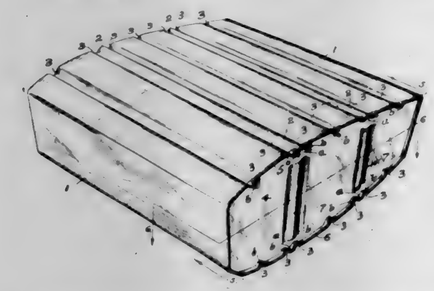
1,562,073. METHOD OF AND MEANS FOR EFFECTING CLOSURES. HAROLD BATCHELOR, Jersey City, N. J., assignor to Albert J. Sterling, New York, N. Y. Filed Sept. 16, 1924. Serial No. 737,973. 10 Claims. (Cl. 215—44.)



1. The combination with a container having the exterior around its mouth provided with projections the lower walls of which are formed as cams and at least one of which is provided with a vertical wall serving as a stop, of a closure cap provided with lugs for engagement with the cam portions of said projections, whereby rotation of the cap until arrested by the stop will cause the inner top of the cap to be drawn into engagement with the mouth of the container, and a bent portion between each lug and the top of the cap which may be further bent after the rotation of the cap has been arrested by the stop to draw the closure into closer engagement with the mouth of the container.

---

1,562,074. AIRPLANE GAS TANK AND METHOD OF MAKING SAME. SEYMOUR J. BAUM, Flushing, N. Y. Filed Aug. 25, 1924. Serial No. 733,869. 2 Claims. (Cl. 220—22.)

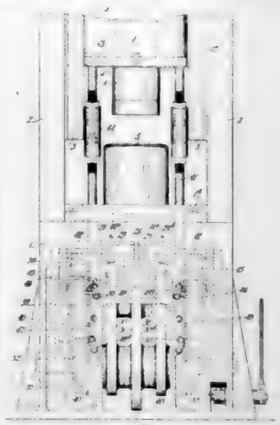


1. An airplane gas tank, comprising a body portion having its opposite faces elongated imperforate channels that extend from end to end, baffle plates whose opposite sides and ends terminate in lip-like extensions, and end covers for the tank which have channels corresponding to those in the faces of the body but at right angles thereto, said end covers conformably fitting the ends of the body and welded thereto, while said lip-like extensions are snugly housed within the channels both in the faces of the body and in the end covers.

---

1,562,075. PRESS FOR DRAWING SHEET METAL. GEORGE WILLIAM BERRY, Wakefield, England, assignor of one-half to Charles Joseph Rhodes, Wakefield, England. Filed Dec. 16, 1924. Serial No. 756,179. 12 Claims. (Cl. 113—38.)

1. In drawing sheet metal, die mechanism including co-operating movable and stationary dies, a movable drawing member embodied in the stationary die, a cam, a shaft carrying said cam having a fixed axis which intersects the vertical axis of the die mechanism, and means operative from the movement of the movable



die member to oscillate said shaft and cam to control the movement of the drawing member and maintain the same under a constant pressure during the drawing operation.

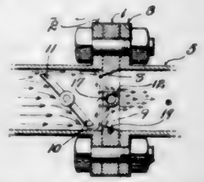
---

1,562,076. PROCESS OF MANUFACTURING ARTIFICIAL SILK AND OTHER PRODUCTS FROM NITROCELLULOSE. EMILE BINDSCHEDLER, Lansdowne, Pa., assignor to Tubize Artificial Silk Company of America, a Corporation of Delaware. Filed May 31, 1924. Serial No. 716,969. 8 Claims. (Cl. 18—54.)

1 Process of manufacturing nitrocellulose products from nitrocellulose hydrate, dissolved in a mixture of alcohol and ether, in which the collodion is exuded through orifices and the formed product drawn away and coagulated in a bath composed of a mixture of an aliphatic monohydroxy alcohol and glycerin and drawing the product through said bath at a speed greater than its rate of exudation.

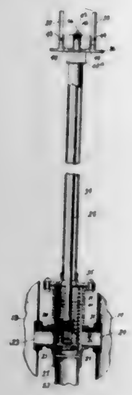
---

1,562,077. COMBINED VAPORIZER AND AUXILIARY AIR-INLET DEVICE. WALTER J. BLIFFERT, Milwaukee, Wis. Filed Nov. 22, 1923. Serial No. 676,369. 1 Claim. (Cl. 48—180.)



The combination of a carburetor and an intake manifold of an internal combustion engine, an exhaust manifold, and a gasket attached between said intake manifold and said carburetor, said gasket having a shouldered portion on the side adjacent the carburetor slightly constricting the continuous aperture through the intake manifold, the opening through said gasket being conical and gradually flaring towards the intake manifold to the size of the intake manifold, a heating pipe supplied from the exhaust manifold and extending transversely across the opening through said gasket, said gasket having an air inlet duct opening tangentially into the aperture through said gasket at a point spaced rearwardly from said shoulder.

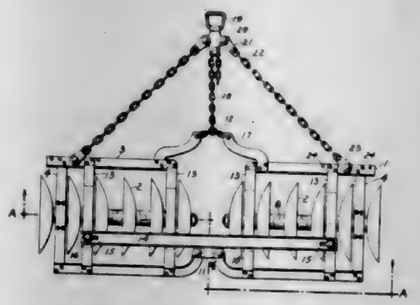
1,562,078. REFRIGERATOR CAR. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Company, a Corporation of Illinois. Filed June 7, 1923. Serial No. 643,958. 8 Claims. (Cl. 62—19.)



1. In combination, a railway car provided with a tank support, a plurality of tanks mounted on said support, a conduit for connecting said tanks, said conduit being provided with a single discharge port, an inwardly opening valve in the bottom wall of said conduit, and means in substantial alignment with the axis of said valve and extending to the top of said tank for operating said tank.

---

1,562,079. DISK HARROW. ANDREW V. CHAPIN, Ferndale, Calif. Filed May 23, 1923. Serial No. 640,976. 5 Claims. (Cl. 55—81.)

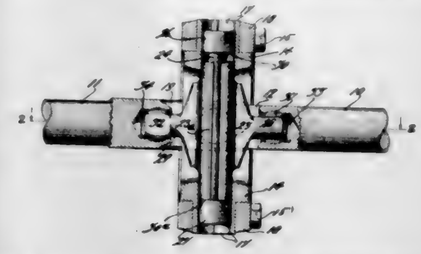


1. A harrow comprising frames, gang disks and a cross-bar, the frames being pivotally connected together by a shackle and each frame thereof provided with a gang of disks and with U-braces arranged transversely thereon to slidably support the cross-bar above said gang disks, to keep the frames substantially in the same plane.

---

1,562,080. UNIVERSAL JOINT. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, Inc., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,765. 15 Claims. (Cl. 64—102.)

1. In a joint having an intermediate articulated connection between a driving and a driven member, a control means comprising a two-part structure slidably journalled in said connection against separation and for relative oscillation of the parts, a pin having enlarged end portions on which the parts are articulated in de-



feat of relative end motion, and a rigid extension on each part engaging the adjacent member in a rotationally free manner.

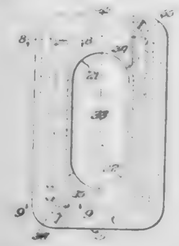
---

1,562,081. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Filed Dec. 24, 1924. Serial No. 757,901. 8 Claims. (Cl. 129—24.)

4. A loose leaf binder comprising a pair of rods provided with opposed short rigid arches extending outwardly from each other to form toggles at each end thereof, opposed paper holding prongs adjacent said arches, and a spring clip for engaging said arches for resiliently holding said toggles in adjusted position.

---

1,562,082. PLINTH PLATE. EDGAR L. DRINKWATER Chicago, Ill. Filed Feb. 11, 1924. Serial No. 691,962 11 Claims. (Cl. 126—317.)



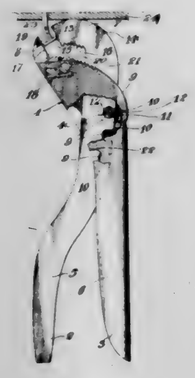
1. A plinth plate comprising a slotted escutcheon composed of a pair of complemental U-shaped members, one leg of each member forming a section of a face plate and the other leg being rearwardly offset from said face plate, said members being provided with interengaging means whereby the members are held against relative longitudinal and lateral displacement.

---

1,562,083. TOOL. WILLIAM FRANKLIN EVANS, Schenectady, N. Y., assignor of one-half to Harry Levering Evans, New York, N. Y. Filed Mar. 21, 1924. Serial No. 700,760. 7 Claims. (Cl. 81—186.)

3. A tool provided with relatively movable jaw members, said jaw members being provided with angularly

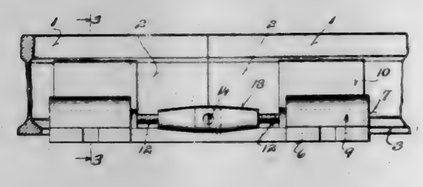
disposed gripping faces, one of the faces of each of said jaw members extending substantially at right angles to the handle portion of the tool, and the other faces of



said jaw members being disposed at an angle of approximately forty-five degrees to the first-named faces and the handle portion of the tool.

---

1,562,084. RAIL JOINT. KARL EMIL FERCH, Koepenick, Wis. Filed Aug. 14, 1923. Serial No. 657,310. 1 Claim. (Cl. 238—207.)

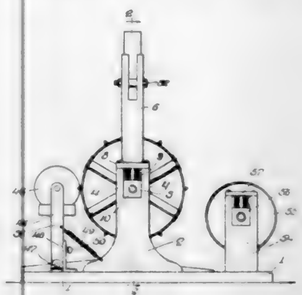


The combination of a pair of juxtaposed rails having their heads, webs, and bases aligned, and a gripping device comprising a body portion located below the bases and engaging one side of each base, a pair of upstanding lugs upon the other side, a pair of reversely slanting, spaced, wedge means positioned between said lugs and said rails and wedgingly engaging said rails, an elongated nut, and reversely threaded screws cooperating with said nut for simultaneously moving both of said wedge means, the body portion of said gripping device having an unbroken channel of uniform width throughout adapted to receive the bases of the rails and to hold them in alignment independently of said wedging means, the marginal walls of said channel engaging opposed edges of the bases.

---

1,562,085. LABELING MACHINE. EDWARD F. FOSTER, Milwaukee, Wis. Substitute for abandoned application Serial No. 465,387, filed Apr. 29, 1921. This application filed Aug. 25, 1924. Serial No. 733,999½. 8 Claims. (Cl. 216—55.)

1. In a labeling machine; a frame, a substantially non-rotatable axle mounted on the frame, one end of said axle having a longitudinal bore and a suction bore between its ends, and the other end of said axle having a longitudinal bore and a relief bore placed substantially on the opposite side of the shaft from the suction bore, a wheel rotatable on said shaft, a hollow spoke on said wheel adapted when rotated to register successively with said suction and outlet ports, and a label tube operatively positioned relatively to the outer end of said spoke when the inner end thereof is in register with said exhaust port.



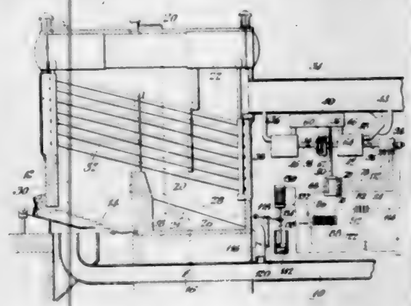
---

1,562,086. ANTIGLARE DEVICE OR EYESHIELD. ROLAND H. GILKERSON, Watertown, Wis., assignor of one-half to Voness D. Chipman, Watertown, Wis. Filed Nov. 24, 1924. Serial No. 752,029. 2 Claims. (Cl. 2—13.)

1. An eye shield adapted to be positioned upon a pair of spectacles, said eye shield comprising a pair of transparent colored members, an elastic tape threaded through adjacent portions of said members and having a clip binding the ends of the tape together, and hook-like clips carried by the outer portion of said transparent members and adapted to fit over the spectacles.

---

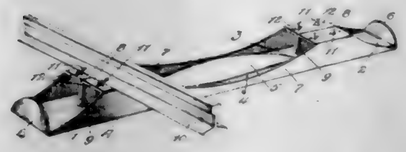
1,562,087. METHOD OF AND APPARATUS FOR CONTROLLING COMBUSTION. JOHN WILLIAM GRISWOLD, Warren, Pa., assignor to Henry L. Doherty & Company, a Copartnership composed of Henry L. Doherty and Frank W. Frueauff, New York, N. Y. Filed Feb. 12, 1920. Serial No. 358,018. 23 Claims. (Cl. 236—15.)



12. The method of regulating combustion in furnaces, which comprises continuously removing a sample of the flue gases from a furnace, continuously testing said sample of flue gases for free oxygen, continuously increasing the draft to said furnace when the content of oxygen in the flue gases is below a certain percentage, and decreasing the draft when the quantity of free oxygen increases above said fixed percentage.

---

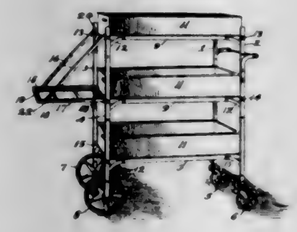
1,562,088. RAILWAY TIE. JOHN J. HOGAN, St. Louis, Mo. Filed Feb. 4, 1925. Serial No. 6,779. 4 Claims. (Cl. 238—63.)



1. A tie formed from a single piece of sheet metal comprising a base having plane surfaces of relatively great area at each end, flanges forming tie-sides and tie-ends, chairs abutting against the flanges forming the tie-sides, piers for said chairs and integral rail securing means on said chairs.

---

1,562,089. DETACHABLE FRAME FOR SERVICE WAGONS. WILLIAM V. HOLLEY, New York, N. Y., assignor to New York Bath Manufacturing Co., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,586. 1 Claim. (Cl. 280—50.)

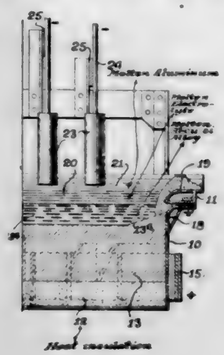


The combination with a service wagon having superposed shelves, and bars at one end, of a frame detachably connected to said bars and including a shelf member and brace members, said brace members having their upper ends hooked over one of said bars and being pivotally connected at their lower ends to one end portion of the shelf member, the shelf member normally lying in a horizontal position and being provided at one end portion with hooks engaging a lower one of said bars, said shelf member and brace members being adapted to lie in a vertical plane on one end of the wagon when the hooks of the shelf member are detached from the bar which they engage and drop down, said shelf member in this position being suspended from the brace members.

---

1,562,090. ELECTROLYTIC CELL. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1923. Serial No. 673,422. 2 Claims. (Cl. 204—19.)

1. An electrolytic cell provided with a bottom lining of carbon formed with a depression constituting a receptacle for a body of molten metal, the bottom lining having also a tapping well extending below the surface on which the molten metal rests and a tap hole leading horizontally from the bottom of the well, whereby in



tapping the cell liquid floating on the said molten metal will be prevented from reaching the tap hole before the said receptacle is substantially drained of metal.

---

1,562,091. PITCH-LOWERING DEVICE FOR MUSICAL INSTRUMENTS. MOSES BERTRAND HOWARD, San Francisco, Calif. Filed Nov. 12, 1924. Serial No. 749,443. 7 Claims. (Cl. 84—386.)

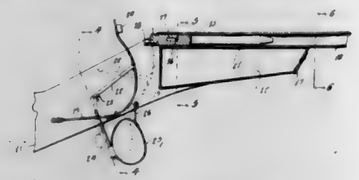
7. A device for adjusting the tonal pitch of clarinets, saxophones and other reed instruments comprising an elongated flexible element adapted to extend along and interiorly of the barrel of a musical instrument of the type above referred to and means at one end of said member adapted to hook over an extremity of the barrel of said instrument.

---

1,562,092. TOY GUN. RUFUS A. IRBY, Long Beach, Miss. Filed Nov. 28, 1924. Serial No. 752,714. 6 Claims. (Cl. 124—12.)

6. A toy gun comprising a stock formed of similar side pieces disposed in spaced and parallel relation, a magazine arranged between the front portion of the side pieces, a barrel supported upon the magazine and clamped between the side pieces of the stock, a plunger

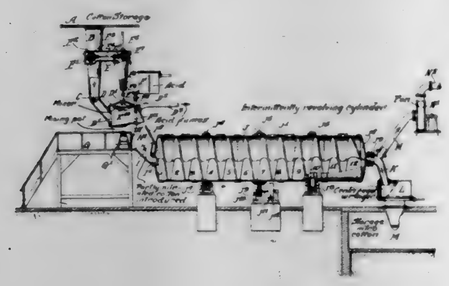
in the breech of the barrel and recessed to receive a paper cap, a spring provided with a hammer to coact with the plunger, a dog carried by the spring, a stop



adapted to engage the dog and a trigger mechanism, the action being comprised between the side pieces forming the stock.

---

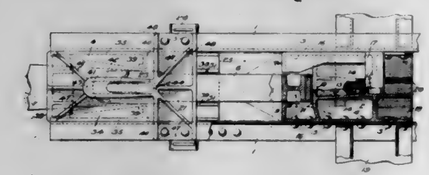
1,562,093. METHOD OF NITRATING CELLULOSE. GEORGE JUER, Hopewell, Va., assignor to Tubize Artificial Silk Company of America, a Corporation of Delaware. Filed June 5, 1923. Serial No. 643,548. 1 Claim. (Cl. 260—145.)



The method of nitrating cellulose which consists in thoroughly mixing cellulose and acids in a mixing pot so as to effect a partial nitration of the cellulose, charging the partially nitrated cellulose and admixed acids into a rotatable cylinder and tumbling the batch by rotating the cylinder until the nitration is complete.

---

1,562,094. DRAFT RIGGING. BYERS W. KADEL and PERCY R. DRENNING, Baltimore, Md., assignors, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Mar. 30, 1922. Serial No. 548,198. 24 Claims. (Cl. 213—50.)



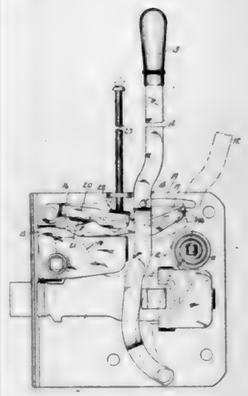
1. In a draft rigging, the combination with draft sills, of cushioning mechanism, a coupler, a vertically arranged yoke, means for guiding the front end of said yoke, guide means for the rear end of said yoke, said guide means at the rear of the yoke acting to form a stop member therefor upon the movement of the yoke beyond a predetermined position, means connecting said yoke and coupler adapted to permit relative movement therebetween, and means for guiding said connecting means.

1,562,095. WEAR PLATE FOR CAR-TRUCK COLUMNS AND METHOD OF MAKING THE SAME. BYRAM W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Sept. 4, 1923. Serial No. 660,906. 8 Claims. (Cl. 105—207.)

1. A wear plate for car truck side frames comprising a body portion having flanges formed with wearing surfaces, the inner faces of said flanges being curved to fit the radii of the truck columns of the side frame, said inner faces joining the wearing surfaces on said flange in relatively narrow edge portions, said edge portions providing one side of the welding groove used in effecting the attachment of said plate to the truck columns.

---

1,562,096. LATCH FOR VEHICLE DOORS. RICHARD V. KAIMER, New Haven, Conn., assignor to The English & Mersick Co., New Haven, Conn., a Corporation. Filed Aug. 13, 1925. Serial No. 49,887. 3 Claims. (Cl. 292—173.)

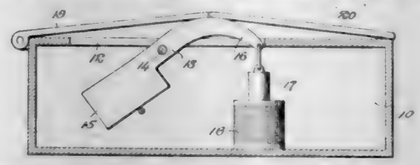


1. A latch, comprising a bolt, a lever for retiring said bolt, a roll-back adapted to retire said bolt, a locking-lever pivoted above the bolt and extending into the path of the roll-back, a push-rod lever pivoted at one end, above and forward of the locking-lever, a push-rod mounted in line with and bearing upon the push-rod lever and adapted, when forced down, to depress the forward end of the locking-lever, and means for depressing the rear end of the locking-lever to lift it out of the path of the roll-back and to raise the push-rod.

---

1,562,097. RAMP DEVICE FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. OTIS B. KENT, Washington, D. C., and ROBERT L. MILLER, Spokane, Wash.; said Miller assignor to Otis Automatic Train Control, Inc., Spokane, Wash., a Corporation of Washington. Filed Jan. 13, 1922. Serial No. 529,011. 3 Claims. (Cl. 246—202.)

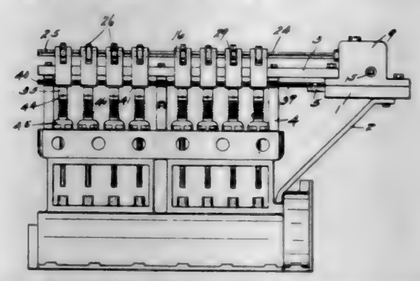
1. A ramp device for automatic train control apparatus including a pair of upwardly projectile ramp rails pivotally connected together, a weight operated member normally exerting an upward force at the point of pivotal connection of said rails to maintain the latter nor-



mally projected, and electro-magnetic means to retract said member thereby to permit retraction of said ramp rails under the influence of gravity.

---

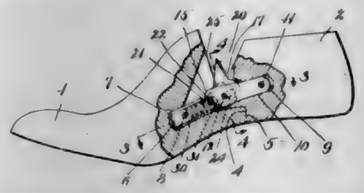
1,562,098. VALVE GRINDER. JACOB KLEINSCHMIDT, Kimmswick, Mo. Filed Aug. 11, 1924. Serial No. 731,378. 1 Claim. (Cl. 51—29.)



In a device of the kind described comprising a base; base supporting legs secured to the base; tracks secured to the base; legs secured to the tracks for engaging the cylinder block; a primary rack bar having gear teeth and a shaft aperture provided therein slidingly mounted upon the base; a gear housing secured to the base; a drive shaft vertically journaled in the gear housing and in the base, engaging the shaft aperture provided in the primary rack bar; a half gear mounted upon the vertical drive shaft; spur gears rotatively secured to the base engaging the half gear and the primary rack bar; means for driving the vertical drive shaft, shaft brackets, releasably secured to the tracks; grinding shafts mounted in the shaft brackets; pinions slidingly secured to the grinding shafts; a secondary rack bar having gear teeth cut therein, mounted in the shaft brackets, engaging the pinions secured to the primary rack bar; valve engaging stems secured to the grinding shafts; and means engaging the grinding shafts for seating and re-seating the said grinding shafts.

---

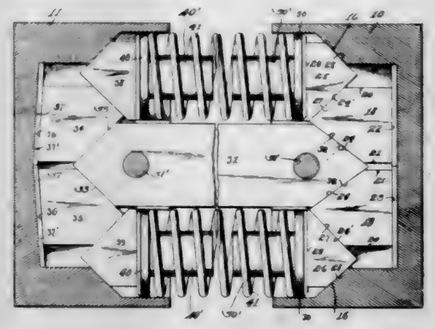
1,562,099. PROCESS OF ASSEMBLING LASTS. EDWIN O. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Original application filed Apr. 24, 1922, Serial No. 556,150. Divided and this application filed Apr. 5, 1924. Serial No. 704,506. 1 Claim. (Cl. 12—136.)



The improved method of manufacturing a last for use in the manufacture of boots and shoes, having a fore part and heel part relatively movable, which consists in constructing the fore part and heel part with recesses to receive connecting members, including positive locking means and lock releasing means, utilizing a temporary retaining element for temporarily assembling the connecting means and interlocking and releasing elements, applying the connecting, interlocking and releasing elements to the fore part and heel part while thus temporarily assembled, then completing the manufacturing operation by driving a retaining element acting to unite the last connecting and interlocking elements while simultaneously removing the temporary retaining element.

---

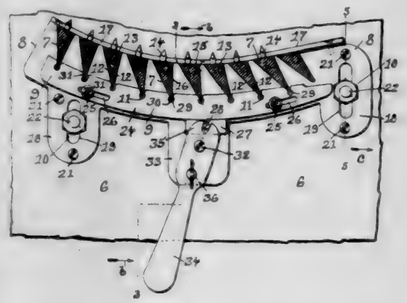
1,562,100. DRAFT RIGGING. ELMYR A. LAUGHLIN, Oregon, Ill. Filed May 16, 1924. Serial No. 713,787. 7 Claims. (Cl. 213—22.)



1. A draft rigging including housings, springs extending between and into the housings, a central longitudinally movable member, and wedge members of different degrees of acuteness cooperating with each other and cooperating with the central member for moving said member and compressing the springs.

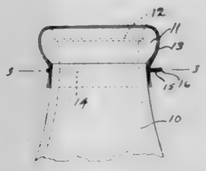
---

1,562,101. COTTON LAPPER. SAMUEL BURNSIDE LAWTON, Cranston, R. I. Filed Feb. 20, 1925. Serial No. 10,607. 6 Claims. (Cl. 19—95.)



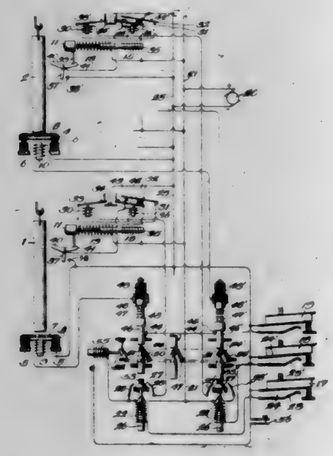
6. In a cotton lapper having side frames, grid bars and a grid bar bearing support at each end of the grid bars for pivotally supporting the grid bars, means for adjusting the grid bars lengthwise between the side frames, consisting of bolts through the grid bar bearing supports and side frames and screws through the bearing supports and bearing against the side frames, whereby on adjusting the bolts and screws, the grid bars are adjusted lengthwise between the side frames and by tightening the bolts and screws the grid bars are held in their adjusted positions.

1,562,102. BOTTLE-COVER HOLDER. WILLIAM H. LE MASSENA, Glen Ridge, N. J. Filed Jan. 23, 1925. Serial No. 4,143. 4 Claims. (Cl. 215—95.)



1. A holder for a bottle cover, comprising a continuous ring of metal wire having a bend in the wire with the bent portion making an angle of at least 90° with the ring portion when the ring is drawn into holding position, said wire having a nick in one side thereof at the junction of the bent portion and the ring portion and positioned to be opened when the bend is straightened, whereby the wire will be broken when the bend is restored to its original position before the wire was bent.

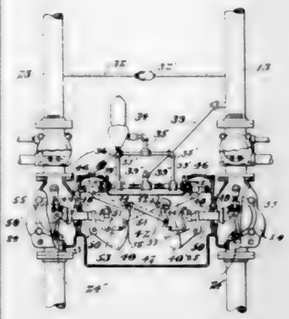
1,562,103. SOUND-PRODUCING INSTRUMENT. FREDERICK B. LITTLE, Chicago, Ill., assignor to J. C. Deagan, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 4, 1925. Serial No. 27,769. 9 Claims. (Cl. 84—405.)



1. The combination with two sound producing members; of a sound damper engageable with one of said members; mechanism controlling the application of said sound damper to the sound producing member to which it pertains; and mechanism operable upon the other sound producing member to set it into sound producing vibration and then operable upon the first aforesaid mechanism to enable the application of said sound damper to the sound producing member to which it pertains.

1,562,104. DRY-PIPE SPRINKLER SYSTEM. ALBERT J. LOEPSINGER, Providence, R. I., assignor, by mesne assignments, to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,173. 15 Claims. (Cl. 169—21.)

1. In a dry pipe system for plural liquids, the combination with a dry pipe valve for each liquid, having a weighted lever arranged to maintain said valve closed while suspended and adapted to open said valve upon being tripped, of means connecting said levers whereby the tripping of one effects simultaneous tripping of the other.



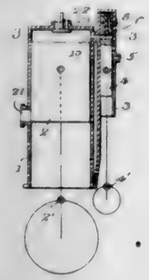
1,562,105. WINDOW-SHADE ROLLER. CHARLES E. MCDONALD, Butte, Mont. Filed May 31, 1924. Serial No. 717,030. 5 Claims. (Cl. 156—25.)

1. A shade roller provided with a longitudinal groove having a seat at one side and a projection at its opposite side, and a resilient retaining member disposed in said groove to abut said seat and having a free portion transversely movable to engage the inner walls of the groove and the projection at opposite points.

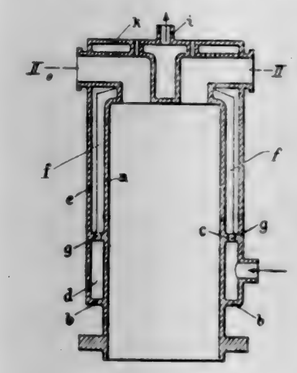
1,562,106. WORKING PROCESS FOR INTERNAL-COMBUSTION ENGINES. FRANZ MÄDLER, Charlottenburg, Germany, assignor to Maedler Engine Corporation, a Corporation of Maryland. Filed July 16, 1920. Serial No. 396,870. 5 Claims. (Cl. 123—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A method of preparing the combustion charges in internal combustion engines, which comprises filling a small auxiliary chamber with practically inert hot combustion gases directly from the working cylinder before the exhaust opens, filling the working cylinder with an air charge while the auxiliary chamber is cut off from the cylinder, subjecting a fuel charge to the action of the combustion gases in said auxiliary chamber and holding said mixture of fuel and gases in said chamber while this chamber is positively closed and while said gases are under high temperature and pressure conditions, whereby said fuel charge is treated in said closed chamber for a sufficient length of time, so

that it is prepared for efficient mixing and combustion with the air charge in the working cylinder, and releasing said gaseous mixture at the proper moment to inject the highly compressed prepared fuel charge from the auxiliary chamber into the less highly compressed air charge in the working cylinder.



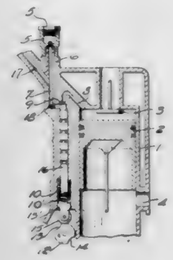
1,562,107. COOLING OF CYLINDERS. FRANZ LOUIS MÄDLER, Charlottenburg, Germany, assignor to Maedler Engine Corporation, a Corporation of Maryland. Filed Apr. 6, 1921. Serial No. 459,196. 3 Claims. (Cl. 123—173.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



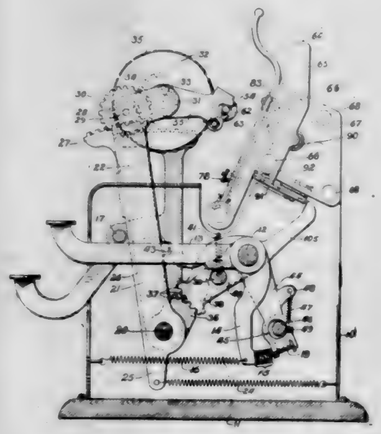
1. In a motor cylinder in combination, a water jacket surrounding said cylinder and having an inlet at its lower portion and an outlet at its upper portion, a radial partition in said jacket dividing the same into upper and lower chambers, longitudinal partitions on said cylinder in said upper chamber between said radial partition and water outlet, and passages of different diameters in said radial partition for connecting said chambers to permit water in varying quantities to reach different parts of said upper chamber.

1,562,108. INTERNAL-COMBUSTION ENGINE. FRANZ MÄDLER, Berlin, Germany, assignor to Maedler Engine Corporation, Cleveland, Ohio, a Corporation of Maryland. Original application filed July 16, 1920, Serial No. 396,870. Divided and this application filed Nov. 25, 1924. Serial No. 752,185. 7 Claims. (Cl. 123—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an internal combustion engine, a working cylinder, a small auxiliary chamber arranged to communicate with the interior of said cylinder, normally closed valve mechanism for controlling said communication, means for momentarily operating said valve mechanism to admit combustion gases under high temperature and pressure from the main cylinder into the auxiliary chamber, means for depositing a charge of fuel in the path of said gases whereby said gases vaporize the fuel in said chamber, said chamber being held positively closed by said valve mechanism after the combustion gases and fuel are admitted therein, so that said combustion gases and vaporized fuel are retained in said chamber under high temperature and pressure, means for admitting an air charge into the main cylinder, and means for operatively operating said valve mechanism to momentarily open communication between the auxiliary chamber and the main cylinder for injecting the vaporized fuel from the auxiliary chamber into the air charge in the main cylinder.

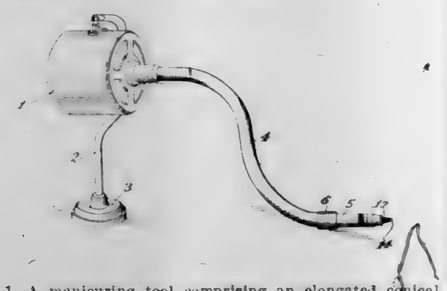


1,562,109. CHECK PROTECTOR. OTTO MALCHER, Chicago, Ill., assignor to Caspar Staub, jr., Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,715. 12 Claims. (Cl. 197—6.6.)



1. The combination with a type wheel, of a frame mounted for rotation about the axis of said wheel, an inking roller carried by said frame in position to engage the periphery of said wheel, a stationary rack, and gearing connected with said rack and frame for rotating said frame about its axis to cause said inking roller to traverse the periphery of said wheel when the axis of said wheel is shifted relative to said rack.

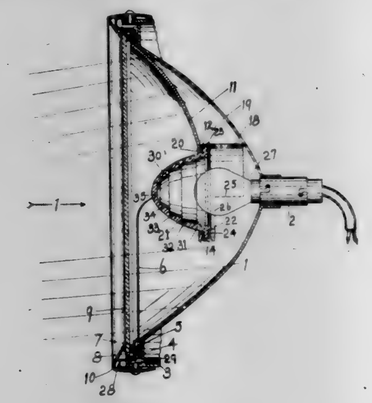
1,562,110. NAIL-CUTICLE TOOL POINT. CHARLES A. MASH, Los Angeles, Calif., assignor to The Electric Manicuring Co., Los Angeles, Calif., a Corporation of California. Filed July 22, 1925. Serial No. 45,253. 5 Claims. (Cl. 132—14.)



1. A manicuring tool comprising an elongated conical body having a pointed apex, an outwardly projecting flange at the base of said conical body, and the surface of said conical body being provided with longitudinally disposed grooves.

---

1,562,111. HEADLIGHT LENS. GEORGE MATTHYSSEN, Inglewood, and CHARLES OHLSON, Los Angeles, Calif. Filed Mar. 24, 1924. Serial No. 701,490. 4 Claims. (Cl. 240—48.2.)



1. A headlight comprising a concavo convex reflector having a rim on its outer edge, an opening in the axial center, and a cut away portion below the axial center adapted to form an opening for rays projected from a lamp, and a beehive glass mounted in the opening of the reflector.

---

1,562,112. TENSION DEVICE FOR SPOOLING MACHINES. EMYGDIO SOARES MEDEIROS, New Bedford, Mass., assignor of one-half to Jose Pacheco Correia, New Bedford, Mass. Filed Apr. 30, 1925. Serial No. 26,984. 5 Claims. (Cl. 242—150.)

1. In a spooling machine, a thread tension device comprising a plate having a bifurcated end forming a thread slot, a porcelain thread guide eye at the end of the thread slot and having a corresponding thread slot, a lower porcelain thread tension washer on the plate and having a neck and a central hole, a stud having a shoulder bearing on the neck of the tension washer and a screw-threaded stem which extends through the tension washer and through a hole in the plate, a rubber washer and a nut on the screw-threaded stem and an upper porcelain tension washer on the lower tension

washer and means for securing the thread tension device to the movable thread guide device of a spooling machine, for the purpose as described.

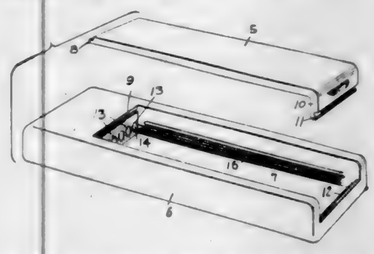
---

1,562,113. SLIDING GATE. ADOLPH A. MEYER, Washington, D. C. Filed Nov. 28, 1924. Serial No. 751,547. 2 Claims. (Cl. 61—28.)

1. In combination, a stationary guide surface, a movable gate having a surface opposed to the guide surface, a substantially rectangular retaining frame mounted on the opposed surface of the gate and normally projected to engage the stationary guide surface, and a friction reducing packing resiliently mounted and retained in said frame for providing a low friction contact surface for the gate with said stationary guide surface and for preventing leakage therebetween.

---

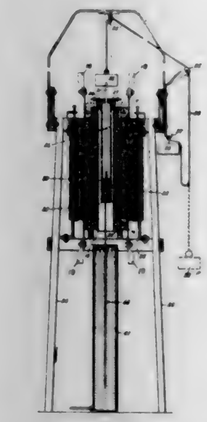
1,562,114. SAFETY BOX. PETER MICHELI, Monongahela, Pa. Filed Nov. 24, 1924. Serial No. 751,897. 2 Claims. (Cl. 206—3.)



2. A box comprising a body portion, a groove transversely disposed adjacent to one end thereof, the opposite end wall of the body portion being partially cut away at its upper side, a cover having an end portion seating within said groove and at its opposite end provided with a downturned portion fitting within said cut away portion, and means for effecting detachable engagement between said downturned portion and that end of the body portion which is adjacent thereto.

---

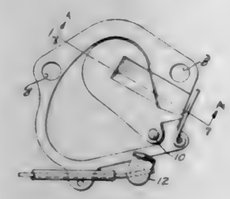
1,562,115. SILICA GLASS. LEVI B. MILLER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Original application filed Apr. 1, 1921, Serial No. 457,660. Divided and this application filed Feb. 13, 1923. Serial No. 618,859. 6 Claims. (Cl. 49—14.)



1. An electric furnace adapted for shaping plastic silica which comprises a container providing a vertical heating zone having a discharge port located at its lower end, an electric heater therefor, a refractory crucible supported in said heating zone and having a die aligned with said discharge port to permit of the extrusion of material therethrough and means for extruding a charge from said refractory container.

---

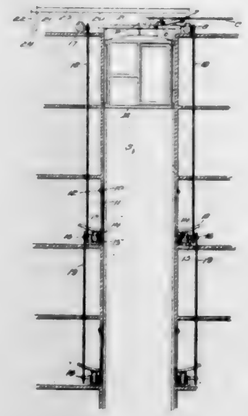
1,561,116. CARBURETOR CUT-OFF. HARRY W. MOIR, Los Angeles, Calif., assignor of one-half to Lester H. Miles, Los Angeles, Calif. Filed Apr. 20, 1920. Serial No. 375,380. Renewed Apr. 18, 1925. 3 Claims. (Cl. 277—8.)



1. A device adapted to be interposed between the carburetor and intake manifold of an internal combustion engine, said device comprising a chamber having a longitudinal opening therethrough, and a second opening to the atmosphere, a valve movable transversely of such longitudinal opening to close the same, and a second valve mounted externally of said apparatus and normally closing such second opening, said first-named valve being adapted to engage and open said second valve upon the closing of said first-named valve.

---

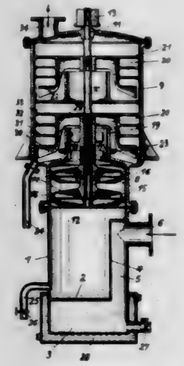
1,562,117. SAFETY DEVICE FOR ELEVATORS. NORMAN LEWIS MONROE, Bucyrus, Ohio. Filed Feb. 24, 1925. Serial No. 11,283. 2 Claims. (Cl. 187—81.)



1. In combination, an elevator shaft, an elevator mounted in the shaft, a cable for operation of the elevator, a circuit closer controlled by the cable, a motor in circuit with the circuit closer, and stops actuatably by said motor and operable to be moved thereby across the path of the elevator in the shaft.

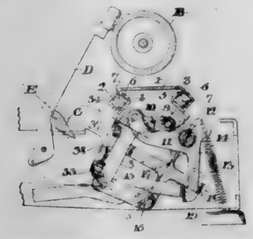
---

1,562,118. TAR SEPARATOR. BERNARD MOSCOVITCH, Rodenkirchen-Cologne, Germany, assignor to "Lignojen" Maschinen- und Apparatebau G. m. b. H., Berlin, Germany. Filed Oct. 18, 1924. Serial No. 744,437. 12 Claims. (Cl. 183—77.)



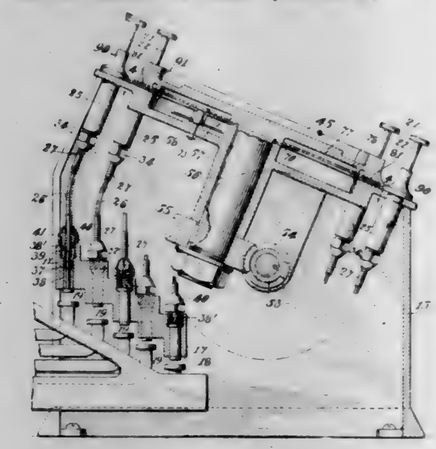
1. A tar separator comprising a casing, a plurality of grate members in the casing, and a plurality of interconnected vane disk members and bell-like members arranged in the casing, certain of said members being movable relatively to the others, each vane disk member cooperating with one of the grate members and comprising an imperforate body with vanes extending therefrom in the direction of the axis of rotation into close proximity to the bars of the grate member with which it is associated, and gas admitting and discharging means on said casing.

1,562,119. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, and GEORGE F. HANDLEY, Glendale, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,169. 30 Claims. (Cl. 197—149.)



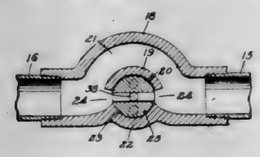
1. In a typewriting machine embodying a main frame, a carriage, and pivoted type bars, the combination of a shift frame supporting said carriage for case shift movement, and means for mounting said shift frame for bodily adjustment as a unit relative to the main frame independent of the case shift movement to obtain proper relation between the carriage and the type bars.

1,562,120. CODE-WRITING MACHINE. LOUIS A. NEMCOVSKY, New York, N. Y. Filed Aug. 16, 1922. Serial No. 582,157. 14 Claims. (Cl. 197—4.)



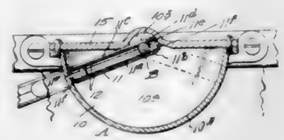
1. In a code-writing machine in combination a rotary disc having a plurality of character-bearing keys carried thereby, means for rotating said disc, and means operating upon rotation of said disc for rotating said keys relative to said disc.

1,562,121. LINE SAMPLER. RALPH W. NEWTON, Placentia, Calif. Filed Jan. 30, 1925. Serial No. 5,793. 12 Claims. (Cl. 137—111.)



1. In combination with a pipe line, means for taking and removing a representative sample of fluid in the pipe line without interrupting the flow therethrough.

1,562,122. FLUID-PRESSURE MOTOR. JOHN R. OISHEI, Buffalo, N. Y. Original application filed Nov. 24, 1921, Serial No. 509,822. Divided and this application filed Feb. 8, 1923. Serial No. 617,878. 3 Claims. (Cl. 121—97.)



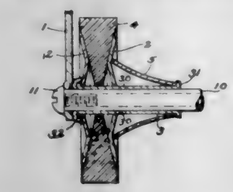
1. A fluid pressure motor having a fluid pressure chamber with concentric curved oppositely disposed inner wall portions of different radii extending from an axis between said opposite inner wall portions, a vane having a pair of packing portions with edges in contact with said wall portions the edges of said packing portions being bent inwardly toward each other, a rock shaft secured to said vane, the axis of said rock shaft coinciding with said first named axis, and means for controlling the admission of operating fluid to said chamber to move said vane.

1,562,123. TUBULAR HOLDER. EDWARD L. PITTS, Raton, N. Mex., assignor of one-half to Chalkey C. Fisher, Okmulgee, Okla. Filed Oct. 20, 1924. Serial No. 744,756. 5 Claims. (Cl. 102—4.)

1. A holder of the character described comprising a tubular inner casing open at its upper end and closed at its lower end, said inner casing being made of a non-metallic material having imperforate walls impervious to moisture, a tubular intermediate casing in which the inner casing fits, said intermediate casing being closed at its lower end and being made of metallic material, the body of the intermediate casing being foraminous, and an outer tubular casing closely covering the intermediate casing and being made of non-metallic material having imperforate walls impervious to moisture.

1,562,124. SKATE WHEEL. ALFRED T. RAUTENBERG, Seattle, Wash. Filed Feb. 17, 1925. Serial No. 9,763. 4 Claims. (Cl. 208—181.)

3. A roller skate wheel having a tubular axis, a wheel body mounted upon said axis and a hollow conical buttress mounted upon the tubular axis to provide a thrust bearing between the said axis and one side of the

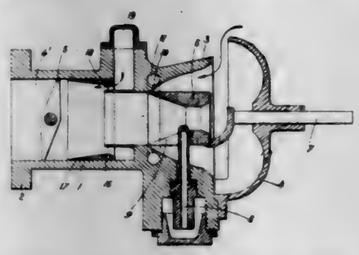


wheel body and also to form a grease reservoir, the tubular axis having a feed hole therethrough.

1,562,125. PROCESS FOR SEPARATING MOLYBDENUM FROM ITS ORE. WILLIAM H. RIDEOUT, Porthill, Idaho. Filed Mar. 13, 1924. Serial No. 699,146. 1 Claim. (Cl. 83—85.)

The method of separating molybdenum from its ore consisting in reducing the ore to a fine mass, adding water to the mass to form a pulp, adding two gallons of a composition to every one gallon of the pulp, the composition being made in the following proportions: for every one hundred gallons, water ninety gallons, paraffin ten gallons, soda, four ounces, lye one pound, then agitating the entire mixture, allowing the mixture to stand until the compound floats to the top thereof carrying the molybdenum therewith, and then withdrawing the compound and molybdenum from the mixture.

1,562,126. CARBURETOR. LÉON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Apr. 20, 1922. Serial No. 555,763. 1 Claim. (Cl. 261—41.)



A carburetor for internal combustion engines comprising a casing having a longitudinal bore, said bore being enlarged adjacent one end to form an air chamber, a Venturi tube axially movable in said air chamber serving as a primary air inlet and controlling communication between said air chamber and said bore, means for discharging fuel into said Venturi tube, means for discharging fuel into said air chamber adjacent said Venturi tube, a second Venturi tube fixed within said bore in the rear of said adjustable Venturi tube, an auxiliary air chamber communicating with said bore between said Venturi tubes, and suction responsive means for controlling the supply of air to said auxiliary air chamber.

1,562,127. MEANS FOR REGULATING MOVING TORPEDOES. FRANCESCO SCHMID, Naples, Italy. Filed Nov. 11, 1924. Serial No. 749,352. 6 Claims. (Cl. 144—238.)

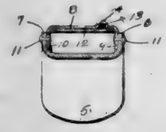
1. In a torpedo and torpedo tube, the combination with the organs of the torpedo that need regulation before firing, when the torpedo is in place in the tube, of a pinion placed in a recess on the torpedo shell, and a shaft fixed to the organ of the torpedo to be regulated, said shaft and pinion lying within the torpedo

shell, and a rotatable element supported by the torpedo tube and movable into mesh with the pinion located within said recess.

1,562,128. BRASSIÈRE. FLORENCE M. STANLEY, Lexington, Ky. Filed Feb. 12, 1923. Serial No. 618,570. 1 Claim. (Cl. 2—42.)

A garment of the class described comprising a substantially V-shaped inelastic breast engaging tape with the apex thereof extending downwardly and adapted to be located between the breasts of the user at the base thereof, an inelastic tape secured to the apex of said breast engaging tape and depending therefrom, and equipped with elastic branches having hose-engaging fasteners, a body encircling tape secured to the apex of said V-shaped tape to be passed around the wearer's body just below the bust, shoulder straps to extend over the outer portions of the shoulders the ends of said V-shaped tape being secured to said shoulder straps at the front of the garment opposite the arm pits of the user, said shoulder straps extending down substantially straight from the shoulders to lie at the sides of the bust and the shoulders adjacent the underarm portion of the user, said straps intersecting and secured to the body encircling tape, means connecting the back members of said straps, and hose supporters carried by said shoulder straps.

1,562,129. HORSE-COLLAR PAD. GEORGE P. STEDNER, California, Mo., assignor to William Heck Saddlery Company, California, Mo., a Corporation of Missouri. Filed May 28, 1925. Serial No. 33,342. 3 Claims. (Cl. 54—19.)

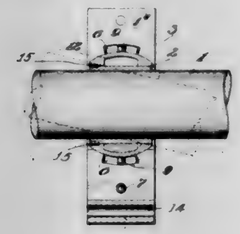


2. A horse collar pad comprising an arcuate bottom member having its longitudinol edges upturned, a top member having its longitudinal edges downturned, said

last mentioned edges adapted to fit snugly within and against the first mentioned edges whereby a tubular member having reinforced side walls is formed, a strap secured to each end of the top member, said straps adapted to secure the pad to a horse collar, and a longitudinally extending outwardly projecting rib formed integral with the top member adjacent one edge thereof.

---

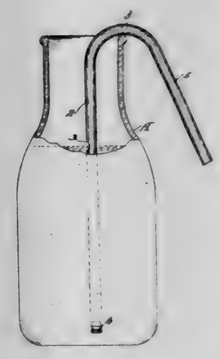
1,562,130. JOURNAL BEARING. BRUCE L. STITSINGER, Long Beach, Calif. Filed Dec. 13, 1923. Serial No. 680,421. 4 Claims. (Cl. 308—72.)



1. A bearing for shafts and the like comprising a support formed of complemental halves, a ball ground collar disposed within said support and providing a bearing for the shaft, recesses formed in the opposed surfaces of said halves cooperating to form a slot, and a pin provided upon said collar and extending into said slot so as to be movable therein, whereby said shaft and collar are capable of universal movement within said support but rotation of said collar with said shaft is prevented.

---

1,562,131. SELF-STARTING CREAM REMOVER. RENSSELAER H. TOLL, Long Beach, Calif. Filed July 30, 1924. Serial No. 729,126. 5 Claims. (Cl. 137—20.)



4. A siphoning device comprising a tube having a trunk part, a removable closure for the bottom end of said part, and a gooseneck for the upper end of the trunk; the said upper end having a liquid inflow below the goose-neck.

---

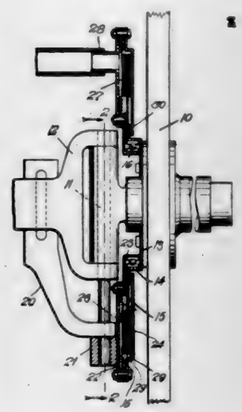
1,562,132. BRAKE-BAND LINING-SECURING MEANS. EDWARD TRIST, Pittsburgh, Pa. Filed Feb. 25, 1924. Serial No. 695,014. 1 Claim. (Cl. 188—234.)

In combination with a brake shoe of open construction provided adjacent each end and centrally thereof with a transversely extending recess and openings extending through the shoe centrally of said recesses, T-bolts having their shanks extending through the shoe and being disposed so that the heads of the bolts are located within the recesses, a brake lining extending about the shoe with the shanks of the bolts extending through the lining and the heads transversely engaging the lining

within the recesses and nuts threaded upon the shanks of the bolts and bearing against the brake shoe upon the face opposite the recesses to provide a single transversely central pull upon the lining at points spaced around the shoe and uniformly tension the lining.

---

1,562,133. FRONT-WHEEL BRAKE FOR AUTOMOBILES. JOHN E. WOODBURY, Worcester, Mass. Filed Mar. 3, 1922. Serial No. 540,846. 9 Claims. (Cl. 188—152.)



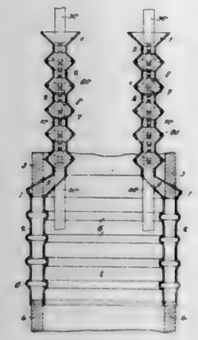
1. In a front wheel brake for vehicles, the combination of a disc forming one element of the brake fastened on the front wheel, and another housing supported by the disc and provided with a friction element.

---

1,562,134. STRAINER FOR OIL PRESSES. HERMANN ZANDER, Stettin, Germany. Filed Apr. 9, 1921. Serial No. 460,067. 4 Claims. (Cl. 100—50.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. An improved strainer for oilpresses comprising in combination a number of superposed ring-shaped strainers, distance pieces between said individual ring shaped strainers, a pressure piston at the upper end of the column of ring-shaped strainers and a counter pressure piston at the lower end of said column, columns of tubular strainers comprising enlarged distance pieces between the individual narrow strainers and means for

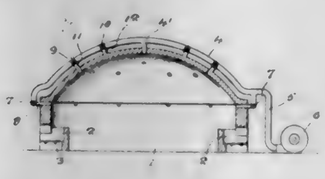
alternately loosening and compressing the material to be compressed, said tubular columns being arranged above said ring shaped strainer column and conduits connect-



ing the outlets of said tubular strainer column with the inlets of said ring-shaped strainer column, supstantially as described and shown and for the purpose set forth.

---

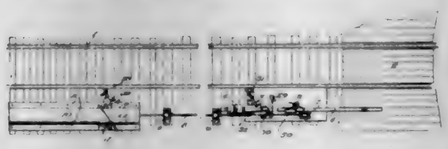
1,562,135. HEATING SYSTEM FOR KILNS. JAMES B. AGNEW and ABIRAM A. OEFFNER, Mount Union, Pa. Filed Mar. 12, 1925. Serial No. 15,144. 3 Claims. (Cl. 25—145.)



1. The combination with a down draft kiln, of a means for introducing air under pressure at varying angles through the top and sides of the kiln above the fire boxes thereof, for the purpose set forth.

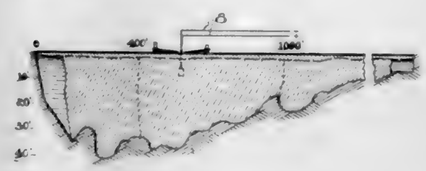
---

1,562,136. RAILROAD GATE. ARBY W. BAILEY, Iron River, Wis. Filed Nov. 18, 1924. Serial No. 750,687. 3 Claims. (Cl. 246—299.)



1. An apparatus for the purpose set forth comprising a gate mounted to be raised and lowered and normally held in a raised position, a cross head, a cable secured to and extending between the crosshead and the gate, a spring attached to the crosshead and tending constantly to move the same away from the gate whereby to lower the gate, a dog normally engaging the crosshead and restraining the action of the spring, and means whereby the dog will be released from the crosshead by a passing train to permit lowering of the gate.

1,562,137. METHOD OF LOOSENING ICE ACCUMULATIONS. HOWARD TURNER BARNES, Montreal, Quebec, Canada. Filed Mar. 18, 1925. Serial No. 16,557. 8 Claims. (Cl. 61—1.)



1. A method of combatting ice which consists in bringing into contact with it a hot mass adapted to give off a large quantity of heat at a very high temperature, the heat transference being sufficiently rapid to cause an explosive reaction between the hot mass and the contacting ice.

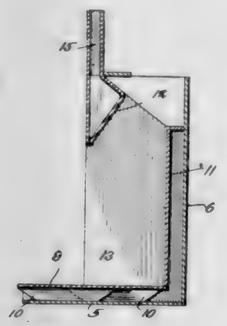
---

1,562,138. ART OF PREPARING LUBRICANT-CARRIER MATERIAL. ARMAN E. BECKER, Newark, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed May 16, 1922. Serial No. 561,532. 5 Claims. (Cl. 308—243.)

5. The process of preparing a metallic lubricant-carrier, which comprises forming a coating on the surface of the metallic carrier by heating said carrier in the presence of a sulfur-containing oil.

---

1,562,139. FUEL SAVER. RICHARD T. BERRY, Georgetown, Miss. Filed June 8, 1925. Serial No. 35,686. 2 Claims. (Cl. 126—121.)



1. A heating device adapted to be positioned in an open fireplace, and formed with a rear wall, side walls and a bottom wall, an inner member including a rear wall, side walls and a bottom wall spaced from the first mentioned walls to provide air passageways, flanges formed on the side walls of the inner member and engaging the side walls of the first mentioned member to hold the inner member in spaced relation, and means for dividing the space between the bottom walls into separate passageways.

---

1,562,140. BILLBOARD. RICHARD L. BIRD and HEBER C. JEX, Salt Lake City, Utah. Filed Oct. 14, 1924. Serial No. 743,626. 3 Claims. (Cl. 40—125.)

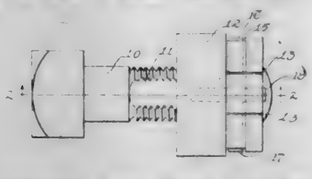
1. A bill-board having a flush front face and made up of a plurality of duplicate poster panels, abutted edge to edge

each panel consisting of a skeleton frame and a metal sheet secured to the frame and having one edge portion

formed into a transversely straight flange extending across the back of and covering the joint between adjacent poster panels.

---

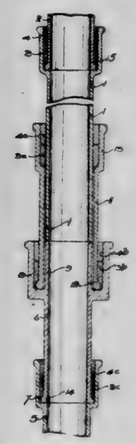
1,562,141. LOCK NUT. EDWARD BISBING, Somerset, Pa. Filed June 23, 1923. Serial No. 647,363. Renewed Aug. 14, 1925. 1 Claim. (Cl. 151—4.)



In combination, a bolt having a flat surface, a nut adapted to be threaded on the bolt and having transverse slots adapted to extend across the flat surface when the nut is tightened on the bolt, a locking element including a body portion adapted to be arranged in said slots with its terminals projecting beyond the sides of the nut and adapted to be bent against said sides, and extensions projecting from said body portion at a right angle thereto, one of said extensions being positioned between the nut and the flat surface of the bolt when the parts are associated, and the other extension projecting beyond the face of the bolt and adapted to be bent across the latter for the purpose specified.

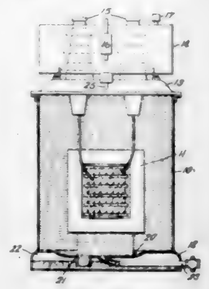
---

1,562,142. PIPE UNION. ISADORE BRACZIK, Detroit, Mich. Filed Sept. 26, 1924. Serial No. 740,055. 7 Claims. (Cl. 285—116.)



1. A pipe union of the class described comprising a tubular spacing member having a hub at one end, an annular groove and a concentric sleeve within said hub, and a male pipe connection adapted to fit into an ordinary pipe hub at the other end, in combination with a sliding member having one end adapted to seat in the hub of said spacing member and terminating at the other end in a hub.

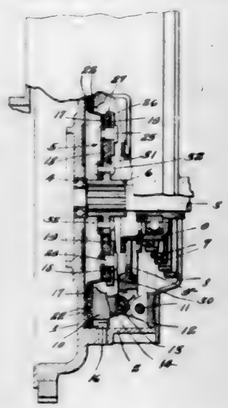
1,562,143. ELECTRICAL APPARATUS. FREDERICK F. BRAND, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 11, 1921. Serial No. 483,728. 1 Claim. (Cl. 220—85.)



A casing for electrical apparatus containing a liquid insulating medium, said casing enclosing a compartment for the apparatus and having a base portion providing an expansion compartment below said apparatus compartment, and means providing communication between said compartments, the insulating liquid extending from said apparatus compartment into and partially filling said expansion compartment.

---

1,562,144. FRICTION CLUTCH. JOHN L. BURNS, Syracuse, N. Y. Filed July 17, 1923. Serial No. 652,167. 6 Claims. (Cl. 192—68.)



1. In a clutch, the combination of driving and driven elements, one of which is shiftable into and out of engagement with the other, and a shaft upon which one of the elements is mounted, said shaft being alined with and having a bearing in the other element, the element mounted on the shaft comprising inner and outer concentrically mounted spaced-apart sections, the outer section being spaced-apart from the shaft, and a comparatively stiff member of fibrous material between the sections, and means for securing said member to both sections.

---

1,562,145. COMPOUND METAL AND METHOD OF MAKING THE SAME. CLARENCE P. BYRNES, Sewickley, Pa. Filed Mar. 1, 1921. Serial No. 448,897. 17 Claims. (Cl. 29—181.)

1. A metal product, comprising metal of a relatively high melting point cooled from a molten condition and containing granules of a higher melting point metal arranged in the relation to each other and to the lower melting point metal which results from natural gravity settling of the said granules through the lower melting point metal while it is in molten condition.

5. The method of making a compound metal product, consisting of mixing loose granules of one metal with another metal while the latter is in molten condition and causing the latter metal to encase said loose granules while they remain in granular form.

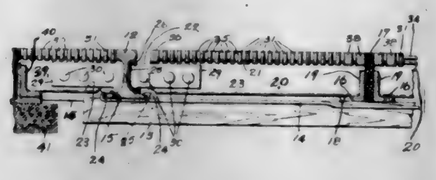
---

1,562,146. ACCELERATOR FOR THE VULCANIZATION OF RUBBER. ADRIEN CAMBRON, Tottenville, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed June 27, 1925. Serial No. 40,106. 10 Claims. (Cl. 18—53.)

1. A process for vulcanizing rubber which comprises combining the rubber with a vulcanizing agent and the steam blown reaction product of an aldehyde and an aromatic amine, and vulcanizing the rubber.

---

1,562,147. RAILWAY CROSSING. NEAL J. CAMPBELL, St. Louis, Mo. Filed June 20, 1925. Serial No. 38,580. 4 Claims. (Cl. 238—8.)



1. A railway crossing comprising a plurality of spaced apart supporting bars, a support for one end of said bars, means for supporting the other ends of said bars so that they may move vertically with a railway rail, and a road-way carried by said supporting bars.

---

1,562,148. PUMP-ROD-HANDLING DEVICE. FRANK WILLIAM CARLSON, Oilfields, Calif., assignor of one-fourth to John Nelson Scarlett and one-fourth to Leland Erastis Axtell, both of Oilfields, Calif. Filed Dec. 2, 1924. Serial No. 753,532. Renewed Oct. 13, 1925. 4 Claims. (Cl. 254—29.)

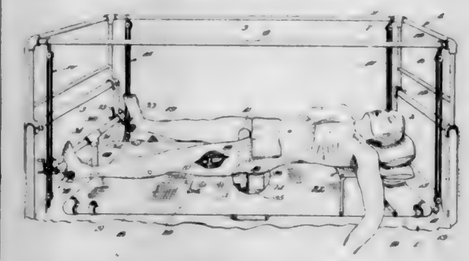
1. A device of the character described comprising a manually operable lever having a part adapted to engage a shoulder of a stand of rods and a bodily movable pivot point for said lever, said pivot point being located closer to the rod engaging ends of the lever than the other end thereof and a means for suspending said pivot to adapt it to swing freely in all directions.

1,562,149. CARD GAME. HERBERT THOMAS COX, Los Angeles, Calif. Filed Apr. 2, 1925. Serial No. 20,238. 10 Claims. (Cl. 273—153.)

1. A card game consisting of a plurality of suit cards, a plurality of honor cards, and a plurality of directional cards, the last mentioned cards indicating the players who initiate the game.

---

1,562,150. ORTHOPEDIC APPARATUS. WILLIAM L. DENTON, Randsburg, Calif. Filed May 14, 1924. Serial No. 713,214. 2 Claims. (Cl. 128—84.)



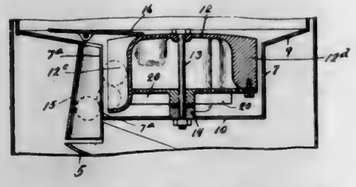
1. In an orthopedic device a leg stretcher and body support comprising a board adapted to rest crosswise upon a bed, a block extending upwardly from the board and adapted to support the lower end of a patient's spine, a removable post extending upwardly from the board beside the block, an adjustable extension bar extending horizontally from the board, a second post extending upwardly from the foot end of the extension bar, a cross bar at the upper end of the second post, supporting bearings pivotally connected to the ends of the cross bar, screws slidingly mounted through the bearings, hand cranks having nuts upon the screws behind the bearings, forks at the forward ends of the screws, clamping screws in the forks and adapted to engage a patient's feet so that when a patient is in position the legs may be stretched by operating the hand cranks.

---

1,562,151. PROCESS OF EXTRACTING SUGAR FROM BEETS. INEO DE VECCHIS, Rome, Italy, assignor to Home and Colonial Investments Limited, London, England. Filed Dec. 5, 1923. Serial No. 678,782. 4 Claims. (Cl. 127—42.)

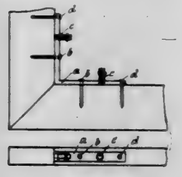
4. In a process of extracting beet sugar, the steps of converting the beets into cossets; heating the cossets to a temperature sufficient to dry and sterilize them; lixiviating the dried cossets to obtain a highly-concentrated, almost neutral sugar juice; adding lime to said juice to render it alkaline and precipitate the less complex dissolved albumenoids; adding calcium superphosphate to the juice to neutralize it; and then filtering the neutralized juice.

1,562,152. VENDING MACHINE. ARTHUR H. DU GRENIER, Haverhill, Mass., assignor of one-half to Harold B. Woods, Hudson, Mass. Filed June 10, 1924. Serial No. 719,081. 14 Claims. (Cl. 211—8.)



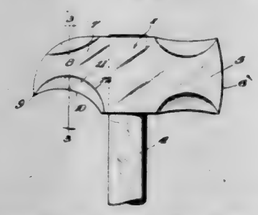
1. A vending machine comprising a magazine for the articles to be vended, a cylindrically shaped delivering tray mounted to rotate about a central vertical axis with its upper end forming a bottom portion of the magazine, and having a series of peripherally arranged article receiving chambers opening to the upper end of the tray and to the side thereof to permit the articles to pass from the magazine into said chambers and be laterally discharged therefrom, means carried by the tray, and disposed at the lower ends of said chambers, for supporting the articles therein, and means disposed adjacent the side of the tray to retain the articles in said chambers and to permit the same to be discharged laterally therefrom, successively, at a predetermined point.

1,562,153. DEVICE FOR TENSIONING MATERIALS ON FRAMES. ALWIN ELBERN, Mehlem/Rhein, Germany. Filed Feb. 27, 1925. Serial No. 12,189. 4 Claims. (Cl. 45—24.)



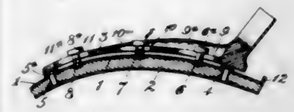
1. A device for tensioning material on a frame comprising an angle piece disposed in an angle of the frame, means for each arm of said angle piece adapted to prevent longitudinal sliding relative to its frame member and a screw having a blunt bearing surface contacting with a frame member in each arm of said angle piece adapted to press the inner sides of the frame away from each arm of the angle piece.

1,562,154. COMBINED AX AND BRUSH HOOK. CARL B. ERICKSON, Fond du Lac, Wis., assignor of one-half to Thomas Thompson, Iola, Wis. Filed Dec. 31, 1924. Serial No. 759,128. 1 Claim. (Cl. 7—1.)



A combined ax and brush hook comprising a head provided intermediate its length with a socket opening through its inner and outer side edge faces and adapted to receive a handle, one end portion of said head being sharpened at its end to provide a cutting edge, and the other end portion of the head having its end edge convexed and at one end merging into the outer edge face of the head and at its other end terminating short of the plane of the inner end of said socket, the inner side portion of the last-mentioned end portion of the head being concaved to provide an inwardly curved edge extending from the inner end of the socket and intersecting the said convexed end edge of the head, and said head being beveled along said concaved edge portion to provide a cutting edge.

1,562,155. TRANSMISSION BAND. DAVID W. ERNST, Flemington, N. J. Filed May 19, 1925. Serial No. 31,372. 2 Claims. (Cl. 188—249.)

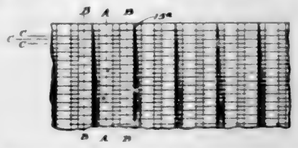


1. A device of the character described, comprising a band and ear for removable engagement with each other; and a brake lining designed to be carried by the band, the band having brass rivets extending downwardly for engagement with the brake lining to hold the same rigidly on the band; and having upwardly extending steel rivets for sliding engagement with the ear to removably hold the same on the opposite side of the band; said ear having openings enlarged at one end for the reception of the heads of the steel rivets, and having narrow portions extending rearwardly from said openings and adapted to receive the shanks of said steel rivets; one of said brass rivets being arranged to register with the enlarged portion of the forward one of said enlarged openings in the ear, with the head of the rivet projecting into said opening when the ear and band are in their normal position relatively to each other; whereby to cause said rivet head to form an obstruction to the movement of the ear on the band.

1,562,156. PROCESS FOR PURIFYING MINERAL OILS. JACOB F. FABER, Los Angeles, and HENRY C. HANNA and MARVIN L. CHAPPELL, El Segundo, Calif., assignors to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Jan. 26, 1922. Serial No. 531,991. 6 Claims. (Cl. 196—145.)

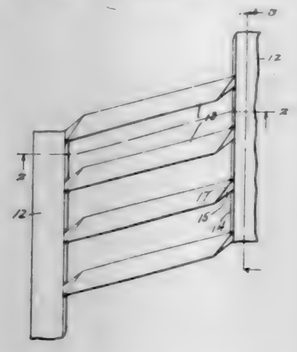
1. A process of refining petroleum oils which consists in treating an oil with sulphuric acid, separating the treated oil from the acid sludge and neutralizing the treated oil in the presence of a petroleum carboxylic salt to prevent the formation of a persistent emulsion, said petroleum carboxylic salt being obtained by extracting petroleum carboxylic acids from crude petroleum oil by means of water solution of a metallic base, thus being free of sulphonated soaps.

1,562,157. PRODUCTION OF EXPANDED SHEET METAL. HARVEY M. GERSMAN, Chicago, Ill. Original application filed May 27, 1921, Serial No. 473,062. Divided and this application filed June 1, 1923. Serial No. 642,871. 5 Claims. (Cl. 164—6.5.)



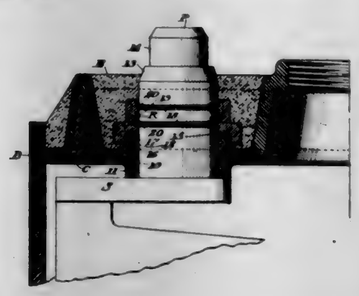
1. The method of producing expanded sheet metal which consists in slitting the blank, the slits being arranged in parallel transverse rows with the slits of one row in break-joint position relatively to the slits of the adjacent rows, longitudinally corrugating the blank to offset the rows of junction portions alternately at opposite sides of the mean plane of the sheet and expanding the blank so slitted and corrugated.

1,562,158. PRODUCTION OF EXPANDED SHEET METAL (HERRINGBONE TYPE). HARVEY M. GERSMAN, Chicago, Ill. Filed June 1, 1923. Serial No. 642,873. 6 Claims. (Cl. 164—6.5)



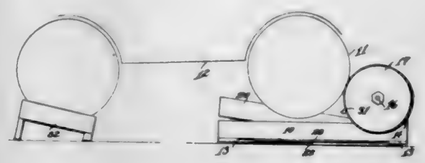
1. The method of producing expanded metal from a flat sheet having parallel imperforate portions and a row of similarly arranged slits between each pair of adjacent imperforate portions, each slit terminating at differently located points along the edges of the imperforate portions between which it extends, which consists in corrugating the slitted sheet to form a complete blank and in expanding the blank by the application of stretching force in a direction of its mean plane and wherein the corrugations of said blank are arranged in the directions of said imperforate portions and are so formed and related to said imperforate portions and slits that upon the application of the stretching force the imperforate portions will be produced as spaced parallel webs and the portions of the metal between the slits will be produced as strands lying flat in a common plane and bent from offsets located at corresponding sides of said webs in planes normal to the common plane of said strands.

1,562,159. POST AND COVER SEAL. WALTER E. GOSSLING, New York, N. Y., assignor to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed July 30, 1920. Serial No. 400,011. 14 Claims. (Cl. 136—168.)



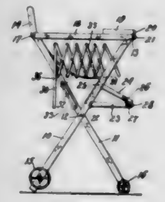
10. The method of sealing a storage battery terminal post in the opening in the cell cover through which it projects, which comprises providing an integral flange of compressible material on the cover adjacent said opening, and forcing such flange inwardly against a terminal post in said opening.

1,562,160. AUTOMOBILE POWER JACK. DAVID GUDEMAN, Francesville, Ind. Filed July 28, 1924. Serial No. 728,732. 2 Claims. (Cl. 74—106.)



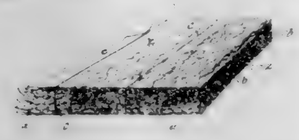
1. An automobile power jack including a base, tracks on the base, a power shaft disposed on one end of the base and having friction wheels thereon arranged above said tracks, rockable means on the base adjacent the power shaft, automobile axle engaging members movably carried by the rockable means, a rock shaft on the base beneath the rockable means and having means in lifting engagement with the rockable means, means for rocking the rock shaft, and means on the lifting means for engagement with the rockable means for preventing lateral movement of the latter.

1,562,161. CONVERTIBLE FURNITURE. SAMUEL GUTERMAN, New York, N. Y. Filed Mar. 20, 1925. Serial No. 17,103. 2 Claims. (Cl. 155—38.)



1. A convertible chair and baby carriage comprising a supporting frame including a pair of spaced apart side members pivotally and transversely connected together between their ends, each of said members consisting of two bars crossed at their pivots, a chair back carried by one pair of said bars, arm rests pivoted to said last mentioned pair of bars adjacent said chair back, a transversely extending table portion connecting said arm rests, said arm rests and table portion being adapted to rest upon the other pair of said bars or to form an extension of said chair back, a web secured to said chair back, a foot rest carried by that pair of said supporting bars upon which said arm rests and table portion are adapted to rest, the free end of said web being adapted to be secured to said foot rest to form a chair seat or to the upper ends of those supporting bars to which said foot rest is attached when said supporting bars are extended to form a baby carriage, whereby said web constitutes a bed bottom.

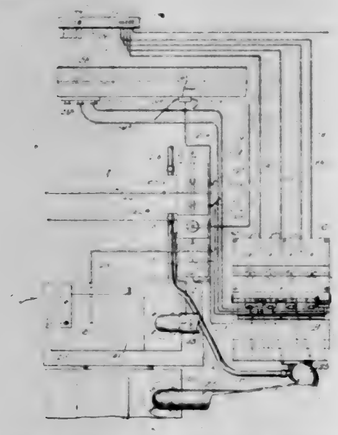
1,562,162. BUILT-UP PIGSKIN-CUTTING BLOCK. HAROLD M. GUSDORF, Indianapolis, Ind. Filed Sept. 19, 1924. Serial No. 738,709. 4 Claims. (Cl. 164—58.)



1. A cutting block formed out of a plurality of pigskin leather members such that the edges of the members form the cutting surface of the block.

---

1,562,163. MECHANISM FOR REGULATING THE EXPRESSION IN APPARATUS FOR PLAYING MUSICAL INSTRUMENTS. STILLWELL R. HARCOURT, Chicago, Ill., and OSCAR H. ANDERSON, Grand Haven, Mich., assignors to Story & Clark Piano Co., Grand Haven, Mich., a Corporation of Illinois. Filed Jan. 25, 1924. Serial No. 688,404. 21 Claims. (Cl. 84—39.)



1. In a device of the character described; a perforated music sheet; a tracker-board having apertures controlled by the perforations in the music sheet; a striker-pneumatic; a stack communicating with the striker-pneumatic; a wind-chest; communication between the wind-chest and the stack; a crest valve in the communication between the wind-chest and the stack; a plurality of bleeds; an air connection between each bleed and the wind-chest whereby atmospheric air may be bled into the wind-chest through said bleed; a bleed valve in each of the connections between the bleeds and the wind-chest; means operated by the perforations in the music sheet for opening the crest valve and opening the bleeds.

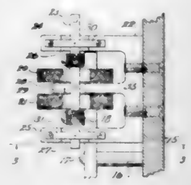
---

1,562,164. PROCESS OF COATING ELECTRODES. JAMES E. HARRIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 4, 1920. Serial No. 363,301. 3 Claims. (Cl. 204—19.)

1. The method of applying an alkaline earth metal oxide coating to a metal, the oxide of which is combinable with alkaline earth metal compounds to form compounds not reducible to alkaline earth metal oxide upon heating in vacuum, said method comprising preparing an electrolyte composed of an alkaline earth metal compound, arranging in said electrolyte a filament of the metal to be coated and electrolytically depositing on said filament an alkaline earth metal coating which is convertible, in part at least, to alkaline earth metal oxide upon exposure to air.

---

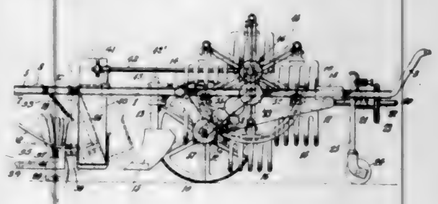
1,562,165. ACOUSTIC DEVICE. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 17, 1923. Serial No. 652,015. 17 Claims. (Cl. 179—108.)



1. In a sound reproducing system, a diaphragm, a magnet, an armature for said magnet operatively connected to the diaphragm, and means for substantially balancing the magnetic pull on the armature in all positions.

---

1,562,166. BEET TOPPER. WILLY HARTENSTEIN, Darmstadt, Germany, assignor to Josephine Aman, Los Angeles, Calif. Original application filed Aug. 27, 1921, Serial No. 495,926. Divided and this application filed Oct. 15, 1924. Serial No. 743,686. 6 Claims. (Cl. 55—107.)



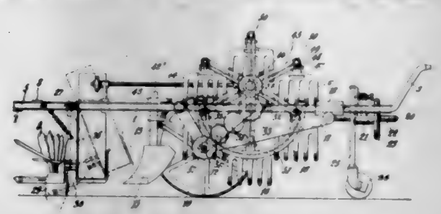
2. In a harvester for beets, and the like, a framework, beet topping means pivoted at the forward portion thereof and adapted to swing rearwardly and upwardly, resilient means for holding the topping means in a normal forward position, and guide means associated with the topping means.

6. A beet harvester comprising a frame and topping means on the frame, a container for catching the tops from the topping means, and a vibrating shovel in the container for constantly emptying the container.

---

1,562,167. BEET HARVESTER. WILLY HARTENSTEIN, Darmstadt, Germany, assignor to Josephine Aman, Los Angeles, Calif. Original application filed Aug. 27, 1921, Serial No. 495,926. Divided and this application filed Nov. 24, 1924. Serial No. 751,732. 3 Claims. (Cl. 55—108.)

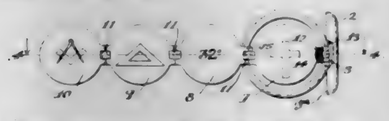
1. In an agricultural machine, a framework, a pair of depending links pivoted at their upper ends to the opposite sides of the framework, an axle in the lower end of each link, a wheel on each axle for supporting the framework, a longitudinally shiftable member on the framework, a second pair of links pivoted at one end to said member and each pivoted at its other end to one of the axles, means for moving said members to raise and lower the framework on the wheels, a shaft on the framework, an agricultural machine on the shaft,



a pair of pivotally connected links extending between the shaft and an axle, and a train of gear wheels connecting the shaft and axle and carried thereby and by said pivotally connected links.

---

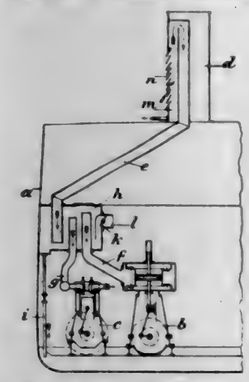
1,562,168. LOCKET. JAMES M. HARVEY, Los Angeles, Calif. Filed May 18, 1923. Serial No. 639,852. 1 Claim. (Cl. 63—19.)



A locket comprising two concavo-convex cover members hinged together, a link incorporated in the cover hinge, a series of display units, each unit having two arms projecting from the sides thereof, links having their ends positioned between the arms, pivot pins passing through each pair of arms and through the end of the link therebetween, thus forming double pivot hinges between adjacent units, and an end unit being hingedly connected to the link incorporated in the cover hinge, all of the units being capable of assuming positions in alignment and of being enclosed between said cover members.

---

1,562,169. DEVICE FOR THE ADMISSION OF AIR TO INTERNAL-COMBUSTION ENGINES ON BOARD SHIPS. WILHELM HEFTI, Wulflingen, Switzerland, assignor to The Firm of Gebrüder Sulzer Aktiengesellschaft at Winterthur. Filed Oct. 12, 1923. Serial No. 668,128. 9 Claims. (Cl. 123—119.)



1. An air supply system for internal combustion engines on board ships comprising an air supply conduit for conducting air from an inlet to the engine, a relatively large air tank located in the interior of the ship and interposed between the inlet and the engine, said tank being of fixed capacity and having a sectional area materially larger than the sectional area of said conduit, stationary means in said tank for causing the air to change its direction of motion as it passes through the tank whereby the tank serves as a silencer and also to arrest dust and water and to equalize fluctuations and sudden variations in the air pressure, and a plurality of air admission pipes associated with said tank and leading to different portions of the ship to ventilate the same.

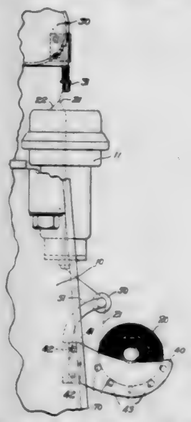
---

1,562,170. PROCESS OF MAKING ORNAMENTAL ARTICLES. ADOLPH M. HOLSTEIN, Syracuse, N. Y. Filed May 25, 1921. Serial No. 472,591. 4 Claims. (Cl. 144—309.)

1. The process of making ornamented legs, standards etc. for furniture, cabinets and the like, and other woodwork, consisting in turning a stick of less diameter than the ornamented finished article to the desired form and up to the outline of ornamental pieces to be placed on unturned portions of faces of the stick and then mounting such ornamental pieces on the unturned faces.

---

1,562,171. STRAND-WORKING MACHINE. HENRY GOODWIN HOORNBEEK, Springfield, Mass., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1923. Serial No. 680,023. 1 Claim. (Cl. 242—132.)

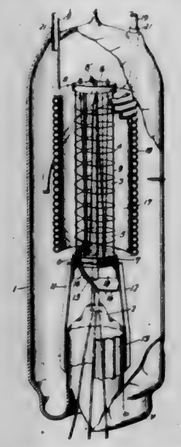


A holder for supply cops of strand working machines, comprising a cradle composed of rigidly fixed end pieces and interconnecting spaced rods arranged in an arc to

support the cop horizontally at spaced points on its peripheral surface, the said arc of the cradle being such as to expose at least half of the periphery of a full cop to be used with said machines, and the cradle being materially longer than said cop whereby the cop is free to slide longitudinally of the rods.

---

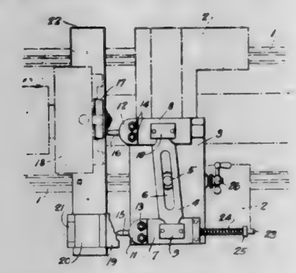
1,562,172. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1920. Serial No. 406,921. 6 Claims. (Cl. 250—27.)



1 An electron discharge device comprising a containing vessel, an electrode within said vessel in the form of a hollow cylinder, said electrode being formed of a plurality of closely spaced convolutions of circular tubing adapted for the flow of circulating medium therethrough, the interior faces of said convolutions being filled in with a material capable of being machined, and a second electrode within said first electrode.

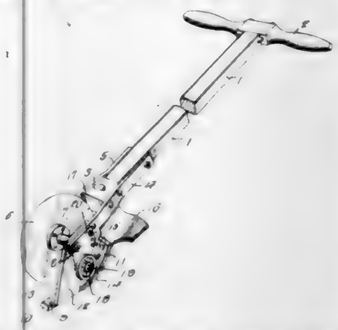
---

1,562,173. LATHE. ANTONIO COSTA HUGUET, Buenos Aires, Argentina. Filed June 1, 1922. Serial No. 565,041. 2 Claims. (Cl. 82—14.)



1. In a machine of the class described, the combination of a slide block, a plate supported thereon, a pair of members carried by said plate and slidable in parallelism thereon, one of said members being adapted to carry a tool and the other to support a center guide, a pivoted link connection between said slidable members, the pivotal point of said link being adjustable, means for supporting a pattern on the frame of the machine in position to be followed by said center guide, said means being adjustable to vary the position of the pattern relatively to the guide, and means for constantly urging said center guide against the surface of the pattern.

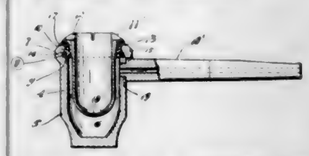
1,562,174. LAWN TRIMMER. PETER W. JOHNSON, Coeur d'Alene, Idaho. Filed Aug. 27, 1924. Serial No. 734,454. 4 Claims. (Cl. 97—227.)



1. A lawn trimmer comprising a circular blade, a frame in which said blade is rotatably mounted, said frame having a flaring flange offset on one side thereof, and having a downwardly curved portion, a shoe attached to said curved portion, and an integral bracing member on said shoe.

---

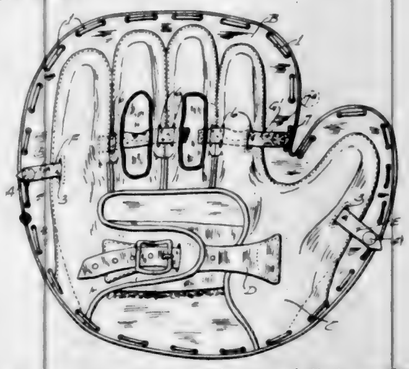
1,562,175. TOBACCO-SMOKING PIPE. JOHN KERCHER, Chicago, Ill. Filed July 26, 1924. Serial No. 728,285. 2 Claims. (Cl. 131—12.)



1. In a tobacco pipe, the combination with an outer bowl and an inner bowl, of a ring member removably set in the outer bowl and projecting from the inner surface thereof, a threaded region which is inclined inwardly and downwardly carried by the inner bowl and adapted to co-operate with said ring, and to have a wedging action thereon, and means receptive of a turning instrument formed in the top of the inner bowl, substantially as described.

---

1,562,176. BASEBALL MITT. HARRY B. LATINA, East St. Louis, Ill., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed May 7, 1924. Serial No. 711,611. 10 Claims. (Cl. 2—19.)

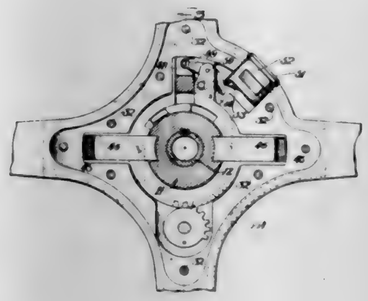


1. A baseball mitt, comprising a pad that constitutes the front portion of the mitt, a hand portion combined with said pad, and loops in said hand portion through

which the thumb and little finger of the user's hand are adapted to be inserted each of said loops comprising a top piece, a bottom piece and a connecting portion for joining said pieces disposed so that the part of the user's hand positioned in the loop will naturally exert pressure on said connecting portion when the mitt is in use.

---

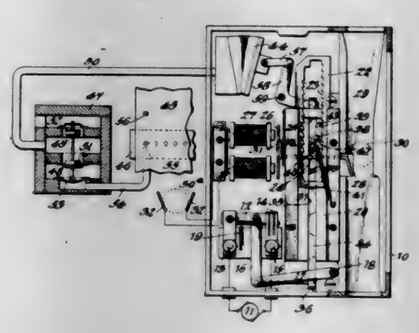
1,562,177. STEERING-WHEEL LOCK. LEROY C. LAZEAR and FRANK S. LAZEAR, Chicago, Ill. Filed May 23, 1921. Serial No. 471,783. 12 Claims. (Cl. 70—129.)



10. In combination with a steering post, a wheel carried thereby, means for locking the wheel to the post comprising a locking bolt arranged to move toward and from the post to engage therewith, a cam device mounted for rotation co-axially of the wheel and for moving the locking bolt in one direction, and spring means working through the cam device for moving the locking bolt in the other direction, substantially as described.

---

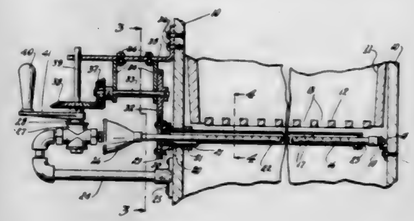
1,562,178. DEVICE FOR CONTROLLING COIN-OPERATED INSTRUMENTS AND MACHINES. FRANK L. MCCORMICK, North Tonawanda, N. Y., assignor to The Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,616. 3 Claims. (Cl. 194—9.)



1. In a device of the character described, the combination of a coin chute, a motor-controlling switch-member, an intermittently-movable slide controlling said switch-member, and a reciprocating detent device co-operating with said slide for controlling its movement, said detent device being operated by the weight of a coin and having an inclined trip member projecting into the coin-path of said coin-chute.

---

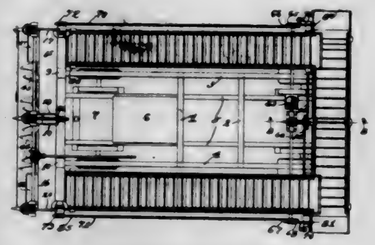
1,562,179. FUEL LIGHTER. RALPH MENOTTI, Chicago, Ill., assignor of 30 per cent to John Silvestro and 30 per cent to Achille Menotti, both of Chicago, Ill. Filed Dec. 26, 1924. Serial No. 757,998. 7 Claims. (Cl. 158—10.)



7. In a stove having a grate, a perforated tubular gas burner mounted underneath said grate, a tubular housing to cover said burner and having a slit registerable with said perforations, an inlet conduit connected to said burner and having a control valve therein, and a handle connected to said control valve and provided with gear means to simultaneously close said valve and cover said perforations or to open said valve and turn said housing to register said slit with said perforations.

---

1,562,180. SNOW-REMOVING MECHANISM. VAN P. MILLER, Chicago Heights, Ill. Filed Jan. 20, 1921. Serial No. 438,588. 13 Claims. (Cl. 37—41.)



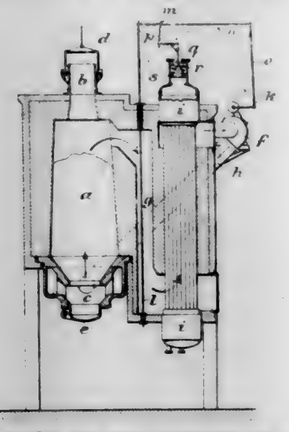
1. The combination with an automotive vehicle, of a mechanism for removing snow from highways removably mounted thereon, said mechanism comprising guidable snow engaging means at the front of the vehicle a conveying mechanism therefrom and snow discharging means at the rear of the vehicle.

---

1,562,181. COOLING PLANT FOR COKE. ARNOLD MORTELLI, Winterthur, Switzerland, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland, a Corporation of Switzerland. Filed Aug. 14, 1923. Serial No. 657,284. 2 Claims. (Cl. 236—17.)

1. In an apparatus for cooling incandescent coke by means of gases forced by a motor driven blower through the charge of coke in a container and through a boiler, the combination of the motor with a device for varying the speed of the motor, said device being automatically controlled by a thermostat under the influence of the

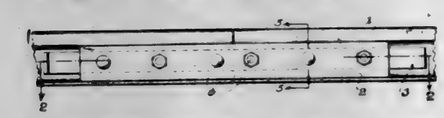
mean temperature of the coke and by a regulating device under the influence of the steam produced in the boiler, whereby the blower is so driven that the speed of the



cooling gases and the heat transmitted to the boiler corresponds at all times to the heat required by the boiler.

---

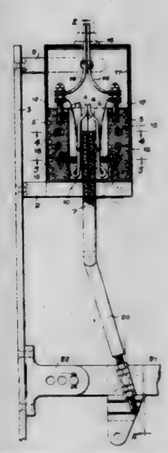
1,562,182. RAIL-JOINT CONNECTION. HARRY R. MYERS, New York, N. Y. Filed Apr. 16, 1925. Serial No. 23,591. 7 Claims. (Cl. 238—259.)



7. A rail joint comprising a fish plate, a concavo-convex spring disposed between the rails and the fish plate, and means for holding the fish plate in position against the force of the spring.

---

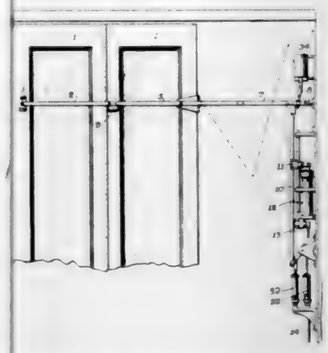
1,562,183. ELECTRIC SWITCH. CLIFFORD NORTON, South Orange, N. J., assignor to Graham & Norton Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1923. Serial No. 616,485. 10 Claims. (Cl. 200—151.)



3. In an electric switch, a bipartite or sectional block of insulating material, the opposing or meeting faces of which are provided with countersunk grooves or recesses combined with circuit closing members mounted in the countersunk portions of said grooves and a circuit breaking member of insulating material working in guides formed by the wider portion of said grooves.

---

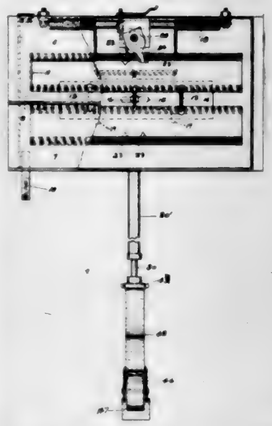
1,562,184. MEANS FOR OPERATING ELEVATOR CAR AND SHAFT DOORS. CLIFFORD NORTON, New York, N. Y., assignor to Graham & Norton Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1925. Serial No. 2,979. 8 Claims. (Cl. 187—52.)



5. In apparatus for simultaneously opening and closing elevator car doors and shaft doors, the combination of a power controlling member for the car door mechanism, an operating member connected to said power controlling member and an actuator therefor mounted on a stationary support at the landing and carried by a member of the shaft door operating mechanism operable from the car when the same is at the landing.

---

1,562,185. STREET INDICATOR. JAMES S. PAXTON, Chicago, Ill. Filed July 26, 1924. Serial No. 728,361. 8 Claims. (Cl. 40—45.)



1. A street indicator comprising a reversible support; guides on said support consisting of two parallel wire guide loops extending first outwardly and downwardly from said support and then inwardly and downwardly to said support; perforated indicator plates slidable on said loops, opposite sides of said plates being marked with the names of streets and said plates being arranged in the order in which said streets occur; and means controlling the movements of said plates on said loops, substantially as described.

1,562,186. ATTACHMENT FOR REFLECTORS. EDWIN H. POWELL and ALBERT R. HOMER, Cleveland Heights, Ohio. Filed Sept. 22, 1921. Serial No. 502,440. 1 Claim. (Cl. 240—48.4.)

The combination with a reflector having a curved surface and provided with an outer rim and a lamp centrally disposed therein, of a member having a flange portion which engages with a portion of the surface of the reflector and clips formed by spaced hook shaped tongues integral with the flange, said clips projecting outwardly from the outer edge of the flange and adapted to engage with the rim of the reflector to detachably secure said member thereto, said member also having a portion with a curved surface which extends transversely between opposite wall portions of the reflector and in front of said lamp.

---

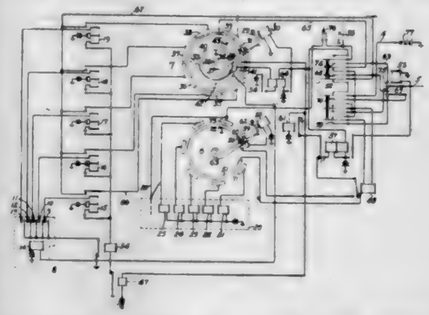
1,562,187. VACUUM-TUBE SOCKET. JOHN W. RADU, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 431,224. 1 Claim. (Cl. 173—328.)

A vacuum tube socket comprising a shell, a disc of insulating material arranged within said shell, a plurality of contact members, each contact member having one end attached to one side of said disc and comprising a resilient strip bent to form a bow portion with its ends in alignment, the free end of each contact member being spaced from the opposite face of said disc, each contact member being arranged at right angles to the adjacent contact members and along a chord of the disc.

---

1,562,188. SELECTING SYSTEM. PAUL M. RAINEY, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,212. 2 Claims. (Cl. 178—33.)

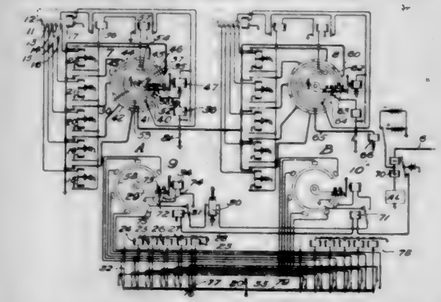
1. A printing telegraph system comprising a line and a plurality of stations connected by said line, periodically rotating transmitting and receiving distributors at each of said stations, a relay normally connected in said line for controlling the operation of said receiving distributor, a relay adapted to be energized by said receiving distributor and thereafter controlled by said



transmitting distributor, and a further relay responsive to the operation of said second-mentioned relay for disconnecting said first mentioned relay from the line and connecting said transmitting distributor thereto.

---

1,562,189. PRINTING-TELEGRAPH SYSTEM. PAUL M. RAINEY, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1921. Serial No. 525,987. 4 Claims. (Cl. 178—2.)



1. In a printing telegraph system, the combination of a line, a plurality of transmitting distributors and a plurality of receiving distributors cooperating with said line, an impulse responsive relay common to said transmitting distributors, means for causing said relay to respond to selections received from a particular one of said transmitting distributors alone, a plurality of recorders and means for associating any of said recorders with any of said receiving distributors.

---

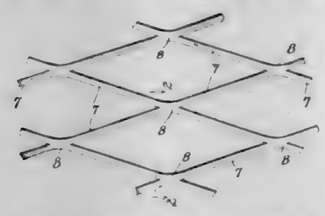
1,562,190. SNAP FASTENER. DANIEL I. REITER, New York, N. Y., assignor to Rau Fastener Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 7, 1924. Serial No. 691,131. 3 Claims. (Cl. 24—216.)

1. A resilient socket adapted to serve as one element of a separable fastener, said socket comprising a ring having a yielding inner portion and a relatively unyielding outer portion, an annular mounting member having

an opening concentric with said ring and of a diameter greater than the internal diameter of said ring, and a plurality of tongues, engaging the relatively unyielding portion of said ring to hold said ring and mounting member in associated relation, said tongues being formed by striking up portions of the material of said mounting member near its outer periphery and thus providing a series of spaced openings to receive fastening elements of a socket attaching means.

---

1,562,191. EXPANDED-METAL FABRIC. CHARLES STOWE RENO, New York, N. Y. Filed Dec. 12, 1921. Serial No. 521,613. 3 Claims. (Cl. 72—117.)



1. A sheet of metal fabric consisting of integrally connected, laterally stretched metal strands terminating in bridges having a width substantially equal to double the width of the strands, the strands and bridges being disposed in inclined planes relative to each other and the general plane of the fabric and the thickness of the sheet between its outer faces being considerably less than the width of the bridges.

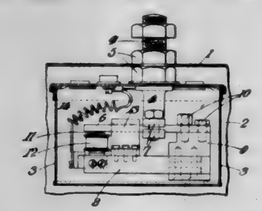
---

1,562,192. WINDOW-SHADE GUIDE. CHARLES E. ROWE, near Dayton, Ohio. Filed Feb. 18, 1924. Serial No. 693,460. 2 Claims. (Cl. 156—29.)

1. A guide for a shade attached to a pole, consisting of a split ferrule having a slitted flange on one end, and adapted to be slipped over said pole until a side edge of the shade projects through its split portion into engagement with said flange for the purpose specified.

---

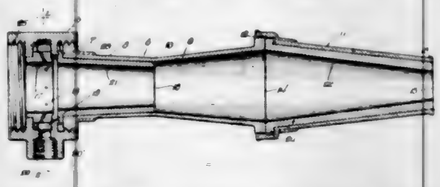
1,562,193. SUBMARINE SOUND SIGNALING OR INDICATING APPARATUS. CYRIL PERCY RYAN, East Molesey, England, assignor to Vickers Limited, Westminster, England, a British Company. Original application filed Jan. 12, 1924, Serial No. 685,904. Divided and this application filed Mar. 19, 1925. Serial No. 16,685. 3 Claims. (Cl. 177—386.)



1. In a submarine sound receiving apparatus, a diaphragm sensitive to submarine sound vibrations, a reed secured rigidly to the said diaphragm, a magnet fixed at one end upon one end of the said reed, magnet poles extending toward and close to the opposite end of the said reed, which is free and is situated on the other side of its point of attachment to the diaphragm, and coils mounted upon the said magnet poles upon the side of the magnet adjacent to the said reed and connected up in the receiving circuit.

---

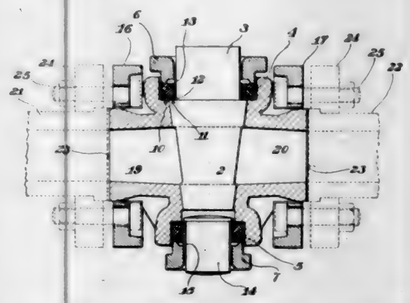
1,562,194. NOZZLE. JOHN V. SCHAEFER, Chicago, Ill., assignor to Cement Gun Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1923. Serial No. 618,210. 1 Claim. (Cl. 91—44.)



A nozzle having a plurality of adjoining sections, each section having a uniformly tapered bore, with alternate sections tapered in the same direction and arranged to contract and alternately expand a stream flowing therethrough; relatively soft linings for said converging sections and a screw joint at each larger end of said contracted sections adapted for connection with another section.

---

1,562,195. VALVE. PEIRCE D. SCHENCK, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed Jan. 18, 1924. Serial No. 687,101. 5 Claims. (Cl. 251—103.)



1. In combination in a plug valve, a valve casing having a tapering seat, and a packing recess terminating in a shoulder, a tapering plug fitting the seat and having a stem with a shoulder at the juncture of the plug and stem opposite said first shoulder in alignment therewith, a metal ring lying in said recess and engaging both of said shoulders, packing means filling the recess on the outer side of said ring, and a follower arranged to apply pressure to the packing at its outer portion, but out of contact therewith at its inner portion.

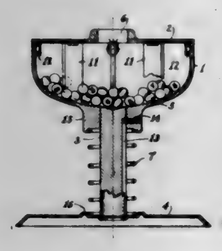
5. In combination, an integral valve body of relatively brittle corrosion resisting metal having tubular inlet and outlet members projecting from opposite sides thereof, a valve in the body extending transversely of said members, a clamping plate on each side of the valve body of relatively strong, tough metal surrounding said inlet and outlet members, bolts extending between the two plates securing them together and clamping the valve body tightly therebetween, each of said plates being provided with perforations so that it may be bolted to the flange plate of an opposing pipe connection, and the ends of said inlet and outlet members projecting through said clamping plates to permit them to be brought into abutting relation with the ends of said pipe connections.

1,562,196. HOLDER FOR CARRYING PIG LEAD. HARRY ABRAMS, Syracuse, N. Y. Filed May 15, 1925. Serial No. 30,575. 1 Claim. (Cl. 206—65.)

A holder for carrying pig lead, consisting of a wire having one end bent into the form of an ellipse with a portion of the ellipse flattened to form a handle and the end of the wire bent around the main body of the wire, the other end of the main body of the wire being bent back on itself and twisted around to permit of its convenient insertion through the channels through a series of lead blocks, the lower end of the wire being bendable to a position at right angles to the main body of the wire to form an approximately T-shaped retaining element.

---

1,562,197. PLAYING GAME. JOHN P. ANDREW, North Pelham, N. Y. Filed Feb. 28, 1924. Serial No. 695,739. 10 Claims. (Cl. 273—144.)

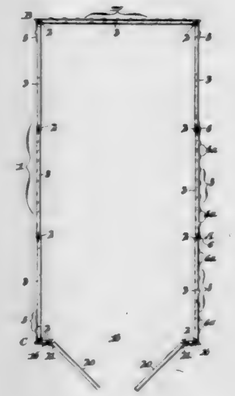


1. In combination, a stationary post, a container supported by the post for movement from a normal position near the top of the post to a position near the base of the post, means for returning the container to normal position after movement thereof, and game units in the container engageable by the top of the post when the container is in normal position, said post when the container is moved from normal position passing through the container and carrying with it a game unit.

---

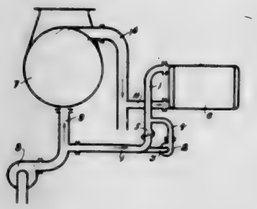
1,562,198. METALLIC BUILDING STRUCTURE. EDWARD J. BAILEY, Jr., Philadelphia, Pa. Filed Nov. 30, 1923. Serial No. 677,847. 5 Claims. (Cl. 189—1.)

1. A metallic building structure including in combination a skeleton frame of angle section uprights and connecting horizontals, the latter having one of their flanges cut away at opposite ends for convenience of attachment to the uprights, wall panels of sheet metal adapted to be hung to the frame, said panels having their opposite ends corrugated with extended marginal flanges, said corrugations adapted for overlapping corresponding end corrugations of contiguous panels, and means for securing the marginal flanges of the corrugations to the portions of the respective panels lapped by them and to the skeleton frame.



---

1,562,199. RADIATING OR COOLING APPARATUS. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 4, 1920. Serial No. 408,197. 8 Claims. (Cl. 257—24.)



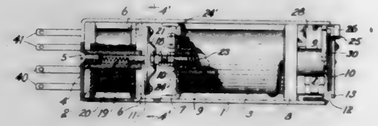
1. In combination with a cooler, a supply conduit for the cooler, a circulating pump to force cooling fluid through the conduit and cooler, and a pump located in the conduit between the circulating pump and said cooler and acting only on a part of said cooling fluid to increase the velocity of flow of said cooling fluid through the cooler to increase its cooling capacity.

---

1,562,200. ELECTROMAGNETIC DEVICE. WILLIAM O. BECK, Ridgefield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. a Corporation of New York. Filed Aug. 29, 1923. Serial No. 659,881. 12 Claims. (Cl. 175—320.)

12. In combination, a U-shaped magnetic structure, electromagnets enclosed therein, a shaft movable within

the core of one of said electromagnets and attached to the armature of another of said electromagnets, and a



ratchet mechanism jointly controlled by both of said electromagnets for operating a switch.

---

1,562,201. METHOD OF PRODUCING MOLYBDENUM AND VANADIUM ALLOYS. JOHN J. BOERICKE, Merion, Pa. Filed May 26, 1920. Serial No. 384,311. Renewed Sept. 25, 1925. 2 Claims. (Cl. 75—17.)

1. The herein described process of producing high percentage alloys of molybdenum or vanadium which consists in reducing an alumino-thermic mixture consisting of the molybdenum or vanadium compound, the alloying metal, a reducing metal, and a quantity of indifferent flux materially in excess of that for the purposes of standard alumino-thermic practices.

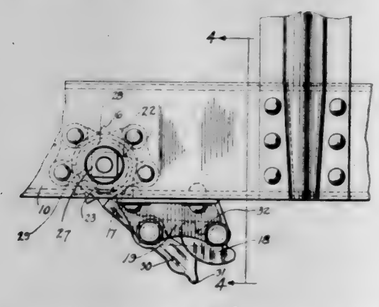
---

1,562,202. METHOD OF FORMING METALLIC COMPOSITIONS. HENRIK BOVING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1922. Serial No. 565,232. 1 Claim. (Cl. 176—132.)

The method of combining an alkaline earth metal with a refractory metal having a higher volatilizing temperature which comprises forming from the refractory metal a body having a large ratio of surface to volume, vaporizing the alkaline earth metal, and exposing said refractory metal to the vapor of the alkaline earth metal at a temperature lower than the melting point of the combined metals.

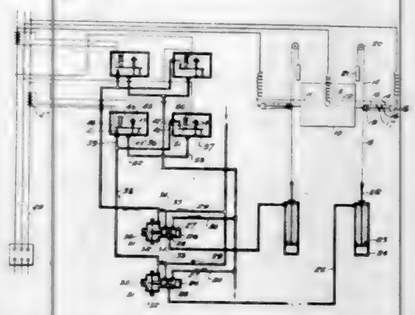
---

1,562,203. CAR-DOOR-OPERATING MECHANISM. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1924. Serial No. 709,331. 13 Claims. (Cl. 105—310.)



1. In a railway car, the combination with the side wall thereof; of a shaft extending across the plane of the side wall; a ratchet wheel on the shaft disposed inwardly of the side wall; a pawl coacting with the ratchet; and means carried by the end of the shaft and disposed outside of the side wall of the car for the purpose of imparting rotation to shaft, said shaft rotating means being adapted to have movement in one direction independent of the movement of the shaft.

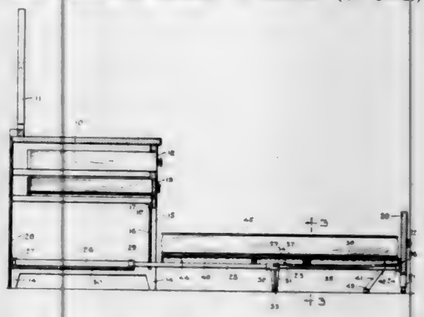
1,562,204. ELECTRIC-FURNACE CONTROL. RAGNAR CARLSTEDT, Stockholm, Sweden, assignor to Arca Regulators Incorporated, a Corporation of Virginia. Filed June 24, 1924. Serial No. 722,046. 11 Claims. (Cl. 204—64.)



7. In combination, an electric furnace, electrodes for said furnace, automatic means to move said electrodes together upon decrease of amperage and to move said electrodes apart when the voltage is zero.

---

1,562,205. COMBINED DRESSER AND BED. FRANK G. CHEMPANOS, New York, N. Y. Filed Aug. 29, 1924. Serial No. 734,843. 5 Claims. (Cl. 5—1.)

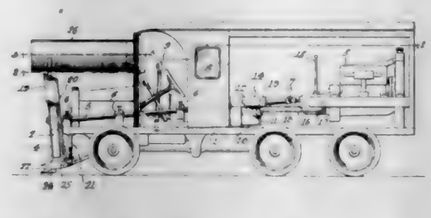


1. The combination of an article of furniture having its front face disposed in substantially fixed vertical position, a lower portion of its front face of said article being provided with an opening, a bed part comprising a head end board conforming to the outline of said opening, said bed part further comprising a pair of oppositely disposed sets of telescopically arranged rail elements, means for slidingly securing a rail element of each set within said opening of the lower portion of the front face of said article of furniture, a closure board and means for pivotally mounting said closure board in substantially vertical alignment with said substantially vertical fixed frontal portion of said article of furniture when said head end board is moved outwardly of said opening and to effect the swinging of said closure board upwardly to substantially horizontal position upon the movement of said head end board inwardly into said opening.

---

1,562,206. DUAL ROTARY SNOWPLOW. JOSEPH C. CHLADEK, Mount Horeb, Wis., assignor of one-fourth to Roy A. Beat and one-fourth to John Beat, both of Mount Horeb, Wis. Filed Aug. 4, 1924. Serial No. 730,116. 4 Claims. (Cl. 37—43.)

1. In a dual rotary snow plow, the combination of an upper plow casing, a lower plow casing, the casings having lateral passages between each other for the discharge of snow at either side, rotary snow plows positioned for operation within said casings, and means for driving the aforesaid rotary snow plows inde-



pendently in either direction to discharge snow from either side or from both sides through the lateral discharge passages.

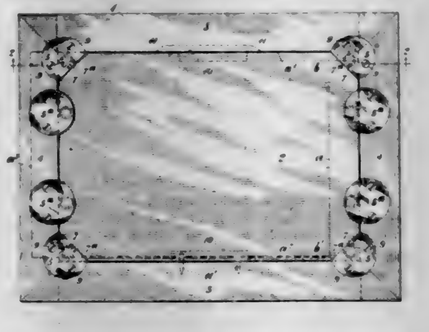
---

1,562,207. METHOD OF MAKING CEMENT. ANDREW GILBERT CROLL, Weatherly, Pa., assignor to The Atlas Portland Cement Company, a Corporation of Pennsylvania. Filed Mar. 3, 1924. Serial No. 696,687. 4 Claims. (Cl. 222—7.)

3. The method of making Portland cement whereby the strength of the resulting product is substantially increased, which comprises burning the ingredients at a clinkering temperature, quenching the clinker at white heat and grinding the same.

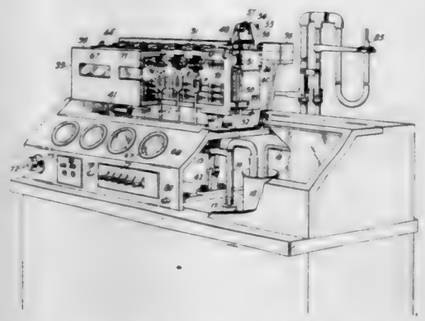
---

1,562,208. DRAWING BOARD. EDGAR L. DRINKWATER and GEORGE C. DAVISON, Chicago, Ill.; said Davison assignor to said Drinkwater. Filed June 26, 1924. Serial No. 722,573. 6 Claims. (Cl. 45—131.)



1. In a drawing board, a frame having interior dimensions substantially corresponding to a drawing sheet, retaining means projecting from the face of the frame and over the interior opening thereof near two edges only so that the other two interior edges are separated through substantially their entire length by a distance at least equal to the width of the sheet, a panel mounted in said frame, the edges of said panel engaging said retaining means and being flexibly held thereagainst, and a portion of said panel intermediate said edges being fixed with respect to the working face of said frame, said panel being adapted to have said edges pressed away from the retaining means whereby the sheet may have one edge inserted from above the frame between the panel and retaining means at one edge of the frame and the opposite edge of the sheet then inserted from above between the panel and retaining means at the opposite edge of the frame.

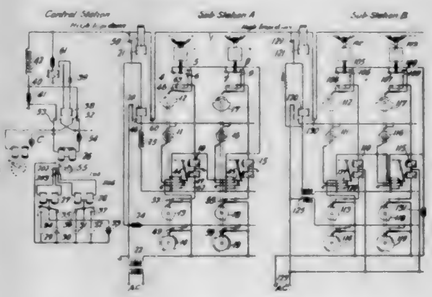
1,562,209. VACUUM-TUBE-EVACUATING OVEN. BENJAMIN J. EGERT, Brookfield, and CHARLES J. DE COSTER, Moline, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,591. 11 Claims. (Cl. 250—27.)



1. In combination, a support, a hollow oven member pivotally connected thereto, and a second oven member pivotally connected to said first oven member to form therewith an enclosure to receive an article to be heated.

---

1,562,210. SIGNALING SYSTEM. JOSEPH C. FIELD, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1921. Serial No. 506,163. 10 Claims. (Cl. 177—353.)



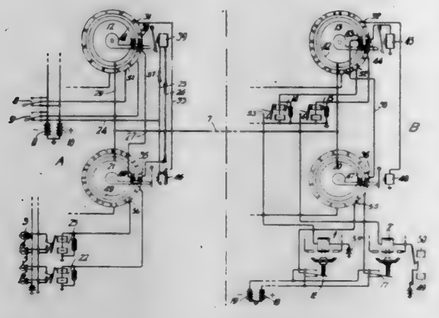
1. In a signaling system, a central station and a plurality of remote stations joined by a common line conductor, a plurality of devices at each remote station, a plurality of means, each controlled by one of said devices, respectively for signaling said central station over said common line conductor, means controlled by each of said signaling means for preventing the operation of all the other signaling means at the same remote station therewith, and means controlled by each of said signaling means for disconnecting the signaling means at all of said remote stations, other than its own, from said line conductor.

---

1,562,211. SUPERVISORY SYSTEM. JOSEPH C. FIELD, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1921. Serial No. 508,448. 5 Claims. (Cl. 177—353.)

1. In a system for remote control and supervision, a central controlling station and a remote station, a plurality of electromagnetically controlled switches at the remote station, a supervisory device corresponding

to each switch and located at the central station, a rotary distributor set comprising a transmitter and a receiver to transmit electrical impulses



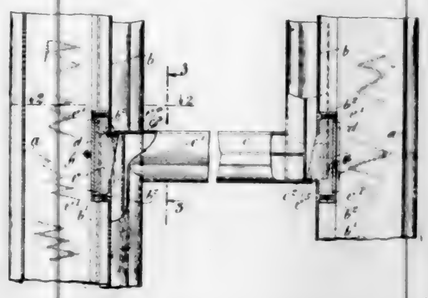
selectively to the supervisory devices from the switches, and holding and releasing means for each distributor, transmitter and receiver, such holding and releasing means for each set being connected electrically in series, and said means for one set being controlled by the other set.

---

1,562,212. METAL WINDOW. ALPHONSUS FIEN, New York, N. Y., assignor to S. H. Pomeroy Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 21, 1925. Serial No. 24,747. 11 Claims. (Cl. 189—75.)

1. In a corner construction for sheet metal window frames, the combination of a vertical frame member and a horizontal frame member the end portion of each extending across the other, the end portion of one member having a diagonal slot formed therein terminating short of its upper edge and the end portion of the other member having a tongue formed therein of a width less than that of the end portion and extending through said diagonal slot so that a part of said tongue lies against the outside and a part against the inside of the slotted member, and means for securing together the end portions of the two members.

1,562,213. METAL WINDOW. ALPHONSUS FIEN, New York, N. Y., assignor to S. H. Pomeroy Company, Inc., New York, N. Y., a Corporation of New York. Filed July 20, 1925. Serial No. 46,725. 6 Claims. (Cl. 189—72.)



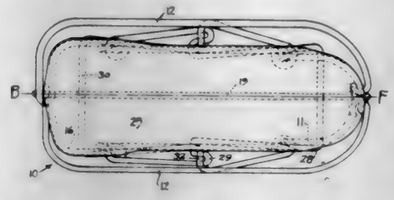
1. In a hollow metal window having a jamb with a removable, grooved pulley stile, and a heavy brace within the jamb, a heavy metal block secured to the brace, channeled in alignment with the grooves in the pulley stile and having the pulley stile secured thereto.

---

1,562,214. POWER JACK. SAMUEL FINE, Philadelphia, Pa. Filed Mar. 9, 1925. Serial No. 13,984. 3 Claims. (Cl. 254—86.)

3. In a device of the character stated, an automobile chassis, a screw jack, carried by and near each corner of the chassis, each of said jacks comprising a beveled gear rotatably mounted within said housing and having a vertical axis of rotation, a jack in an upright position, a second beveled gear in mesh with said first beveled gear rotatably mounted in said housing, having a horizontal axis of rotation, a horizontal shaft interconnecting the two horizontally mounted beveled gears at each end of the car, worm gears carried by each of said horizontal transverse shafts and longitudinally extending shafts extending to said transverse shafts and carrying a worm in mesh with each of said worm gears for operating said screw jacks, each of said horizontal longitudinal shafts being rotatably mounted in a gear and clutch housing a power shaft, power shaft trunnions interposed between the ends of said two shafts, and having friction clutch faces at their ends, driven friction discs slidably mounted on the ends of said shafts in juxtaposition to the driving friction clutch faces of said trunnions, each of said clutches being composed of frictional driven members slidably mounted on the end of each respective longitudinal shaft and a frictional driving member at each trunnion end of said power shaft manually operated means located between said clutch mechanism for driving said power shaft in either direction, and separate levers for actuating either of said driven members at will.

1,562,215. COLLAPSIBLE STOOL. GUSTAV W. FISCHER, Elizabeth, N. J. Filed Sept. 22, 1921. Serial No. 502,343. 6 Claims. (Cl. 15—266.)



2. A stool comprising inner and outer frame portions formed from a single continuous piece of wire; a cover for said inner portion and foldable leg portions pivoted at the under side of said frame.

---

1,562,216. GOLF TEE. JAMES F. FLAHERTY, Philadelphia, Pa. Filed Sept. 5, 1925. Serial No. 54,589. 5 Claims. (Cl. 273—33.)

2. A golf tee comprising a metallic stem adapted to be thrust into the ground and a primarily separate metallic cup rigidly connected with said stem, at the upper end thereof, and comprising an annular flange forming a receptacle in which a ball may be set; and a metallic coating extending over said stem and cup and permanently uniting them.

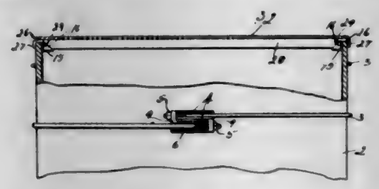
---

1,562,217. CONTROL OF BISULPHITE-PULP COOKING. JOSEPH ERNEST FLEURY, Three Rivers, Quebec, Canada. Filed May 14, 1924. Serial No. 713,344. 2 Claims. (Cl. 23—230.)

1. Method of control of bisulphite pulp cooking by the colour of the liquor, consisting in drawing a sample of the liquor from a digester in operation, to which sample is added an alkaline hydroxide and an alcohol, filtering the liquor and diluting it in determined proportion and then comparing it in a colorimeter with a predetermined graduation corresponding to certain percentages of strength and bleach of finished pulp.

---

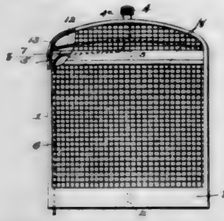
1,562,218. TANK STRUCTURE AND LUG THEREFOR. WILLIAM W. FORD, Philadelphia, Pa. Filed June 24, 1924. Serial No. 722,024. 2 Claims. (Cl. 217—95.)



1. A structure comprising, in combination, a tank, hoops surrounding said tank and having threaded meeting ends, a sister lug for each hoop into which the threaded ends are inserted, nuts screwed on said threaded ends and engaging opposite ends of the sister lug, brackets including hangers to engage the upper edge of the tank, stirrups adjustably mounted on the hangers and positioned within the tank, a rafter having its ends seated in the stirrups, and means to fasten the ends of the rafter in the stirrups.

---

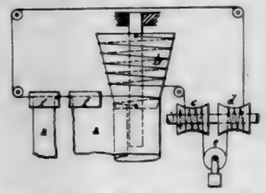
1,562,219. RADIATOR CONDENSER FOR INTERNAL-COMBUSTION ENGINES. ALBERT C. FOULK, Dayton, Ohio. Filed Nov. 11, 1922. Serial No. 600,275. 2 Claims. (Cl. 257—25.)



1. In a cooling system for internal combustion engines, a radiator assembly comprising a prime cooler, upper and lower headers for said prime cooler, and a condenser mounted above said upper header and separated therefrom by a baffle wall, said baffle wall having laterally disposed ports for connection with said upper header.

---

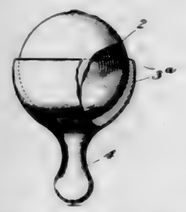
1,562,220. DEVICE FOR MOVING CURTAINLIKE ROUNDHORIZONS. RUDOLF FRITSCH, Dresden, Germany. Filed June 20, 1923. Serial No. 646,721. 4 Claims. (Cl. 272—22.)



1. In a device of the kind described a conical drum, a rope passing round said drum and having a horizontal portion for supporting a web or curtain, devices for winding said rope upon the said drum and unwinding the same therefrom, and means for displacing said drum so that the line on which the rope winds upon and unwinds from the said drum is a stationary one.

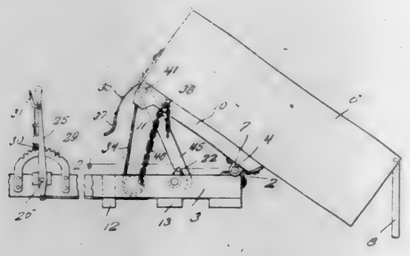
---

1,562,221. METHOD OF AND MEANS FOR PRODUCING SOUND. ELLIS F. FROST, Colonial Beach, Va. Filed Aug. 14, 1922. Serial No. 581,805. 2 Claims. (Cl. 46—46.)



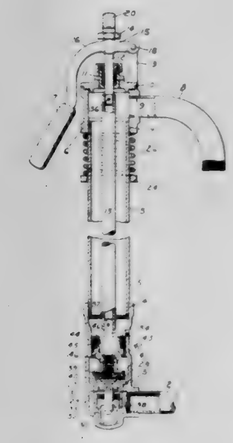
2. A chamber having an elastic membranous wall retained by fluid pressure in a curved distended and attenuated condition, and a holder for holding the wall against such bodily movement as would result in the dissipation or absorption of the vibrations set up by crepitating the wall, whereby such vibrations will be resonated by the chamber.

1,562,222. DUMPING TRUCK. EVERETT H. GALFORD, Elkins, W. Va. Filed Jan. 20, 1925. Serial No. 3,614. 2 Claims. (Cl. 298—19.)



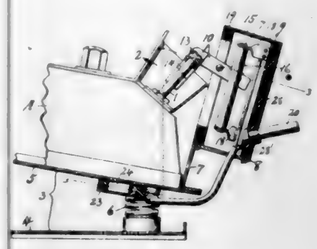
1. In combination with the chassis of a vehicle, of a dump body pivotally supported intermediate its ends on the rear end of the chassis, means for normally locking the dump body in a horizontal position on the chassis against tilting movement, said means comprising a pair of cross bars extending transversely on the chassis in spaced relation, a lever pivotally supported intermediate its ends on the rear cross bar, a locking bolt secured at its rear end on one end of the lever, the forward end thereof adapted for slidable movement within an opening provided therefor in the forward cross bar, a keeper associated with the forward end of the dump body, the same being provided with an opening for receiving the forward end of the locking bolt, and a lever operatively associated with the other end of the aforementioned lever for actuating said locking bolt.

1,562,223. HYDRANT. THOR GANNESTAD, Pittsburgh, Pa., assignor to Edgar M. Moore, Pittsburgh, Pa. Filed Mar. 8, 1924. Serial No. 697,746. 7 Claims. (Cl. 137—13.)



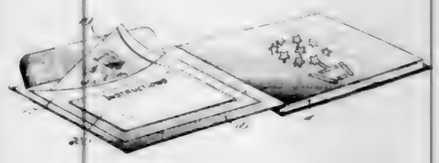
1. The combination with a hydrant having a central valve stem and an operating lever therefor, of a cross yoke for depressing the stem and lever having tension rods extending down at each side of the hydrant, a ring surrounding the hydrant and connected with the tension rods, and a spring between the ring and an abutment on the hydrant.

1,562,224. ELECTRICALLY-HEATED SADIRON. HERMAN GANSERT, Jr., Syracuse, N. Y. Filed Oct. 20, 1924. Serial No. 744,790. 6 Claims. (Cl. 219—25.)



6. The combination with an electrically heated flat iron having a pair of exposed terminals for the heating circuit, of a support for the iron having a pair of exposed terminals similar to those of the iron and also connected in the heater circuit, an electric switch and a thermostatic switch, both connected in the heating circuit, the thermostatic switch and one of the parts of the first named switch being mounted upon the support for the iron, the other member of the first named switch being movable into and out of contact with the member on the support and provided with sockets for receiving the terminals on the iron, and means including a socketed coupling member for connecting either set of terminals to a source of electric supply when the socketed switch member is removed from the terminals on the iron.

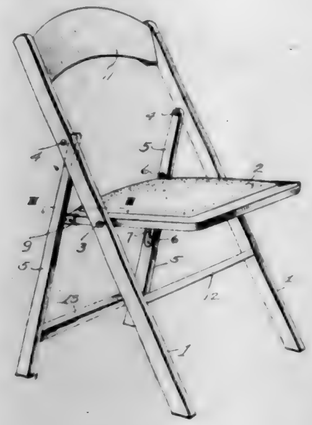
1,562,225. INSTRUCTION OUTFIT FOR CHILDREN. RAYMOND H. GARMAN, Wilmette, Ill. Filed Jan. 2, 1925. Serial No. 213. 1 Claim. (Cl. 35—12.)



In a child's instructive outfit for the purpose specified, a sheet or leaf having thereon individual disconnected outlines to be colored, said outlines being each self-contained and disconnected from other outlines, together with a series of die-cut paper sections each of proper size and shape to fit into and completely occupy one of the aforesaid outlines, each of the aforesaid die-cut sections being colored on its top surface with a solid block of a single color and gummed on its lower surface for direct attachment to the sheet within the intended outline, whereby said die-cut paper sections when so attached serve to completely occupy and completely color the outlines within which they are placed and produce an attractive ornamental design or pattern of disconnected units of solid color blocks, substantially as and for the purpose set forth.

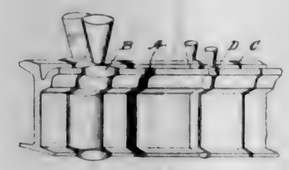
1,562,226. FOLDING CHAIR. CHARLES GLANTZ, Arkville, N. Y. Filed Feb. 21, 1925. Serial No. 10,879. 2 Claims. (Cl. 155—142.)

1. A folding chair, embodying front legs, rear legs pivoted thereto at their upper ends, a seat pivoted intermediate its length between said front legs, and means forming sliding connections between the rear of said seat and said rear legs, said means forming a loose



engagement in intermediate positions of the seat and legs, but adapted to lock the two together at each extreme of adjustment.

1,562,227. METHOD OF WELDING METALS. HANS GOLDSCHMIDT, Berlin, Germany, assignor to Gesellschaft für Aluminothermie, m. b. H., Dr. Hans Goldschmidt, Berlin, Germany. Filed Sept. 2, 1921. Serial No. 497,996. 4 Claims. (Cl. 22—204.)

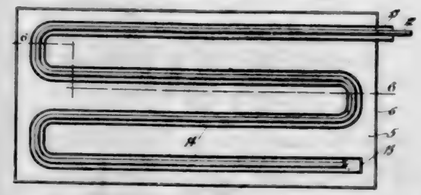


1. A method of welding metal parts by the thermo-aluminic process which consists in bringing faces of the metal parts into close proximity, preheating said faces to substantially welding temperature, enclosing the joint in a mould and introducing the molten metal into said joint and mould, the mould closely conforming to the profile of the metal parts and being of such reduced dimensions that the preheated portions of the metal parts extend beyond the metal space within said mould, whereby the outer preheated portions are not further heated by the molten metal.

1,562,228. STENCIL SHEET. JOHN DOUGLASS GRANGE, Brookfield, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1922. Serial No. 603,125. 14 Claims. (Cl. 41—386.)

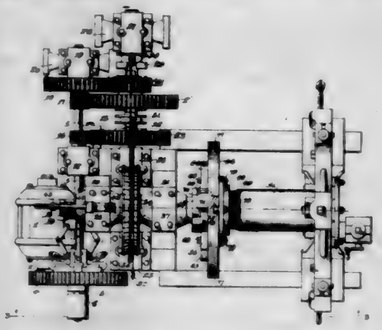
1. A stencil blank capable of being stencilized, comprising a sheet of fibrous material impregnated with a compound including a protein, an aluminum salt, an agent to retard the hardening effect of the aluminum salt, a suitable tempering agent, a coloring material and water.

1,562,229. APPARATUS FOR DRYING MATERIALS. GEORGE GRINDROD, Oconomowoc, Wis., assignor to Carnation Milk Products Company, Seattle, Wash., a Corporation of Delaware. Filed Feb. 28, 1920. Serial No. 362,054. 2 Claims. (Cl. 257—256.)



2. In combination with a hot plate, means for heating the surface of said plate to a uniform temperature throughout its area consisting of inner and outer pipes formed into a heating coil and arranged in proximity to said plate, said pipes constituting a continuous circulating means for a fluid heating medium entering through one of the pipes and leaving through the other pipe.

1,562,230. COUPLING-ELEMENT-ATTACHING APPARATUS. ALPHONSE GUTTLY, Wisconsin Rapids, Wis. Filed Nov. 29, 1924. Serial No. 753,001. 16 Claims. (Cl. 29—88.2.)

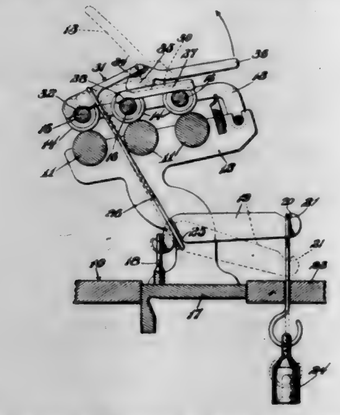


1. A coupling element attaching apparatus comprising a revoluble chuck formed of a driving and a driven section, the former extending into the rear of the latter, fluid pressure operated means carried by said driving section and yieldingly impacting with the rear of said driven section to provide for the bodily revolving of the chuck, means for detachably securing the coupling element to be attached to the front of said driven section, a non-rotative combined pipe locking and positioning means for supporting one end of and for positioning a pipe for the reception on its other end of the coupling element carried by said driven section, and a portable holder for said locking and positioning means.

1,562,231. ROLL-WEIGHTING APPARATUS FOR COTTON-SPINNING MACHINES. ROBERT EDMON HAYNES, Gastonia, N. C., assignor of one-half to Arthur D. Gantt, Kings Mountain, N. C. Filed Oct. 25, 1924. Serial No. 745,927. 6 Claims. (Cl. 19—136.)

1. In a spinning machine, the combination with lower rolls, upper rolls resting upon the lower rolls and means for applying tension to the upper rolls to force them against the lower rolls including a pair of saddles, one resting upon the middle and rear upper rolls, the other resting at its front end upon the front upper roll and at its rear end upon the first named saddle, a weight supported from the front saddle intermediate the front and

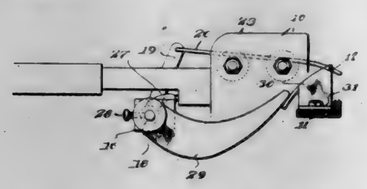
middle rolls, of means at the rear end of the last named saddle and engaging the first named saddle shiftable to vary the height of the rear end of the last named saddle



and to permit said weight to lower, and means other than said front saddle supporting said weight when it has been lowered a predetermined distance.

---

1,562,232. SELVAGE-LOOP RETAINER. JAMES A. HENAULT, Easthampton, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 12, 1923. Serial No. 674,337. 5 Claims. (Cl. 139—195.)



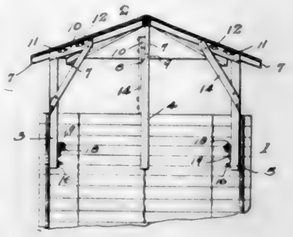
1. A loom comprising a temple, a lay movable toward and from the temple, a selvage loop retaining finger mounted in the temple to slide substantially parallel with and above the edge of the cloth adjacent the fell, means acting normally to project the finger rearwardly past and inclining downwardly over the fell, and means acting simultaneously with the beat-up of the lay to retract the finger forwardly of the fell whereby, after the pick of weft toward the side at which the temple is located is beaten in and the lay moves back the finger is projected over the weft and the next pick toward the opposite side loops the weft over and around the finger, which is then withdrawn therefrom on the succeeding beat-up of the lay.

---

1,562,233. WALL CONSTRUCTION. EDWARD AUGUST HEYER, New York, N. Y. Filed July 9, 1925. Serial No. 42,535. 3 Claims. (Cl. 72—125.)

1. The herein described wall construction, consisting in supporting strips located at an angle to each other, metal plates secured to said strips and spaced apart at their edges, strips of flexible material secured over the meeting edges of the plates and at the ends of the plates, and metal strips covering the flexible strips and secured to the plates thereover.

1,562,234. ADJUSTABLE ROOF. CLARENCE HOARD, Victoria, British Columbia, Canada. Filed May 16, 1924. Serial No. 713,726. 2 Claims. (Cl. 108—2.)



1. The combination with an adjustable roof structure having rafters, of a pair of guide posts adapted to extend into and coact with the inner walls of a silo, said posts having extensions thereon, adjustable means for securing said extensions to the rafters, and means in connection with said posts and silo for elevating and retaining the roof in elevated position.

---

1,562,235. SWAB. BEN P. HOFFMAN and WALTER G. BISBEE, Bristow, Okla. Filed Nov. 19, 1923. Serial No. 675,774. 8 Claims. (Cl. 103—225.)

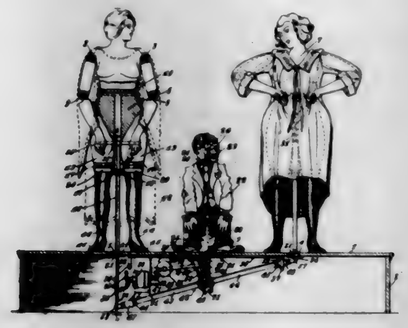
1. In a device of the class described, a tubular member having upper and lower threaded portions, a packing element arranged for movement on the tubular member, means for expanding said packer, a valve casing fixed to said tubular member and a valve carried by said packer.

---

1,562,236. DISPLAY DEVICE. JOHN B. HOLTZ, Los Angeles, Calif. Filed Apr. 15, 1925. Serial No. 23,871. 14 Claims. (Cl. 46—40.)

5. A wearing apparel display device comprising a vertically disposed apparel supporting and displaying element adapted to support a plurality of articles of wearing apparel and provided with means for elevating and lowering one of the articles supported thereon to respectively expose and cover another of the articles supported

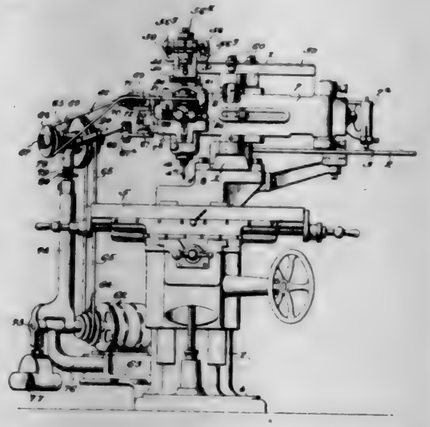
thereon, an attraction directing element positioned in proximity to said display element and including a movable part shiftable in a direction towards said display



element to direct attention to said exposed article, and an operating mechanism common to said means and said movable part.

---

1,562,237. ENGRAVING MACHINE. GEORGE HORNER, Racine, Wis., assignor to George Gorton Machine Company, Racine, Wis., a Corporation of New Jersey. Filed June 23, 1924. Serial No. 721,874. 28 Claims. (Cl. 90—131.)

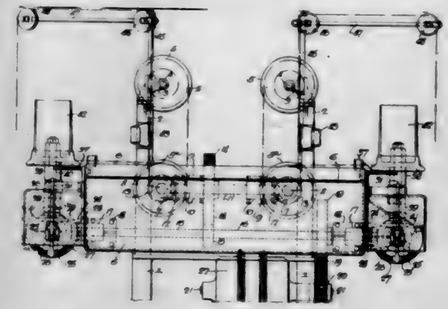


2. In an engraving machine, in combination, a slide provided with and carrying the cutting tool spindle, a head in which the slide is movable toward and from the work, pantograph mechanism for moving said head and the slide over the surface of the work, a feed member carried by said head, means for fixing said member to the head against relative vertical movement and whereby said member can be released for relative vertical movement, feed mechanism fixing the vertical position of said slide relative to said member and supporting the slide from said member, spring mechanism for yieldingly upholding said member from said head, an independently supported relatively fixed forming guide surface for controlling the relative vertical movement of said member, slide and cutting tool against the tension of said spring mechanism when said member is released for relative vertical movement.

12. In an engraving machine and the like, a cutting tool rotary spindle and a slide carrying the same, in combination with a rotary driving head, and a rotary driving coupling between said spindle and head permitting relative longitudinal movement between the spindle and head while maintaining rotary driving relation from head to spindle, said coupling embodying an intermediate sleeve and longitudinally slidable key driving connections between the head and sleeve and sleeve and spindle.

---

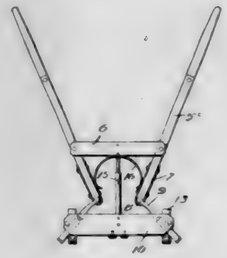
1,562,238. WIRE-DRAWING MACHINE. JAMES C. MAGEE, Hastings-on-the-Hudson, N. Y., assignor to American Insulating Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1921. Serial No. 523,677. 4 Claims. (Cl. 205—13.)



1. In a wire-drawing machine, the combination with a horizontal main drive shaft, of a source of motive power connected with said shaft, a second shaft disposed above the main shaft and operatively connected thereto, a tank at each side of said main shaft, a plurality of sets of drawing sheaves mounted in each of said tanks and operatively connected with said second shaft, and a block for each of said sets of drawing sheaves operatively connected with the said main shaft.

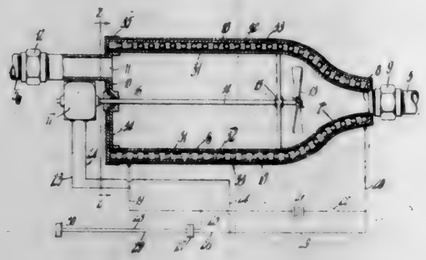
---

1,562,239. HAND TRUCK. ULYSSES S. MEALEY, Faribault, Minn. Filed May 28, 1925. Serial No. 33,421. 3 Claims. (Cl. 214—65.5.)



1. A hand truck of the class described including a wheel supported plate, a pair of arms pivoted to the plate and having extensions for engaging an article on one end, a cross member, a pair of handle bars pivoted to the cross member and having their ends pivotally engaged with the other ends of the arms, a spring between the handles for normally holding them in a parallel position.

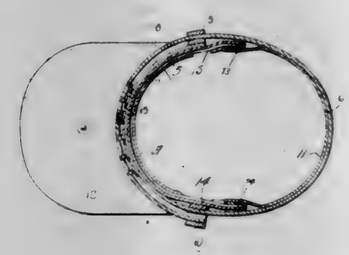
1,562,240. AUXILIARY HEATING AND CIRCULATING APPARATUS FOR AUTOMOBILES. ELLA E. MELOTTI, Boston, Mass. Filed Jan. 10, 1925. Serial No. 1,709. 10 Claims. (Cl. 123—174.)



1. An auxiliary liquid heating and circulating apparatus for automobiles comprising a container for liquid having an inlet and an outlet orifice and adapted to be interposed in and connected to a pipe forming a portion of the liquid circulating system of an automobile, a coil of wire surrounding said container and adapted to be connected to a source of electric energy, and means within said container to force the liquid therein through said outlet orifice and pipe.

---

1,562,241. ADJUSTABLE CAP. OLIVER J. MILLSAPS, Abilene, Tex. Filed June 28, 1924. Serial No. 722,997. 1 Claim. (Cl. 2—197.)

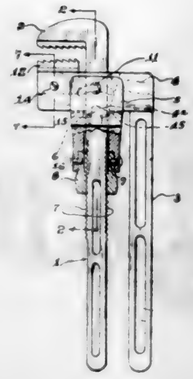


In an adjustable cap, a visor having rearwardly projecting extensions, means inside the cap for guiding and concealing the extensions, a body portion provided with a head band having extensions overlappingly arranged with relation to each other exteriorly of the body portion, the said extensions being of a length to terminate on opposite sides of the cap near the ends of the visor, a loop on the end of each extension embracing the other extension and being slidable thereon, one of the said extensions having fastening elements on its surface contiguous to the overlapping extension and the other of said extensions having a fastening element on its surface facing the first mentioned fastenings, the said fastenings being concealed by the outer of the telescopic sections, substantially as described.

---

1,562,242. WRENCH. EDWARD T. MITCHELL, Lisco, Nebr. Filed June 22, 1925. Serial No. 38,730. 2 Claims. (Cl. 81—83.)

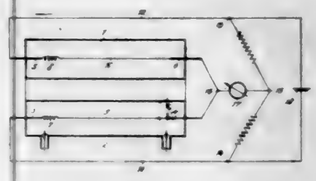
1. In a device of the class described, in combination, a shank, an upper jaw integral with the said shank having teeth at the bottom, a forked sleeve adapted to move on the said shank, a transverse bar having a handle, the said transverse bar movably fastened to the said forked sleeve, springs for normally keeping the said transverse bar at right angles to said shank, a lower



jaw fitting in the forked portion of the said transverse bar, and a threaded sleeve engaging said shank for moving the said forked sleeve on the said shank.

---

1,562,243. APPARATUS FOR CONTINUOUSLY MEASURING THE COMBUSTIBLE CONSTITUENTS OF WASTE GASES. MAX MOELLER, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Nov. 22, 1924. Serial No. 751,711. 2 Claims. (Cl. 23—255.)

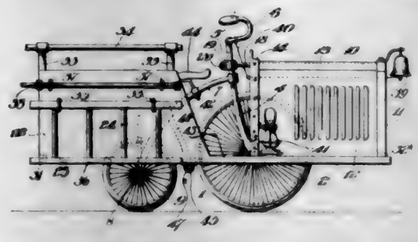


1. In a device for continuously measuring the combustible constituents of waste gases the combustion of a compartment filled with a suitable gas for comparison with the waste gases and containing a wire of suitable catalytically acting material surrounded by said comparison gas, a second compartment having an intake and a discharge opening for said waste gases, and containing a catalytically acting wire consisting of an alloy containing at least one of the elements of the platinum group, said wire being surrounded by said waste gases, a source of current and conductors for connecting said source with said catalytic wires, and a measuring instrument suitably connected in circuit with said wires for comparing the amount of current passing through said wires.

---

1,562,244. DETACHABLE BODY FOR CHILDREN'S TRICYCLES. WILLIAM A. MORRILL, Jr., Wenonah, N. J. Filed Sept. 15, 1924. Serial No. 737,671. 5 Claims. (Cl. 208—42.)

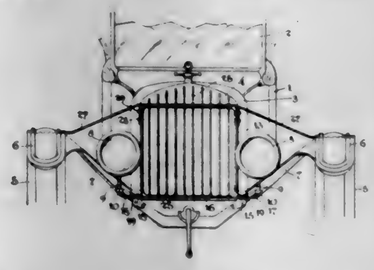
1. The combination of a child's tricycle, having a steering column and a rear axle, a detachable body therefor, comprising a front hood member enclosing the top and front sides of the tricycle and a rear chassis member, connections from said hood member to said steering column, and supporting devices for said chassis member carried by the rear axle of the tricycle, there being



a space between said hood member and chassis member, and a seat located within said space upon the tricycle frame.

---

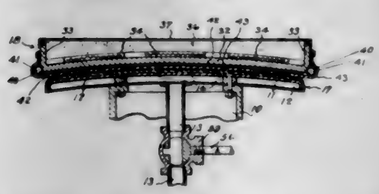
1,562,245. COMBINED RADIATOR GUARD AND FENDER BRACE. ELMER J. NEGY, Abilene, Tex. Filed Aug. 16, 1924. Serial No. 732,509. 4 Claims. (Cl. 293—54.)



1. A combined radiator guard and fender brace for motor vehicles comprising an inverted vertically disposed U-shaped frame, a horizontally disposed rearwardly extending yoke-shaped support formed of an intermediate and a pair of rearwardly extending end portions of a length to extend below the supports for the standards of the headlights of the vehicle, said support of greater width than said frame, means for securing the lower end of said frame to said intermediate portion, means for securing the rear terminals of said end portions to said supports, spaced bars secured to said intermediate portion and extending through the top of the frame, and brace members secured to upper end of said frame and to the front fenders of the vehicle.

---

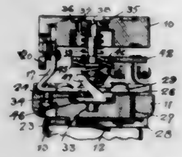
1,562,246. ELECTRIC CLOTHES PRESSER. CHARLES R. NELSON, Seattle, Wash. Filed Jan. 3, 1925. Serial No. 307. 1 Claim. (Cl. 68—9.)



In a clothes pressing machine a buck having a pressing face, a steam conduit pipe extending around said buck adjacent the edge thereof and having perforations for directing steam inwardly across the pressing face of said buck, a layer of wire mesh covering the face of said buck and forming porous means for permitting an even distribution of said steam and a fabric pressing pad covering said wire mesh and extending around and over said steam pipe and secured to said buck.

---

1,562,247. ELECTRIC SWITCH MECHANISM. ARVID H. NERO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed July 23, 1921. Serial No. 487,164. 3 Claims. (Cl. 173—354.)



1. In an electric switch having a hill and valley course, a switch bar riding the course, a cam plate arranged beneath and having cam arms upwardly offset for engagement with the switch bar and passing therethrough, a compression spring above and normally pressing the switch bar against the cam plate, and means for actuating said cam plate to cause the cam arms of the latter to lift the switch bar with lagging action over the hills of the course, said compression spring causing said switch bar to ride down the cam arms with overtaking action as the switch bar descends into the succeeding valley.

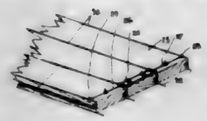
---

1,562,248. INSECT TRAP. NIELS NIELSEN, Lincoln, Nebr. Filed Dec. 7, 1923. Serial No. 679,176. 1 Claim. (43—109.)

An insect trap adapted to support a piece of furniture, said trap comprising a plate adapted to be secured to a piece of furniture, a shank carried by said plate and having a chamber therein, a cup into which the lower end of said shank extends axially and adapted to receive liquid in a chamber thereof, which chamber is in communication with the chamber of the shank, the lower end of said cup being convexed, thereby forming a caster and a vent in said shank adjacent its upper end and in communication with the chamber of the shank.

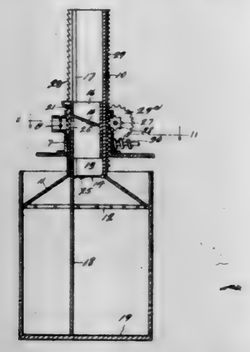
---

1,562,249. CAR DOOR. JAMES OMAR OAKLEY, Montreal, Quebec, Canada, assignor of one-half to Paul Emile Lalanne, Montreal, Canada. Filed Jan. 24, 1925. Serial No. 4,454. 6 Claims. (Cl. 20—32.)



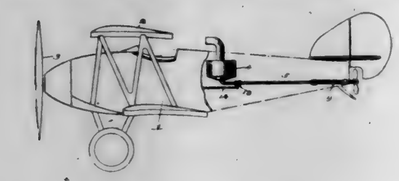
1. A car door comprising a plurality of slats longitudinally hinged at the joints and operating as a roll door and hinge pins having double offsets at the ends forming tread members and hangers for the door in its sliding and stored positions, trackways secured over vertical recesses in door posts and therebeyond across the car under the ceiling and suspended therefrom.

1,562,250. ICE-CREAM-DISPENSING MACHINE. ARTHUR B. PATTON, Omaha, Nebr. Filed Mar. 25, 1924. Serial No. 701,688. 1 Claim. (Cl. 107—8.)



The combination with a device for dispensing ice cream from ice cream containers, said device comprising a plunger disposed in the casing, a tubular casing carried by said plunger, and through which ice cream is forced, a deflecting casing disposed within the plunger casing and slidably mounted therein, and having a discharge opening registering with the discharge opening in the plunger casing, of means for preventing movement of the deflecting casing, said means comprising an arm carried by the deflecting casing and engaging the bottom of the container, pawl and ratchet means for locking the deflecting casing to the plunger casing whereby said deflecting casing may move upwardly or downwardly with the plunger casing and gear means cooperating with the plunger casing for moving said plunger casing.

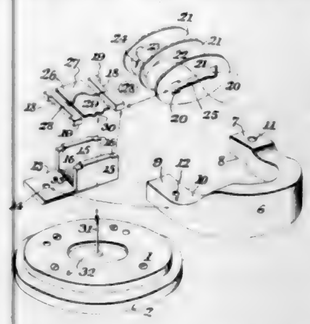
1,562,251. MATERIAL DISTRIBUTOR FOR AIRCRAFT. CLIFFORD L. PELTON, Baltimore, Md. Filed July 9, 1925. Serial No. 42,406. 4 Claims. (Cl. 244—1.)



1. In an aircraft, in combination, a receptacle for holding a quantity of material to be distributed from the aircraft, a tube rotatable about an axis on the aircraft, a conduit in said tube extending outwardly from said axis, a passage from said receptacle to said tube, and means for rotating said tube to cause the material to be scattered in the air.

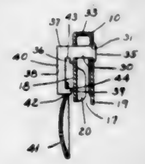
1,562,252. TELEPHONE RECEIVER. ALBERT PIHL, Murray, Utah, assignor to Holliday Radio & Manufacturing Company, a Corporation of Utah. Filed Aug. 8, 1924. Serial No. 730,939. 5 Claims. (Cl. 179—119.)

1. A telephone receiver comprising a ring member, a generally U-shaped permanent magnet carried by said ring member and having its ends widely spaced offset to lie in different planes, pole pieces attached to the outer faces of the legs of the magnet and extending inwardly, each of said pole pieces having on its free end sides extending toward the corresponding sides of the opposite pole piece, a coil supported within the sides of the pole pieces, and an armature mounted within said coil.



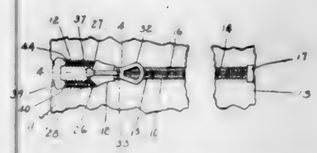
5. A telephone receiver comprising a ring member, a permanent magnet, pole pieces carried thereby and having trough shaped free ends milled out so that the bottom of the trough is curved, a coil supported within the pole pieces and curved similarly to the bottom of the trough, and an armature mounted within said coil.

1,562,253. SLIDE CONSTRUCTION. GEORGE EDWARD PRENTICE, Berlin, Conn. Filed Mar. 23, 1925. Serial No. 17,500. 2 Claims. (Cl. 24—205.)



1. In interlocking fastener construction, a pair of opposed fabric edge structures provided with interlocking fastener devices and a slide for cooperating with said devices for connecting and disconnecting the same comprising a pair of opposed plates that are separated by a space for admitting said devices, a rivet structure having a body that cooperates with the outside faces of said plates so as to tend to limit the outward spacing thereof, a handle for operating said slide, a part of said rivet structure serving as the support for said handle, and said part being of U-shape and extended over an appreciable part of the length of one of said plates and with the free end opposed to said last named plate.

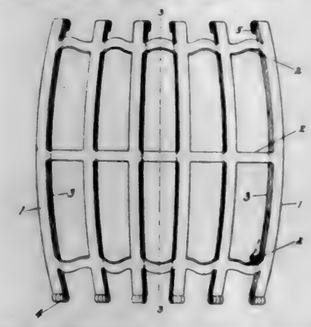
1,562,254. FASTENER COMBINATION. GEORGE E. PRENTICE, Berlin, Conn. Filed Mar. 26, 1925. Serial No. 18,427. 2 Claims. (Cl. 24—205.)



1. In combination, interlocking fastener devices arranged along the opposed edges of material bordering a gap, a slide for operating said devices and mounted for longitudinal movement thereon, said slide having at one end a pair of outlets, spaced laterally one from the other, and serving individually as exits for the fastener

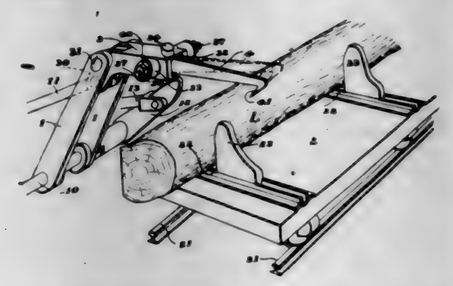
devices on the two sides, the end of the gap that is opposed to said one end of the slide being bridged by a stop device, and said stop device cooperating with the slide to limit the movement thereof.

1,562,255. HAIR-WAVING FRAME. EMMA A. PURKEY, Pittsburgh, Pa. Filed Jan. 23, 1925. Serial No. 4,191. 10 Claims. (Cl. 132—38.)



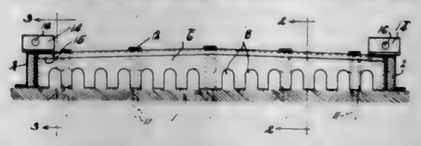
1. A hair waving frame comprising a plurality of interconnected clamping elements, each consisting of a pair of matching bars and means for mutually engaging said bars to clamp hair therebetween; and means extending upwardly from the clamping elements to provide forming loops for the undulations of the hair.

1,562,256. LOG TURNER. ULRICK J. RAYMOND, Seattle, Wash. Filed Dec. 16, 1922. Serial No. 607,292. 16 Claims. (Cl. 143—103.)



1. In combination, means for supporting a log, and a two-part arm movable transversely of and over a log resting upon said support to turn the log about its longitudinal axis, said arm comprising a supporting part movable only in a plane and a log engaging part deflectable laterally of said plane and along said log axis.

1,562,257. RETAINER FOR EXPANSION-JOINT STRIPS. LEWIS W. ROGERS, Clanton, Ala. Filed Feb. 9, 1925. Serial No. 8,006. 5 Claims. (Cl. 94—51.)

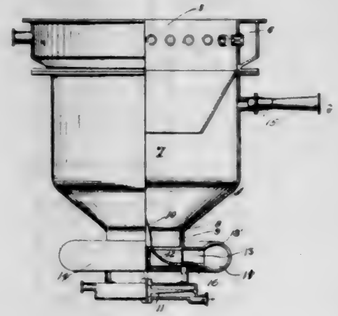


1. An expansion joint retainer formed of a metal plate having greater width vertically than the expansion joint strip to be retained and having its top edge bent over on one side to form a shallow pocket closed overhead and adapted to receive the upper edge of such joint strip, there being slots in the plate extending from below the level of the downturned edge through the bottom of the plate.

1,562,258. PARACHUTE. JAMES M. RUSSELL, Dayton, Ohio. Filed May 19, 1924. Serial No. 714,461. 20 Claims. (Cl. 244—21.)

1. A parachute comprising a canopy made up of a plurality of concentric sections having overlapping portions joined together at spaced points to provide a vent therebetween.

1,562,259. JET CONDENSER. HENRY F. SCHMIDT and DAVID W. R. MORGAN, Swarthmore, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 3, 1920. Serial No. 428,062. 9 Claims. (Cl. 261—24.)

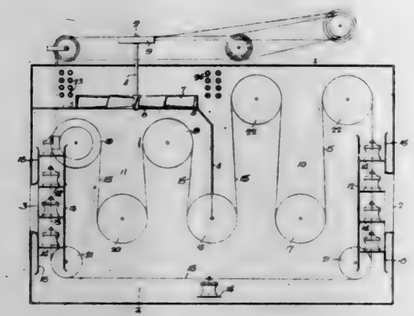


1. A combined jet condenser and condensate extraction pump therefor comprising a mixing chamber, means providing a discharge throat at the bottom thereof, a propeller member rotatable in said throat, and means for discharging the condensate delivered by said propeller member.

1,562,260. DRIER. WALTER M. SCHWARTZ, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 28, 1921. Serial No. 480,953. 4 Claims. (Cl. 34—12.)

1. The combination in a drier having a feed opening at one end, and a discharge opening at the opposite end; a driving chamber; a vertical partition dividing the main portion of the chamber into two compartments, but affording communication between the compartments at top and bottom; a horizontal circulating fan above the compartment at the delivery end of

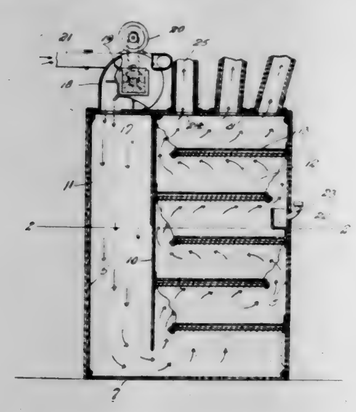
the drier, and means near the fan for heating the air so that heated air will be circulated down through the compartment at the delivery end and the cooler



air will be circulated upwards in the compartment at the feed end of the drier, and a conveyor arranged to travel through both compartments.

---

1,562,261. ELECTRIC FURNACE. JEROME SECHOWSKI, Notre Dame, Ind. Filed Aug. 17, 1923. Serial No. 657,899. 2 Claims. (Cl. 219—39.)



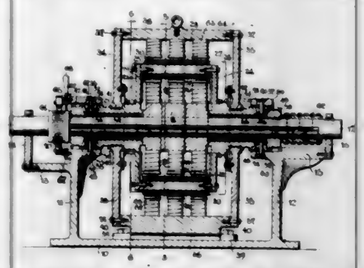
1. In an electric furnace, a casing divided internally by a vertical partition into separate compartments, said partition terminating in spaced relation from the bottom of the casing to afford communication between the compartments, the top of said casing being provided above one of said compartments with an opening, air circulating means mounted on said casing and in communication with said openings for driving air through said compartment and into the remaining compartments, a plurality of horizontally disposed baffles arranged in the last named compartments in staggered relation, said baffles being mounted alternately upon said partition and one of the walls of the last named compartment, said baffles being of a width equal to the compartments and of a length less than the length of the compartment whereby to afford a restricted and tortioned passage for the incoming air, and electric heating elements disposed beneath said baffles and arranged in transversely spaced rows.

1,562,262. PROCESS OF TREATING RUBBER AND THE PRODUCTS THEREOF. OMAR H. SMITH, New York, N. Y., assignor to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed Sept. 15, 1924. Serial No. 737,695. 27 Claims. (Cl. 18—53.)

1. The process of treating rubber hydrocarbon which consists in incorporating therewith a normal alkaline-base salt of a phosphorous acid.

---

1,562,263. ELECTRO MOTOR AND GENERATOR. JOHN C. SOMMER, St. Louis, Mo. Filed June 16, 1924. Serial No. 720,308. 2 Claims. (Cl. 171—252.)



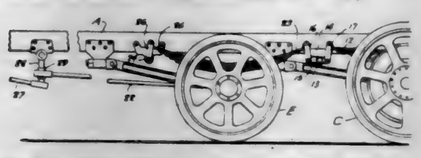
1. In a machine of the character set forth, a base having a pair of spaced standards mounted thereon, an upright annular housing mounted on each standard, an annular enclosed field coil mounted on said base between said standards, a hollow rotary member within said field coil carrying coil windings upon the exterior and interior thereof constituting armature and field coils respectively, a hollow stub shaft extending from each end of said rotary member through and supported by the end walls of said field coil and each terminating in a housing, bevelled gear teeth formed upon the free end of each stub shaft, a central shaft extending through said hollow shafts and beyond the ends thereof through said housings, an armature carried by said center shaft within said rotary member, a fixed gear mechanism mounted within each housing in mesh with the teeth on the adjacent stub shaft, means for transmitting reverse motion from said shaft to said rotary member through said fixed gears, and a commutator mechanism for the machine carried upon the central shaft.

---

1,562,264. CORN-HARVESTING MACHINE. GEORGE J. SOUKUP, Wagner, S. Dak. Filed Apr. 18, 1925. Serial No. 24,112. 3 Claims. (Cl. 130—5.)

1. In a device of the type described, the combination with the stripping rolls of a corn harvesting machine, of a roller transversely overlying said rolls and adjustable longitudinally in respect thereto, and means for driving said roller.

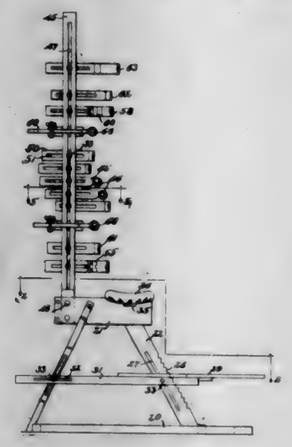
1,562,265. SIX-WHEEL TRUCK. HARRY Y. STEBBINS and DAVID LEROY VAN LEUVEN, Los Angeles, Calif., assignors to Six Wheels, Incorporated, Los Angeles, Calif., a Corporation of California. Filed Feb. 23, 1924. Serial No. 694,591. 1 Claim. (Cl. 180—22.)



In a motor vehicle, the combination of a frame, drive wheels, drive mechanism therefor, front wheels, steering mechanism therefor comprising movable spindles having steering knuckle arms, a tie rod connecting said arms, intermediate carrier wheels, steering mechanism for said carrier wheels comprising movable spindles having steering knuckle arms, a tie rod connecting said last mentioned arms, and a divided connecting bar securing said steering mechanisms together and having an adjustable proportional movement connection characterized by said connection comprising a lever pivotally mounted on said frame, a collar slidably mounted on said lever so as to be adjustably disposed thereon, means to lock said collar in any selected position on said lever, said collar having a ball, one section of said bar having a socket receiving said ball so as to form a joint, and the other section of said bar being non-adjustably connected to said lever so as to swing therewith.

---

1,562,266. APPARATUS FOR PRACTICING ORTHOPEDIA. MABEL ELSWORTH TODD, Boston, Mass. Filed Feb. 25, 1922. Serial No. 539,211. 40 Claims. (Cl. 128—68.)

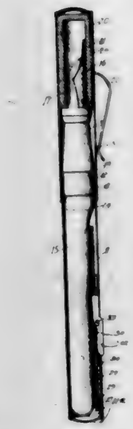


1. Orthopedic apparatus comprising a frame, means on said frame for supporting a human body, including a saddle seat having two parts individually adjustable, and a series of members adjustably mounted on said frame and adapted to be selectively positioned to indicate the normal contour of the body supported by said frame.

---

1,562,267. FOUNTAIN PEN. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 457,873. 8 Claims. (Cl. 120—46.)

1. In a fountain pen, a thin metal container tube for housing an ink sack, and formed at one end with spirally arranged corrugations forming external threads and internal ridges and valleys, a pen section having a smooth surfaced extension adapted to be forcibly thrust within said corrugated end of the container tube causing a slight distortion of the resilient metal of said



corrugations longitudinally of said tube, so as to produce a gripping action of the corrugations on said smooth surfaced extension to tenaciously hold said pen section in place on said container tube.

---

1,562,268. HEDDLE-FRAME MOVEMENT. JOHN D. WATSON, Appleton, Wis. Filed Feb. 1, 1924. Serial No. 690,019. 3 Claims. (Cl. 139—57.)

1. A heddle frame gearing comprising heddle frames, racks secured to said heddle frames, a shaft provided with pinions of unequal size meshing with said racks, a pair of reciprocating racks, a pinion on said shaft, meshing with said racks, and cam and lever means for reciprocating said last mentioned racks.

---

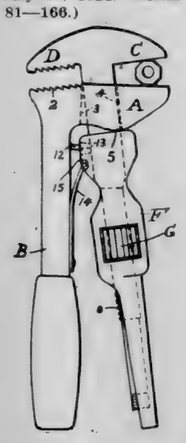
1,562,269. PROCESS FOR TEMPERING LIGHT ALLOYS. GLEN LENARDO WILLIAMS, Detroit, Mich. Filed May 8, 1922. Serial No. 559,284. 3 Claims. (Cl. 148—10.)

3. An electrolytic method for treating light alloys which consists in immersing the alloy in a hot solution

of a salt of a heavier metal, subjecting the solution while heated to an electrolyzing current with the alloy active as the cathode until the alloy surface has taken up metal from the solution, and then quenching the alloy in cold water.

---

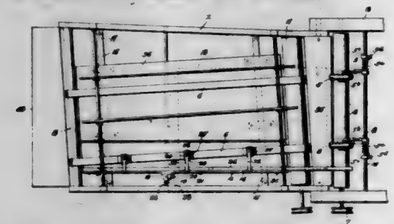
1,562,270. WRENCH. ALBERT H. WOLFE, Santa Rosa, Calif. Filed July 29, 1924. Serial No. 728,959. 11 Claims. (Cl. 81—166.)



3. The combination in a wrench, of a perforated stationary jaw and handle, an adjustable double jaw member having a shank movably located within the perforation in the stationary jaw and the lower end of the shank threaded, a nut on the threaded shank, and a sleeve also on said shank between the nut and the stationary jaw; the perforation in the stationary jaw being so shaped that the double jaw and threaded shank member can rock relative to the stationary jaw.

---

1,562,271. AUTOMATIC REGISTER. LESTER KYLE ALDRICH, Sidney, Ohio. Filed June 27, 1925. Serial No. 39,991. 14 Claims. (Cl. 271—48.)



1. An automatic register comprising a side guide against which the sheets are to be registered, diagonally arranged feed tapes for moving the sheets laterally into contact with the guide and means for varying the lateral feed or movement of the sheets by the said tapes without changing the position of the tapes or varying the speed of the same, said means including spaced devices capable of independent angular adjustment.

---

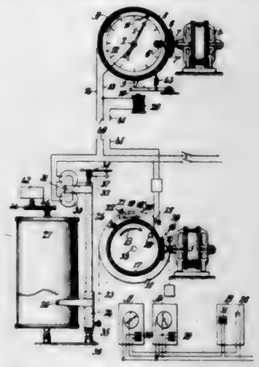
1,562,272. SHOULDER-STRAP RETAINER. JOSEPH J. ALLISON, New Orleans, La., assignor to Rachel H. Stull and Augusta Maze, both of Indianapolis, Ind. Filed Nov. 17, 1924. Serial No. 750,422. 1 Claim. (Cl. 241—12.)

A device of the class described comprising a strip of tape, a safety pin connected with each end of the strip, a strip of covering material looped around the first strip longitudinally to enclose the same and passing through the pins, an extension formed on the covering strip and a snap fastener for connecting the free end

of the extension with the device so that the shoulder strap of a garment can be held between this extension and the rest of the device.

---

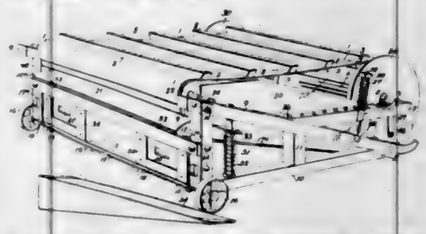
1,562,273. RECORDING INSTRUMENT. ALFRED AMSLER, Schaffhausen, Switzerland. Filed June 17, 1924. Serial No. 720,662. 9 Claims. (Cl. 234—1.5.)



7. A device for recording over a distance the variable positions of an element, comprising in combination, a sender adapted to ascertain the position of the element and having a contact mechanism co-operating with said element, a receiver instrument having a stylus point adapted to travel over a recording surface, driving means adapted to move the contact mechanism and the stylus point periodically so that the contact mechanism moves over the range including the various positions of said element and the stylus point moves over the whole recording range, electric connections between the sender and the receiver, means influenced by the receiver instrument for synchronizing the start of the movements of the contact mechanism and of the stylus point from their initial positions, means to cause the stylus point to produce a mark on the record surface when the contact mechanism engages the element, locking means adapted to cause the contact mechanism and the stylus point to take up determined initial positions, said means influenced by the receiver instrument for synchronizing the start of the movements of the contact mechanism and of the stylus point rendering said locking means inoperative.

---

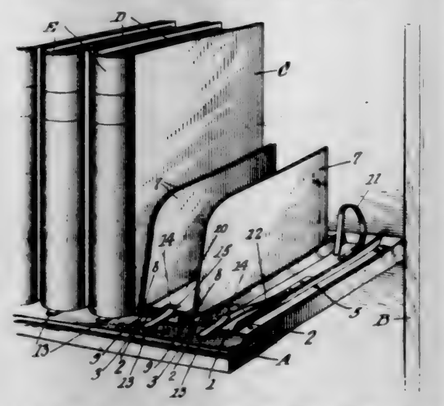
1,562,274. GRASS-SEED SEPARATOR. JOHN F. ARD, Jackson, La. Filed Oct. 26, 1922. Serial No. 597,021. 14 Claims. (Cl. 56—207.)



1. In combination with a mower having a cutter bar, a seed separator comprising a seed receiving body; a screening plate, means for yieldably mounting the screening plate above the receiving body; an endless slatted conveyor means for moving the conveyor over the yieldably mounted screening plate in a manner effecting jarring of the said plate at intervals; a frame for supporting the receiving body and plate and the conveyor, and means for securing the frame to the mower in position for causing the grain cut by the cutter bar thereof to fall on said screening plate.

---

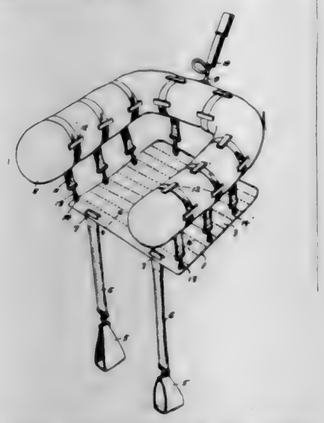
1,562,275. BOOK-SUPPORTING DEVICE. JOSEPH M. ARMSTRONG, Alexandria, Va. Filed Feb. 7, 1921. Serial No. 443,085. 9 Claims. (Cl. 50—57.)



1. A book holder formed of sheet metal and including a bottom, opposed side flanges extending upwardly from the opposed longitudinal edges of the bottom to engage and support the sides of a book, the bottom being bent downwardly and outwardly at points adjacent the side flanges to define opposed channels for the reception of the lower edges of the sides of the book and to define a leaf-supporting platform between the said channels.

---

1,562,276. BUOYANT CHAIR. ANTONINO ASSENZIO, New York, N. Y. Filed Dec. 6, 1924. Serial No. 754,416. 4 Claims. (Cl. 9—11.)



4. A buoyant chair comprising a U-shaped inflated member adapted to form a chair back and arms, and having means for facilitating its inflation and deflation, straps retained about the inflated member and having pendent portions, and a bottom connected to said pendent portions of the straps; the said bottom being foldable and being detachably connected with the pendent portions of the straps and being equipped on its forward portion with stirrups-straps and stirrups, and the whole being adapted to be reduced to a package of small compass.

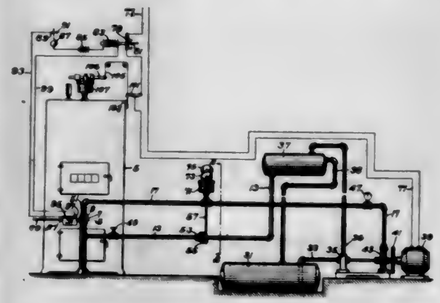
---

1,562,277. PROCESS OF PREPARING ELECTRODES. FRITZ BAHR, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 11, 1922. Serial No. 606,295. 3 Claims. (Cl. 176—5.)

1. The process of transferring material of high electron emissivity from one electrode of an arc to the other electrode of the arc by establishing an arc between the electrodes in a sealed envelope.

---

1,562,278. OIL-BURNING APPARATUS. ARTHUR H. BALLARD, Boston, Mass., assignor to Ballard Oil Burning Equipment Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 1, 1923. Serial No. 616,401. 3 Claims. (Cl. 158—42.2.)



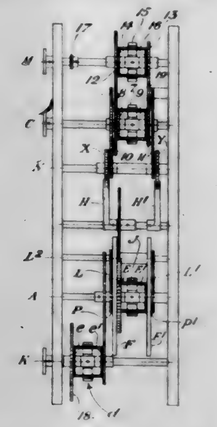
1. A fluid fuel burner having a mixing chamber therein presenting an orificed nozzle, air and oil conduits communicating with the mixing chamber, means for supplying air under pressure to the air conduit, a gravity feed device for supplying oil under substantially constant pressure to the oil conduit, a pressure responsive device in the air conduit arranged to be actuated by the air pressure and means operatively connected to be controlled by said pressure responsive device for permitting a supply of oil to the mixing chamber from said gravity feed device only when a predetermined air pressure has been obtained whereby there is insured a substantially constant pressure relation between the air and the oil at their respective points of discharge to the mixing chamber.

---

1,562,279. MECHANICAL RELAY. ARCHIBALD BARR and WILLIAM STROUD, Glasgow, Scotland, assignors to Barr and Stroud, Limited, Anniesland, Glasgow, Scotland. Filed Sept. 1, 1922. Serial No. 585,822. 2 Claims. (Cl. 74—34.)

1. Apparatus comprising a first differential, a servo-motor, control mechanism, and servo-motor control gear operated by the control mechanism, the first differential comprising a first connection for communicating motion to its first element, a second connection for communicating motion from the servo-motor to its second element, and a third connection driven by its third element, the control mechanism comprising a second differential, the second differential comprising a first driving element driven by the third connection from the first differential, and two driven elements, one a restricted motion element, the other an extensive motion element, means

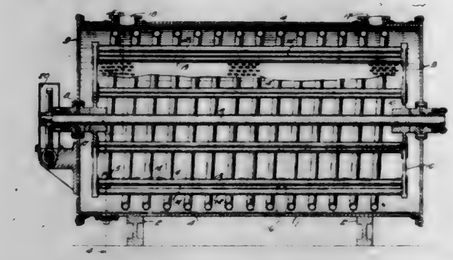
for causing motion from the first driving element to be imparted to one or other or momentarily to both of the driven elements and when the restricted motion element



is displaced operate to restore it to its fiducial position and a connection from the restricted motion element to the servo-motor control gear, for the purposes set forth.

---

1,562,280. MACHINE FOR TREATING FOODS. JAMES J. BARRY, New York, N. Y., assignor of one-half to William T. Gamage, Gloucester, Mass. Filed Mar. 7, 1924. Serial No. 697,560. 3 Claims. (Cl. 257—1.)



1. In combination, a cylindrical tank, a rotatable package carrier mounted within said tank, said carrier having a plurality of package receiving troughs extending axially of the tank, a coil of refrigerating pipe surrounding said carrier in spaced relation to the tank and carrier, the coils of the pipe being separated to constitute a continuous spiral passage into which the packages on the carrier extend, the interior wall of the tank serving to confine the packages in position between said coils during the turning of the carrier for progressing the packages from one end of the coil to the other, said carrier comprising a shaft extending through the tank, a pair of spiders mounted on said shaft in spaced relation to one another, said spiders having radial arms, a continuous platform extending between said arms and constituting the bottom of the trough, said platform being spaced inwardly from the free ends of said arms.

---

1,562,281. ELEVATOR CONSTRUCTION. TELFORD CLARENCE BATCHELOR and CYRIL TELFORD LATCH, Birmingham, England. Filed Mar. 9, 1925. Serial No. 14,228. 3 Claims. (Cl. 187—1.)

2. In an elevator construction, in combination with a pair of cages, a rubbing guide rope positioned there-

between, said rope comprising an outer layer of strands and a central rod about which said strands are wound, said rod being formed with an oppositely tapered en-

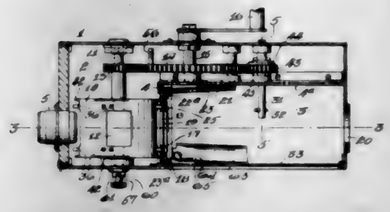
larged part included in that portion of the rope which lies between the cages while they are passing, whereby a corresponding enlargement is produced in the adjacent portion of said outer layer.

---

1,562,282. MACHINE FOR TURNING SHOES AND THE LIKE. DAVID BAUM, Livermore Falls, Me., assignor to The Baum Machine Co., Livermore Falls, Me., a Corporation of Maine. Filed Apr. 5, 1924. Serial No. 704,437. 11 Claims. (Cl. 12—57.)

1. In a machine for turning shoes and the like, the combination, with shoe supporting means and a reciprocable plunger normally out of alignment with said supporting means and in operation adapted to act on one side of the sole of a shoe, of a second plunger reciprocably mounted within said shoe supporting means and adapted to act on the opposite side of said sole of said shoe mounted thereon, said second plunger being capable of recession within said shoe support by the thrusting action of said reciprocable plunger first mentioned,—the two plungers co-acting to grip said sole while being forced into said supporting means, means for aligning the two said plungers, means for causing a rolling action to take place on the interposed sole by simultaneously moving one plunger perpendicularly and the other horizontally and means for actuating said first mentioned reciprocable plunger.

1,562,283. MOTION-PICTURE APPARATUS. ALWIN H. BECK, Rochester, N. Y., assignor to Anthony Bielle, Rochester, N. Y. Filed Nov. 17, 1921. Serial No. 515,934. 3 Claims. (Cl. 88—17.)



1. A motion picture apparatus comprising a casing having a chamber formed with an exposure opening and an opening in the wall opposite the one with the exposure opening through which rays pass to the exposure opening, a shutter for said last mentioned opening, means normally holding said shutter in open position, guiding means for guiding a film over the exposure opening, and a film holder for effecting the closure of said shutter when the film holder is introduced into the casing.

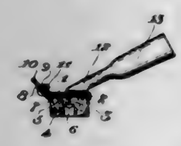
---

1,562,284. LOCOMOTIVE CONSTRUCTION. FRANK ARNOLD BENOLKEN, Helena, Mont. Filed Sept. 12, 1924. Serial No. 737,332. 1 Claim. (Cl. 105—37.)

In a locomotive construction, front and rear cylinders on each side, a drive wheel corresponding to each cylinder, a crank shaft connecting the front drive wheels, a crank shaft connecting the rear drive wheels, links for connecting the crank shafts together, and connections from said cylinders to said drive wheels, said connections including crank pins and connecting rods, the crank pins of the front drive wheels being disposed at 90° from each other, and the crank pins of the front and rear drive wheels on either side being also disposed at 90° from each other.

---

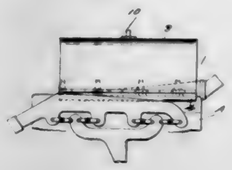
1,562,285. CLEANING DEVICE. MARTIN L. BIBB, Seattle, Wash. Filed June 13, 1924. Serial No. 719,844. 1 Claim. (Cl. 15—118.)



A device of the character described comprising a body plate having a laterally directed flange, spaced tabs extending from said flange inwardly, under the plate, a supporting plate of less width than the body plate having one edge provided with a flange spaced from the flange of the body plate, a pad secured to the supporting plate between the flanges, a wiper strip and a clamping strip having one edge provided with a flange adjacent flange of the supporting plate and means for adjustably securing the clamping plate to the body plate with the wiper strip interposed the flanges of the clamping strip and supporting plate interlocking to constitute a pivot for the clamping plate and to secure all the parts in assembled relation as specified.

---

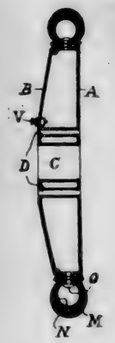
1,562,286. COIL BOX. MARSHALL ROMBO BOLES and ARTHUR JOSEPH SNAVELY, Fountain City, Tenn. Filed Mar. 9, 1925. Serial No. 14,274. 4 Claims. (Cl. 123—148.)



1. In an internal combustion engine, a coil box, means for fastening the same to the top of the engine so that coils in the box will be subjected to the heat from the engine and the ends of the box having openings therein through which the air from the fan will pass.

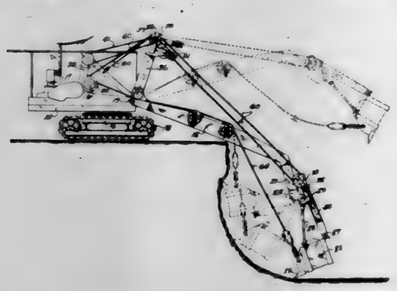
---

1,562,287. VEHICLE WHEEL. EARL M. BUNCE, Fenton, Mich. Filed Sept. 3, 1924. Serial No. 735,621. 9 Claims. (Cl. 301—63.)



1. The combination in a wheel, of two circular metallic plates, each plate having a central opening; a spacing member, having an opening therethrough uniting said plates in line with the central openings therethrough and forming air tight connections with said plates; a circular metallic rim welded to the outer edges of said plates forming with said plates and spacing member a closed air chamber; a tire, including an inner tube, at the outer surface of the rim; coupling means secured to the inner tube and also to the rim for forming an open passageway between the interior of the inner tube and the air chamber in the body of the wheel; a valve for the introduction of air to the air chamber and the inner tube; and means at the outer edges of the rim for retaining the tire in position when the tire is inflated.

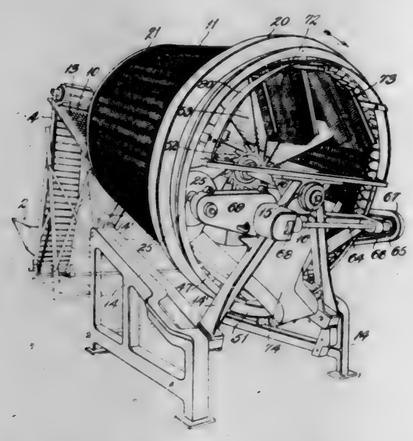
1,562,288. PULL SHOVEL. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 2, 1924. Serial No. 729,734. 10 Claims. (Cl. 214—138.)



1. In an excavating machine of the type described, the combination with a support, of a boom pivoted thereon, a dipper and dipper handle pivotally carried at the outer end portion of said boom and swinging toward the same during digging, and cables for controlling the movements of the boom, dipper and dipper handle, said boom being cambered to increase the working range of the dipper.

---

1,562,289. MACHINE FOR POSITIONING AND CUTTING FISH. WILLIAM F. BUTLER, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1920. Serial No. 434,084. 15 Claims. (Cl. 17—2.)

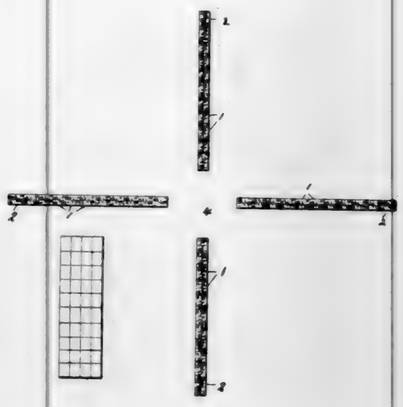


1. In a machine for positioning fish, the combination with a delivery chute of a rotary drum cooperating therewith having a reticulated portion provided with a plurality of channels adapted to receive the fish delivered thereto from said chute.

---

1,562,290. GAME. ROBERT CARLSON, Greenwich, Conn. Filed Apr. 3, 1925. Serial No. 20,532. 1 Claim. (Cl. 273—152.)

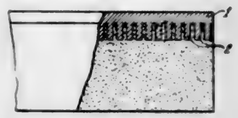
A game apparatus comprising a field having rows of blocks thereon, each comprising an equal number and being consecutively numbered, the inner pieces of the respective rows defining on the field, therebetween, a goal, other playing blocks representing attackers arranged to the rear of the respective rows, other playing blocks similar to the defenders having their faces down



on the field and representing reserves and a number of such reserve blocks providing the force of the attackers.

---

1,562,291. ROADWAY, PAVING BLOCK, AND THE LIKE. GERALD OTLEY CASE, London, England, assignor to Rubacrete Limited, London, England. Filed Sept. 7, 1923. Serial No. 661,524. 6 Claims. (Cl. 94—11.)



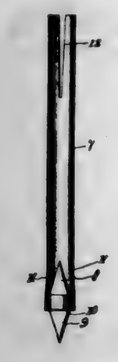
1. In roadways and blocks for roadways and paving purposes, in combination, a rubber layer and a foundation of cement, or the like, to which the said rubber layer is attached, and means for attaching, comprising numerous pins of relatively small cross sectional area integral with the rubber layer, and of a length substantially greater than their largest width, each pin being completely surrounded by the said cement, and being equally spaced apart in the said cement in such a manner that the area viewed in plan of the said pins and the area of the unperforated foundation is approximately the same, whereby both shearing of the pins and creeping, or rising of the layer are prevented.

---

1,562,292. PENCIL HOLDER. HAMILTON DUDLEY COLEMAN, Biloxi, Miss. Filed July 14, 1924. Serial No. 725,942. 2 Claims. (Cl. 120—9.)

1. A pencil holder comprising a tubular holder having split ends with diametrically opposite slots extending axially of the holder and through the ends thereof, the slots at one end being offset circumferentially with respect to the slots at the other end of the holder and the slots at one end having divergent walls and being

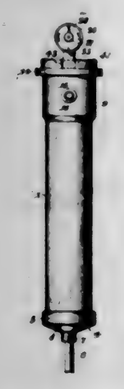
of greater length than the slots in the other end, and a short length of pencil sharpened upon both ends having a rubber band extending about the intermediate



part thereof and adapted to engage frictionally with the walls of the holder, said pencil adapted to be received wholly within the holder at the longer split end thereof.

---

1,562,293. ELECTRIC WATER HEATER. GEORGE B. CONKLIN, Miami, Fla., assignor of fifty-one per cent to Moman Pruiett, one-fourth to Orban C. Patterson, and twenty-four per cent to Vernon Price Williams, all of Miami, Fla. Filed July 25, 1924. Serial No. 728,163. 1 Claim. (Cl. 219—39.)



In a water heater of the character described, a relatively long casing having an inlet and an outlet through the sides thereof and closed at one end, an interiorly and exteriorly threaded collar threaded into the upper end of said casing, a plug of insulation threaded into said collar, a bare electrical resistance element depending from said plug into said casing for direct contact with a fluid therein, and means for conducting an electric current to said elements.

---

1,562,294. LEG AND FOOT DEVELOPER. JOHN J. COOPER, New York, N. Y. Filed Apr. 23, 1925. Serial No. 25,372. 10 Claims. (Cl. 128—80.)

4. In an appliance for use in subjecting the feet and legs to corrective treatment, a waist belt, billets extending upwardly from said belt, suspenders, and coacting fastener means on said billets and on said suspenders at the back and front of the latter; together with ligaments suspended from said belt and adapted to be dis-

posed along the legs of the wearer, and means to hold said ligaments at their lower ends to the legs of the wearer.

---

1,562,295. PROCESS OF PRODUCING CYANIDE SOLUTIONS. KENNETH F. COOPER, Great Neck, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Feb. 21, 1923. Serial No. 620,503. 12 Claims. (Cl. 75—185.)

1. The process of preparing a solution suitable for extracting precious metals from their ores, which consists in dissolving in water a crude cyanide compound containing calcium carbide, and sulphide sulphur, to get rid of said carbid; and aerating the solution thus obtained with a gas containing oxygen to change said sulphide sulphur into the thiocyanate form.

---

1,562,296. SLAB FOR RAILWAY CROSSINGS. FREDERICK DOUGLAS COPPOCK, Greenville, Ohio. Filed Aug. 14, 1925. Serial No. 50,292. 10 Claims. (Cl. 238—8.)

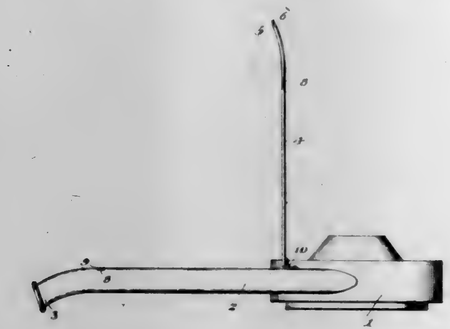
1. A slab comprising a combined armor and reinforcing element including a metallic frame having arranged therein and connected therewith spaced reinforcing bars, and a body portion of non-metallic material completely filling and flush with the side and end edges of the frame, said body portion completely enveloping said rods.

---

1,562,297. MILK AND CREAM SEPARATOR SPOUT. PEARL COVER, Anna, Ill. Filed May 1, 1925. Serial No. 27,324. 1 Claim. (Cl. 233—1.)

In a cream separator discharge spout, a spout body having a longitudinally extending slot therein, a door correspondingly shaped to the slot and snugly closing

the same, a hinge connecting one end of the door to one end of the slot, the slot in opposite side edges being formed with notches, and lugs on opposite side edges of



the door to engage the notches for holding the door relative to its inner and outer surfaces flush with corresponding surfaces of the spout.

---

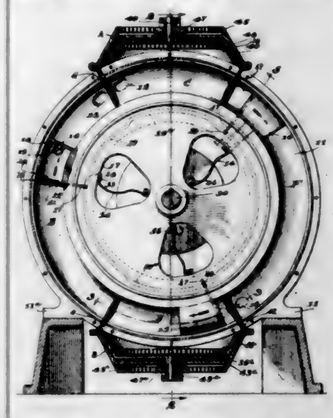
1,562,298. TRIDIMENSIONAL RADIOCOMPASS. CLARENCE C. CULVER, Washinton, D. C. Filed June 9, 1922. Serial No. 567,131. 2 Claims. (Cl. 244—2.)

1. In combination with an airplane, adjustable means for locating a source of radiant energy substantially athwart the longitudinal axis of said airplane, and further means for guiding said airplane toward said source by localizing the reception of radiant energy athwart said airplane at an angle oblique to the longitudinal axis of said plane.

---

1,562,299. ROTARY INTERNAL-COMBUSTION ENGINE. ARTHUR B. CUNDY, Durango, Colo., assignor of four-twelfths to Frank Lake, jr., three-twelfths to Glen A. Stokes, one twenty-fourth to A. R. Mollette, and one twenty-fourth to R. S. Clements, all of Durango, Colo. Filed July 26, 1923. Serial No. 654,017. 7 Claims. (Cl. 123—13.)

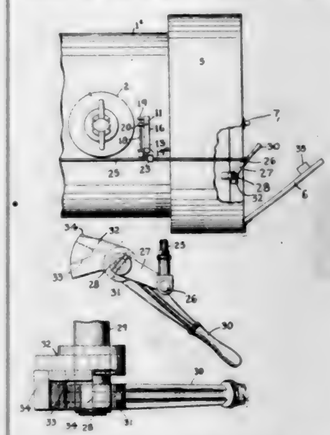
1. The combination, in a rotary engine, of an annular cylinder, a series of hollow pistons movable therein, an inlet valve carried by the front end of each piston, an outlet valve carried at the opposite end of each piston, a pair of cylinder heads comprising each a pair of circular shells mounted to rotate about an axis perpendicular to that of the cylinder and positioned to intersect the bore of the cylinder and to form therewith a pair of compression chambers separated by intervening combustion chambers, the shells of each pair being provided with slots adapted to be alternately brought into registration at opposite ends of the compression chamber to permit the pistons to pass into and out of the same, fuel inlets communicating with said compression chamber, exhaust passages leading from said combustion chambers, and means acting automatically to hold the outlet valve of



each piston closed during movement of the piston through said compression chambers and to permit opening of said valve upon escape of the piston from said compression chambers.

---

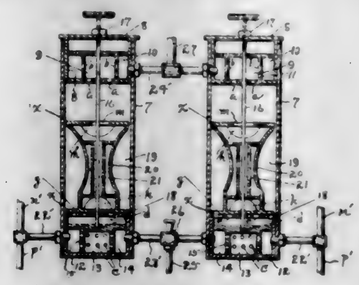
1,562,300. VEHICLE TANK. AUGUSTINE DAVIS, JR., Covington, Ky., and ARTHUR L. BETTS, Cincinnati, Ohio; said Betts assignor to said Davis. Filed May 15, 1920. Serial No. 381,575. 5 Claims. (Cl. 221—67.)



1. The combination with a vehicle tank having an outlet, and a box having a door, of a valve adapted to close the outlet, operating connections passing from the valve to the box, a catch cooperative with a member of said connections to hold the valve open, and means whereby closing of the door disengages said member from the catch.

4. In combination with a vehicle tank provided with an outlet, and a box at the end of the tank having a door, a valve commanding said outlet, a connection passing upward from the valve through the top of the tank, a longitudinally movable control rod connected therewith and extending lengthwise over the top of the tank, a vertical rock-shaft the upper end of which is connected to the rear end of said control rod, said rock-shaft passing downward into the box, and a lever connected with said rock-shaft within the box.

1,562,301. AUXILIARY CARBURETOR. CLYDE M. DAWDY, Boone, Iowa. Filed Jan. 7, 1925. Serial No. 1,096. 7 Claims. (Cl. 48—180.)



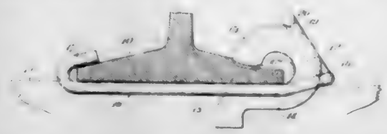
1. In an auxiliary carburetor, a cylindrical casing, a cylindrical receptacle within and closing one end of the casing, said receptacle being provided with annular chambers in communication with each other and having a valve seat formed in its inner end, a second cylindrical receptacle within and closing the opposite end of the casing, said second receptacle being provided with annular chambers in communication with each other and having apertures formed in its inner end, a hollow slide valve disposed within the casing to permit movements between said receptacles and having a by-pass in communication with the annular chambers of the second receptacle, a needle valve for said valve seat, said needle valve having a stem traversing the by-pass and threaded in the second cylindrical receptacle, an intake pipe having branches in communication with a chamber of the first named cylindrical receptacle, and a discharge pipe in communication with a chamber of the second cylindrical receptacle.

---

1,562,302. RESPIRATORY MASK. JOHN MANSFIELD DEAN and ANDREW N. KITTRELLE, Memphis, Tenn. Filed May 1, 1923. Serial No. 636,003. 12 Claims. (Cl. 128—146.)

1. In a respirator, a unitary structure comprising an upper nose enclosing elastic portion having a plurality of apertures at the lower end thereof, and a lower mouth covering resilient portion, means to provide a forwardly extending semicircular antiseptic chamber projecting into and resting upon the lower end of and enclosed by said nose enclosing portion, said chamber opening into the mouth covering portion for the insertion of antiseptic carrying material, and having a plurality of apertures through the upper and lower sides thereof, the lower apertures aligning with the apertures in the nose enclosing portion and the other apertures opening upwardly through the nose enclosing portion, and means hingedly attached to said resilient portions for retaining the same in position when in use.

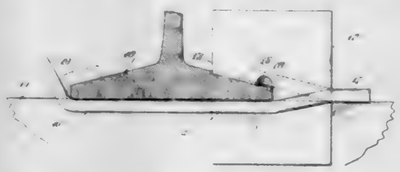
1,562,303. RAIL ANCHOR. WILLIAM H. DE BUSK, Chicago, Ill., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1924. Serial No. 731,061. 11 Claims. (Cl. 238—315.)



1. A rail anchor comprising a clip adapted to be driven into operative gripping engagement with the flange of a rail, and a retaining member adapted to be hooked over the edge of the flange at the opposite side of the rail and then to be brought into snap engagement with the clip for holding the clip against backing transversely from the flange.

---

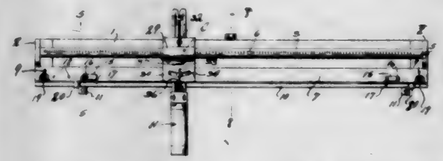
1,562,304. RAIL ANCHOR. WILLIAM H. DE BUSK, Chicago, Ill., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1924. Serial No. 731,062. 9 Claims. (Cl. 238—315.)



1. A rail anchor comprising a clip adapted to have a driving fit upon the flange at one side of a rail, and a retaining member for holding said clip from backing transversely from the rail, comprising an arm at one end of the member extending along one face of the clip and supported in position by contact with the upper face of the flange of the rail, and means at the other end portion adapted to engage, in the application of the member to the rail, around the edge of the flange at that side of the rail.

---

1,562,305. SAW-FILING MACHINE. GEORGE DECHERT, Detroit, Mich. Filed Jan. 31, 1925. Serial No. 6,113. 7 Claims. (Cl. 76—78.)



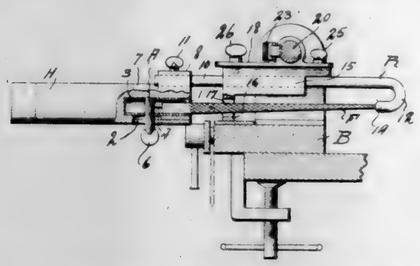
1. An apparatus of the class described comprising, in combination, a base, means coacting with the base for clamping a saw thereto, means for supporting a tool by the base, attaching means carried by the extremities of the base, and means operating to elevate the central portion of the base.

---

1,562,306. FILE HOLDER. GEORGE DECHERT, Detroit, Mich. Filed Jan. 31, 1925. Serial No. 6,114. 5 Claims. (Cl. 76—36.)

1. A file holder comprising, in combination, a handle member provided with a socket, a sleeve fitting within said socket and having its outer end portion slotted, a screw threaded through the slotted portion of the sleeve

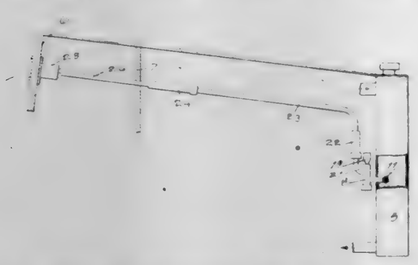
to contract and expand said slotted portion, said sleeve being adapted to receive an end portion of a file, and means carried by the handle member to engage and support the outer end portion of the applied file said means comprising two rod members disposed longitudinally of



the handle member and in parallelism to each other, the outer end portions of the rods being connected by an inwardly extending and downwardly disposed intermediate member adapted to receive the outer end of the file, the inner ends of the rods being adjustably secured to openings in the handle member.

---

1,562,307. SIGNALING DEVICE. JOSEPH DEL COZZO, Scotia, and ALBERT W. GOBLE, Fortuna, Calif. Filed Jan. 16, 1925. Serial No. 2,915. 1 Claim. (Cl. 116—109.)

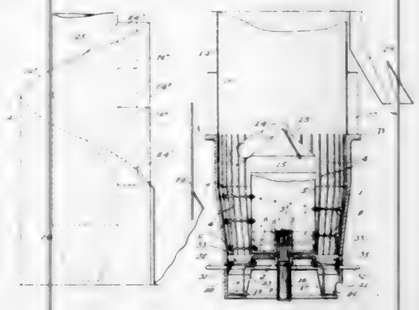


In a device of the character described, the combination with a radiator for an internal combustion engine, of a casting having a tubular portion secured to said radiator at a point below the normal water-line of said radiator and communicating with the interior thereof, a chamber formed in said casting, a buoyant ball positioned in said chamber, a bore formed in said casting and adapted to be closed at one end by said buoyant ball when said chamber is filled with water from said radiator, a second ball adapted to close the opposite end of said bore from that closed by said first mentioned ball, spring means for retaining said second mentioned ball in closed position, an auxiliary whistle secured to said casting at a point adjacent said second mentioned ball and in such a manner that said second mentioned ball will be positioned between said bore and said whistle, a whistle remotely located with respect to said casting, and a pipe for conducting pressure from said bore to said last mentioned whistle.

---

1,562,308. APPARATUS FOR DEFIBRATING COTTONSEED AND THE LIKE. EDWARD CARSTENSEN DE SEGUNDO, London, England. Filed Nov. 2, 1922. Serial No. 598,661. 4 Claims. (Cl. 19—46.)

1. An apparatus of the class described, comprising a defibrating chamber having a portion of its interior formed conically and another portion of its interior formed cylindrically, a series of beaters rotatably mounted in the conical portion of said chamber, means for adjusting said series of beaters lengthwise of said conical portion to vary the clearance between said beaters and the wall of said conical portion, a second series of beaters mounted to rotate in said cylindrical portion,



and a ring mounted in said cylindrical portion having a beveled face lying adjacent said second series of beaters, said ring being movable lengthwise of said cylindrical portion for varying the clearance between said second series of beaters and the beveled portion of said ring.

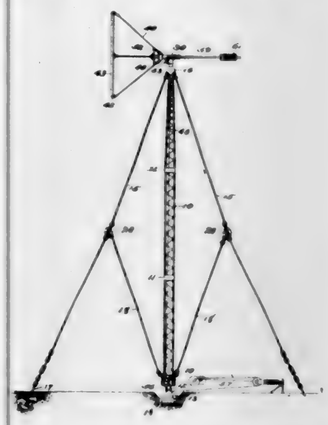
---

1,562,309. METHOD OF CONCENTRATING AND DRYING FRUIT JUICES. WALTER H. DICKERSON, East Orange, N. J., assignor to Industrial Waste Products Corporation, Dover, Del., a Corporation of Delaware. Filed Aug. 2, 1922. Serial No. 579,299. 5 Claims. (Cl. 99—5.)

1. The method of treating fruit juices, which consists in concentrating same by freezing to thereby preserve the aromatic ethers thereof, and then drying to a powder by spraying the concentrate into a hot gas.

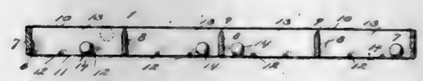
---

1,562,310. MOORING MAST FOR AIRSHIPS. VICTOR H. DELL, Dayton, Ohio. Filed June 9, 1923. Serial No. 644,482. 11 Claims. (Cl. 244—2.)



1. An airship mooring mast embodying a mast, a mast head rotatable on a vertical axis at the top of the mast, a bumper head pivotally mounted on the mast head on a horizontal axis, said bumper head being balanced upon said pivot and an anchor line reeved through the mast, mast head and bumper head.

1,562,311. CLEANER FOR SIFTING SCREENS. CHANDOS ROY DIMM, Muncy, Pa., assignor to Robinson Manufacturing Company, Muncy, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1925. Serial No. 18,490. 4 Claims. (Cl. 83—56.)



1. A sifting means comprising a frame with dividing partitions extending transversely the full width thereof at distances apart, an upper sifting screen, a lower supporting screen surface having larger mesh than the said sifting screen, the two screens with the frame and partitions forming enclosed compartments, rods extending across the compartments in contact with and extending slightly above the lower screen surface, and resilient balls mounted in the compartments for free movement and contact with and over the rods to quickly and effectively cause a bounding action of the balls when the frame and screens are subjected to vibratory motion for cleaning the meshes of the upper sifting screen.

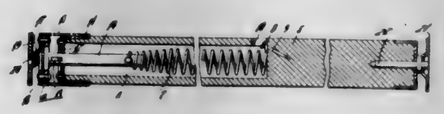
---

1,562,312. ROLLER BEARING. CHARLES F. DRAPER, Westmount, Quebec, Canada. Filed Aug. 9, 1923. Serial No. 656,475. 6 Claims. (Cl. 308—207.)

1. In a roller bearing the combination with a base, a roller resting on the base and a bearer resting on the roller, of a controller connected to an end of the roller and having oppositely projecting similar cams slidably engaging openings in the base and bearer.

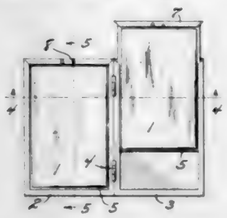
---

1,562,313. SHADE ROLLER. FRANK B. DUNCAN, Toledo, Ohio. Filed Nov. 22, 1924. Serial No. 751,586. 2 Claims. (Cl. 150—36.)



1. A shade roller provided with a coil spring, a ferrule rotatably supported on one end thereof, a T-shaped member fixed to the ferrule and having one end connected with the spring, a disk fixed to the ferrule, an offset tongue carried by the disk, a keeper on the bracket and receiving the tongue to hold the ferrule stationary, the tongue being adapted to be disengaged from the keeper and the ferrule being subsequently rotated to adjust the spring.

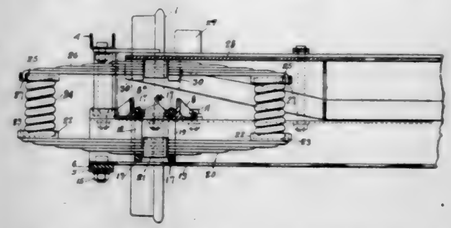
1,562,314. DUPLICATOR. CARLOS ALFRED ELKINS, Dunning, Nebr. Filed Dec. 27, 1924. Serial No. 758,456. 2 Claims. (Cl. 101—131.)



1. A device of the class described comprising a sectional case, the sections of which are hinged together, a plate slidably mounted in each section so that it can be removed therefrom and a duplicating surface carried by each plate.

---

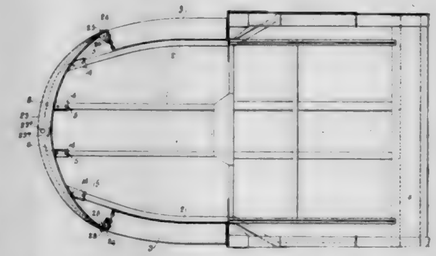
1,562,315. RAILWAY-CAR TRUCK. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 24, 1922. Serial No. 546,338. 7 Claims. (Cl. 105—192.)



1. In a car truck, the combination with the wheels, axles and side frames proper, of inwardly extending spring supports secured to said side frames and having inwardly spaced bearings thereon, laterally swinging links mounted on each bearing, a pair of leaf springs at each side frame sustained by the distal ends of said links, a pair of helical springs mounted on the ends of said leaf springs, a pair of leaf springs at each side frame supported upon said helical springs, and a bolster having its ends mounted on the latter leaf springs.

---

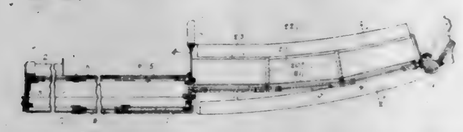
1,562,316. BUFFER FOR RAILWAY CARS. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Winton Place, Ohio, a Corporation of Ohio. Filed Nov. 12, 1924. Serial No. 749,526. 14 Claims. (Cl. 213—220.)



1. A railway car buffer comprising a bar of sheet metal, serpentine in cross section, whereby a plurality of ribs are produced, and provided with a coupling pin

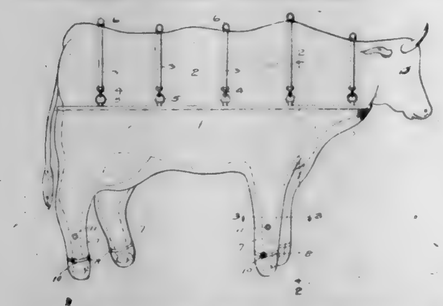
hole extending through the several ribs and having a link recess formed within one of the serpentine bends and intersecting the pin hole.

1,562,317. RAILWAY CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Winton Place, Ohio, a Corporation of Ohio. Filed Jan. 8, 1925. Serial No. 1,162. 4 Claims. (Cl. 20—2.)



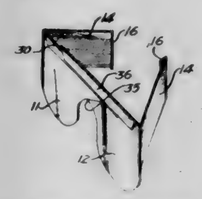
1. In a car, the combination with a side wall having a pocket and a platform having a doorway, of a door mounted to slide from the pocket to the doorway and vice versa and composed of sections flexibly connected together, and a guard made in sections and connected each to a section of the door.

1,562,318. STOCK-DISINFECTING COVER. VICTOR E. ERLANDSON, Osakis, Minn. Filed Nov. 2, 1923. Serial No. 672,425. 2 Claims. (Cl. 119—156.)



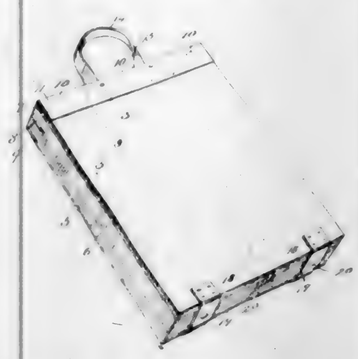
2. An applicator for applying a disinfectant to animals, comprising a body having a trough-shaped portion and depending leg portions which are closed at their lower ends, means for supporting the trough-shaped portion upon the body of an animal, valve controlled outlet openings provided upon the leg portions and spaced above the lower ends thereof, and means located between said openings and the lower ends of the leg portions for contracting the leg portions around the legs of the animal.

1,562,319. GOGGLES. HARRY K. FAIRALL, Los Angeles, Calif. Filed Sept. 30, 1922. Serial No. 591,530. 12 Claims. (Cl. 2—14.)



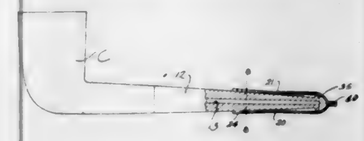
1. Goggles of the class described, comprising; a pair of lenses formed of transparent material; means joining said lenses together; and temple members formed integrally with said lenses extending rearwardly from said lenses, said temple members being resiliently maintained against the temples of the wearer for the purpose of providing a grip for holding said goggles in place.

1,562,320. PORTABLE DISPLAY OR SAMPLE BOOK. HENRY A. FARLEY, Hackensack, N. J., assignor to The Tait Paper & Color Industries, Inc., Hackensack, N. J., a Corporation of New York. Filed July 2, 1924. Serial No. 723,812. 7 Claims. (Cl. 281—21.)



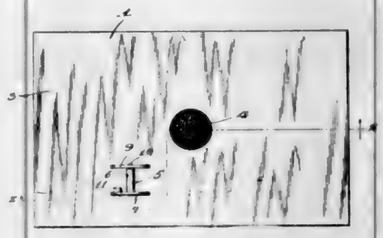
1. A portable display or sample book of the class specified, having flexible covers and leaves bound at one end with the covers, the bound end of the book having binding strips applied to the flexible covers and leaves in spaced relation, and a flexible handle having the ends inset and secured within the intermediate binding strip and held firmly between the bound leaves.

1,562,321. SANITARY PROTECTOR FOR THE STEMS OF SMOKERS' APPLIANCES. ARTHUR F. FRATTINGER, Seattle, Wash. Filed Mar. 13, 1924. Serial No. 699,002. 9 Claims. (Cl. 131—12.)



1. A sanitary protector for the stems of smokers' appliances comprising a body formed as a receptacle provided with an open end and having one side thereof recessed inwardly from the margin at the open end to facilitate insertion of the stem into the body.

1,562,322. GAME. CLINTON GITCHEL, Kearney, Nebr. Filed June 2, 1925. Serial No. 34,428. 6 Claims. (Cl. 273—115.)

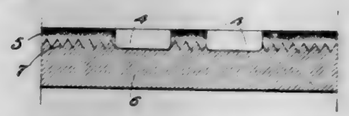


6. A game comprising a game board and a playing piece cooperable with the board and having fixed and loose supporting elements rollable thereover.

1,562,323. METHOD OF LITHOGRAPHIC PRINTING. WILLIAM GRASS, Weehawken, N. J., assignor to Grass Patents Corporation, New York, N. Y. Filed Feb. 10, 1916. Serial No. 77,489. Renewed Mar. 11, 1922. Serial No. 543,090. 12 Claims. (Cl. 95—5.7.)

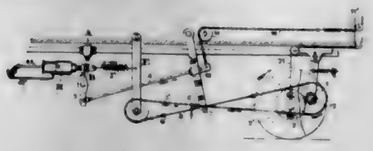
1. A process of lithographic printing for newspapers and other purposes, in which a lithographic metal plate is produced by photographing light-reflecting directly reading and individually set up letters having a non-reflecting background, and from the negative so made printing on the plate, and causing said plate to have a normal high ink rejecting surface and surfaces at a slightly lower level, said lower surfaces constituting the design or matter to be printed.

1,562,324. LITHOGRAPHIC PLATE AND METHOD OF MAKING THE SAME. WILLIAM GRASS, Weehawken, N. J., assignor to Grass Patents Corporation, New York, N. Y. Filed May 14, 1920, Serial No. 381,386. Renewed Apr. 29, 1925. 10 Claims. (Cl. 41—42.)



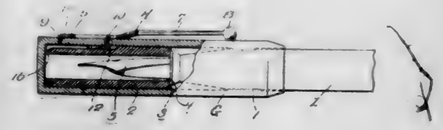
1. In a method of producing a printing surface on a metal lithographic plate, etching the plate and removing the surface thereof in exposed and defined places by subjecting it, while partly protected by a film, to the action of an etching bath containing a neutralized acid, and containing in addition an etching acid.

1,562,325. METHOD AND DEVICE FOR BRAKING RAILWAY AND OTHER VEHICLES. PAUL HALIOT, Paris, France. Filed May 4, 1922. Serial No. 558,415. 6 Claims. (Cl. 303—24.)



1. A braking device for vehicles comprising in combination a braking element adapted to be applied to a moving part of the vehicle for resisting movement of the vehicle wheels, means for applying the braking element, means cooperating with the applying means for reinforcing and rendering more uniform the action of the brakes and comprising a rotating means provided with centrifugally operated means, and means controlled by the centrifugal means for adding power to the first mentioned brake applying means, said brake applying means including a conduit, a fluid actuating means, a conduit connected with the fluid system, and means connected with the conduit adapted to be actuated by the fluid from said conduit and cooperating with the brake applying means to secure a simultaneous and instantaneous setting action of the brakes.

1,562,326. FOUNTAIN-PEN CLIP. CHARLES HARDY, New York, N. Y., assignor to Amsco Products, Inc., New York, N. Y., a Corporation of New York. Filed July 11, 1924. Serial No. 725,360. 6 Claims. (Cl. 24—11.)

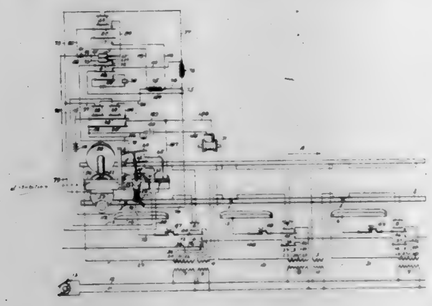


1. A pen clip comprising, a body portion having the usual spring extension, a pair of tangs provided upon said body portion for use in attaching the body portion to the pen cap, at least one of said tangs being adapted to extend through a suitable aperture of the pen cap and to be bent over internally of the pen cap, and said mentioned tang having at least a portion of itself bent to stand normally at an acute angle to the longitudinal plane of said clip so as thereby to facilitate the further bending of said tang when attaching the clip to the pen cap.

1,562,327. VALVE-GUIDE CLEANER. KARL HEDEEN, Chicago, Ill., assignor to Fleming Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1923. Serial No. 681,176. 1 Claim. (Cl. 15—104.09.)

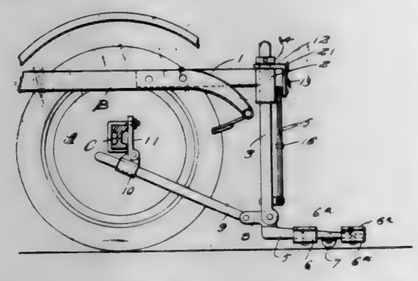
A device for cleaning the openings in which valve stems of an internal combustion engine are placed comprising a rotatable shaft, two bearing collars, permanently secured to the shaft, each collar having an annular recess in its inner ends, wires having their ends secured in the recesses, the position of the collars on the shaft causing the wires to assume a bowed out and a twisted position relative to the axis of the shaft, the collars being of a size to provide bearing surfaces when the device is inserted in a valve stem opening to be cleaned, and said wires being circular in cross section to produce a smooth finished surface in the opening when the shaft is rotated.

1,562,328. AUTOMATIC TRAIN-CONTROL SYSTEM. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Feb. 5, 1915, Serial No. 6,248. Renewed Oct. 2, 1920. Serial No. 414,337. 41 Claims. (Cl. 246—180.)



1. In an automatic train control system, in combination: a trackway divided into track circuit sections and having a movable vehicle thereon; a movable contact member positioned on the movable vehicle; means governed by the track circuit sections for creating a high, medium or low difference of potential between the ramp and a rail of the trackway; a partial circuit on said vehicle including an impedance and a relay; means for closing said partial circuit by the contact of the contact member with the ramp and energizing said relay and causing it to lift its armature when a high difference of potential exists between the ramp and a rail of the track; a second relay; means governed by said first relay for energizing said second relay; means including a circuit controller governed by said movable contact member for maintaining said second relay energized; means governed by said second relay for forming a shunt path about said impedance whereby the medium difference of potential between the ramp and a rail will when the contact member contacts a ramp energize the first mentioned relay sufficiently to cause it to raise its armature; means governed by the second mentioned relay for controlling the movable vehicle; and means for governing the vehicle controlled by the low difference of potential.

1,562,329. BUMPER. HERBERT E. HUDGINS, Shreveport, La. Filed Mar. 17, 1925. Serial No. 16,168. 4 Claims. (Cl. 293—45.)

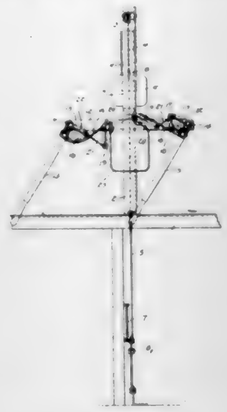


3. In combination with a motor vehicle having side beams and an axle, a bar secured to each side beam, a tubular guide on each bar, a rod slidably mounted in each guide, an arm pivotally mounted on each rod and having an extension, a rod pivotally engaging said extension, a guide for said rod pivotally mounted on the axle, and a platform carried by said arms.

1,562,330. WELDING, BRAZING, AND TEMPERING COMPOUND. GLEN V. IRELAND, Miles City, Mont. Filed June 17, 1925. Serial No. 37,862. 2 Claims. (Cl. 148—26.)

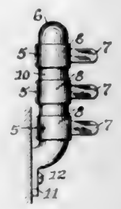
1. A welding and tempering flux in the form of a dry mixture of powdered borax, 85 parts, carbonate of iron, 12½ parts and bicarbonate of soda, 2½ parts.

1,562,331. STRIPPING DEVICE. FRANK FRASER JAMIESON, Montreal, Quebec, Canada, assignor to The Goodyear's India Rubber Glove Manufacturing Company, a Corporation of Connecticut. Filed Jan. 20, 1923. Serial No. 613,819. 6 Claims. (Cl. 18—2.)



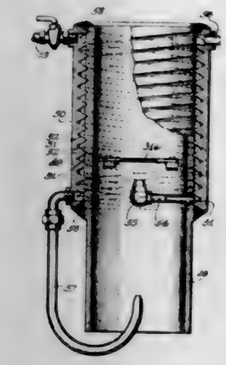
3. In a stripping device for removing hot water bottles from cores, reciprocable means for holding a core, a pair of hooks for engagement with the interior of the bottle neck, said hooks having grooves adapted to interfit with the edges of the core, means for laterally moving the hooks to stretch the bottle neck, and means for withdrawing the core.

1,562,332. THICKNESS GAUGE OR FEELER. FERNANDO OSCAR JACQUES, Jr., Providence, R. I., assignor of one-half to The Central Tool Company, Cranston, R. I., a Corporation of Rhode Island. Filed Oct. 2, 1922. Serial No. 591,935. 1 Claim. (Cl. 33—201.)



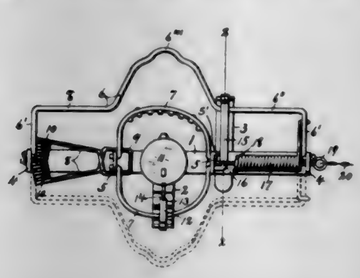
As a new article of manufacture, a thickness gauge or feeler for gas engines comprising a holder member 6 having a round elongated body 10 on which is a flattened end 11, means for securing the flattened end 11 to a relatively fixed object, a thickness gauge or feeler 5, having an elongated flat blade 7 of the required thickness and which forms the thickness gauge or feeler part and on one end of which is a horse-shoe shaped spring clip 8 to be mounted on the holder member 6, the blade 7 having the required thickness, for the purpose as required.

1,562,333. BURNER AND GENERATOR. LEO C. JOHNSON, Detroit, Mich. Filed Feb. 11, 1922. Serial No. 535,079. 7 Claims. (Cl. 158—57.)



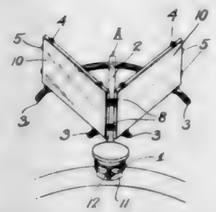
5. The combination with an open end casing, said casing having a helical groove in the outer wall thereof, a fuel jet extending into said casing and adapted to have fuel ignited at said jet to heat said casing, a fuel generator having an interior screwthread in the groove of said casing providing a helical chamber in which liquid fuel is converted into a gaseous fuel, and means in connection with said generator for producing a partial vacuum in one end of said casing so that air will be drawn therein to communicate with the gaseous fuel ignited within said casing.

1,562,334. ANIMAL TRAP. ALLAN C. JONES and JEREMIAH O'NEIL, Oneida, N. Y., assignors, by mesne assignments, to Animal Trap Company of America, Lititz, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1923. Serial No. 674,452. 1 Claim. (Cl. 43—90.)



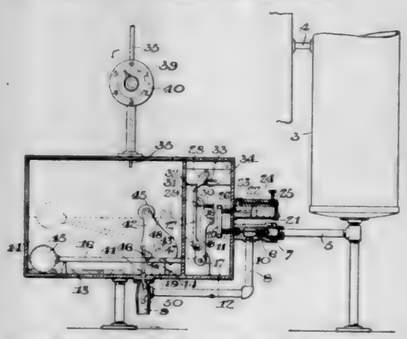
An animal trap comprising a frame, cooperative jaws pivoted to the frame, a spring for closing the jaws, releasable means for holding the jaws open against the action of the spring, a striker-bar pivotally mounted on the frame on an axis parallel to the axes of the jaws so as to swing in opposite directions from a depressed position on one side to a like position on the other side of the jaws, a spring acting independently of the first named spring for moving the striker-bar in one direction, and means controlled by one of the jaws for holding the striker-bar against the action of its spring when the jaws are held open, said striker-bar being of such shape and dimensions relatively to the jaws and the frame as to swing over the jaws and beyond and without engaging the frame or parts carried thereby.

1,562,335. REFLECTING DEVICE FOR MOTOR VEHICLES. CHARLES WADE JONES, Seattle, Wash. Filed May 4, 1925. Serial No. 27,945. 1 Claim. (Cl. 45—97.)



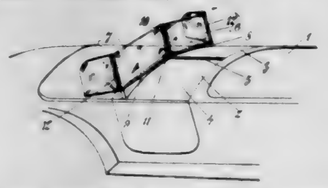
A device of the class described comprising a supporting frame consisting of a forwardly extending bar and curved arms connected with the bar and a split ring connected with the inner end of the bar, a pair of side frames hingedly connected together at the inner ends and having slots in the lower ends for receiving the arms, set screws for holding the side frames in adjusted position on the arms and mirrors carried by the side frames.

1,562,336. BLOW-OFF FOR BOILERS. HERMAN M. KAUL, Cedarburg, Wis. Filed Apr. 26, 1922. Serial No. 556,589. 10 Claims. (Cl. 137—45.)



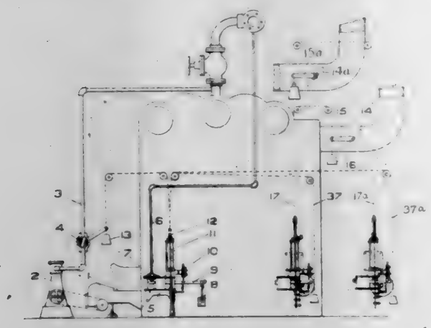
1. In a boiler blow-off system, the combination, with the blow-off valve, of a float tank, a float in said tank, means for controlling the flow of liquid to and from the tank to produce periodic operation of said float, and means moved by the float on its upward movement for effecting the sudden opening of said valve independent of the rate of flow of the liquid into said tank.

1,562,337. REAR SHIELD WITH AUTOMATIC WINDSCREEN. JEAN CLEMENT KELSCH, Levallois-Perret, France. Filed Sept. 16, 1924. Serial No. 738,095. 5 Claims. (Cl. 296—85.)



1. A rear shield for motor vehicles, including horizontally disposed panels adapted for independent movement, wind screens carried by and projecting above the panels, and connections between the wind screens and panels to permit the wind screens to automatically fold in the opening movement of the panels.

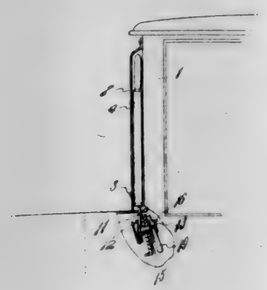
1,562,338. APPARATUS FOR CONTROLLING COMBUSTION. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Filed Feb. 11, 1924. Serial No. 692,050. 8 Claims. (Cl. 236—26.)



1. In a regulator comprising a reversible motor and an operating element for controlling said motor, a cam member for actuating said operating element, and an adjustable compensator operated by said motor coacting with said cam whereby the operating element is jointly controlled by said cam and by the operation of said motor to effect a variable step by step control of said motor.

---

1,562,339. DIRECTION SIGNAL FOR AUTOMOBILES. HERBERT G. KING, Victoria, Tex. Filed June 7, 1924. Serial No. 718,596. 2 Claims. (Cl. 116—52.)

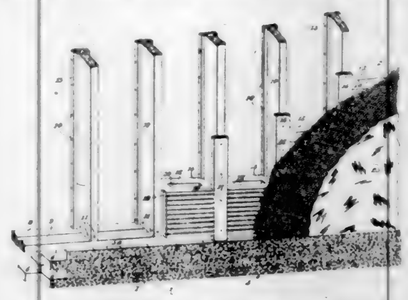


1. In an automobile direction signal, the combination of an automobile body, a swinging semaphore arm having fixed in and to its heel portion a circumferentially grooved circular member, a retractile spring connected at its end to said member and arranged to partly lie in the groove of the member, a pulley mounted within the automobile body and having a circumferential groove, a cable connected to said member and pulley and arranged to partly lie in the grooves thereof, means for operating said pulley, and means for adjustably fixing the pulley.

---

1,562,340. BUILDING CONSTRUCTION. ALEK KISS, Flint, Mich. Filed Apr. 18, 1925. Serial No. 24,100. 3 Claims. (Cl. 72—32.)

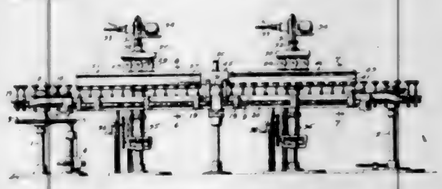
1. In a building construction, a wall consisting of a baseboard, a plurality of uprights fastened to said baseboard, a vertical row of blocks positioned between each adjacent pair of uprights, said blocks having their vertical edges rabbeted, holding strips fastened to the uprights and received within the inner rabbeted edges of the rows of bricks, locking boards fastened to the outer



faces of the uprights and projecting laterally into the outer rabbeted edges of the rows of blocks, and a finishing coat fastened to the locking boards.

---

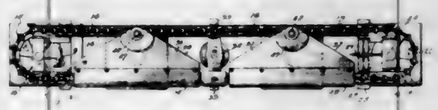
1,562,341. METHOD OF AND APPARATUS FOR GLAZING AND POLISHING GLASSWARE. ALBERT BREAKENRIDGE KNIGHT, Fairmont, W. Va. Filed Dec. 13, 1923. Serial No. 680,519. 8 Claims. (Cl. 49—58.)



1. The herein described method of polishing and glazing glassware which consists in subjecting the ware to the action of a polishing burner, lowering the temperature of the ware, and subjecting it to the action of a glazing burner.

---

1,562,342. GLASS-WORKING BURNER. ALBERT BREAKENRIDGE KNIGHT, Fairmont, W. Va. Filed Dec. 17, 1923. Serial No. 681,232. 4 Claims. (Cl. 49—58.)



1. A device of the character described comprising a substantially fan shaped casing divided to form a plurality of substantially fan shaped mixing chambers having a common wall at their outer ends, said wall being provided with a plurality of sets of burner nozzles each set communicating with one of said chambers, means for conveying articles of glassware progressively past said nozzles, means for supplying fuel to said chambers, and means for independently controlling the flow of fuel to said chambers whereby heat areas of progressively increasing intensity are provided adjacent said nozzles in the path of travel of the glassware.

---

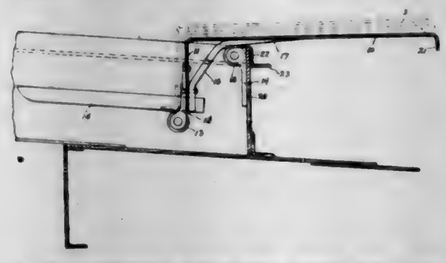
1,562,343. POST. LEROY W. LA BORE, Osborne, Kans. Filed Dec. 5, 1923. Serial No. 678,737. 1 Claim. (Cl. 189—30.)

A post formed of angle iron with its lower end flattened and bent into spiral shape to form an auger for entering the ground and a reinforcing piece fastened to the lower end of the post and having a point passing through the spiral, said reinforcing piece having its top

part of the angle shape to engage the lower part of the angle-shaped post with its pointed part contacting with the spiral at intervals.

---

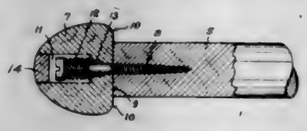
1,562,344. HATCH COVER. JOHN LA FRANCE, Lorain, Ohio, assignor to The American Ship Building Company. Filed July 11, 1923. Serial No. 650,788. 4 Claims. (Cl. 114—202.)



1. The combination with spaced parallel hatch coamings, a series of covers movably supported at either end upon said coamings, said covers lying parallel and overlapping each other, whereby movement of the same in one direction will cause said covers to be superposed upon the end one thereof, and means supporting such end cover when in a position extending over the end of said coaming, said means including two trackways and two rollers one of said trackways being mounted on said coaming and the other on said end hatch cover, and said rollers being also mounted one on said coaming and one on said cover and engaging said trackways.

---

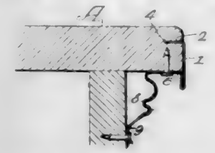
1,562,345. HOSE-TURNING DEVICE. ELMER G. LEACH and CLARENCE R. WADDLE, Olympia, Wash.; said Waddle assignor to said Leach. Filed June 15, 1925. Serial No. 37,145. 6 Claims. (Cl. 223—20.)



1. In a turning device of the class described, a handle, and a knob rotatably mounted on the end of said handle, said knob being of larger diameter than said handle and affording at its end adjacent said handle an unobstructed annular shoulder for engagement with an article to be turned.

---

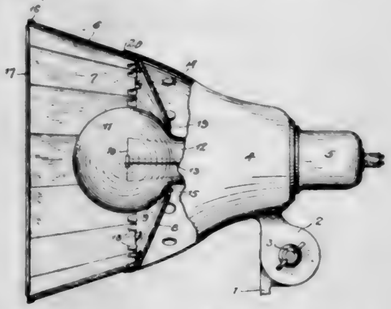
1,562,346. DRIP FOR PORCH FLOORS. PETER C. LEIDICH, Philadelphia, Pa. Filed May 27, 1925. Serial No. 33,199. 7 Claims. (Cl. 108—26.)



1. A porch floor drip comprising a metallic strip having a main longitudinal section adapted to lie in a vertical plane, a second section joining the main section at the top edge thereof and adapted to lie in a horizontal plane and to be driven into the ends of floor boards, and a third section connected with but located above the bottom edge of the main section, the said third section being adapted to engage the bottom surfaces of the said floor boards.

---

1,562,347. LIGHTING FIXTURE. ISAAC LIBSON, Brooklyn, N. Y., assignor to Sunlight Reflector Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 28, 1924. Serial No. 695,791. 1 Claim. (Cl. 240—103.)



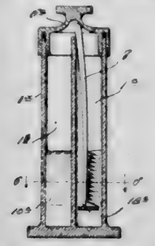
A lighting fixture comprising a canopy bell, a lamp socket arranged at one end of the bell and projecting therefrom and adapted to support a lamp within the bell, in combination wih a reflector mounted at the mouth of the bell and comprising a frusto conical diffusion area arranged in extension of the annular wall of the canopy bell, and a central frusto conical spot-light area of greater pitch embraced within the canopy bell but spaced therefrom, the deviation of said spot-light area of the reflector from the wall of the canopy bell progressively increasing toward the axis of the fixture, said spot-light area being centrally apertured to accommodate the neck of an electric lamp inserted therethrough and through the canopy bell into the socket supported at the head of the latter, together with a universally adjustable supporting bracket secured to the canopy bell in the area between the socket and the reflector.

---

1,562,348. INDIVIDUAL TOOTHBRUSH STERILIZER AND HOLDER. JOHN W. LOCKERY, Scranton, Pa. Filed July 6, 1923. Serial No. 649,899. 1 Claim. (Cl. 206—15.1.)

An individual tooth brush holder and sterilizer comprising a body partitioned to provide two side by side compartments, one of said compartments being adapted to receive a predetermined quantity of antiseptic solu-

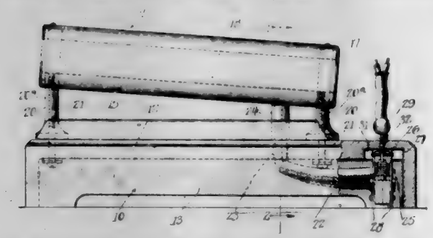
tion, a stationary foraminous rest bridging the walls of the other compartment and arranged adjacent the lower end thereof to support a tooth brush to drain therein, a cover for said body and being formed with a concavity overlying the partition whereby fumes from the antiseptic solution in the solution compartment will pass



above the partition into the other compartment and come in contact with the brush therein, parallel spaced flanges depending from the cover and engaging the inner and outer sides of the wall of the body and said wall and flanges cooperating to form a hermetically seal therebetween.

---

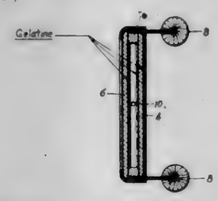
1,562,349. ELECTRICAL CURLING-IRON HEATER. THEODORE S. LORENZE and WARREN S. SCHMIDT, Chicago, Ill., assignors to The Master Electric Co., Chicago, Ill., a Corporation of Illinois. Filed May 4, 1925. Serial No. 27,694. 2 Claims. (Cl. 219—23.)



1. An electrical curling iron heater having, in combination, a hollow base of molded insulation comprising a flat top and a depending peripheral supporting wall, upright standards on the base, a heating muffle supported by said standards, lead wires extending through certain of the walls of the base and connecting said muffle to a source of current, a switch controlling the flow of current to said muffle, said switch being located beneath the top wall of the base and between said depending supporting wall so as to be concealed within the base, and an operating member for the switch projecting through the top wall of the base.

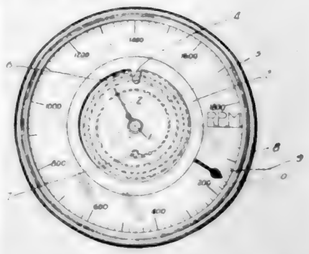
---

1,562,350. NONFOGGING, NONFROSTING DOUBLE-LENS GOGGLES. GEORGE P. LUCKEY, Dayton, Ohio. Filed July 15, 1922. Serial No. 575,408. 5 Claims. (Cl. 2—14.)



1. A double lens goggle having an air space therebetween, said lenses being sealed from the exterior and an air vent communicating between the outside and the space between said lenses.

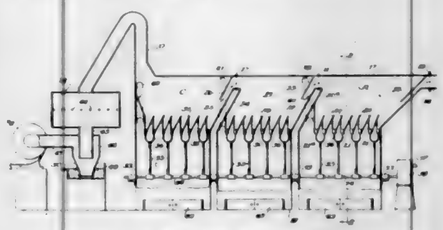
1,562,351. TACHOMETER. GEORGE P. LUCKEY, Dayton, Ohio. Filed Oct. 26, 1922. Serial No. 597,101. 3 Claims. (Cl. 264—21.)



1. A tachometer embodying a rotary yieldable tappet, a rotatably mounted resiliently constrained ring having a projection lying in the path of said tappet and adapted to be struck thereby, indicating means fixedly secured to and movable with said ring and calibrated means positioned to indicate the amplitude of rotative displacement of said indicating means.

---

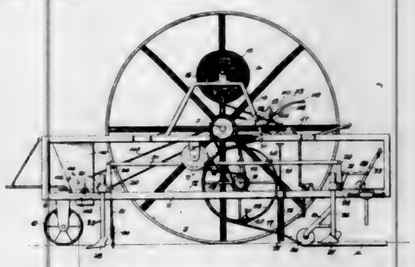
1,562,352. DUST COLLECTOR. FRANK A. LUNDQUIST, Chicago, Ill. Filed May 31, 1924. Serial No. 716,894. 5 Claims. (Cl. 183—111.)



1. In a device of the class described, a chamber having a horizontal partition provided with tapered slots inclined toward one upper corner of the chamber, an air intake connection at said upper corner, a plate arranged to direct the incoming air downward at an incline toward said partition, and a discharge connection at the opposite upper corner of the chamber, said parts being so arranged that air flowing from the intake to the discharge will pass transversely over the slots in said partition

---

1,562,353. MACHINE FOR LAYING MULCHES. NORMAN B. MCGUIRE and ANDREW GUILD, Sr., Honolulu, Territory of Hawaii. Filed Aug. 14, 1924. Serial No. 731,987. 12 Claims. (Cl. 47—9.)



1. A machine for laying mulches in strips and covering the lateral edges with soil, comprising means in advance of the laying means for reducing the soil area to be covered by the mulching strip to the desired surface contour.

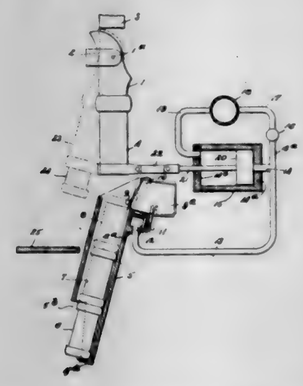
5. A mulch laying machine, comprising a wheeled frame, plows at the front and rear of the frame for forming parallel furrows to receive the edges of a mulching strip and to turn the soil from the furrows over and onto said edges respectively, means for supporting a roll of mulching material on said frame, means for feeding the material from the roll and spreading the same on the ground between the furrows, and means following the spreading means for turning the edges of the material into the furrows.

10. A machine for laying mulches in continuous strips comprising a wheeled frame, means for supporting a roll of mulching material on said frame, means for feeding the material from the roll and spreading the same on the ground including a drum over which the material is drawn, and means for excising planting openings in the material, said means including a roll parallel with said drum, and cooperating die-punching members on said drum and roll.

12. A machine for laying mulches in continuous strips comprising a wheeled frame, means for supporting a roll of mulching material on said frame, means for feeding the material from the roll and spreading the same on the ground, and means located between the roll support and feeding means for splicing the free ends of successive strips

---

1,562,354. RECEIVING TERMINAL FOR CONVEYER SYSTEMS. JAMES G. MACLAREN, Syracuse, N. Y., assignor, by mesne assignments, to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Original application filed Mar. 26, 1920, Serial No. 369,084. Renewed Mar. 9, 1925. Divided and this application filed Mar. 11, 1925. Serial No. 14,694. 7 Claims. (Cl. 248—16.)

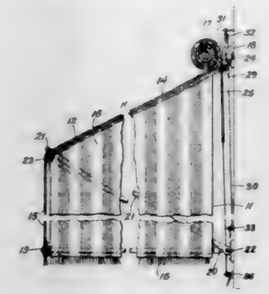


3. In a carrier receiving apparatus, a receptacle for carriers, a pivotally suspended guide normally positioned to deliver carriers to a receptacle, a pneumatic motor having a piston member connected to said guide and adapted to swing the latter upon its pivot, a valve controlling the operation of said motor, and means actuable by a carrier occupying a definite position in the receptacle for opening said valves whereby to start the motor and thereby to swing said guide upon its pivot.

---

1,562,355. AWNING. JEROME MANASSA, Bronx, N. Y. Filed Jan. 2, 1925. Serial No. 175. 3 Claims. (Cl. 156—44.)

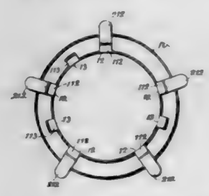
1. In a device of the class described, the combination with the casing of a window, a tension roller mounted thereon, a pivoted frame, a strip of fabric, one end of said fabric being secured to said roller and the other end to a portion of said frame, a flexible strap secured to said window casing and to said frame and underlying said strip of fabric for relieving the weight of said fabric and frame from said tension roller when the frame is



in a lowered position, and means for holding said frame and fabric in a lowered position against the action of said tension roller.

---

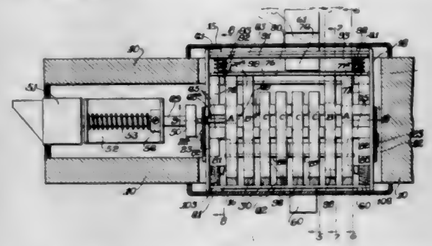
1,562,356. CURTAIN LIGHT. ELIAS MANDEL, Brooklyn, N. Y. Filed Dec. 29, 1924. Serial No. 758,760. 4 Claims. (Cl. 296—145.)



1. A frame for a curtain light including a front ring and a washer disposed at the back of the frame, a series of bendable tongues on said ring at the inner edge presenting seats for the edge of the glass of the light, and longer tongues also on said ring at the inner edge and bendable to present seats for the glass, the terminals of said first-mentioned tongues being of a length to be bent inward over the glass and the longer tongues adapted to extend through said washer and bendable to engage the outer portion of the washer.

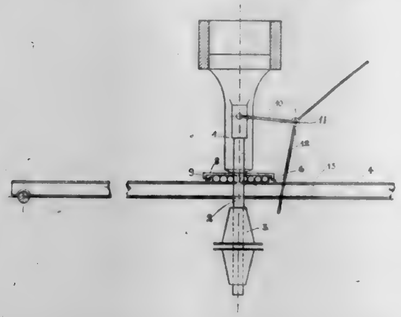
---

1,562,357. LOCK. GEORGE F. MAYER, Chicago, Ill. Filed May 31, 1923. Serial No. 642,389. 18 Claims. (Cl. 70—54.)



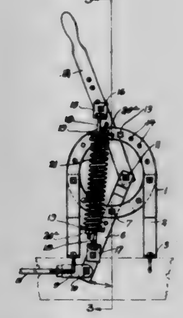
1. A lock comprising, in combination, a fixed locking bar having a plurality of spaced teeth thereon, a sliding locking bar adapted to cooperate with said fixed bar, a plurality of locking tumblers and means associated with said tumblers adapted to hold the said tumblers in normally locked position.

1,562,358. BRICK PRESS AND THE LIKE. RODOLPHE NAVET, Tubize, Belgium. Filed Feb. 14, 1924. Serial No. 692,792. 5 Claims. (Cl. 25—45.)



1. An improved piston arrangement in presses for the manufacture of bricks, tiles and similar articles comprising in combination the piston, vertical guiding rods rigidly secured to said piston, fixed guides engaged by said guiding rods, a pivotally arranged pressure beam freely engaging the depending end of said piston so that it will be free to be moved longitudinally with respect to said piston, and a wear compensating anti-friction member interposed between the end of the piston and the pressure beam.

1,562,359. SWITCH THROW. DAVID OSBURN, Grindstone, Pa. Filed Feb. 27, 1925. Serial No. 12,063. 8 Claims. (Cl. 246—285.)

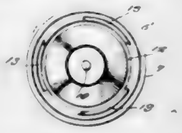


1. In a switch throwing device, a supporting structure, an operating lever pivotally mounted between its ends on said structure, a switch bridle rod connected to one end of said lever, a control lever pivotally connected to the other end of the operating lever, means urging the levers toward each other about their pivotal connection while permitting movement of the levers away from each other when pressure in the proper direction is applied to either lever, and adjustable means for limiting movement of the control lever in either direction about its pivotal connection with the operating lever.

1,562,360. DIRECT COOLING OF GOODS. ANTON JENSÉNIUS ANDREAS OTTESÉN, Copenhagen, Denmark. Filed Mar. 1, 1924. Serial No. 696,398. 1 Claim. (Cl. 99—14.)

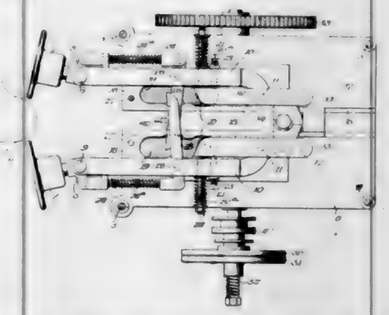
A process for the preservation of goods by refrigeration, consisting in exposing the goods to the direct action of a cooled solution of salts or other compounds whereby a temperature below freezing point is obtained, and removing the substances contained in the solution which are retained on the surfaces of the cooled goods, by exposing the goods to the action of a solvent in a tepid or hot state.

1,562,361. POTTERY MOLD. MIKE L. PASCARELLO, New Brighton, Pa. Filed Feb. 11, 1925. Serial No. 8,502. 2 Claims. (Cl. 25—26.)



1. A pottery mold including a male and a female member, and a clay cutter between and carried by one of said members, comprising an annular member whose outer edge is beveled inwardly and provided with equidistantly spaced notches, and one of the end walls of each notch being cut angularly to provide a cutting edge.

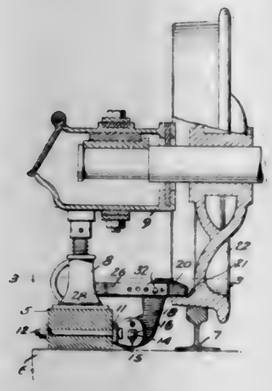
1,562,362. STITCHER-FEEDING MECHANISM FOR TIRE-MAKING MACHINES. EDWARD D. PUTT, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 10, 1920. Serial No. 395,219. 17 Claims. (Cl. 154—10.)



2. In a tire making machine including a rotatable core, spinning rollers, means for advancing said spinning rollers radially of the core, and automatically actuated means for adjusting the angle of the spinning rollers as they engage the bead portions of the tire and simultaneously changing the speed of their advance independently of said adjustment.

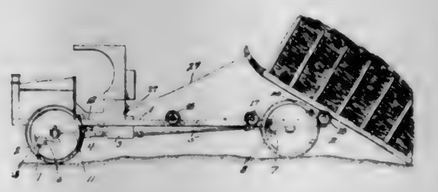
1,562,363. ADJUSTABLE WHEEL CLAMP. JOHN H. RANDALL, Salina, Kans. Filed June 12, 1925. Serial No. 36,714. 4 Claims. (Cl. 254—33.)

4. A wheel clamp comprising an elongated base adapted to rest upon one or more ties and adapted to support a jack, L-shaped brackets secured to one vertical side of said base and having laterally projecting apertured ears provided with spaced pairs of openings, a clamping arm positioned between said ears, a pivot bolt selectively extending through said openings and pivotally connecting said arm to said ears, the upper portion of said arm being provided with a laterally projecting branch to overhang and engage a flange of a wheel to hold the wheel in place, and a holding bar pivotally and adjustably connected to the upper portion of said clamping arm adjacent said laterally projecting branch and having a curved head to rest against one side of the jack mounted on said base whereby to hold said clamping arm in engagement with said flange of the wheel, said holding bar being bifurcated to provide a fork, the sides of which have registering openings positioned at opposite sides of



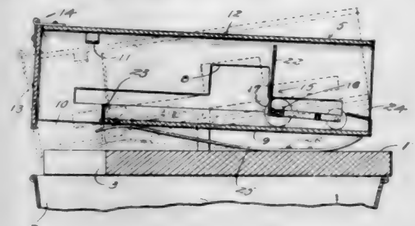
the laterally projecting branch of said clamping arm, and a pivot element selectively extending through said openings in said holding bar and through said arm to adjustably connect the holding bar to the arm.

1,562,364. SELF-LOADING CANE TRUCK. CLAUDE C. REASONER, Habana, Cuba, assignor to Cuba Self Loading Cane Truck Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 5, 1922. Serial No. 592,507. 7 Claims. (Cl. 214—65.)



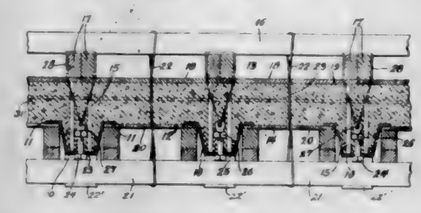
1. In combination, a truck and a demountable body therefor, the latter being of such construction and load capacity as, when demounted and loaded, to exert greater frictional contact with the ground on which it rests than does the truck, said body converging at its forward end and adapted, when partially demounted, to rest with one end supported upon said truck and at an acute angle to the longitudinal dimension of the latter, means connecting said truck and body for shifting the center of support of said body upon said truck toward the center of mass of the former, and means supporting said body and operative when the latter reaches its teetering point to align said body longitudinally of the truck.

1,562,365. SELF AND EVER SET TRAP. CHARLES M. REED, Babletown, W. Va. Filed July 23, 1925. Serial No. 45,625. 6 Claims. (Cl. 43—64.)



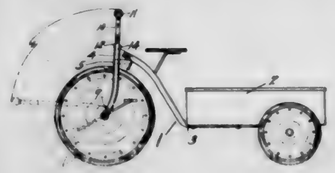
1. A trap comprising a pivoted body provided with an entrance and an exit and adapted to be tilted downwardly and forwardly by a rodent, and an impeller adapted to be set in motion by tilting of the body to eject the rodent.

1,562,366. CONCRETE BUILDING FORM. HENRY C. RIESBOL, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,596. 9 Claims. (Cl. 25—131.)



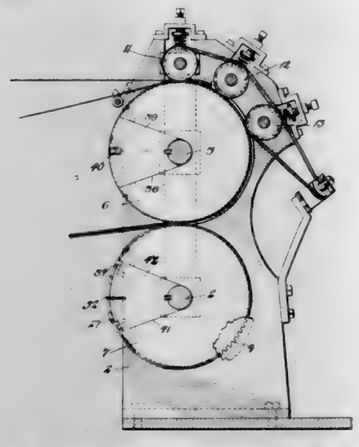
1. A building form adapted to be used in combination with a solid wall structure having spaced vertical ribs, including inner and outer sections, means for supporting said inner sections in spaced relation to the interior surface of said solid wall structure between said ribs, and means for supporting said outer sections in spaced relation to said inner sections to form a cavity therebetween.

1,562,367. COMBINATION VELOCIPEDE AND WAGON. WILLIAM E. SANDERS, San Francisco, Calif. Filed Nov. 28, 1924. Serial No. 752,605. 1 Claim. (Cl. 208—45.)



A convertible toy vehicle, comprising a velocipede having an inner wheel fork vertically journaled at the front of the chassis; and outer steering fork and attached handle bar mounted over the inner wheel fork, the two forks being pivotally connected at their lower ends and the outer fork being thereby adjustable to either a vertical or a horizontal position; and means for releasably locking the outer steering fork in its vertical position, said means including a thumb latch pivoted at the top of the outer fork immediately over the head of the inner fork, the said latch being formed with a hook bent downwardly and adapted to releasably engage the head of the inner fork.

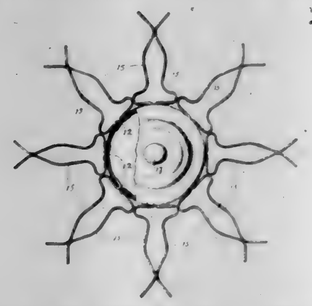
1,562,368. MACHINE FOR FORMING PAPER HAT RINGS. BUDDE SCHIFFENHAUS, Newark, N. J. Filed Dec. 6, 1924. Serial No. 754,385. 6 Claims. (Cl. 93—1.)



1. In a machine for forming paper rings for hat supports, a pair of rollers, a plurality of cutting members on one of said rollers for cutting a strip of paper passed around the other roller, said cutting means acting to cut the paper into sections and to cut each section so as to provide a slit at one end, and a tongue at the opposite end, and means co-acting with one of said rollers for turning over the edge of the paper to form a bead thereon before it is discharged from the machine.

---

1,562,369. STAMP-HOLDING DEVICE. ARTHUR W. SCHMIDT, Spring Valley, N. Y. Filed June 18, 1925. Serial No. 38,026. 4 Claims. (Cl. 211—43.)

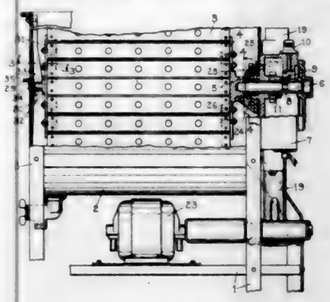


2. A stamp holder, which comprises a cup-shaped casing having a slotted peripheral flange, a plurality of spring fingers disposed around the outer periphery of the casing with their inner ends passing through the slots and bent over to engage the inner walls of the casing whereby they are supported therefrom, and a cup-shaped cover adapted to be pressed into the bent end of the cup-shaped casing after the fingers have been mounted in place.

---

1,562,370. WASHING MACHINE. LEON W. SCHUMANN, Rochester, N. Y., assignor, by mesne assignments, to The G. R. S. Products, Inc., Colonie, N. Y., a Corporation of New York. Filed Mar. 27, 1922. Serial No. 546,984. 8 Claims. (Cl. 68—18.)

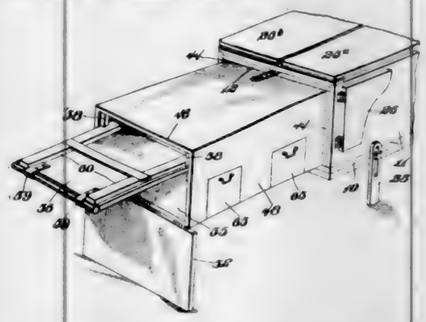
1. In a washing machine, the combination of a cylinder, means adapted to be shifted into driving engagement with one end of said cylinder, and resilient means at the other end of said cylinder for maintaining said



cylinder in a predetermined spring pressed engagement with respect to said last mentioned means.

---

1,562,371. AUTOMOBILE TRAILER. HOWARD L. SHANKS, Mesick, Mich. Filed Jan. 24, 1925. Serial No. 4,454. 9 Claims. (45—17.)



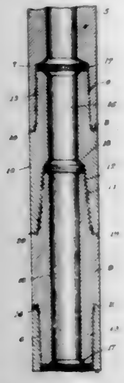
1. The combination with a body structure having an opening in one wall thereof, a table slidable into and out of the body through the opening and a member hinged to the outer end of the table along the lower edge thereof and of greater size than the opening, said member being swingable upon the hinges thereof to a vertical position where its free edge abuts the ground to support the outer end of the table when in extended position or to a position where it abuts the body at the sides of the opening when the table is slid within the body, and means for locking said member in the last named position to thereby retain the table within the body.

---

1,562,372. FLUSH-JOINT PIPE. WALDO SHELDON, South Norwalk, Conn. Filed Apr. 15, 1925. Serial No. 23,262. 1 Claim. (Cl. 285—146.)

A tool joint for well drilling comprising sections of drill pipe having thickened reinforced ends screw threaded internally on a slight taper and terminating in beveled end edges, cooperating joint members having slightly tapered externally screw threaded shanks screwed fast in the internally threaded reinforced ends of the drill pipe sections, said members being provided with undercut shoulders at the bases of the shanks of the same engaged fast over the beveled edges of the pipe sections to prevent spreading of the pipe sections and to interlock the members securely in the ends of the pipe sections, one of said joint members having a projecting tapered stem and the other joint member having a tapered socket receiving the stem, said stem and socket having engaging screw threads coarser than the screw

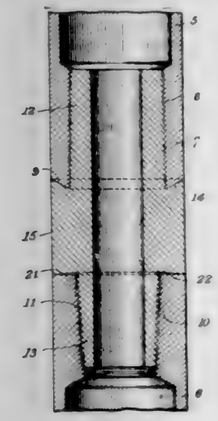
threads of the shanks and drill pipe sections and the taper of said stem and socket being materially greater than the taper of the shanks and screw seats in the pipe sections, insuring separation of the tool joint at the stem and socket, said joint members having alined passages extending entirely therethrough in continuation



of the bore of the drill pipe, the ends of the drill pipe sections and the over-engaging shoulder of the coupling members being substantially flush with the external surface of the drill pipe and the joint members being substantially coextensive with the drill pipe to enable the entire tool joint to pass through a stuffing box or the like intact along with the drill pipe.

---

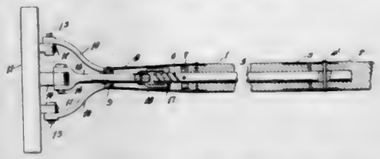
1,562,373. DRILL-PIPE COUPLING. WALDO SHELDON, South Norwalk, Conn. Filed July 13, 1925. Serial No. 43,131. 6 Claims. (Cl. 285—146.)



1. A drill pipe connection comprising a pipe section having a thickened end wall with an internal slightly tapered screw seat and a beveled end edge, a tubular coupling member having an externally screw threaded tapered shank at one end screwed fast in the screw seat of the pipe end and an undercut shoulder at the base of said shank engaging over the beveled pipe end, said member having a projecting stem at the opposite end with coarser screw threads and a greater taper than the other screw shank and a second pipe section having a reinforced end wall of greater thickness than the first pipe section, said thicker end wall having an internal tapered screw seat to receive the coarsely screw threaded taper projecting stem of the coupling member and said coupling member having no greater external dimensions than the pipe sections to permit passage of the joint with the pipe through a stuffing box or the like.

---

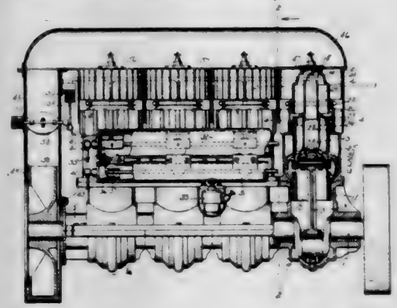
1,562,374. ADJUSTABLE TOOL HEAD. WINFRED L. SMITH, Westbrook, Me. Filed May 28, 1925. Serial No. 33,544. 2 Claims. (Cl. 306—4.)



1. In a tool, a handle, a head pivotally engaging said handle, an extension of the handle swivelly mounted thereon, a rod secured to said extension and extending through the handle, another rod engaging the head, a yoke on the last mentioned rod, and threaded connection between said yoke and the first mentioned rod.

---

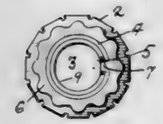
1,562,375. GAS ENGINE. IRA H. SPENCER, West Hartford, Conn. Filed Aug. 26, 1921. Serial No. 495,517. 3 Claims. (Cl 123—171.)



1. An engine comprising a cylinder having a concentrically arranged exhaust passage opening from the bottom of the combustion chamber, hollow fins evenly spaced about the cylinder with the spaces in said fins opening into said exhaust passage, and a shell surrounding said hollow fins and terminating above the bottoms thereof to provide openings at the bottom from each of the spaces between the fins for free circulation of air downwardly through said spaces.

---

1,562,376. TYPE WHEEL FOR HAND STAMPS. CHARLES SPIELMAN, New York, N. Y., assignor to Wm. A. Force & Company, Inc., New York, N. Y., a Corporation of New York. Filed May 7, 1925. Serial No. 28,676. 2 Claims. (Cl. 101—109.)

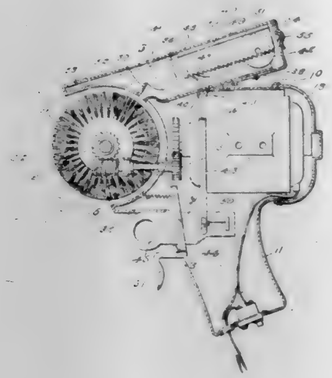


1. A type wheel for hand stamps comprising a type wheel provided with printing symbols on its outer face and a cylindrical center hole, a ratchet wheel also pro-

vided with a corresponding center hole which hole is provided with an integral spline adapted to enter and engage a groove in a shaft carrying the type wheel and means for securing the type and ratchet wheels together.

---

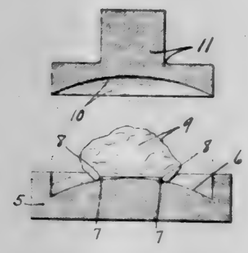
1,562,377. SHOE POLISHER. MARVIN A. SPIELMAN, Larimore, N. Dak. Filed Nov. 10, 1924. Serial No. 749,013. 3 Claims. (Cl. 15—24.)



1. A device of the character described comprising a casing, a motor arranged therein, a brush detachably mounted on the casing and adapted to be driven from said motor, a handle projecting from said casing, a compartment supported on said casing, a paste tube holder arranged in said compartment, a manually controlled means for feeding the paste from the tube onto said brush, and said means including a carriage arranged to move longitudinally within said compartment, and a roller journaled on said carriage and adapted to compress said tube when moved over the latter.

---

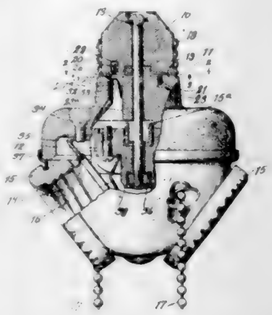
1,562,378. METHOD OF MANUFACTURING BIFOCAL LENSES. HAROLD J. STEAD, Geneva, N. Y. Filed Feb. 21, 1922. Serial No. 538,174. 3 Claims. (Cl. 49—79.)



1. In the process of manufacturing multifocal lenses, molding a groove in a piece of glass, utilizing the groove forming portion of said mold as a filler for said groove, and then grinding the glass to form an optical surface thereon.

2. In the process of manufacturing multifocal lens blanks, molding a groove in a piece of glass, securing a ring of different material in said groove, and grinding visual surfaces upon opposite sides of said ring.

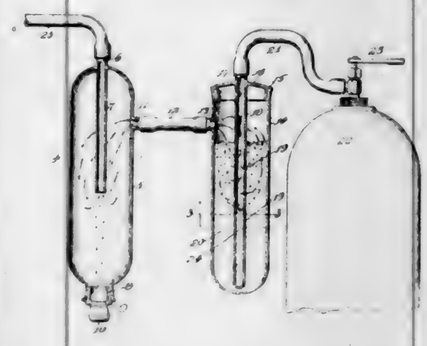
1,562,379. ELECTRICAL CONNECTER DEVICE. WALTER D. STEELE, Evanston, and REUBEN B. BENJAMIN, Chicago, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1919. Serial No. 348,307. 4 Claims. (Cl. 173—335.)



1. A plug receptacle comprising a plug portion having a threaded shell contact to be screwed into the corresponding threaded shell contact of a socket, a receptacle portion electrically and mechanically connected with said plug portion, and means for mounting said portion with respect to each other whereby relative unrestrained rotation in either direction through a limited arcuate span may be effected, said means allowing said receptacle portion when turned in one direction and at one extremity of said arcuate span to serve as a handle for screwing said plug portion into the socket and when turned in the other direction and at the other extremity of said arcuate span to serve as a handle for unscrewing said plug portion from the socket, said receptacle portion after said plug portion has been screwed into the socket then being capable of being turned freely in either direction within said limited arcuate span to bring said receptacle portion into desired position without unscrewing the said plug portion from the socket.

---

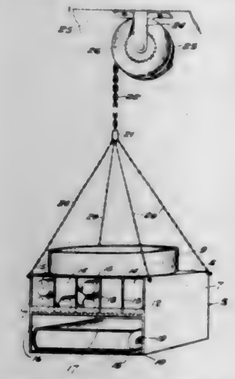
1,562,380. CHLORINE-GAS CONTROL FOR FLOUR BLEACHING. WILLIAM STEIN, St. Louis, Mo. Filed Sept. 22, 1924. Serial No. 739,237. 3 Claims. (Cl. 83—42.)



1. A chlorine gas control for flour bleaching comprising an independent transparent graduated tubular indicator having an open top and containing a volume of liquid through which the gas is directed, a detachable stopper closing said open top, a perforated tube forming a part of the stopper and extending into the indicator, an independent transparent tubular separating member through which the gas from the indicator must pass, and be purified from moisture before admitted to the agitator, said indicator and separating member connected together by a separate pliable tube.

---

1,562,381. VENDING DEVICE. CHARLIS W. STOYKA, Fayette City, Pa. Filed June 12, 1924. Serial No. 719,631. 2 Claims. (Cl. 211—17.)



1. In a vending device of the class specified, a body having closed sides and fully open front and rear ends, the sides and ends of the body being vertically straight and the body intermediately separated by a horizontal partition extending fully through from one open end to the other, vertical partitions in spaced relation being interposed between the horizontal partition and the top of the body, the ends of the horizontal partition being also provided with vertical guard flanges which project upwardly over the lower portions of the vertical partitions, the body below the horizontal partition being fully open from end to end to receive record means and the top of the body provided with a fixed receptacle for the deposit of coin, and means for holding the device in operative position.

---

1,562,382. FLOOR COVERING AND PROCESS OF MAKING THE SAME. CALEB MARSHALL TAYLOR, Elizabeth, N. J. Filed Jan. 10, 1922, Serial No. 528,297. Renewed Sept. 1, 1925. 14 Claims. (Cl. 91—70.)

1. A floor covering comprising a dry felt base of the floor covering type impregnated throughout with a cellulose ester saturant which includes a drying oil.

14. The process of increasing the tensile strength of felt base floor coverings which comprises saturating an absorbent felt base of the floor covering type with a mixture of a cellulose ester and a drying vegetable oil.

---

1,562,383. FLOOR COVERING AND PROCESS OF MAKING SAME. CALEB MARSHALL TAYLOR, Elizabeth, N. J. Filed Jan. 10, 1922, Serial No. 528,298. Renewed Sept. 1, 1925. 32 Claims. (Cl. 91—70.)

14. A floor covering comprising a bitumen impregnated base coated with a film of a cellulose ester.

30. The process of making floor coverings which comprises coating a felt base impregnated with water resistant material with a solution of nitrocellulose, which solution contains a mixture of approximately 12 parts by weight of nitrocellulose, 88 parts of a solvent therefor, 12 parts of a resin, and 12 parts of a vegetable oil.

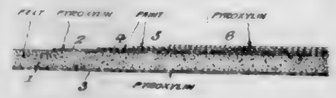
1,562,384. FLOOR COVERING AND PROCESS OF MAKING SAME. CALEB MARSHALL TAYLOR, Elizabeth, N. J. Filed Jan. 10, 1922, Serial No. 528,300. Renewed Sept. 1, 1925. 28 Claims. (Cl. 91—70.)

9. A floor covering comprising a bitumen impregnated base, an imperforate coating of a cellulose ester on said base, and a coating of paint on said cellulose ester.

18. The process of making floor coverings which comprises coating a bitumen impregnated felt base with a mixture in solution of a cellulose ester, which solution contains approximately 12 parts by weight of a cellulose ester, 88 parts of a solvent thereof, 12 parts of a resin, and 12 parts of a vegetable oil, drying said solution, and applying to said dried surface a coat of paint.

---

1,562,385. FLOOR COVERING AND PROCESS OF MAKING SAME. CALEB MARSHALL TAYLOR, Elizabeth, N. J. Filed Jan. 10, 1922, Serial No. 528,301. Renewed Sept. 1, 1925. 22 Claims. (Cl. 91—68.)



1. A floor covering comprising an impregnated felt base saturated throughout with an impregnating material and dried, a first imperforate coating of a cellulose ester on said base, a coating of paint on said cellulose ester, and a second and transparent coating of a cellulose ester on the outer surface of said paint coat.

14. The process of making floor coverings which comprises treating a felt base, which has been saturated throughout, by coating it with a first coating of a solution of a cellulose ester, drying said coating, applying to said dried surface a coat of paint, and applying a second and transparent coating of a solution of a cellulose ester.

19. The process of making floor coverings which comprises coating an impregnated felt base with a solution of nitro cellulose, which solution contains approximately 12 parts by weight of nitrocellulose, 88 parts of solvent therefor and 12 parts of a softening medium, drying said solution, applying to said dried surface a coat of paint, and applying to said paint coat a second and transparent coating of a mixture in solution of 10 parts by weight of nitrocellulose, 90 parts of a solvent therefor, and 10 parts of softening medium.

---

1,562,386. FLOOR COVERING AND PROCESS OF MAKING THE SAME. CALEB MARSHALL TAYLOR, Elizabeth, N. J. Filed Sept. 27, 1924. Serial No. 740,225. 20 Claims. (Cl. 91—68.)

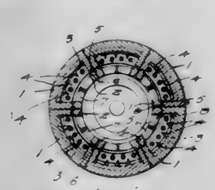
3. A floor covering comprising a felt base impregnated with a flexible filling material, a coating of paint supported on said felt base, and an outer coating of a film of a cellulose ester.

19. The process of making a floor covering which comprises impregnating a porous base with a flexible saturant filling material, coating said base with a coating of paint, drying said paint coat and coating the painted surface with a film of a cellulose ester in solution.

1,562,387. FLOOR COVERING. CALEB MARSHALL TAYLOR, Elizabeth, N. J. Filed Oct. 21, 1925. Serial No. 63,805. 28 Claims. (Cl. 91—68.)

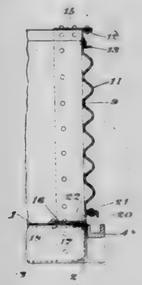
22. A floor covering of the smooth surface type comprising a base of porous sheet having sufficient thickness for use as floor covering material and impregnated throughout with a binder saturant, said sheet being comprised of material having coherence as a sheet prior to impregnation, and a coating of a film of a cellulose ester directly united to at least one face of the saturated sheet.

1,562,388. RADIANT BACK. OWEN TAYLOR and CHARLES C. TAYLOR, Huntington, W. Va. Filed Oct. 2, 1923. Serial No. 666,118. 2 Claims. (Cl. 126—39.)



1. A radiant back comprising upstanding segments forming an endless figure, each segment having a front portion and a back portion in separable relation and radial side walls, the adjacent side walls being in contact with each other, an interfitting means between the side walls and both portions of each segment whereby the same cannot accidentally turn relatively to each other when assembled.

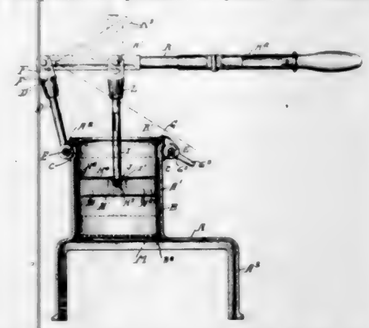
1,562,389. END STRUCTURE FOR RAILWAY CARS. WILLIAM O. THOMPSON, Cleveland, Ohio. Filed Jan. 11, 1924. Serial No. 685,601. 4 Claims. (Cl. 105—410.)



1. In combination with the side sills, center sills and metallic end wall of a railway car provided with integral horizontal corrugations a sub-end sill of thicker material than said end wall having a vertical web forming the lower part of the end wall, and having an inwardly projecting horizontal flange secured to the center and side sills, the upper part of said sub-sill connected to the metallic end wall.

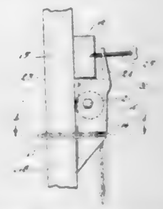
1,562,390. PRESSING AND STRAINING MACHINE. HENRY TRUST, Park Ridge, N. J., and FRANK M. ASHLEY, Brooklyn, N. Y.; said Ashley assignor to Josephine Trust, Park Ridge, N. J.; Josephine Trust administratrix of said Henry Trust, deceased. Filed Dec. 10, 1919. Serial No. 343,965. 2 Claims. (Cl. 100—41.)

1. A machine comprising a base portion, a receptacle having a beaded top edge from which it is suspended from the top of said base portion, means fixed to the receptacle and overlying said beaded edge for holding said receptacle in position, a piston, and means con-



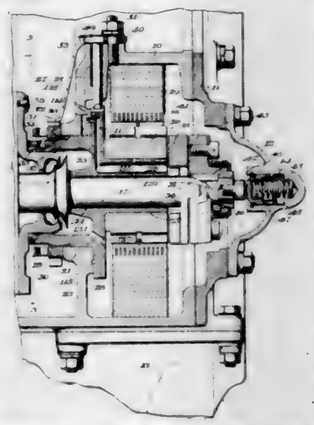
nected to said base portion and said piston for reciprocating said piston in said receptacle and for swinging said piston laterally from above the same.

1,562,391. DEVICE FOR DETACHABLY CONNECTING BEAMS. JOHANN VIDON, Evanston, Ill. Filed Oct. 13, 1924. Serial No. 743,320. 4 Claims. (Cl. 304—41.)



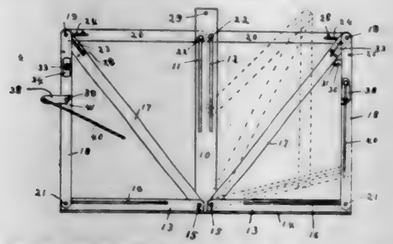
1. A beam connecting device comprising a frame with flexible means for clamping beams together, and a tooth fixed and integral with said frame and an eccentric movably mounted in said frame for engaging into one of said beams and preventing downward movement of said frame thereon.

1,562,392. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 7, 1917. Serial No. 190,241. 16 Claims. (Cl. 304—14.)



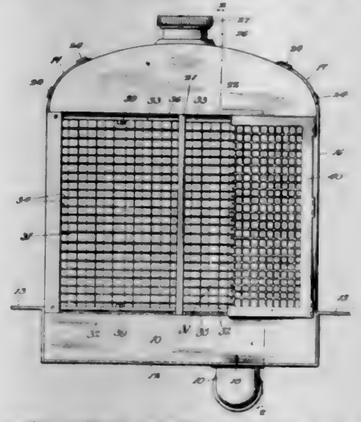
1. In combination, a housing, a chain drive within said housing including a sprocket, means for adjustably supporting said sprocket comprising a sleeve on which the sprocket is rotatively mounted, said sleeve being rotatively adjustable about an axis eccentric to the sprocket axis, means without the housing for adjusting said sleeve, and means operable from the outside of the housing, extending through the wall of the housing and engaging the sleeve within the housing for securing the sleeve in adjusted position.

1,562,393. AUTOMATICALLY-OPENING MUSIC RACK. PHILIP P. VOOT, Utica, N. Y., assignor to Charles L. Letson, Utica, N. Y. Filed Dec. 11, 1923. Serial No. 680,020. 4 Claims. (Cl. 45—121.)



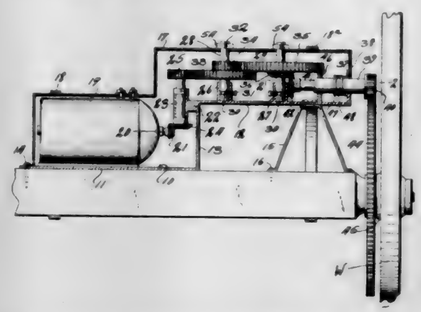
1. In an automatically-opening music rack, the combination of a central stem with longitudinally extending spaced slots, two oppositely disposed flanged bottom bars pivotally connected at their inner ends to the bottom of the central stem and each having a slot extending from near its outer end nearly to its inner end, two oppositely disposed diagonally arranged arms pivoted at their lower ends to the bottom of the central stem, two side bars each having its upper end pivoted to the upper end of one of the arms and with its lower end having a headed pin pivotally and slidingly mounted in the slot of one of the bottom bars, two top pieces, each pivoted at its outer end to the upper end of one of the arms and with its inner end having a headed pin pivotally and slidingly mounted in one of the slots in the stem, springs attached to the top piece, to the diagonal arm and to the side bar on each side adjacent the connecting ends thereof and adapted to move the parts to extended position and yieldingly hold them in such extended position against the tension of said springs and means on the rack members for holding the rack in folded position.

1,562,394. RADIATOR. ERNEST SMITH WALKER, St. John, Kans., assignor of forty-nine one-hundredths to Charles Van Fleet, St. John, Kans. Filed Mar. 29, 1922. Serial No. 547,885. 1 Claim. (Cl. 257—125.)



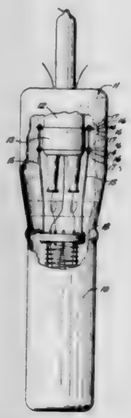
An engine radiator including a bottom tank having side plates rising therefrom and provided with tongues, a top tank having keepers thereon accommodating said tongues, the tongues detachably connecting the top tank with said plates, and a core unit fitting between the tanks communicating therewith.

1,562,395. GENERATOR ATTACHMENT. UEL T. WALKER, Eccles, W. Va. Filed Jan. 22, 1925. Serial No. 4,131. 5 Claims. (Cl. 74—7.)



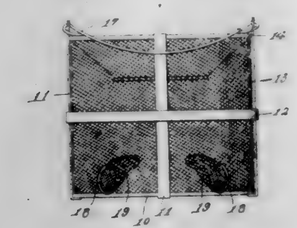
1. A generator attachment for the axles of vehicles including a base having an axle engaging portion and an offset portion connecting with the axle engaging portion by an integral wall, a generator supported from said axle engaging portion, a cover for the base, a shaft rotatably supported by the cover, a gear train for connecting said shaft, and the generator shaft, carried by the base and including shafts projecting through said cover and means mounted on said shafts for maintaining the cover in position upon the base.

1,562,396. ELECTRON-DISCHARGE DEVICE. FRANK E. WARD, Corona, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 4, 1923. Serial No. 643,234. 6 Claims. (Cl. 250—27.)



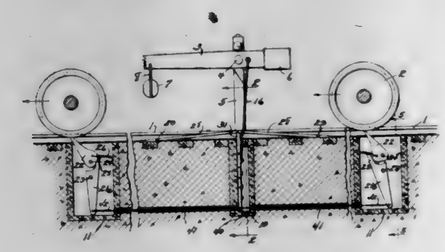
6. An electron discharge device, comprising an evacuated vessel, a stem, a collar encircling said stem, a plurality of perforated projections on said collar, a metallic member extending through said projections, and spacing means on said metallic member arranged on opposite sides of said projections, said metallic member being expanded adjacent the outer ends of said spacing means to attach said metallic member to said collar.

1,562,397. TRAP. LYMAN F. WHELCHEL, Anniston, Ala., assignor of one-half to W. F. Britton, Anniston, Ala. Filed Apr. 6, 1925. Serial No. 21,132. 1 Claim. (Cl. 43—121.)



An insect trap comprising a bottom, a frame secured to the bottom and including spaced vertically extending standards, an annulus connecting the standards, a foraminous wall having one edge secured to the bottom within the frame and provided with spaced openings, a downwardly inclined top secured to and extending inwardly from the frame and the opposite ends of the foraminous wall and provided with a central opening and inwardly tapering passages extending within the trap from the spaced openings of the wall.

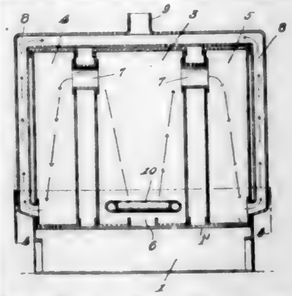
1,562,398. AUTOMATIC CROSSING GATE. JAMES V. WHITEHURST, Elizabeth City, N. C. Filed June 5, 1925. Serial No. 35,130. 3 Claims. (Cl. 246—293.)



1. In an automatic crossing gate, the combination of a movable gate, a lever located at one side of the crossing, a train operated cam member arranged on movement thereof to move the lever, a train of geared levers, a connection between one of said train of geared levers and the gate for moving said gate to and from active position, a connection between the first-named lever and another of said train of geared levers, and a spring connected to one of said train of geared levers for assisting in the movement of the gate to idle position.

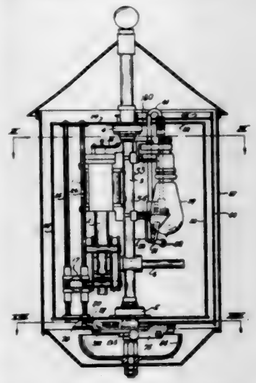
1,562,399. STOVE. CHARLES M. WHITMAN, Henryetta, Okla. Filed Jan. 16, 1925. Serial No. 2,884. 1 Claim. (Cl. 126—91.)

A stove of the class described comprising a hollow base having openings therein for admission of air, a central casing seated on the base and having an opening in its bottom, a pair of end casings seated on the base with their ends closed, said end casings being spaced from the central casing and the base having openings which place its interior in communication with said spaces, a coupling connecting the upper part of each end casing with the upper part of the central casing, outlet pipes connected with the outer sides of the end casings and extending up alongside the said



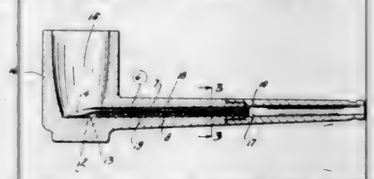
casing and across the tops of all the casings, a chimney connected with the top portion of the outlet pipes and a burner in the central casing.

1,562,400. TRAFFIC SIGNAL. RALPH W. WILEY, San Francisco, Calif. Filed Apr. 21, 1921. Serial No. 463,103. 11 Claims. (Cl. 177—327.)



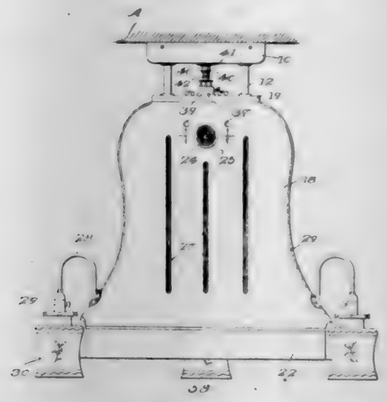
1. In a traffic signal, a casing, a drum, means mounting said drum for oscillation about a vertical axis within the casing to two signaling positions, means for moving the drum from one position to the other comprising a solenoid having a vertically reciprocating plunger, a rock shaft mounted for oscillation about a horizontal axis and having a connection with said drum, a link connecting said rock shaft and said plunger whereby a complete movement of said plunger into and out of said solenoid moves the signal from one position to the other.

1,562,401. COMBINED SMOKE CONDUIT AND ABSORBENT HOLDER FOR TOBACCO PIPES. ABRAHAM E. WILLIAMS, Chicago, Ill. Filed Nov. 7, 1924. Serial No. 748,302. 10 Claims. (Cl. 131—12.)



1. A device for use in a tobacco pipe comprising a hollow elongated member provided with an exterior channel at one side, substantially as described.

1,562,402. RADIOCHANDELIER. ARTHUR O. WILSON, Wayne, Mich. Filed June 9, 1924. Serial No. 718,949. 3 Claims. (Cl. 179—140.)



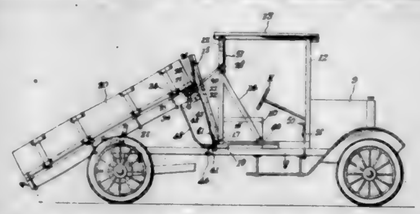
1. A combination fixture comprising a supporting cap, a dome mounted beneath and hung from the cap and carrying sockets for incandescent bulbs, an amplifying horn mounted within the dome and secured to the top thereof, a loud speaker unit mounted upon the top of the dome in communication with the small end of the horn, and a downwardly urged clamp engaging the unit including a socket on the cap, a plunger slidable through the socket and having padded feet engaging the unit, and a spring urging the plunger downwardly.

1,562,403. ELECTRON-DISCHARGE DEVICE. JAMES R. WILSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1924. Serial No. 756,859. 5 Claims. (Cl. 250—27.)

4. In an electron discharge device, a cathode, a resilient helix of Monel metal, a molybdenum supporting hook passing through said helix and supporting said cathode, and a nickel sleeve on said hook, said sleeve being welded to said hook and one end of said resilient helix simultaneously.

1,562,404. TRUCK BODY. MYRON L. WINANS, Waco, Tex. Filed Nov. 7, 1924. Serial No. 748,473. 8 Claims. (Cl. 298—21.)

1. A truck comprising a chassis, a cab thereon having a fixed top and rigid rear posts, a back hinged to the chassis at its lower end and adapted to close against said rear posts, a dumping body hinged to the chassis, a shaft journaled upon the forward portion of the dumping body, a cable wound about said shaft and extending at opposite sides of said rear wall with the intermediate portion of the cable crossing the upper



edge of the rear wall and the ends of the cable being affixed to the chassis adjacent the lower part of the rear wall, and means to rotate said shaft.

1,562,405. RAKING MACHINE. AUGUST WOLFF, New York, N. Y. Original application filed Nov. 7, 1919, Serial No. 336,254. Divided and this application filed Oct. 22, 1921. Serial No. 509,468. 3 Claims. (Cl. 97—12.)

1. In an agricultural machine, a frame, propulsion means therefor, a plow on said frame adapted to be adjusted into fixed relation to the frame and extend in the direction of progressive movement thereof, and raking means carried by said frame at both sides of said plow, said raking means being adjustable toward and from the ground whereby to throw the one or the other raking means into operation cooperating with the position of the plow and adapted to operate upon the soil in rear of the plow, and conveying means associated and operating with said raking means for removing foreign matter from the soil sifted out by said raking means.

2. In an agricultural machine, a frame, propulsion means therefor adapted to propel the vehicle in either forward or reverse directions, a plurality of plow means on the frame adapted to be adjusted in opposite directions into contact with the ground in accordance with the direction of progressive movement of the machine, a pair of raking devices mounted on the frame at opposite sides of said plow means and supported on the frame for adjustable movement into and out of operative relation with the ground, intermediate means on the frame for alternately raising and lowering said raking means in conformity with the disposition of said pair of plow means whereby the raking means in rear of the operative plow is adjusted into operative relation with the soil, and conveying means associated with said raking means and operating in conjunction therewith to remove foreign material turned up by said raking means.

3. In an agricultural machine, a frame, plow means centrally of the frame adapted to be swung down in opposite directions in accordance with the direction of movement of the frame, an endless conveyor at each end of said frame, said conveyor having buckets thereon with projecting lower portion providing rake teeth, and means to alternately raise and lower said conveyors in accordance with the position of said plow and the direction of movement of the vehicle.

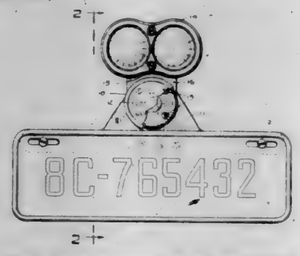
1,562,406. PORTABLE LIGHT. CHARLES E. WOODVILLE, Chicago, Ill. Filed June 13, 1921. Serial No. 477,052. 2 Claims. (Cl. 240—81.)

1. A portable electric light comprising a base, an upright member detachably affixed thereto, a stem having

a lamp and reflector mounted thereon, electric connections to the stem positioned exteriorly and independent of the upright member, said stem being ad-

justable in the upright member and rotatable in any adjusted position, and adapted to be affixed to the base with the removal of the upright member from the base, and the removal of the stem from the upright member.

1,562,407. LAMP BRACKET. WILLIAM BERK, New York, N. Y., assignor to American Auto Lamp Co., Inc., New York, N. Y., a Corporation of New York. Filed July 6, 1925. Serial No. 41,554. 1 Claim. (Cl. 240—57.)

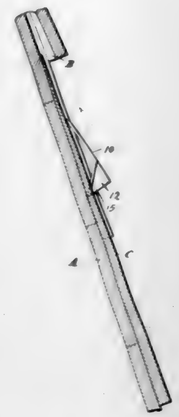


A signalling lamp adapted to be associated with another signalling lamp already attached to a vehicle, said first named lamp having attaching means comprising a depending plate, said plate having radially disposed enlarged bolt receiving openings and a lamp socket opening extending to the edge of the plate whereby the lamp may be attached without removal of the second named lamp from the vehicle.

1,562,408. HAND BAG. MAX BERKOWITZ, Richmond Hill, N. Y. Filed Dec. 24, 1924. Serial No. 757,782. 4 Claims. (Cl. 150—33.)

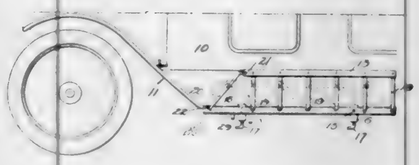
4. In a handbag, the combination of a body made of diverse materials so that either of said materials may be outwardly exposed, a handle attached to said bag, said handle being lined with materials to match the materials of said handbag, an opening in the body of said handbag, said handle being reversible through said openings.

1,562,409. SHINGLE FASTENER. EDWARD J. BRADY, Oswego, N. Y. Filed Dec. 3, 1924. Serial No. 753,734. 3 Claims. (Cl. 108—33.)



1. A securing device of the character described comprising a fastening member formed from a single blank and including an elongated substantially trapezoidal shaped body provided at two adjacent corners with a pair of prongs extending at substantially right angles to the body.

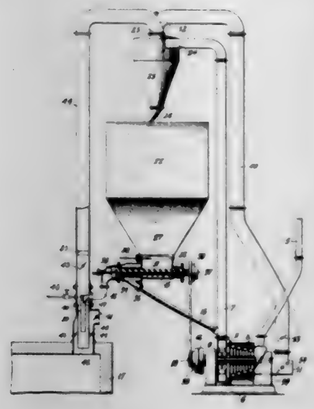
1,562,410. COLLAPSIBLE LUGGAGE CARRIER. GUSTAV BERANDT, St. Paul, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Feb. 27, 1924. Serial No. 695,443. 8 Claims. (Cl. 224—29.)



8. A collapsible baggage carrier comprising, a lower rail, means for attaching the same to the running board of an automobile or the like, an upper rail, links pivotally connecting the upper and lower rails, a lock link pivotally connected with the upper rail and having detachable engagement with the lower rail, said lock link being adapted to be shifted to a position beneath the lower rail when the upper rail is in the lowered position, and means for detachably connecting the free end of the lock link with the lower rail when the device is collapsed.

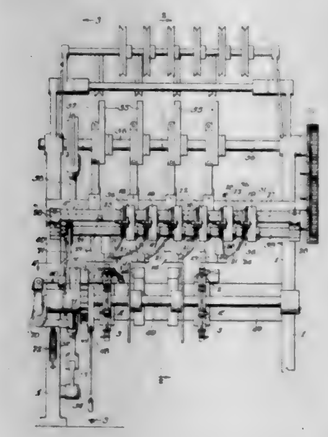
1,562,411. PULVERIZED-FUEL APPARATUS. VIRGINIUS Z. CARACRISTI, Bronxville, and JOSEPH V. SANTRY, New York, N. Y., assignors to Locomotive Pulverized Fuel Company, a Corporation of Delaware. Filed Sept. 17, 1921. Serial No. 501,488. 8 Claims. (Cl. 110—106.)

8. A pulverized fuel system comprising in combination, a pulverizer, a burner, storage means for the pulverized fuel, a feeder taking fuel from the storage means, a conduit from the feeder to the burner, a conduit from the



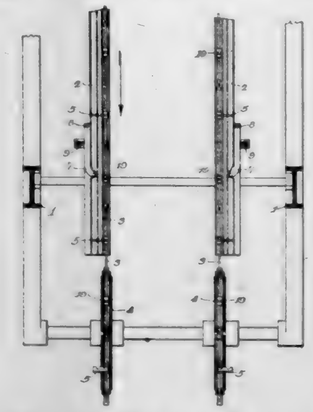
pulverizer to the storage means and a branch pipe leading from the last named conduit to the feeder.

1,562,412. BOX-BLANK-STAPLING MACHINE. EDWARD CRAIG, St. Joseph, Mich., assignor to Saranac Automatic Machine Corporation, Benton Harbor, Mich., a Corporation of Delaware. Filed Apr. 22, 1922. Serial No. 555,938. 19 Claims. (Cl. 1—82.)



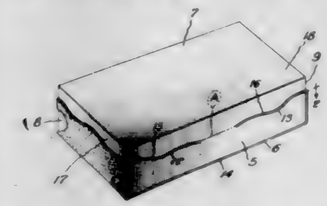
1. In a wire bound box blank machine for making blanks by inserting relatively long staples in one or more sections of the blank, and relatively short staples in one or more sections thereof, the combination of one or more staple wire feeding devices to intermittently feed the wire for the long staples, one or more staple wire feeding devices to intermittently feed the wire for the short staples, means for continuously operating all of said staple wire feeding devices, and instrumentalities to automatically control the grip of said devices on the wire, thereby to prevent the feeding of wire for the long staples when it is desired to drive short staples, and to prevent the feeding of wire for short staples when it is desired to drive long staples, without interrupting the driving motion of said devices.

1,562,413. METHOD OF MAKING WIREBOUND-BOX BLANKS. EDWARD CRAIG, St. Joseph, Mich., assignor to Saranac Automatic Machine Corporation, Benton Harbor, Mich., a Corporation of Delaware. Filed June 28, 1924. Serial No. 723,058. 8 Claims. (Cl. 1—8.2.)



1. A method of making wire-bound box blanks by securing sheets and cleats and binding wires together by machinery, comprising the feeding of loose or unattached cleats under one or more sheets of each blank, and the feeding of previously attached cleats under one or more sheets of each blank, thereby causing the sheet material to initially position some cleats in each blank, while requiring individual positioning of other cleats, so that for each blank there are some previously attached cleats which are carried along by the sheet material, and also some unattached cleats to be secured to one or more sheets by the machinery for making the blanks, maintaining the sheets and cleats in relative position while moving along, inserting staples to secure binding wires in place to flexibly connect the sections of the blank together and to secure both the attached and the unattached cleats to their respective sheets, so that some cleats are propelled by individual pressure on their rear ends, while other cleats are necessarily propelled by the sheet material.

1,562,414. HAND BLOCK FOR ABRASIVES, ETC. WILLIAM LESTER MCKNIGHT, St. Paul, Minn., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 14, 1922. Serial No. 600,831. 8 Claims. (Cl. 51—187.)



1. In a device of the character described, in combination, a block having complemental situated recesses in its opposite ends, and an abrasive element embracing one surface of the block and engaged in said recessed ends.

1,562,415. POLISHING AND WIPING IMPLEMENT. GEORGE A. NEWMAN, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed May 9, 1923. Serial No. 637,639. 4 Claims. (Cl. 31—187.)

1. A polishing and wiping implement comprising a rigid block, a block of resilient material secured to the

underside of said rigid block along a meridian line, said resilient block having slits in two opposite sides, pointed members carried by said resilient block and extending into

said slits, and a strip of material held upon said resilient block by said pointed members passing through edges of said strip inserted in said slits.

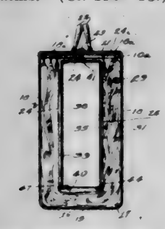
---

1,562,416. SAFETY DEVICE FOR CONVEYER SYSTEMS. FRANK B. PEEBLES, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Apr. 19, 1923. Serial No. 633,132. 18 Claims. (Cl. 104—114.)

2. A conveyer system comprising a pair of tracks, a pivoted switch point forming a continuation of one track and converging toward the other track, resilient means normally holding the free extremity of the switch point in contact with the last named track but permitting said switch point to move away from said last named track when engaged by a carrier moving along the latter track, and a member normally fixed as respects movements of the switch point and having a stop shoulder so positioned as normally to permit carriers to move freely along the switch point but to engage and stop carriers so moving when the free extremity of the switch point is swung away from normal position.

---

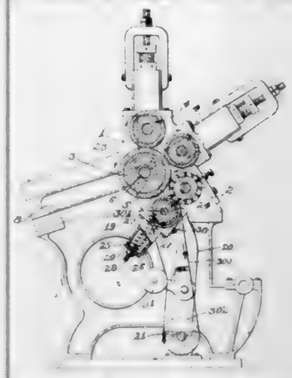
1,562,417. WARDROBE SUITCASE. HUGH J. SCHUCK, Des Moines, Iowa. Filed Apr. 2, 1923. Serial No. 629,331. 7 Claims. (Cl. 190—13.)



1. In a wardrobe suitcase of the class described, having bottom and side members hinged together to swing to position providing a flat bottom from end to end of the suitcase, an inner container member, and means at the ends of said suitcase for supporting said inner mmeber at its upper portion and at its bottom portion in position spaced above the bottom of the suitcase.

---

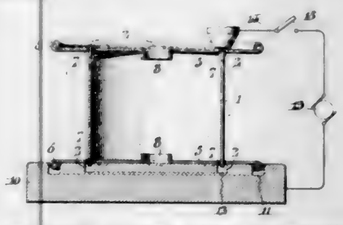
1,562,418. SPREADING ROLL FOR HIDE-WORKING MACHINES. DANIEL E. TENNEY, Woburn, Mass., assignor to Woburn Machine Company, Woburn, Mass., a Corporation of Massachusetts. Filed Apr. 20, 1925. Serial No. 24,406. 4 Claims. (Cl. 49—16.)



1. The combination with a working cylinder, and a work-support against which the working cylinder operates in acting upon a hide or skin, movable into working relations against said cylinder and separable therefrom to permit a hide or skin to be introduced between them, of a spreading roll by which the hide or skin is pressed against the surface of the working cylinder in advance of the squeeze between the work-support and said cylinder, and means for producing reverse rubbing and spreading action of said spreading roll upon the portion of hide or skin approaching said squeeze.

---

1,562,419. METHOD OF SECURING TOGETHER THE COMPONENT PARTS OF METALLIC SPOOLS OR REELS AND APPARATUS USEFUL TO THIS END. RUSSELL H. BOWEN, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 4, 1924. Serial No. 684,364. Renewed Sept. 11, 1925. 4 Claims. (Cl. 219—2.)

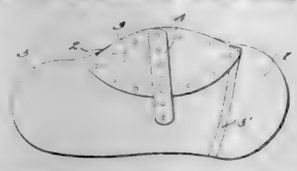


1. The herein described method of assembling an all metal spool or reel wherein the barrel portion is provided with tabs engaging through apertures of the end flange heads, which consists in electrically upsetting the protruding ends of the tabs by combined application of heat and pressure.

---

1,562,420. ARCH SUPPORT. AXEL ALFRID FRIBERG, Pawhuska, Okla.; Joseph D. Mitchell administrator of said Axel A. Friberg, deceased. Filed Sept. 7, 1923. Serial No. 661,474. 1 Claim. (Cl. 36—71.)

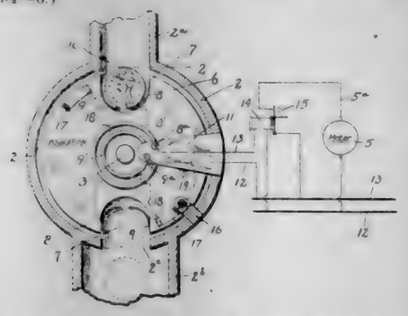
An arch support comprising a plate of flexible material shaped to fit the inner sole of a shoe and having an extension at its inner side which is curved upwardly, a sheet of resilient material secured to the under face of the plate and forming a cushion for the foot, an imperforated metal reinforcing plate connected with the curved part of the flexible plate and having its lower



edge overlapping the resilient sheet, and a transversely extending metal strip for reinforcing the metal plate, said strip being of curved formation and having its lower end extending beyond the lower edge of the metal plate and connected with the resilient sheet and the flexible plate.

---

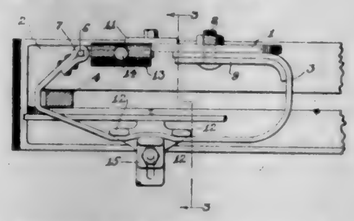
1,562,421. COIN-CONTROL MECHANISM FOR ELECTRIC CIRCUITS. ARTHUR W. HARRISON, Los Angeles, and FLOYD O. CHAFFEE, Eagle Rock, Calif., assignors to Fred J. Goggins, Los Angeles, Calif., and Frank W. Kinney, Chicago, Ill. Filed July 14, 1922, Serial No. 574,997. Renewed Oct. 5, 1925. 5 Claims. (Cl. 194—6.)



2. In a coin controlled circuit closer, a carrier having rings for constant contact with terminals of the given circuit, diametrically opposite sets of coin receiving contact members on said carrier, said members connected to the circuit rings on the carrier, the circuit being closed by an inserted coin engaging the opposed members of a set.

---

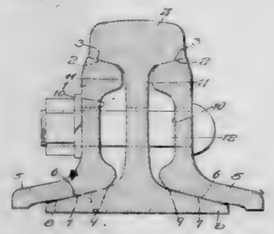
1,562,422. PICKER-STICK CHECK FOR LOOMS. SIMEON S. JACKSON, Boston, Mass., assignor to The Stafford Company, Boston, Mass., a Corporation of Massachusetts. Filed July 27, 1925. Serial No. 46,196. 5 Claims. (Cl. 139—165.)



1. A picker-stick check for looms comprising a hanger adapted to be mounted upon the lay-beam of a loom, a pintle carried by said hanger, and a check-strap forming a horizontal loop within which a picker-stick may move back and forth, said strap having at one end thereof an eye which fits upon the said pintle and is adapted to turn therearound so as to permit the adjacent portion of the strap to swing relative to the pintle, and said strap having the opposite end-portion thereof reversely bent into substantial parallelism with the intermediate length of the strap and fixedly engaged with the hanger.

---

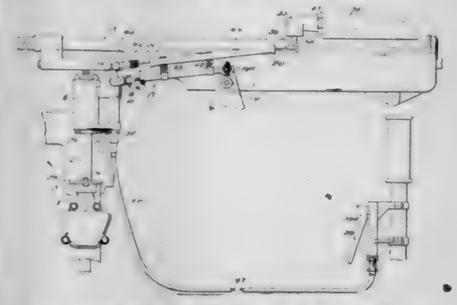
1,562,423. RAIL JOINT. GEORGE LANGFORD, Joliet, Ill. Filed Feb. 20, 1925. Serial No. 10,537. 6 Claims. Cl. 238—243.)



1. A rail joint comprising a pair of rail ends having substantially plane bearing surfaces forming a dihedral angle between them, and a bar having its upper and lower bearing surfaces lying in the planes of said bearing surfaces of the rail ends and in contact with said bearing surfaces, said bar being bowed from end to end, the ends of the bar extending inwardly further than the central part of the same.

---

1,562,424. CONTROL MECHANISM FOR AIRCRAFT GUNS. ADOLPH L. NELSON, Indianapolis, Ind. Filed June 6, 1919, Serial No. 302,278. Renewed Mar. 31, 1925. 64 Claims. (Cl. 89—27.)



1. In combination, an automatic gun, a firing mechanism for said gun, and a single shot mechanism controlling the operation of said firing mechanism, and means for operating said single shot mechanism synchronously with a given movable member.

45. In a gun control assembly, a gun firing synchronizing control motor comprising a casing, a driven shaft extending into said casing, a cam member within said casing and mounted to rotate with said shaft, a plunger slidably mounted in said casing and adapted to engage with said cam member, a lever mounted on said casing and adapted to be actuated by said plunger, and a slidably mounted detent member adapted to engage said lever and prevent the movement thereof.

47. In a gun control assembly, a gun firing synchronising control motor comprising a casing, a driven shaft extending into said casing, a cam member within said casing and mounted to rotate with said shaft, a plunger slidably mounted in said casing and adapted to engage with said cam member, a lever mounted on said casing and adapted to be actuated by said plunger, a slidably

mounted detent member adapted to engage said lever and prevent the movement thereof and hold it in one extreme position and not subject to actuation by said plunger, and a spring cooperating with said detent member to normally hold said detent member in engagement with said lever.

51. In a gun control assembly an impulse generator operatively connected to a trigger motor by an impulse connection member, an impulse connection member adjusting device comprising a receiving member having a screw-threaded opening, a movable screw-threaded member fitted for movement in said screw-threaded opening, a connection member extending into said movable member, means preventing rotation of the connection member with respect to the receiving member, and a shoulder on the connection member, said movable member adjusted to engage with said shoulder member whereby said connection member may be moved lengthwise with respect to said receiving member but not rotated thereto.

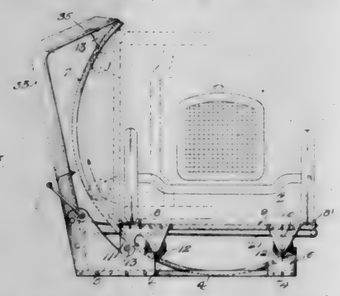
---

1,562,425. METHOD OF PURIFYING HYDROCARBONS. ADOLPH GREENSPAN, Minatitlan, Vera Cruz, Mexico. Filed Nov. 10, 1922. Serial No. 600,006. 1 Claim. (Cl. 196—19.)

A process of removing crystalline and amorphous wax from oil which consists in first causing crystallization of the crystalline wax at a temperature of between 80 and 90 degrees Fahrenheit by the addition of 15 to 20 per cent of kerosene, then mechanically separating the oil from the wax crystals, and then distilling off amorphous wax and kerosene from the separated oil until the residuum in the still is a high grade cylinder stock, substantially as described.

---

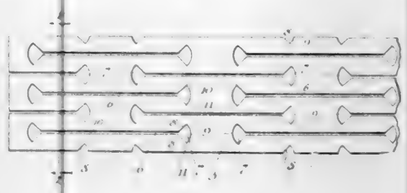
1,562,426. MOTOR-CAR STAND. FRANK G. ERICKSON and FRANK D. OLEY, Kenosha, Wis. Filed July 13, 1921. Serial No. 484,340. 4 Claims. (Cl. 214—1.)



1. In a motor car stand, the combination of a supporting frame comprising a pair of spaced tracks extending laterally and upwardly, a carriage thereon for supporting the motor car and having a pair of track wheels at each end thereof at opposite sides respectively of the carriage and means for moving the carriage laterally and upwardly on the tracks so as to tip up the car thereon sidewise and position the bottom in substantially an upright position.

---

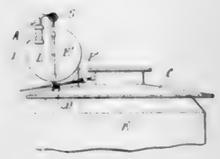
1,562,427. PLASTER-LATH CONSTRUCTION. JOHN WALLER, Los Angeles, Calif., assignor, by mesne assignments, to Flexo Common Lath Company, a Corporation of California. Filed Oct. 18, 1923. Serial No. 669,269. 9 Claims. (Cl. 72—116.)



4. A plaster wall board, comprising a sheet of flexible material having a plurality of slots formed therein, the ends of said slots being enlarged to form plaster keyways.

---

1,562,428. OIL-COOLED TRANSFORMER. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Nov. 8, 1920. Serial No. 422,465. 10 Claims. (Cl. 220—85.)



1. In an expansion system for air cooled transformers the combination with a main transformer tank, of a non-expansible tank receiving the overflow from said main tank and having a rigid closed top for trapping and holding a gas above the surface of said overflow and preventing outside air from having access to the surface of the overflow during the expansion of oil in said main tank.

---

1,562,429. CUTTING DEVICE. PHILIP H. UNSINGER, Fremont, Ohio, assignor to The Unsinger Manufacturing Company, Fremont, Ohio, a Corporation of Ohio. Filed Apr. 28, 1924. Serial No. 709,417. 7 Claims. (Cl. 30—3.5)

1. A cutting device comprising a tool, said tool embodying a plurality of simultaneously cutting edges, said cutting edges lying in a common plane, being of different lengths, and extending at different angles from the line or normal draft of the tool, and spaced from each other by a throat directly opposing one of said cutting edges.

mounted detent member adapted to engage said lever and prevent the movement thereof and hold it in one extreme position and not subject to actuation by said plunger, and a spring cooperating with said detent member to normally hold said detent member in engagement with said lever.

51. In a gun control assembly an impulse generator operatively connected to a trigger motor by an impulse connection member, an impulse connection member adjusting device comprising a receiving member having a screw-threaded opening, a movable screw-threaded member fitted for movement in said screw-threaded opening, a connection member extending into said movable member, means preventing rotation of the connection member with respect to the receiving member, and a shoulder on the connection member, said movable member adjusted to engage with said shoulder member whereby said connection member may be moved lengthwise with respect to said receiving member but not rotated thereto.

---

1,562,425. METHOD OF PURIFYING HYDROCARBONS. ADOLPH GREENSPAN, Minatitlan, Vera Cruz, Mexico. Filed Nov. 10, 1922. Serial No. 600,006. 1 Claim. (Cl. 196—19.)

A process of removing crystalline and amorphous wax from oil which consists in first causing crystallization of the crystalline wax at a temperature of between 80 and 90 degrees Fahrenheit by the addition of 15 to 20 per cent of kerosene, then mechanically separating the oil from the wax crystals, and then distilling off amorphous wax and kerosene from the separated oil until the residuum in the still is a high grade cylinder stock, substantially as described.

Patents Nos. 1,562,430 to 1,563,312.

THE
# OFFICIAL GAZETTE
OF THE
# United States Patent Office.

Vol. 340—No. 4. TUESDAY, NOVEMBER 24, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Interference Notices.

U. S. PATENT OFFICE, *Washington, Nov. 18, 1925.*

*Anne E. Rawlins, her assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Fitzpatrick Bros., 1319 West Thirty-Second Place, Chicago, Ill., for registration of a trade-mark and trade-mark registered May 3, 1910, No. 77,755, to Anne E. Rawlins, 2270 South Jefferson Avenue, St. Louis, Mo., and a notice of such declaration sent by registered mail to said Rawlins at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Rawlins, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 27, 1925.*

*International Shade Co., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Incandescent Supply Company, 468 West Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered June 24, 1913, No. 92,222, to the International Shade Co., 46 Harrison Avenue, Springfield, Mass., and a notice of such declaration sent by registered mail to said International Shade Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said International Shade Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 29, 1925.*

*Harry Leigh Curran, his assigns or legal representatives, take notice:*

An interference has been declared by this Office between applications for patents filed by Louis Carrol Howard, of 512 West One hundred and eighty-fourth Street, New York, N. Y., and Harry Leigh Curran, of 244 West Seventy-sixth Street, New York, N. Y. Counsel for Curran states that the present whereabouts of Curran is unknown to him. Notice is hereby given that unless said Curran, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 31, 1925.*

*Wallace M. Fewel, his assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Ivanhoe Fruit Association, Ivanhoe, Calif., for registration of a trade-mark and trade-mark registered July 22, 1924, No. 186,742, to Wallace M. Fewel, Centerville, Calif., and a notice of such declaration sent by registered mail to said Fewel at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Fewel, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

## Order of the Court of Appeals of the District of Columbia Relating to Motions, Etc.

COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

*October Term, 1925.*

It is by the court this day ordered, that on and after November 20th, 1925, all typewritten motions, petitions, and applications addressed to the court must be made in originals instead of original and carbon copies thereof, as heretofore allowed.

PER MR. CHIEF JUSTICE MARTIN.

November 9, 1925.

HENRY W. HODGES,
*Clerk.*

## Condition of Applications Under Examination at Close of Business November 13, 1925.

(Total number of applications awaiting action, excluding Trade-Mark Division, 39,883; Trade-Mark Division, 1,012. Oldest new case, Apr. 24, 1925; oldest amended, May 4, 1925. The dates given are 1925.)

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

### Ex parte Kleinman.

*Decided September 12, 1924.*

WITHDRAWAL FROM ISSUE.

Where a claim refused by the Examiners in Chief was canceled and only allowable claims remained, there was nothing for the Examiner to do but pass the case to issue, and a petition to withdraw the case to give the present attorney further opportunity to study it with a view to amendment was denied, although a letter requesting that allowance be withheld had been received by the Office before the case was passed to issue, but through mistake had not been sent to the Examiner.

ON PETITION.

INSULATED SUPPORT FOR LIGHT REFLECTORS.

*Mr. Harry Jacobson* for the petitioner.

ROBERTSON, *Commissioner:*

Applicant has requested that the allowance of this case be withdrawn that further opportunity may be given the present attorney to study the case with a view to further amendment in order to adequately protect the invention. This request was filed on August 26th, notice of allowance having been dated August 15th.

It appears that appeal was taken by the then attorneys and that the Examiners in Chief affirmed the Examiner as to one claim and reversed him as to another. Thereafter a new claim was presented, the entry of which was recommended by the Examiners in Chief, and the claim as to which the Examiner was affirmed was canceled. In this state of the record there was nothing for the Examiner to do but pass the case to issue.

The letter from the present attorney, which was received on August 7th, requesting that the allowance be withheld was through mistake not sent to the Examiner, presumably because it had gone to the Manuscript Division in view of the request for copies. However, this fact is immaterial, since, the rejected claim having been canceled, there was no reason for withholding the allowance of the application.

Applicant has his remedy either by proceeding under rule 78 or by allowing the case to forfeit and renewing it.

The petition is denied.

---

### Ross *v.* Tesse.

*Decided September 30, 1924.*

INTERFERENCE—REOPENING AFTER FINAL DECISION TO ADD COUNT ALREADY REFUSED BY LAW EXAMINER—SECOND INTERFERENCE.

Where the Law Examiner denied a motion by T. to add claim 5 of R.'s patent on the ground that T.'s application did not disclose that the substances employed by him had certain properties, and no appeal was taken or request made to extend the limit of appeal, and where after the interference was finally decided in favor of T. he moved that the interference be reopened or a new interference be declared to include R.'s claim 5, alleging that after the decision of the Law Examiner the principal attorney asked T. if the properties in question were inherent in the substances specified in his application and a letter from T. stating that they did was received by the principal attorney, but through oversight was not sent to the associate attorney, and it was not until after the final decision that it was discovered that claim 5 was not in the issue, *Held* that it was incumbent upon T. to have taken the proper steps to lay the facts before the Law Examiner, and the showing was insufficient to excuse the long delay.

ON PETITION.

COATED AEROPLANE CLOTH AND PROCESS OF MAKING SAME.

*Mr. Frederick S. Duncan* for Ross.

*Mr. A. B. Foster* for Tesse.

ROBERTSON, *Commissioner:*

The party Tesse moves that this interference be restored to the jurisdiction of the Examiner of Interferences with directions either to declare a new interference between the same parties on the subject matter of claim 5 of the Ross patent or reopen the old interference as regards that claim.

The record shows that a motion to amend the issue of the interference was filed, which was denied by the Law Examiner as to a count corresponding to count 5 of the Ross patent on the ground that Tesse's application did not disclose that the substances employed by him would preserve the cellulose ester from disintegration under the action of sunlight and weather, as specified in that claim. No appeal was taken from this decision, nor was there any request made to extend the limit of appeal. The interference was redeclared and was finally decided in favor of Tesse on the counts included on April 29, 1924.

In support of the motion it is alleged that after the decision of the Law Examiner the principal attorney for Tesse communicated with his client to ascertain whether the substances specified in his application had the property stated and that he received a letter from Tesse stating that they did on September 29, 1923; that through some oversight this letter was not communicated to the associate attorney, who had direct charge of the interference, and that no action was taken with respect to claim 5 of the Ross patent, and that it was not until after the final decision and the attorney was examining all of the applications of Tesse relating to this general subject matter that it was ascertained that claim 5 of the Ross patent was not included in the issue of the interference. It is urged that Tesse is entitled to a claim even broader than claim 5 of the Ross patent, and under the circumstances the interference should be reopened, so that Tesse may have a judgment of priority as to this claim 5, especially as no testimony was taken on behalf of Ross.

The showing made is not deemed sufficient to warrant the reopening of the interference or the

declaration of a new interference. It was clearly incumbent upon Tesse, if he deemed that the property stated was not inherent property to the substances specified in the Tesse application, to have taken proper steps to lay those facts before the Law Examiner, and he could have asked that the limit of appeal be suspended to give him an opportunity to produce this evidence. It further appears that long before the final decision Tesse's attorney was in possession of a letter from Tesse alleging that the substances had this property, and the statement that this letter was not called to the attention of the associate attorney is not sufficient excuse for the long delay in taking any steps toward getting this matter before the Office.

The petition is denied.

---

EX PARTE HARRISON.

*Decided December 11, 1924.*

1. ASSIGNMENTS—CONFLICTING—ISSUE OF PATENT.

This Office can not decide between conflicting assignments and can only issue the patent to the inventor, leaving the question of the title to be determined by a court of competent jurisdiction.

2. SAME—ASSIGNEE OF HALF INTEREST—INSPECTION OF FILE.

As an assignee of a half interest M. has the right either himself or by his attorney to inspect the file of the application.

3. SAME—SAME—PROTECTION OF RIGHTS OF ASSIGNEE OF HALF INTEREST.

If it should appear at any time that the application is not being prosecuted so as to save it from abandonment or if, in his opinion, the application is not being properly prosecuted so as to protect his interests, the party M. (assignee of half interest) can file a petition to be allowed to control the prosecution.

4. REVOCATION OF POWER OF ATTORNEY—AMENDMENT RECEIVED SAME DAY FROM ATTORNEY WHOSE POWER IS REVOKED.

Where an amendment filed by the attorneys of record is received on the same day as the revocation of their power of attorney and the appointment of new attorneys and before acceptance of the revocation, the Examiner should enter the amendment and take such action as may be necessitated thereby, communicating with the new attorneys.

5. PETITIONS—ORAL HEARINGS.

It is not customary to set for hearing a petition by an assignee of a part interest, protesting, through his attorneys, against the revocation of their power of attorney, which was originally given by the applicant.

ON PETITION.

PAPER MAKING.

*Messrs. Rummler & Rummler* for Harrison.

*Messrs. Emery, Booth, Janney & Varney* for Millspaugh.

ROBERTSON, *Commissioner:*

William H. Millspaugh, who is an assignee of record of a half interest in the above-entitled application, protests through his attorneys, Emery, Booth, Janney & Varney, against the revocation of their power of attorney, which was originally given by the applicant.

The record shows an assignment by the applicant of a half interest to Millspaugh and an assignment by the applicant of the entire interest to Drying Systems, Inc. The applicant, Harrison, has revoked the power of attorney given by him to Emery, Booth, Janney & Varney and appointed new attorneys, which revocation and appointment of the new attorneys is also signed by Drying Systems, Inc.

[1] Under the rules the assignee of an entire interest is entitled to control the prosecution of the application, but the assignee of the part interest is not. This Office can not decide between conflicting assignments and can only issue the patent to the inventor, leaving the question of the title to be determined by a court of competent jurisdiction.

The protest of Millspaugh is therefore overruled.

[2, 3] As an assignee of a half interest Millspaugh has a right either himself or by his attorneys to inspect the file of the application. If it should appear at any time that the application is not being prosecuted so as to save it from abandonment or if, in his opinion, the application is not being properly prosecuted so as to protect his interest, the party Millspaugh can file a petition to be allowed to control the prosecution.

[4] On the day that the new power of attorney was received an amendment was filed by the former attorneys putting in the claims suggested by the Examiner in the letter of November 3. As this amendment was received on the same day as the revocation of the power of attorney and before the revocation was accepted, the Examiner should enter this amendment and take such action as may be necessitated thereby, communicating, of course, with the new attorneys.

[5] An oral hearing is requested on the petition; but it is not customary to set petitions of this kind for hearing, and no reason is found for making an exception in this case.

The petition is denied without prejudice to the right of Millspaugh to renew the same if at any time, in his opinion, the condition of the case may justify so doing.

---

INTERNATIONAL SHOE COMPANY *v.* NIAGARA SHOE COMPANY, INC.

*Decided June 26, 1925.*

TRADE-MARKS—GRADE MARKS USED IN CONNECTION WITH—"NIAGARA."

The use of the word "Niagara" by appellant as a grade mark for shoes in connection with the trade-mark "Diamond" did not constitute a trade-mark use of the word "Niagara."

APPEAL from Examiner of Interferences.

Application for cancellation No. 1,046 of trade-mark registration of the Niagara Shoe Company, Inc., March 4, 1924, No. 180,826, for shoes of leather.

*Mr. M. S. Meem* for International Shoe Company.

*Messrs. Milans & Milans* for Niagara Shoe Company, Inc.

ROBERTSON, *Commissioner:*

This is an appeal from the decision of the Examiner of Interferences denying appellant's petition for the cancellation of the registrant's trade-mark "Niagara," registered under the act of March 19, 1920, as a trade-mark for shoes, as shown by Certificate No. 180,826, March 4, 1924.

Appellant alleges that the registrant was not entitled to registration by reason of the use of the mark by appellant earlier than any date of use claimed by the registrant.

It appears from the testimony submitted in behalf of appellant that the Peters Shoe Company, predecessor of appellant, used the word "Niagara" as a name of certain styles of its shoes in 1906 (R. p. 24). Appellee has taken no testimony, but rests its case on the alleged failure of appellant to establish a case for cancellation. The carton label, appellant's Exhibit No. 4, shows at the left thereof the trade-mark comprising a diamond-shaped outline inclosing the words "Peters Shoe Co.'s Diamond Brand, St. Louis," arranged in four horizontal lines, the word "Diamond" in larger type than the other words, occupying the position of the longer diagonal of the outline. To the right of the trade-mark appears the word "Peters" in very large script and under the latter in much smaller type the word "Niagara."

It clearly appears from appellant's testimony that the name "Niagara" was used as a style or grade mark, together with 35 or 40 other names, as set forth in the following testimony of James K. Stribling, advertising manager of the International Shoe Company:

X Q. 26. You have other lines of shoes besides the "Niagara?"

A. Yes, we have a number of different names.

X Q. 27. How many?

A. Probably forty or fifty of them. Thirty-five or forty, anyhow, different names.

X Q. 28. Why do you have so many different names?

A. It designates the different grades and styles of shoes. We have several names, for instance, for work shoes—the higher grades and medium grades—and the same thing obtains in the men's, women's and children's styles.

Nowhere does it appear in the testimony that the word "Niagara" alone was ever used as a trade-mark. It is true that Stribling testified (Q. 55) that the name "Niagara" was stamped on the sole and when used with the word Peters the stamp reads (X Q. 14), "Peters Niagara Shoes." No exhibit of a shoe so stamped is in the record. Moreover, it does not appear that the stamp "Peters Niagara Shoes" was regarded as a trade-mark by appellant, as Stribling testified (X Q. 18) that "no shoes go without something to indicate Diamond Brand mark except a few of the novelties," and that the Niagara line is not a novelty shoe.

This case is governed by the case of *The Touraine Co.* v. *F. B. Washburn & Co.*, 52 App. D. C. 356; 309 O. G. 676; 1923 C. D. 174–177, in which it was held that the use of the word "Touraine" as a grade mark of a candy mixture used in connection with the trade-mark "Waleco" by the opposer did not constitute a trade-mark use of the word "Touraine." The court said:

Considering all these facts we are satisfied that the opposer never used, or thought of using, the word as a trade-mark until Minor appeared upon the field, and that was many years after the applicant had adopted and applied it to its entire output. It was used by the opposer to indicate the character of the chocolate, not the origin of it. The distinction between a technical trade-mark and a device to denote style or quality is pointed out in *Lawrence Mfg. Co.* v. *Tennessee Mfg. Co.* (55 O. G. 1526; 1891 C. D. 415; 138 U. S. 537) and *Columbia Mill Co.* v. *Alcorn* (65 O. G. 1916; 1893 C. D. 672; 150 U. S. 460). The mere use of a word as a trade-mark does not prove likelihood of damage to one who uses the mark in another capacity, for instance, as a grade indicator. Since opposer has no other proof of probable damage its opposition should have been dismissed.

In the case of *Theo. Weiss & Co., Inc.*, v. *Stuart, Keith & Co., Inc.*, 335 O. G. 540, the court of appeals held that the appellee's use of the words "Just Like Dads" to distinguish certain garments as being different from its other line of goods, did not constitute trade-mark use of these words.

The decision of the Examiner of Trade-Mark Interferences denying the petition for cancellation is affirmed.

---

EX PARTE MARKUSH.

*Decided July 9, 1924.*

1. CLAIMS—UNDUE BREADTH OF—GENERIC TERMS WHICH INCLUDE ELEMENTS OR SUBSTANCES WHICH APPLICANT HAS NOT FOUND USEFUL—SUBGENERIC TERMS.

Where a generic term covering a number of substances can not be properly employed in a claim because many of the substances included under that broad generic term can not be used in the combination stated, there can be no objection to the use of a true subgeneric term which includes those elements which the applicant has found useful in the combination and excludes those which are not.

2. SAME—SAME—SAME—GENERIC TERM LIMITED BY EXPLANATORY TERMS.

If there is no known subgeneric term, an applicant may employ a generic term limited by explanatory terms in the absence of anticipating art.

3. SAME—LANGUAGE OF—WAIVER OF TECHNICAL RULES.

Where the validity of the claim is not involved, the paucity of the language may necessitate a waiver of technical rules of this Office, to the end that an applicant may properly protect his real invention.

4. SAME—SAME—SAME—COINED EXPRESSIONS.

Where a generic term covering a number of substances can not properly be employed in a claim, and no way except by coining a subgeneric expression can be seen of covering the real invention without filing a number of applications, and it is possible that the substances are so closely related that they would not support a series of patents, *Held* that the applicant should be permitted to use such expression or otherwise adequately cover his invention and not be forced to unduly limit his claims and then rely upon the doctrine of equivalents for his proper protection.

[Note.—This application has resulted in Patent No. 1,506,316, Aug. 26, 1924.]

Application for patent.

ON PETITION.

PYRAZOLONE DYES AND PROCESS OF MAKING THE SAME.

Application filed January 9, 1923, No. 611,637.

*Messrs. Stockbridge & Borst* for the applicant.

KINNAN, *First Assistant Commissioner:*

This is a petition from the action of the Examiner objecting to the form of certain claims.

As the Examiner points out, the petition is premature, since he had not made a second action on

the claims as now presented. However, as he does not indicate in the answer to the petition any willingness to withdraw his objection the petition will be considered.

In the application as filed it is stated that the applicant has discovered that a diazo compound of aniline or its homologues or the halogen substistutes thereof may be coupled with halogen substituted pyrazolones to produce dyes which are exceptionally fast. The original claims included a diazotized solution of aniline or its homologues or halogen substitutes.

The Examiner objected to these claims as being alternative. Thereupon there was substituted, in place of the expression above referred to, the term "mono-amine". The Examiner objected to the amended claims as being too broad, because the term "mono-amine" would cover aliphatic mono-amines, pyridine mono-amines, etc., which would not work in the combination stated, and on the further ground that only anilin and its homologues were disclosed in the original description. Thereupon the phrase was substituted "material selected from the group consisting of aniline, homologues of aniline and halogen substitutes of aniline". It is to this last phrase that the objection was made from which the petition is brought.

In his answer the Examiner states that the term objected to is a mere evasion of the alternative form without avoiding the real alternativeness, and the expression is not a generic one. This holding is based on the ground that a genus is a broad class name based on some general distinguishing properties or characteristics possessed in common by a class of things or substances and embraces all other substances possessing these characteristics—for example, acid and alkali—and that this is not true of the expression in question.

The Examiner raises a further question, stating that it is doubted that a chemist would recognize that a chlorine substitution product of aniline that a chlorine substitution product of analine could replace anilline in the reaction.

There are many instances in which a generic term covering a number of substances can not properly be employed in a claim, because many of the substances included under that broad generic term can not be used in the combination stated. The term "mono-amine," which the Examiner admits is a true generic expression, is an example of such an expression, for, as stated above, the Examiner has held that the term includes aliphatic mono-amines, and pyridine mono-amines, which will not work in the combination stated.

[1, 2, 3] In cases such as above referred to if there is a true subgeneric term which would include those elements which the applicant has found useful in the combination and excludes those which are not there could be no objection to the use of such a term. Obviously any generic term covers more than one element; but the use of such a term does not render a claim alternative. If there is no known subgeneric term, it is not seen why any applicant may not employ a generic term limited by explanatory terms in the absence of anticipating art. Such terms must be read in the light of what is disclosed. Where the validity of the claim is not involved, the paucity of the language may necessitate a waiver of technical rules of this Office, to the end that an applicant may properly protect his real invention. The Examiner has not helped the petitioner by suggesting a satisfactory term. In place of the expression originally used, which the Examiner objected to as alternative, applicant substituted a generic term, which was objected to as too broad, and he is now attempting to coin a subgeneric expression—viz, a group comprising certain substances.

[4] It is not seen in what other way an applicant, in a case such as the present, may cover his real invention without filing a number of applications, and it may well be that the substances named are so closely related that they would not support a series of patents. An applicant should be entitled to adequately cover his invention and not be forced to rely upon the doctrine of equivalents for his proper protection. If, as the Examiner states, there is nothing to indicate that the chlorine products of aniline could replace aniline in the reaction described in this application, it may be that the subgeneric term sought to be used is too broad, just as the term "mono-amine" was held to be, and that applicant would have to substitute for the expression used the expression "material selected from a group consisting of aniline and homologues of aniline." This question, however, is not before me at this time and is one which will have to be determined by the Examiner. If there is no objection to the inclusion of the term "halogen substitutes of aniline", then it is not seen that the phrase to which the Examiner objects is, in fact, objectionable. The Examiner, therefore, should withdraw the objection to the claims as being in effect alternative or should require the applicant to limit his subgeneric term properly.

It may be noted that in another division of this Office claims of this character have been allowed (see Patents Nos. 1,472,048 and 1,486,635). Nor is it seen that in principle these claims are any different from the claims which were allowed in Patent No. 901,675, in which the letter R is used in a chemical formula as standing for $CH_3$ or COOH, and it is understood that claims of the type shown in that patent have frequently been allowed.

The petition is granted to the extent indicated.

---

## EX PARTE THE GREENING NURSERY COMPANY.

*Decided June 4, 1925.*

1. TRADE-MARKS—DEFINITION OF.
   A proper trade-mark must be a name, device, or symbol which expresses and identifies either origin or ownership of the goods to which it is applied.
2. SAME—USE OF MARK TO IDENTIFY BREED OF ANIMALS OR VARIETY OF PLANTS—"AUSTRIAN PRUNE PLUM."
   A trade-mark can not be sustained for an organic article, such as a species of grapevine, which, by the law of its nature, is reproductive, for the reason that after the goods are sold they may be used to reproduce their kind, and those purchasing the original goods and obtaining reproductions of them would have the right to designate such reproductions by the recognized name of the species and sell them to others under such distinguishing name.
3. SAME—SAME—TRADE-MARK LAW OF 1920.
   The trade-mark law of 1920 does not afford protection to the party who produces an improved species of fruit or vegetable.

ON APPEAL.

Application for registration of trade-mark for fruit trees, scions, grafts, etc., filed July 12, 1923, Serial No. 183,111.

*Messrs. Robb, Robb & Hill* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration, sought under the act of March 19, 1920, of the notation "Austrian Prune Plum," used upon fruit trees, scions, grafts, cuttings, stocks, and roots.

The Examiner rested his decision upon the ground that the notation constituted the name of a specific variety of plum and of the fruit trees, scions, and grafts thereof from which these plums are produced. This being true, the notation was denied registration in view of the ruling announced in the case of *Hoyt et al. v. J. T. Lovett Co.*, 71 Fed. 173, C. C. of App. 7th Cir. In that case the registrants, James and Edwin Hoyt, sued the Lovett Company for infringement of the registered trade-mark "Green Mountain Grape," as used upon a variety of grapevines. The court found the complainants were not the first to adopt and use the mark and also held the mark a geographical name, and in consequence not a proper trade-mark under the law as it existed at the date of that decision. The point of this adjudicated case which is pertinent to the case here on appeal rests in the holding that a trade-mark can not be sustained for an organic article, such as a species of grapevine, which, by the law of its nature, is reproductive. The court noted that if such a trade-mark could be sustained a breeder of cattle could with equal propriety and reason demand like protection for the increase of his herd. Appellant corporation, however, contends its case falls under the ruling of the court in *Stark Bros. Nurseries & Orchards Co. v. Stark et al.*, 248 Fed. 154, U. S. D. C., W. D. M. The Examiner distinguished this latter case by noting that the mark was there applied to fruit trees, fruit plants, and ornamental trees generally as a class, and not, as in the Hoyt case, as the name of a specific variety of fruit tree. The Examiner compared appellant's case to one where the name of a particular breed of cattle or sheep was sought to be registered as a trade-mark.

There are two questions presented here for review. The first question is whether the notation constitutes a trade-mark, has been or is used in a trade-mark sense to indicate origin or ownership. The second question is as to the effect of the act of March 19, 1920, upon the instant case and the cases above cited, which latter were adjudicated prior to the passage of said act.

[1, 2] Regarding the first question, the statutes do not define what a trade-mark is, but leave those seeking a definition to find it in the common law. *Illinois Watch Case Co. et al. v. Elgin National Watch Co.*, 87 O. G. 2323; 1899 C. D. 386; 94 Fed. 667, C. C. App. 7th Cir. The United States Supreme Court, however, has very well indicated what are the necessary elements of a proper trade-mark. That Court has made it very plain that the mark must be a name, device, or symbol which expresses and identifies either the origin or ownership of the goods to which it is applied. *Canal Company v. Clark*, 13 Wall. 311; *Columbia Mill Co. v. Alcorn*, 65 O. G. 1916; 1893 C. D. 672; 150 U. S. 460. The goods to which appellant applies its mark are properly designated merchandise when removed from the soil or other fixed environment; but after they are sold they, like the cattle or the sheep, may be used to reproduce their kind, and those purchasing the original goods and obtaining reproductions of them would have the right to designate such reproductions by the recognized name of the species and sell them to others under such distinguishing name. Thus still others could do as the first purchasers did and so on indefinitely. In this way the appellant would no longer have the exclusive right to use in commerce the notation here sought to be registered as a trade-mark. In the case of the *United Drug Co. v. Theodore Rectanus Co.*, 257 O. G. 1082; 1918 C. D. 389; 248 U. S. 90, the United States Supreme Court noted that—

> the function of a trade mark is simply to designate the goods as the product of a particular trader and to protect his good will against the sale of another's product as his.

Again, in the case of *Prestonettes, Inc., v. Coty*, 326 O. G. 246; 1924 C. D. 508; 264 U. S. 359; 44 Supreme Court Rep. 350, that same Court held that

> a trade mark owner has the right to prohibit the use of the mark so far as to protect the owner's good will against the sale of another's product as his.

It seems quite apparent that under the conditions above referred to appellant is unable to qualify, as indicated in these last two decisions, by *preventing others from selling the same species of fruit trees, grafts, cuttings, etc., under the same name appellant applies to this class of goods.* Appellant's notation is but the name of a particular variety of fruit-bearing plant. The latter would be sold for the express purpose of reproducing its kind, and, in the hands of its purchaser, appellant could not in any way prohibit such purchaser from calling his new plants by this same name and selling them to third parties *under such title.* It would appear plain enough appellant has not had and can not have trade-mark use of the name of a variety of plants. The decision relied upon by the Examiner seems controlling here, as well as does the logic of the law of trade-marks.

[3] The second and remaining point to be considered is whether the act of March 19, 1920, under which registration is sought and which has been held not to deny registration to geographic

and descriptive marks, affords any basis for the registration of the notation here under consideration. It is apparent, without argument, that there is nothing in this act which changes the situation so far as appellant's case is concerned. When some improved species of fruit or vegetable is produced, after the laborious and costly experimenting that is necessary for such production, there should be some way to extend protection to the party who has created this beneficial food; but it is believed the trade-mark law does not afford such protection.

The decision of the Examiner of Trade-Marks is affirmed.

---

EX PARTE GALLAHER LIMITED.

*Decided July 8, 1925.*

1. TRADE-MARKS—NAME OF INCORPORATED INSTITUTION, ORGANIZATION, CLUB, OR SOCIETY—ACT OF 1905 AS AMENDED JANUARY 8, 1913.

For the purpose of protecting an incorporated institution, organization, club, or society from whatever inconvenience or possible injury that might result from the registration of its name the act of 1905 as amended January 8, 1913, prohibits such registration.

2. SAME—SAME—CONVENTION FOR THE PROTECTION OF INDUSTRIAL PROPERTY.

Such incorporated body does not possess any such rights as were contemplated by the Treaty of 1911, adopted at the Convention for the Protection of Industrial Property, which refers to rights in regard to commerce.

3. SAME—ACT OF 1920—REGISTRATION IN ENGLAND—"ROTARY."

Registration by the applicant in England of the notation "Rotary," applied to tobacco, cigars, and cigarettes, entitled it to registration in this country under the act of 1920.

4. SAME—SAME.

The bar of registration of corporate names, found in the act of 1905, is not carried forward into the 1920 act if the interpretation of such act as set forth in the opinion of the Solicitor of the Department of the Interior, 1920 C. D. 89, is correct.

ON APPEAL.

Application for registration of trade-mark for smoking, chewing, and snuffing tobacco, cigars, and cigarettes, filed December 29, 1924, Serial No. 207,348.

*Mr. Chauncey P. Carter* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks refusing registration of the notation "Rotary," applied to tobacco, cigars, and cigarettes, Class 17, Tobacco products.

The application is made under the provisions of the Trade Mark Act of March 19, 1920, and registration has been denied under the clause of section 5 (*b*) of the Trade Mark Act of February 20, 1905, as amended January 8, 1913, which states that registration will be denied any name—

adopted by any institution, organization, club, or society which was incorporated in any State in the United States prior to the date of adoption and use by the applicant.

Applicant has obtained registration in the country in which it is domiciled April 19, 1906, and has presented an affidavit of its managing director to the effect that such applicant company has used the mark in its business "since the 1st of December, 1906." There is no allegation of use of the mark in trade with the United States or between the States thereof. The allegation of use of the mark in commerce with the United States or among the States thereof is not necessary to registration where an applicant domiciled in a foreign country has already obtained registration in such country. It is true that the Treaty of 1911, adopted at the "Convention for the Protection of Industrial Property," to which Convention Great Britain was a party, Article VI, states:

Every trade mark regularly registered in the country of origin shall be admitted to registration and protection in the form originally registered in the other countries of the Union.

However, there may be refused or invalidated:

1. Marks which are of a nature to infringe rights acquired by third parties in the country where protection is claimed.

[1, 2] The 1905 act as amended January 8, 1913, prohibits registration, as above noted, for the purpose of protecting an incorporated organization, club, or society from whatever inconvenience or possible injury thhat might result from the registration of its name by some party as a trade-mark. It is not believed, however, that such organization, club, or society possesses any such "rights" as were contemplated by the treaty. The treaty would appear to refer to rights in regard to commerce.

[3] There is nothing in the act of 1920 which changes the law of 1905 as amended January 8, 1913, so far as the instant case is concerned. It is believed the registration in England by the applicant entitles it to registration in this country.

[4] The bar of registration of corporate names, found in the act of 1905, is not carried forward into the 1920 act if the interpretation of such act as set forth in the opinion of the Solicitor of the Department of the Interior, 277 O. G. 181, 1920 C. D. 89, is accepted.

The decision of the Examiner of Trade-Marks is reversed.

---

EX PARTE BRUBAKER.

*Decided April 27, 1925.*

DESIGNS—IDENTITY OF—TESTS FOR.

Sameness of appearance to the eye of an ordinary observer, not mere difference of lines or slight variation in configuration, is the test that determines identity of design.

APPLICATION for design patent.

ON APPEAL from Examiners in Chief.

DESIGN FOR TIRES.

Application filed October 7, 1921, No. 506,209.

*Mr. Albert E. Dieterich* for applicant.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiners in Chief affirming the Primary Examiner in rejecting an application for patent for a design for tires.

The reference relied on is design Patent No. 55,600 to Follen, granted July 6, 1920.

It seems clear that applicant has merely taken the elements of Follen's tire and slightly rearranged them. The crosslike depressions in Follen are arranged opposite each other. Applicant has taken the same crosslike depressions and staggered them. I agree with the Examiners in Chief that this does not require invention.

Applicant has made elaborate measurement calculations based on the applicant's drawings and the Follen patent. It may be admitted that they are not identical, but it is hard to distinguish one from the other by the eye unaided by a measuring stick, which few members of the general public will employ. One seeing the Follen tire will carry a visual memory which will respond to the Brubaker tire.

Sameness of appearance to the eye of an ordinary observer, not mere difference of lines or slight variation in configuration, is the test that determines identity of design. *Inflexible Co.* v. *Meyibow*, 251 Fed. 924. Not—

by a close comparison of the two articles; but the test is whether the ordinary observer could purchase one, believing it to be the other.

*Ashley* v. *Weeks-Numan Co.*, 220 Fed. 899; *Bush & Lane Piano Co.* v. *Becker Bros.*, 209 Fed. 233. The test is the same as when comparing trade-marks. See, also, *North British Rubber Co., Ltd.*, v. *Racine Rubber Tire Co.*, 271 Fed. 936.

Affirmed.

## TRADE-MARKS CANCELED.

113,818. Candy. The Snyder-Chaffee Company, Columbus, Ohio. Registered October 31, 1916. Canceled October 27, 1925.

153,869. Ammonium sulphoichthyolate. Standard Oil Company, (Incorporated in New Jersey), Bayonne, N. J., and New York, N. Y. Registered March 28, 1922. Canceled November 11, 1925.

162,553. Timber-joint plates. Midwest Steel & Supply Company, Inc., New York, N. Y. Registered December 19, 1922. Canceled November 11, 1925.

173,044. Artificial fish baits. Water-Witch Company, Lake Odessa, Mich. Registered September 11, 1923. Canceled November 11, 1925.

187,064. Applicators containing medicaments. Cook Laboratories, Inc., Chicago, Ill. Registered July 22, 1924. Canceled November 11, 1925.

188,861. Ampuls or carpules containing medicaments. Cook Laboratories, Inc., Chicago, Ill. Registered September 2, 1924. Canceled November 11, 1925.

191,817. Chocolate. Eline's Incorporated, Milwaukee, Wis. Registered November 18, 1924. Canceled November 11, 1925.

199,453. Lumber. American Wood Impregnation Corporation, New York, N. Y. Registered June 9, 1925. Canceled November 11, 1925.

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,421,412, Cory and Gray, Friction lining, decided October 16, 1925, claim 8.

Pat. 1,464,322, F. A. Kolster, Radio receiving method and apparatus, decided October 14, 1925, claims 1 to 4, inclusive.

Pat. 1,477,587, A. T. Perkins, Crushing machine, decided October 15, 1925, claims 1, 3, 4, 5, 6, and 8.

## Disclaimers.

1,131,361.—*Frederick Laren Gallup*, Media, Pa. PROCESS OF MAKING GRANULAR NITRATE OF AMMONIA. Patent dated March 9, 1915. Disclaimer filed October 28, 1925, by the assignee, *E. I. du Pont de Nemours and Company*.

Hereby enters its disclaimer to such parts of the thing patented as it does not choose to claim or to hold by virtue of the above-mentioned patent or assignments as follows:

To the process specified in claims 1 and 3 as applied to the production of small, fine grains of ammonium nitrate.

1,492,329.—*James S. Lang*, Watertown, Mass. SHOCK ABSORBER. Patent dated April 29, 1924. Disclaimer filed October 24, 1925.

Hereby enters this disclaimer to the said claims 1, 2, 6, and 7 of said patent.

1,540,548.—*George F. Downer*, Cleveland, Ohio. PROCESSES OF PRODUCING STORAGE BATTERIES. Patent dated June 2, 1925. Disclaimer filed November 11, 1925, by the patentee.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit, claim 1:

"1. The process of producing a storage battery plate which contains the steps of pasting a grid with a paste of lead oxide and water and subsequently immersing the same prior to any material drying and while the surface pores are full of water, in a solution of sulphuric acid having a specific gravity between about 1.050 and about 1.300 until the paste is sufficiently sulphated."

# TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 24, 1925.

[VOL. 340. No. 4.]

**The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.**

**As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.**

Ser. No. 136,391. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) BUFFALO WEAVING & BELTING CO., Buffalo, N. Y. Filed Aug. 24, 1920.

"Buffalo" Quality

No claim is made for the word "Quality."

*Particular description of goods.*—Woven Trunk Straps, Woven Razor Straps, Woven Skate Straps, and Woven Bag Straps.

*Claims use* since Aug. 2, 1920.

Ser. No. 164,706. (CLASS 39. CLOTHING.) C. R. HAZZARD, Seattle, Wash. Filed May 31, 1922.

NAIL
FILE TEST
PURE-THREAD
SILK

Registration rights in the words "Nail File Test Pure-Thread Silk" are disclaimed apart from the mark shown in the drawing.

*Particular description of goods.*—Hosiery.

*Claims use* since May 18, 1922.

Ser. No. 170,898. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HOGE EDMUNDSON RICHARDSON, doing business as Rite-Wa Cleaning Co., Washington, D. C. Filed Oct. 18, 1922.

RITE-WA

*Particular description of goods.*—Cleanser of Rugs, Draperies, Upholstered Furniture, Dress Goods, Silk Blankets, etc.

*Claims use* since July, 1919.

Ser. No. 173,627. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) DE ZENG STANDARD CO., Camden, N. J. Filed Dec. 21, 1922.

TRULITE

*Particular description of goods.*—Eye-Examining Instruments—Namely, Ophthalmoscopes, Retinascopes, Illuminators, Transilluminators, Perimeters, Optometers, Phorometers, Phoroptors, and Light Screens.

*Claims use* since about Nov. 29, 1922.

Ser. No. 187,662. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE CALORIZING COMPANY, Pittsburgh, Pa. Filed Oct. 30, 1923.

CALCO

*Particular description of goods.*—Recuperators and Air Heaters.
*Claims use* since October, 1920.

---

Ser. No. 187,890. (CLASS 15. OILS AND GREASES.) CLIFFORD H. WAGONER, Zanesville, Ohio. Filed Nov. 2, 1923.

"The High Test Gasoline" appearing on the drawing and being descriptive of the goods are disclaimed apart from the mark shown.
*Particular description of goods.*—Gasoline.
*Claims use* since June 1, 1923.

---

Ser. No. 189,364. (CLASS 45. BEVERAGES, NONALCOHOLIC.) KIC-NIC, INCORPORATED, New York, N. Y. Filed Dec. 7, 1923.

KIC-NIC

*Particular description of goods.*—Nonalcoholic, Maltless Vegetable-Compound Beverage Containing Coffee, Sold as a Soft Drink, and Sirup for Making the Same.
*Claims use* since Nov. 16, 1923.

---

Ser. No. 197,034. (CLASS 15. OILS AND GREASES.) MAGNOLIA PETROLEUM COMPANY, Galveston and Dallas, Tex. Filed May 14, 1924.

No claim is made for "Supergas" except as part of the mark shown in the drawing.
*Particular description of goods.*—High-Grade Gasoline.
*Claims use* since Apr. 4, 1924.

Ser. No. 198,285. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA ALMOND GROWERS EXCHANGE, San Francisco, Calif. Filed June 9, 1924.

BLUE DIAMOND BRAND
ALMOND SPREAD

The right to the exclusive use of the words "Brand" and "Almond Spread" is disclaimed apart from the mark shown in the drawing.
*Particular description of goods.*—Almond Paste Composition Formed of Ground Almonds Adapted for Use as a Sandwich Spread.
*Claims use* since Nov. 15, 1923.

---

Ser. No. 200,452. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BELLE N. KIDD, Vancouver, Wash. Filed July 24, 1924.

Body Glo
BATH MITT

The words "The Wash Cloth That Fits the Hand" and "Bath Mitt" are disclaimed apart from the mark as shown in the drawing, the mark consisting of "Body-Glo" and the fanciful representation of a female figure seated beside a pool.
*Particular description of goods.*—Bath Mitts.

---

Ser. No. 201,988. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) TOWNSEND MANUFACTURING COMPANY, Hatfield, Pa. Filed Aug. 28, 1924.

NU-LASTIC

*Particular description of goods.*—Narrow Elastic Fabrics.
*Claims use* since December, 1923.

---

Ser. No. 202,514. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WALLER E. MORGAN, Mount Vernon, N. Y. Filed Sept. 1, 1924.

Mi-T

*Particular description of goods.*—Metal Polish for Brass, Nickel, Silver, and Copper.
*Claims use* since May 31, 1924.

Ser. No. 202,544. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) C. BAHNSEN & CO., INC., New York, N. Y. Filed Sept. 12, 1924.

MOLERA

*Particular description of goods.*—Woven Combination Silk and Wool Coating Fabrics.
*Claims use* since Aug. 1, 1924.

---

Ser. No. 202,545. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) C. BAHNSEN & CO., INC., New York, N. Y. Filed Sept. 12, 1924.

REPLERA

*Particular description of goods.*—Woven Worsted Coating Fabrics.
*Claims use* since Aug. 1, 1924.

---

Ser. No. 202,546. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) C. BAHNSEN & CO., INC., New York, N. Y. Filed Sept. 12, 1924.

VOGERA

*Particular description of goods.*—Woven Wool Coating Fabrics.
*Claims use* since Aug. 1, 1924.

---

Ser. No. 202,562. (CLASS 39. CLOTHING.) NOBILITY GLOVES, INC., New York, N. Y. Filed Sept. 12, 1924.

No claim is made to the exclusive use of the word "Pierlis" apart from the peculiar construction of the letter "P" and the circles within which the word appears.
*Particular description of goods.*—Gloves of Leather and Like Material.
*Claims use* since Apr. 22, 1924.

Ser. No. 202,791. (CLASS 45. BEVERAGES, NONALCOHOLIC.) H. C. BOTKIN, doing business as Red Pep Co., Harriman, Tenn. Filed Sept. 20, 1924.

No claim is made to the use of the words "Drink, Smile, From Dixie" apart from the trade-mark as shown on the drawing.
*Particular description of goods.*—Nonalcoholic, Maltless Beverage Sold As a Soft Drink.
*Claims use* since 1914.

---

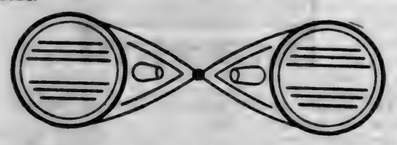
Ser. No. 202,816. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WM. H. LUDEN INC., Reading, Pa. Filed Sept. 20, 1924.

SILK GLOSS

*Particular description of goods.*—Candy.
*Claims use* since Dec. 5, 1923.

---

Ser. No. 202,855. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CHAYES SYSTEM LABORATORIES, INC., New York, N. Y. Filed Sept. 22, 1924.



*Particular description of goods.*—Grinding or Cutting Points or Wheels Such As Are Used by Dentists.
*Claims use* since Apr. 2, 1924.

---

Ser. No. 202,857. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CHAYES SYSTEM LABORATORIES, INC., New York, N. Y. Filed Sept. 22, 1924.

TRUPOINT

*Particular description of goods.*—Grinding or Cutting Points Such As Are Used by Dentists.
*Claims use* since Apr. 2, 1924.

Ser. No. 202,858. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CHAYES SYSTEM LABORATORIES, INC., New York, N. Y. Filed Sept. 22, 1924.

**TRUWHEEL**

*Particular description of goods.*—Grinding or Cutting Points or Wheels Such As Are Used by Dentists.
*Claims use* since Apr. 2, 1924.

---

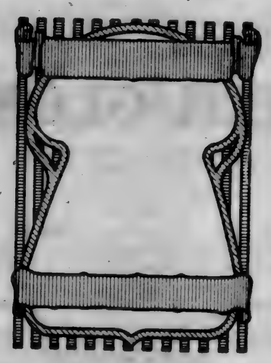
Ser. No. 202,863. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE FIRESTONE STEEL PRODUCTS COMPANY, Akron, Ohio. Filed Sept. 22, 1924.

**Firestone**

*Particular description of goods.*—Vehicle Wheels and Rims Therefor.
*Claims use* since June 3, 1912.

---

Ser. No. 202,868. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRUIT VALLEY CORPORATION, Rochester, N. Y. Filed Sept. 22, 1924.



The drawing is conventionally lined to indicate the colors red, green, and blue.
*Particular description of goods.*—Compound for Making Puddings and Pies.
*Claims use* since Sept. 6, 1923.

---

Ser. No. 202,993. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHNSON EDUCATOR FOOD COMPANY, Cambridge, Mass. Filed Sept. 24, 1924.

**CREAMKIST**

Trade-mark consists of the words "Creamkist."
*Particular description of goods.*—Biscuits.
*Claims use* since Apr. 17, 1924.

Ser. No. 202,998. (CLASS 41. CANES, PARASOLS, AND UMBRELLAS.) LYNN UMBRELLA MFG., CO., Boston, Mass. Filed Sept. 24, 1924.

No claim is made to the pictorial representation of the goods or to the word "Brand" apart from the mark shown in the drawing.
*Particular description of goods.*—Umbrellas.
*Claims use* since February, 1924.

---

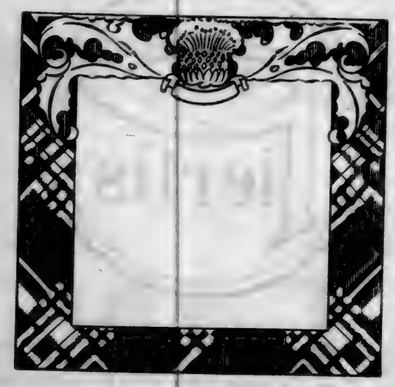
Ser. No. 203,110. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA LAND & PRODUCTS CORP., Oakland, Calif. Filed Sept. 27, 1924.

**DISTRICT**

*Particular description of goods.*—Fresh Grapes.
*Claims use* since Aug. 9, 1924.

---

Ser. No. 203,134. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) LIEBMANN BREWERIES, INC., Brooklyn, N. Y. Filed Sept. 27, 1924.



*Particular description of goods.*—Malt Beverages.
*Claims use* since about May 24, 1922.

Ser. No. 204,287. (CLASS 15. OILS AND GREASES.) UNITED OIL COMPANY, Pittsburgh, Pa. Filed Oct. 22, 1924.

**UNITED**

*Particular description of goods.*—Lubricating Oils and Greases Made From Crude Petroleum and Lubricating Oils and Greases Manufactured From Crude-Petroleum Products and Other Mineral, Vegetable, and Animal Products.
*Claims use* since Apr. 16, 1908.

---

Ser. No. 204,449. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) FRIEDR. HERDER ABR. SOHN, Solingen, Germany. Filed Oct. 27, 1924.

No claim is made to the exclusive use of the name "F. Herder" apart from the mark shown on the drawing.

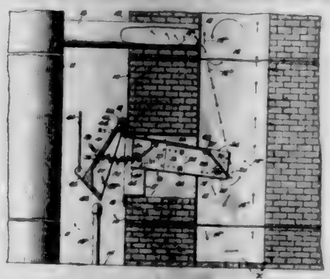
# REISSUES

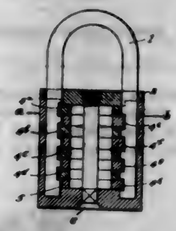
## NOVEMBER 24, 1925.

16,214. FUEL-SAVING DEVICE. ARTHUR H. STURGES, Omaha, Nebr. Filed Feb. 18, 1925. Serial No. 10,156. Original No. 1,503,387, dated July 29, 1924, Serial No. 701,503, filed Mar. 24, 1924. 16 Claims. (Cl. 126—285.)



13. In a fuel saver for a chimney having an opening for a smoke pipe, a second opening below the first named opening, and a mixing chamber below the second opening, and an inclined deflecting-plate in the flue of the chimney in the horizontal plane of the second opening.

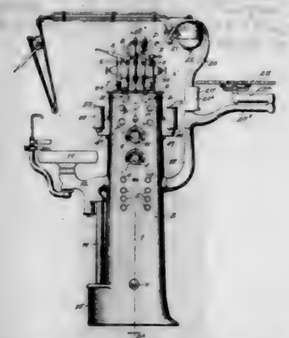
16,215. COMBINATION LOCK. ERNEST TOBLER, Brunswick, Germany, assignor, by mesne assignments, to The Defender Lock Co., Inc. Filed Aug. 14, 1925. Serial No. 50,310. Original No. 1,502,411, dated July 22, 1924, Serial No. 598,648, filed Nov. 22, 1922. 10 Claims. (Cl. 70—113.)



1. A combination padlock of the character described, comprising a U-shaped shackle having notched limbs, the notches of one limb being staggered relative to those of the other limb, a casing having bores in which to receive the limbs of the shackle, and a plurality of superposed rings arranged rotatably in said casing so as to encroach on the bores and engage the notches of the shackle limbs, each ring having an elongated notch which registers with the full portion of one limb so as to allow a partial rotation of the ring through the notch in the opposite shackle limb, the ring having also a notch which, in one end position of the ring, registers with said latter limb so as to allow the shackle to move.

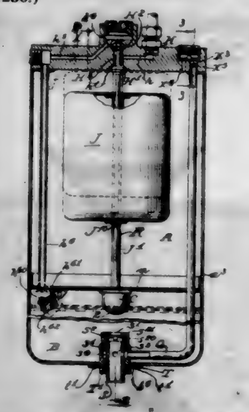
16,216. UNITARY DENTAL APPARATUS. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Sept. 17, 1925. Serial No. 57,013. Original No. 1,376,356, dated Apr. 26, 1921, Serial No. 189,825, filed Sept. 5, 1917. 16 Claims. (Cl. 32—5.)

1. An assembled dental apparatus, comprising a hollow column, a plurality of mouth instruments located above the column each having an electric device, separate cord circuits for said devices looped within the column and having means for yieldingly retracting them, a voltage control device mounted within the column having circuit



connections with said cords, and operating means for said voltage control device extending exteriorly of the column below the mouth instruments.

16,217. VACUUM FUEL-FEEDING DEVICE FOR INTERNAL-COMBUSTION ENGINES AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 26, 1925. Serial No. 11,392. Original No. 1,439,689, dated Dec. 26, 1922, Serial No. 545,658, filed Mar. 22, 1922. 12 Claims. (Cl. 103—236.)



1. A vacuum fuel feeding device comprising a receiving chamber and a delivery chamber, the receiving chamber having a restricted air inlet; a duct connecting the upper part of the two chambers; a suction connection from said duct; valve seats in said duct respectively on the side of said suction connection toward and on the side thereof away from the receiving chamber; a valve device positioned for seating alternatively on one or the other of said seats, and means operated by change of level of the liquid in the delivery chamber for shifting the seating of said valve device from one seat to the other.

# DESIGNS

## NOVEMBER 24, 1925.

68,843. BUMPER. CHRISTIAN ANDERSON, Marysville, Calif., assignor of one-half to L. A. Morrison, Marysville, Calif. Filed June 22, 1921. Serial No. 479,655. Term of patent 7 years.

The ornamental design for a radiator cap, substantially as shown.

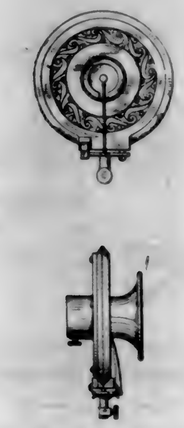
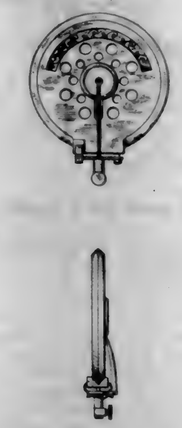
68,877. PHONOGRAPH REPRODUCER. HERMAN SEGAL, New York, N. Y. Filed Oct. 14, 1925. Serial No. 15,114. Term of patent 7 years.



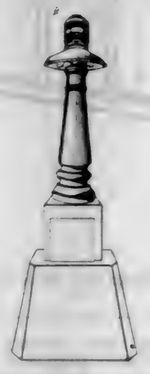
The ornamental design for a phonograph reproducer, as shown.

68,878. PHONOGRAPH REPRODUCER. HERMAN SEGAL, New York, N. Y. Filed Oct. 14, 1925. Serial No. 15,115. Term of patent 7 years.



The ornamental design for a phonograph reproducer, as shown.

68,879. ILLUMINATED TRAFFIC-SIGNAL STANDARD. ABRAHAM SPRUNG, New York, N. Y., assignor to Municipal Street Sign Co. Inc., New York, N. Y., a Corporation of New York. Filed July 25, 1925. Serial No. 14,223. Term of patent 7 years.

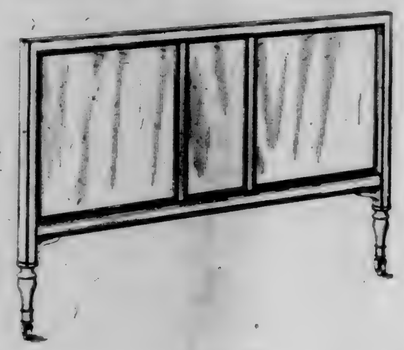


The ornamental design for illuminated traffic signal standard as shown.

68,880. CASING FOR A VENDING MACHINE. GOODWIN B. SMITH, New York, N. Y., assignor to Smith Vending Machine Corp., New York, N. Y., a Corporation of Delaware. Filed Aug. 31, 1925. Serial No. 14,667. Term of patent 14 years.

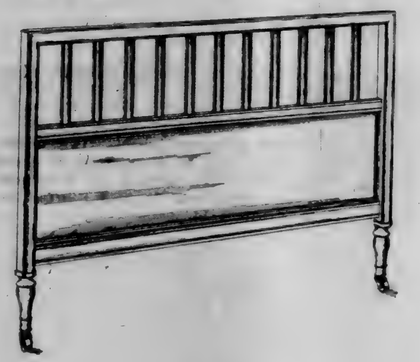
The ornamental design for a casing for a vending machine, as shown.

68,881. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1925. Serial No. 14,761. Term of patent 14 years.



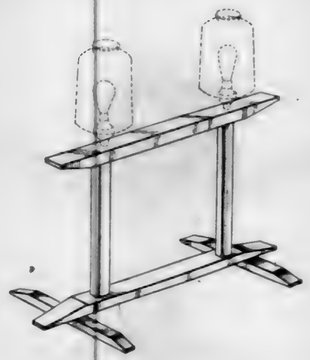
The ornamental design for bedstead end frame, as shown.

68,882. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1925. Serial No. 14,762. Term of patent 14 years.



The ornamental design for bedstead end frame, as shown.

68,883. LAMP STANDARD. ESELLE TERRY, Ionia, Mich. Filed May 15, 1925. Serial No. 13,458. Term of patent 14 years.



The ornamental design for a lamp standard, as shown.

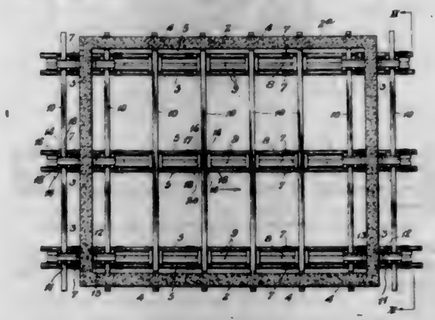
68,884. BOUDOIR CAP. WILLIAM JAY TUROFF and ELISE AUVRAY BESANCON, New York, N. Y. Filed July 19, 1923. Serial No. 6,806. Term of patent 3½ years.

The ornamental design for a boudoir cap as shown.

# PATENTS

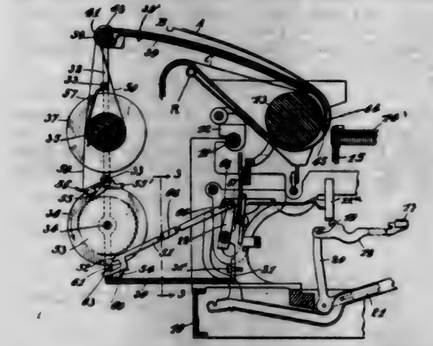
## GRANTED NOVEMBER 24, 1925.

1,562,430. MEANS FOR AND METHOD OF MOVING BUILDINGS. ORION ALEXANDER, South Akron, Ohio. Filed Jan. 8, 1925. Serial No. 1,294. 19 Claims. (Cl. 238—13.)



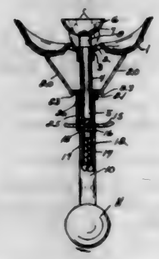
1. In a method of moving a building resting on a foundation, the steps of splitting the foundation approximately within a predetermined horizontal plane by exertion of a uniform lifting action distributed at selected points of two parts of a temporary supporting carriage.

1,562,431. RIBBON MECHANISM FOR TYPEWRITERS. RICHARD D. ANANSON, Stirling, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 24, 1922. Serial No. 546,805. 23 Claims. (Cl. 197—153.)



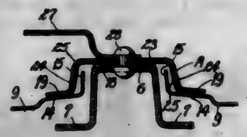
1. In a typewriting machine, the combination with a main frame, a carriage thereon, a platen on said carriage and printing instrumentalities to print through a main ribbon against said platen, of means to conduct an auxiliary ribbon from the delivery side of the platen to the printing point and between work-sheets, said means including a ribbon-guide supported on the main frame, said guide being flat and thin at its free end so that it may extend between the work-sheets without disturbing their printing relation and in a direction opposite to which the work-sheets are fed around the platen, and means to feed said auxiliary ribbon.

1,562,432. MEASURING SCOOP. ARTHUR WILLIAM BERSCH, Milwaukee, Wis. Filed June 13, 1925. Serial No. 36,821. 7 Claims. (Cl. 107—48.)



1. A measuring scoop comprising the combination with an ejector, of a set of spoon shaped scoop members adapted to close about the ejector and adapted for movement longitudinally relative to the axis of said ejector, a sleeve with which the scoop members are pivotally connected, a plunger mounted to slide in the sleeve and supporting the ejector, and a handle in which the plunger and sleeve are seated.

1,562,433. CAR ROOF. CHARLES DAVID BONBALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Nov. 19, 1924. Serial No. 750,840. 2 Claims. (Cl. 108—5.4.)

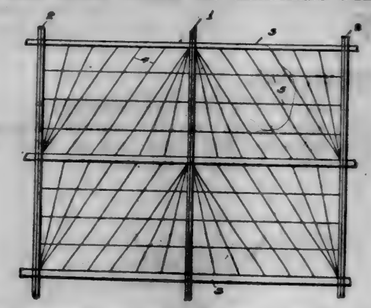


1. A car roof comprising side plates, car-lines of inverted channel-shaped section extending from side plate to side plate, roof sheets extending from side plate to side plate between carlines, metal caps of inverted channel-shaped section extending from side plate to side plate, said caps straddling said carlines and the adjacent side marginal portions of said roof sheets, the web portions of said carlines and caps being rigidly riveted together flatwise at points a substantial distance inwardly from the side plates and at points near the sides of the running board whereby said caps cooperate with said carlines in taking care of the carline stresses.

1,562,434. AIRSHIP CONSTRUCTION. CHARLES P. BURGESS, Bethesda, Md. Filed Jan. 28, 1925. Serial No. 5,397. 3 Claims. (Cl. 244—3.)

1. In an airship construction, in combination with a main frame and intermediate frames, a series of gas

cell retaining wires extending diagonally upward from the main frames towards the intermediate frame to



thereby transmit the gas lift in greater part to the main frames instead of equally to the main and intermediate frames.

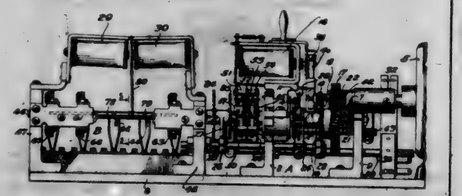
---

1,562,435. AIRSHIP CONSTRUCTION. CHARLES P. BURGESS, Bethesda, Md. Filed Jan. 28, 1925. Serial No. 5,398. 3 Claims. (Cl. 244—3.)

1. In an airship construction, transverse members, a longitudinal girder connecting said transverse girders, said longitudinal girder having a longitudinal member of structural cross-section braced by a series of struts normal thereto, and brace wires passing over the struts and connected substantially with the ends of said longitudinal member, whereby the longitudinal forces due to the bending of the girder are taken by the wires instead of by longitudinal members of structural section.

---

1,562,436. TRANSLATING DEVICE. MERLE PRESCOTT CHAPLIN, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1921. Serial No. 511,785. 21 Claims. (Cl. 178—27.)



1. In combination, a plurality of members arranged to occupy one of two positions, means individual to said members for causing their movement, means controlling the deflection of said means to one side or the other of said members for causing their movement in either of two directions, and means responsive to selecting current impulses for controlling the positioning of said second recited means.

---

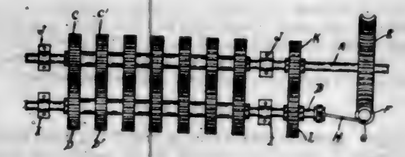
1,562,437. SHAFT COUPLING. CHARLES F. CLAPHAM, Baltimore, Md., assignor of one-third to Hiram S. Miller, Baltimore, Md. Filed Mar. 24, 1923. Serial No. 627,269. 1 Claim. (Cl. 64—26.)

A coupling of the class described, comprising a disc having its peripheral edge bent to provide a right angle flange, said flange being divided to provide resilient beam portions, a shaft secured to said disc, flexible means pivotally connected to said beams, a second shaft, a crosshead connected to one end of said second shaft, and means flexibly connecting the second shaft of the cross-

head to said flexible means, said connection aligning said second shaft with said first shaft and permitting relative movement of said shafts out of alignment with one another.

---

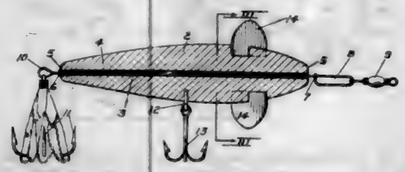
1,562,438. METHOD OF TRUING GEARS. ALEXANDER W. COPLAND, Detroit, Mich. Filed Jan. 15, 1921. Serial No. 437,489. 4 Claims. (Cl. 51—278.)



1. The process of truing gears which consists in simultaneously lapping groups of intermeshing gears, the gears of each group being in fixed relation to each other, and the teeth of the gears in each group being arranged in staggered relation whereby an averaging of irregularities is effected.

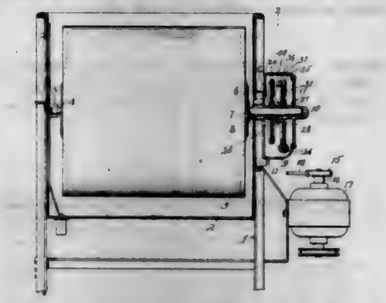
---

1,562,439. ARTIFICIAL BAIT. CHARLES S. CRAWFORD, Pittsburgh, Pa. Original application filed Nov. 24, 1923, Serial No. 676,763. Divided and this application filed July 7, 1925. Serial No. 41,967. 2 Claims. (Cl. 43—47.)



2. In combination with a central stem having a front attaching eye and a rear loosely connected hook, a fish-shaped body provided with a central tube having terminal flanges tightly secured against the body at each end for rotatable mounting on the central stem, abutting washers on the stem adapted to bear against each end of said tube, and a freely swinging hook loosely mounted at one side of and beyond the surface of the body.

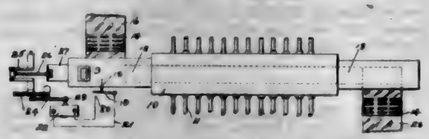
1,562,440. WASHER DRIVE MECHANISM. ARTHUR R. CURTIS, Cleveland, Ohio. Filed Apr. 23, 1923. Serial No. 633,969. 21 Claims. (Cl. 74—50.)



5. A drive mechanism comprising a shaft, a pair of gears loose on the shaft, said gears having driving lugs on their inner faces, an arm fixed to the shaft between the gears and a key pivoted at its inner end to said arm and movable into engagement with either gear.

---

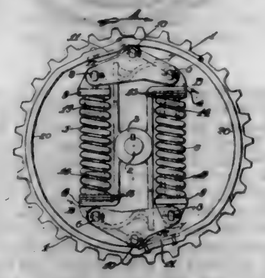
1,562,441. APPARATUS FOR BURNING BRICK. THOMAS STANLEY CURTIS, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 9, 1919. Serial No. 316,431. 5 Claims. (Cl. 25—142.)



1. A kiln comprising a highly-heated chamber, means for localizing the heat in said chamber, means for conducting the work to be treated at a predetermined speed past the high temperature point, means for automatically introducing the work into the heating chamber through an opening in the side thereof, means for automatically and intermittently feeding the work as introduced at a predetermined speed to the furnace, and means for automatically conducting the treated work from the furnace.

---

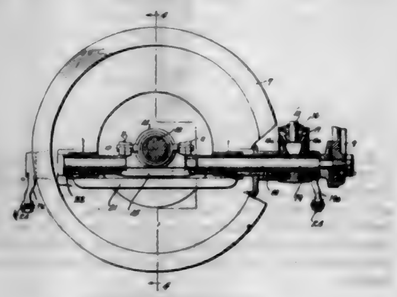
1,562,442. AUTOMATIC RELEASE DRIVE. CHARLES E. EVANS, Aurora, Ill., assignor to Barber-Greene Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 10, 1923. Serial No. 673,892. 2 Claims. (Cl. 74—29.)



1. In combination with a shaft and a driving wheel therefor with its hub mounted loose on said shaft, a hub fixed to the shaft adjacent the wheel hub, a frame rigid with said fixed hub comprising a web extending diametrically with respect to the wheel with parallel re-enforcing flanges at opposite sides of the shaft, said flanges terminating in portions transverse to their parallel portions at opposite ends of the frame respectively, a pair of levers each fulcrumed at one end on the frame adjacent the terminal portion of one of its flanges, the flat end of each lever extending opposite the other flanged terminal, a pair of compression springs each engaged between the free end of one lever and the flange terminal opposite thereto and a rim on the wheel overhanging the levers and formed with a pair of abutments facing the lever fulcrums respectively and engaging portions of the levers intermediate their ends.

---

1,562,443. VEHICLE BRAKE MECHANISM. EDWIN R. EVANS, Detroit, Mich. Original application filed Sept. 4, 1923, Serial No. 660,855. Divided and this application filed May 5, 1924. Serial No. 711,279. 11 Claims. (Cl. 74—81.)



1. The combination with a vehicle drive shaft, of coaxial clutch control shafts at opposite sides of said drive shaft, a drive connection between said shafts offset transversely to their axis to clear the engine shaft, a pair of brake actuating elements mounted coaxially with said clutch control shafts at each side of said drive shaft, and a similarly offset connection between said brake control members.

---

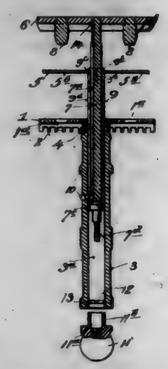
1,562,444. CLAMPING DEVICE. ROBERT A. FLUM, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Feb. 4, 1924. Serial No. 690,112. 7 Claims. (Cl. 293—55.)

1. A clamping device for bumpers comprising a pair of vertically spaced front or impact bars and a rear or auxiliary bar having its central portion interposed between the central portions of the first two bars, said device comprising upper and lower symmetrical clamping members, each having a seat at one end thereof adapted to engage the upper edge of the upper bar and the upper edge of the lower bar, respectively, and each having a seat at its opposite end for the adjacent edge of the intermediate bar, an intermediate clamping member having laterally spaced seats adapted to receive the lower edge of the upper bar and the upper edge

of the lower bar and provided with lateral flanges adapted to engage the front face of said intermediate bar, and a bolt extending through the first two members for securing the same together and to said bars.

---

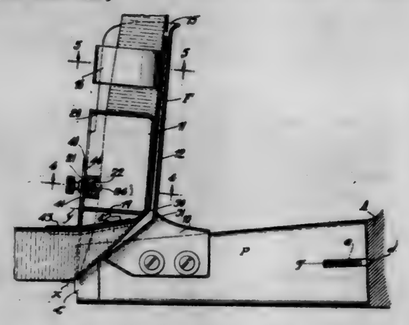
1,562,445. SAFETY RAZOR. HENRY J. GAISMAN, New York, N. Y. Filed May 21, 1921. Serial No. 471,333. 12 Claims. (Cl. 30—12.)



1. A safety razor comprising a guard, a backing for a blade, a support for the blade, a handle slidably supporting said support respecting the guard, means movably supporting the backing respecting the guard, the handle and said support, the backing being detachably connected to its supporting means, and means to prevent detachment of the support and the backing from the handle.

---

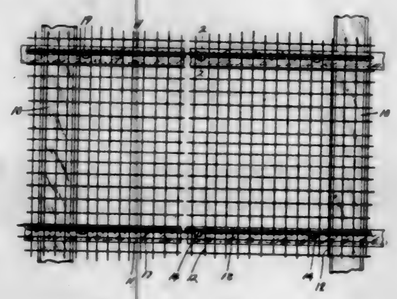
1,562,446. FOLDER FOR SEWING MACHINES. CHARLES HAM, Albany, N. Y., assignor to Fuld and Hatch Knitting Company, a Corporation of New York. Filed Apr. 29, 1925. Serial No. 26,576. 2 Claims. (Cl. 112—138.)



1. A device of the type described which comprises an inner guiding channel formed of substantially U-shaped inner and outer walls joined at their side edges and having their outlet end edges at an angle to their length, a bridge member lying wholly within the space formed by said U-shaped inner wall, said bridge member having one edge flush with said joined side edges and having its sides extending a substantial distance into said space and rigidly secured to said inner wall to reinforce and strengthen the same, a plate on said flush edge having a longitudinal slot therein, a clamping nut having a shank projecting through said slot and threaded into said bridge, said clamping nut having a head projecting outwardly from said bridge and lying wholly outside of said wall enclosed space, permitting rapid and convenient adjustment of said plate, and a U-shaped guide arm rigidly secured to one end of said plate.

---

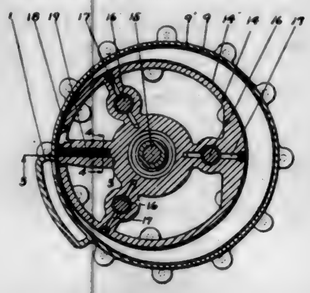
1,562,447. REENFORCING CONCRETE WALLS AND THE LIKE. HARVEY HANNA, Detroit, Mich. Filed Feb. 16, 1925. Serial No. 9,636. 11 Claims. (Cl. 72—118.)



1. The combination with a structural member of a wall, of means for supporting the reenforcing material of the wall comprising a supporting member, fastening means engaging said structural member and disengageable means for securing said supporting member to said fastening means.

---

1,562,448. ROTARY PUMP. WILLIAM A. HATCHER, Detroit, Mich., assignor to Wernicke-Hatcher Pump Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Feb. 19, 1921. Serial No. 446,474. 5 Claims. (Cl. 103—121.)



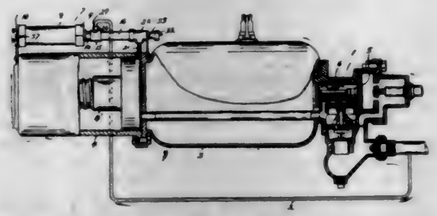
1. A rotary pump the combination of a suitable cylinder, a cylindrical piston of less diameter than said cylinder disposed eccentrically within the same to contact with the walls thereof, bearings for supporting the said cylinder and piston in said relative positions, a vane disposed in a recess in said piston and abutting the circumferential wall of said cylinder, means connecting the said piston and cylinder to maintain the same in parallel relation the one to the other during rotation, means for driving the same, a band of yielding material disposed within the periphery of said cylinder, the ends of which are connected each side of the exhaust, and a band of yielding material surrounding the said piston with its ends secured in proximity to the sides of said vane, coacting as specified.

1,562,449. ROTARY DRILLING APPARATUS. CHARLES W. HERRIN, Pattonsburg, Mo. Filed Nov. 12, 1924. Serial No. 749,444. 12 Claims. (Cl. 255—63.)

1. In an apparatus of the character described, a rotary drill stem, a sleeve arranged to slip over said drill stem while the same is in a well, coupling means whereby said member is caused to rotate with said drill stem, and a bit mounted on said member to move therewith.

---

1,562,450. AIR-BRAKE MECHANISM. DENNIS C. HESSIAN, Detroit, Mich. Filed May 26, 1924. Serial No. 715,980. 10 Claims. (Cl. 303—65.)

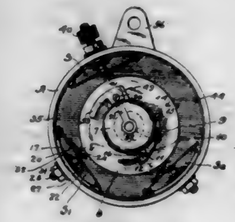


1. The combination with an air brake system including a main supply pipe and a brake cylinder, of means for maintaining the pressure of air in the brake cylinder substantially equal to the air pressure in the main pipe, said means including an auxiliary pipe connected to the brake cylinder, a member normally closing the passage in said pipe, an auxiliary pipe connected to the main pipe, a tube connected to said auxiliary pipes, and means in the tube engageable with the member aforesaid for controlling the passage of air from one auxiliary pipe to the other.

---

1,562,451. IGNITION-CONTROLLING APPARATUS. ALONSO HOWARD, Chicago, Ill., assignor to Howard Ignition Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1923. Serial No. 673,904. 10 Claims. (Cl. 200—21.)

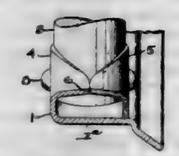
3. In ignition controlling apparatus of the class described, the combination of a housing, a cam member rotatable within said housing and having cam formations thereon, a supporting frame seating against the inside of said housing, a spring element extending between the ends of said frame and in the path of said cam formations, a contact on said spring element, said housing having an opening and said frame having an opening in register therewith, a terminal stud extending through said opening and insulated from said frame and housing, means for clamping said frame to said housing and for securing said stud in place, a contact on said stud in opposition to said spring element contact and normally disengaged therefrom, cooperation of the cam formations



with said spring element causing flexure of said element to close said contacts, and a conductor held in place between said frame and housing, said conductor being in electrical contact with said stud but insulated from said frame and housing.

---

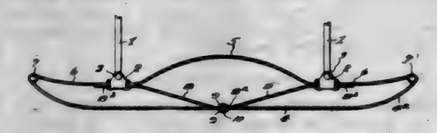
1,562,452. FELLY AND SPOKE CONNECTION. RUSSELL HUFF, Detroit, Mich., assignor, by mesne assignments, to Dodge Brothers Inc., a Corporation of Maryland. Filed May 27, 1920. Serial No. 384,541. 6 Claims. (Cl. 301—67.)



2. In a wheel, the combination of a spoke and a spoke socket formed by two metallic socket members, one on each side of the socket, each of said members being bent laterally around the spoke and abutting against the other socket member to form a spoke-holding socket smaller in diameter than the original diameter of the spoke head, and means for drawing the two socket members together to compress the spoke head within the socket.

---

1,562,453. BUMPER FOR AUTOMOBILES. HERBERT S. JANDUS and CHARLES F. BROWN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 688,992. 5 Claims. (Cl. 293—55.)



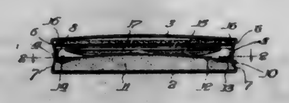
3. A bumper comprising a pair of vertically spaced impact bars, a rear or auxiliary bar connected to the ends of the impact bars and having its central portion spaced from said bars, a reinforcing bar having its central portion secured to the impact bars, means for frictionally clamping the reinforcing bar to the auxiliary bar, and means for pivotally supporting the bumper.

1,562,454. FOOT GRIP FOR INVALIDS. STANLEY S. JENKINS, Buffalo, N. Y. Filed May 14, 1923. Serial No. 638,891. 3 Claims. (Cl. 128—134.)

1. A foot grip for invalids comprising a gripping element formed of flexible material roughened on its outer face for engagement with a relatively slippery surface and provided with ventilating perforations, and means whereby said element may be securely attached to the bare heel of an invalid.

---

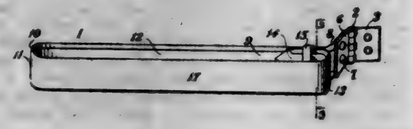
1,562,455. TOILET CASE. ALBERT G. JONES, Chicago, Ill., assignor to Melba Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1924. Serial No. 753,044. 11 Claims. (Cl. 132—83.)



1. A toilet case comprising, a two part hinged receptacle, one of said parts adapted to receive a powdered material and having its sides inwardly converged, a gasket adapted to fit tightly within said sides and upon the material therein, a reticular member secured to said gasket and a bezel ring holding said gasket in place.

---

1,562,456. CURTAIN HOLDER. NELLIE KLANG, New York, N. Y. Filed Mar. 31, 1925. Serial No. 19,612. 6 Claims. (Cl. 156—33.)



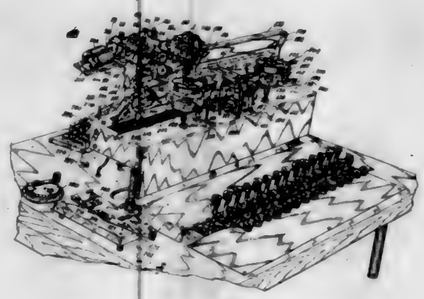
1. A curtain holder having a hinge at one end thereof adaptable to be secured in position, a flexible strap having its terminal secured to said hinge and extending from said hinge to a place whereat the curtain is to be embraced thereby, said strap forming a loop at said place and extending from said place backwardly to said hinge, and said strap forming a loop near its opposite terminal and the latter terminal extending for a short distance away from the hinge and in contact with the strap portion near its former terminal.

---

1,562,457. PRINTING-TELEGRAPH MACHINE. OSCAR L. KLEBER, Pittsburgh, Pa., assignor to Telegraph Typewriter Co., Inc., New York, N. Y. Filed Feb. 15, 1921. Serial No. 445,180. 87 Claims. (Cl. 178—26.)

79. In a device of the kind described, means for moving the paper carriage, comprising a rotating shaft, means loosely mounted thereon for moving the paper carriage and electromagnetically operated means also mounted upon the shaft for causing loosely mounted means to rotate with the shaft.

84. In a device of the kind described, a rotatable switch, means constantly tending to rotate said switch, selecting means and means controlled by the selecting



means for holding the switch against rotation and including a delayed action mechanism to permit rotation thereof after the completion of the selecting part of the printing mechanism.

---

1,562,458. METALLIC RAILWAY TIE. EDGAR R. LEHMAN, Johnstown, Pa., assignor to Bethlehem Steel Company. Filed June 25, 1925. Serial No. 39,406. 6 Claims. (Cl. 238—10.)

1. The combination, with a railway rail, a metallic member, and means for holding the metallic member in place with respect to one flange of the rail, of a movable sector-like clip pivoted to the member and in opposed relation with respect to said means for connecting the other flange of the rail to the member, said movable clip having a downwardly-facing arcuate lateral cam surface to engage the top surface of a rail flange, the radius of said arcuate cam surface with respect to the pivot increasing from one side to the other of the clip and the surface of said cam being inclined downwardly in the direction of increasing radius.

---

1,562,459. MEDICINAL PREPARATION. JOSIAH K. LILLY, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 5, 1925. Serial No. 13,866. 2 Claims. (Cl. 167—7.)

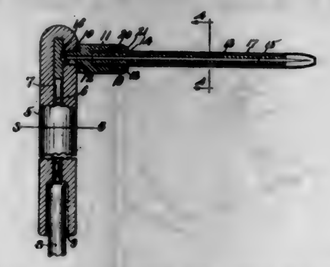
2. A medicinal preparation comprising a mixture of phenylcinchoninic acid with the hydriodid of phenylcinchoninic acid.

---

1,562,460. FULGURATOR. WILLIAM D. MCFEE, Haverhill, Mass. Filed Apr. 26, 1922. Serial No. 556,665. 5 Claims. (Cl. 714—89.)

1. A therapeutic fulgurator having a handle, a member mounted on said handle and extending angularly

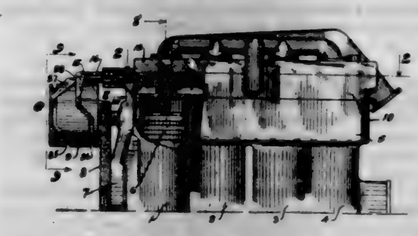
therefrom, a discharge electrode on said member and projecting therefrom, a protector surrounding the dis-



charge end of said electrode, and means for adjusting said electrode relative to said protector.

---

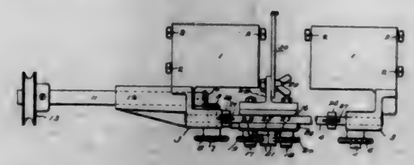
1,562,461. INTERNAL-COMBUSTION ENGINE. THOMAS J. MALONEY, Denver, Colo. Filed Sept. 10, 1923. Serial No. 661,844. 1 Claim. (Cl. 123—188.)



In an internal combustion engine, in combination, an engine block having a plurality of cylinders, a two-part cylinder head adapted to be secured to the top of the engine block, said head having an intake and an exhaust port for each cylinder, a stationary slide block adapted to be located between the two parts of the cylinder head, said slide block having two substantially parallel longitudinally extending grooves on each side and having also a number of intake port openings connecting two opposed grooves, and exhaust port openings connecting the other two opposed grooves, slides mounted in said grooves, said slides having openings therein at spaced intervals, and means for causing corresponding openings in two opposed slides to register with any desired opening in the slide block.

---

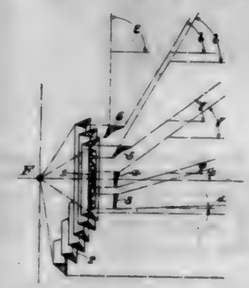
1,562,462. INK AGITATOR. ECTOR F. MARCEAU, East Hartford, Conn. Filed Apr. 23, 1925. Serial No. 25,399. 5 Claims. (Cl. 101—364.)



1. An ink agitator comprising means for attaching the appliance to a printing press, guiding means supported by the attaching means, a carriage movable back and forth on the guiding means, said carriage being adapted to support an agitator blade, wheels mounted on the attaching means, an endless belt connecting said wheels, mechanism for rotating one of said wheels, wheels rotatably mounted on the carriage, one of which is engaged by one length of the belt and the other of which is engaged by the other length of the belt, means movably mounted on the carriage and adapted to intermittently release one of said carriage wheels and lock the other of said carriage wheels, and stops adapted to engage and change the position of said movable means with relation to the carriage wheels at the predetermined limits of travel of the carriage.

---

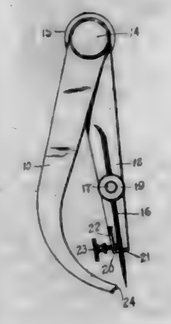
1,562,463. LENS APPARATUS. NILS THURE KRISTIAN MOLLEBERG, Skarmatra, Lidingon, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 29, 1921. Serial No. 481,392. 5 Claims. (Cl. 240—106.)



2. In lens apparatus, the combination of the lens, and a set of prisms in front of the lens, so constructed and placed as to divide the rays which radiate from the said lens into a plurality of groups of rays which groups extend in succession from the horizon to the zenith, the angles of the rays of each group with respect to the horizon being different from the angles of the rays of each of the other groups with respect to such horizon.

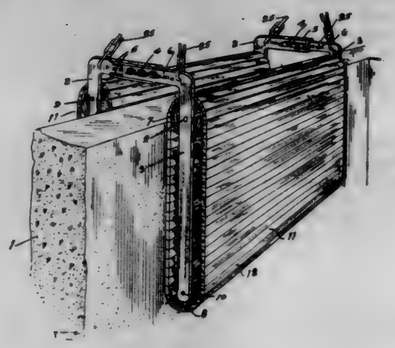
---

1,562,464. CALIPERS. ANDREW NELSON, Saltfleet Township, Wentworth County, Ontario, Canada. Filed May 21, 1925. Serial No. 31,818. 4 Claims. (Cl. 33—149.)



1. In a pair of calipers including a first finger and a second finger pivoted together, a lip formed on the free end of the second finger and having an elongated notch, a yieldable pointer carried by said finger and extending through said notch, and means for slightly bending the pointer in relation to the centre line of said finger, said pointer being adapted to move along said notch while being thus bent.

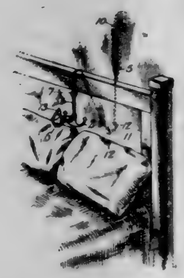
1,562,465. MOLD. CARY HOLLIS NELSON, Denver, Colo. Filed Feb. 24, 1925. Serial No. 11,135. 4 Claims. (Cl. 25—131.)



1. A mold for building walls from plastic material, comprising, in combination, two U-shaped frames having corresponding sides connected by two parallel spaced rollers, an endless flexible belt enclosing each pair of said rollers, the adjacent sides of said belt being spaced to form the sides of the mold.

---

1,562,466. LIGHTING FIXTURE. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1919. Serial No. 339,827. 10 Claims. (Cl. 240—53.)

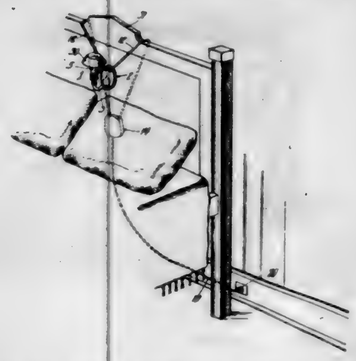


1. In a lighting fixture, the combination of a stem having a flexible hanger connected to one end thereof, a lamp socket disposed laterally at the other end of the stem, and a weight at the latter end of the stem for counter-balancing the lamp socket so as to hold the stem in a substantially upright position when the fixture is supported by the aforesaid flexible hanger, said hanger containing a pair of electrical conductors which are led through the stem and connected to the socket and provided with an attachment plug at the outer ends.

---

1,562,467. LIGHTING FIXTURE. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1921, Serial No. 452,276. Renewed May 20, 1925. 14 Claims. (Cl. 240—52.)

1. The combination of a lighting fixture comprising a plate having a lamp mounted thereon at one side, and a pair of flexible supporting members having the plate connected therewith so that the latter is maintained by gravity in an upright position when supported by said



members, said members being spaced apart so as to hold the plate against twisting movement around the vertical axis when suspended by said members.

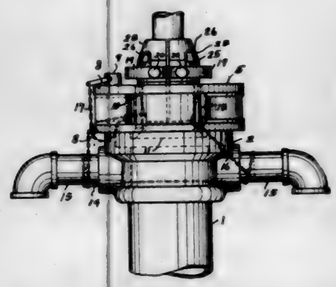
---

1,562,468. MANUFACTURE OF VAT DYESTUFFS. HEINRICH NERESHEIMER, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Nov. 11, 1924. Serial No. 749,320. 8 Claims. (Cl. 260—61.)

1. The process of manufacturing a chlorinated dibenzanthrone vat dyestuff which consists in acting on dibenzanthrone with a chlorid capable of being converted, in the course of the reaction, into a chlorid of a lower valence.

---

1,562,469. TUBING SLIP AND SPIDER. JEDDY D. NIXON, Houston, Tex. Filed Mar. 28, 1924. Serial No. 702,652. 23 Claims. (Cl. 24—249.)



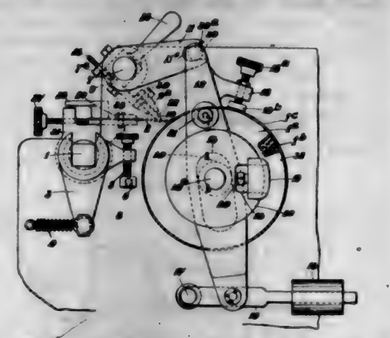
1. A device of the character described including a sectional spider having an upwardly flared central opening, flexible means connecting said spider to a casing head so as to permit a limited radial movement of the bowl, and a tubing slip adapted to seat in said opening.

---

1,562,470. DOCTOR-OPERATING GEAR. MALCOLM OWEN, London, England. Filed June 15, 1925. Serial No. 37,165. 10 Claims. (Cl. 101—157.)

1. A method of flexing a doctor supported in contact with the printing surface of a printing cylinder to effect

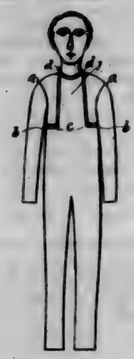
complete wiping of the printing surface, consisting in applying pressure independent of the doctor support



along a line completely across the doctor from side to side between the operating edge of the doctor and its support.

---

1,562,471. UNDERGARMENT. HATTIE JANE PAGE, Grand Rapids, Mich., assignor of one-half to Elert A. Clements, Grand Rapids, Mich. Filed Apr. 28, 1924. Serial No. 709,604. 2 Claims. (Cl. 2—78.)



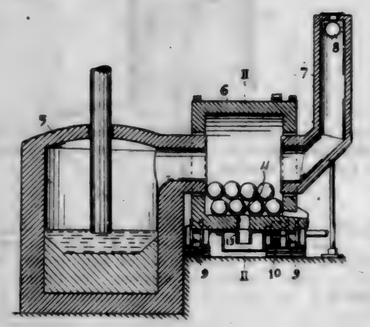
1. A garment comprising a front and a back body part, the back of the garment having two flaps connected therewith at the shoulder lines and passing over the front of the garment, the inner borders of the flaps diverging downwarly from the sides of the neck opening to the waist line, thence stitched across horizontally to the axillar portion of the garment, the front of the garment having two like flaps connected therewith at the shoulder lines and having their inner borders diverging downwardly and extending to the waist line, thence stitched to the body of the garment across to the axillar portions of the garment and the outer edges of the four flaps stitched vertically along the axillar portions and around the arm scyes of the garment, all arranged to form a close fitting and readily expansible neck opening.

---

1,562,472. PROCESS FOR THE TREATMENT OF ALLOYS CONTAINING COPPER AND IRON. HARALD PEDERSEN, Trondhjem, Norway, assignor to Orkla Grubeaktiebolag, Lokken Verk, Norway. Filed Apr. 16, 1924. Serial No. 706,931. 3 Claims. (Cl. 75—17.)

1. Process of treating iron containing carbon and copper alloys to obtain copper, characterized therein that the alloy is subjected to washing with lead in a liquid conditon whereby a lead alloy, rich in copper, and iron, free from or poor in copper, results.

1,562,473. PROCESS AND APPARATUS FOR CONDENSING ZINC VAPOR. ØYSTEIN RAVNER, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Christiania, Norway, a Business Entity. Filed Mar. 7, 1921. Serial No. 450,121. 5 Claims. (Cl. 266—18.)



1. A condenser for zinc vapors comprising a revolving drum and a stationary tube connected with the drum in such manner that the condensate formed in the tube will automatically fall back into the drum.

---

1,562,474. NEEDLE THREADER. WILLIAM H. RICE, Omaha, Nebr. Filed Dec. 19, 1924. Serial No. 756,911. 2 Claims. (Cl. 223—36.)

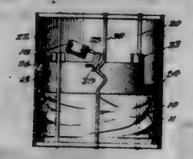
2. A needle threading device comprising a casing having a chamber therein, spaced parallel vertically disposed slidable rods mounted in bearings of the casing, springs disposed within the casing and cooperating with the rods for simultaneously forcing the same upwardly, a needle receiving block secured to the upper ends of the rods above the casing, right angularly disposed needle and thread receiving recesses in the upper end of the block, a needle engaging arm carried by the upper end of the casing between the rods and extending vertically through an aperture in the block and adapted to move upwardly through the upper end of the block at the point of intersection of the needle and thread recesses and spring thread gripping arms carried by the rods at opposite sides of the block.

---

1,562,475. TALKING MECHANISM FOR TOYS. ISAAC A. ROMMEL, Brooklyn, N. Y., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Apr. 25, 1922. Serial No. 556,389. 19 Claims. (Cl. 46—46.)

2. A sound producing device having in combination a casing, a sound chamber having air inlet and air outlet openings therein, said chamber being weighted and sliding

by gravity back and forth in the casing, means whereby movement of said chamber in the casing will cause air to be forced through the chamber as it slides in the casing,



a sound reed mounted in the inlet opening of the sound chamber, and means for controlling the sound associated with the other opening.

---

1,562,476. BAFFLE. JAMES P. SNEDDON, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Apr. 5, 1921. Serial No. 458,844. 16 Claims. (Cl. 110—98.)

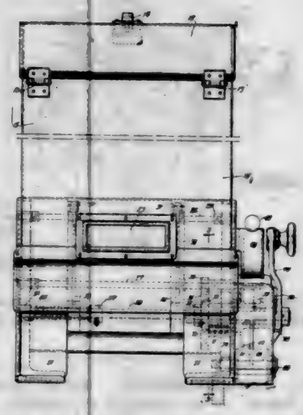
1. A vertical baffle comprising tubes arranged side by side, some of which are spaced apart, members for filling the spaces between the spaced tubes, and gravity-operated means to draw the members against the tubes and to lock the members in position.

---

1,562,477. BOTTLE CRATE. RALPH G. TRIBBY, Philadelphia, Pa. Filed Sept. 30, 1924. Serial No. 740,713. 6 Claims. (Cl. 217—20.)

2. A bottle crate including side and end walls; a bottle supporting frame secured to the walls, and a bottle separating frame consisting of bars having parts bent upon themselves and embedded in the walls and having extremities forming lugs extending from the bar, and nails passing through the lugs and the walls and having their ends clinched.

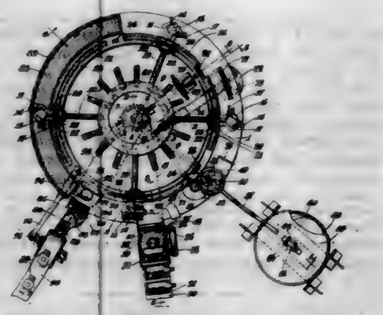
1,562,478. VENDING MACHINE. GEORGE WEISS, Chicago, Ill. Filed Nov. 18, 1920. Serial No. 424,873. 13 Claims. (Cl. 194—85.)



3. In a vending machine, the combination with a propeller for discharging articles, means geared thereto for actuating the same, a pair of rotatable parts mounted on a common axis and having co-acting recesses forming the coin-receiving slot, a dog pivoted on a fixed axis and normally extending through an aperture in one of said parts to hold the same and the propeller against movement, said means being displaced by the weight of a coin in the slot to permit said parts to be turned at which time the coin forms a connector between the parts whereby the propeller may be actuated.

---

1,562,479. APPARATUS FOR CAPPING BOTTLES. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Jan. 19, 1922. Serial No. 530,253. 9 Claims. (Cl. 226—80.)



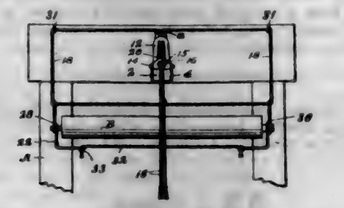
1. A bottle capping machine which comprises a coating tank, a rotary arm carrying a bottle container rotatable around the arm axis, means for holding the container horizontal to receive a bottle, means for rotating it to dip the bottle into the coating tank, and for further rotating it to clear the tank, means for inverting it to allow the liquid to drip off, and means for righting it to permit the liquid to spread evenly.

1,562,480. SYNTHESIZING HIGHER MOLECULAR ORGANIC COMPOUNDS CONTAINING OXYGEN. GUSTAV WIETZEL and RUDOLF WIETZEL, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Feb. 25, 1925. Serial No. 11,557. 8 Claims. (Cl. 260—156.)

1. The process of synthesizing higher molecular organic compounds containing oxygen which consists in causing carbon monoxid to act on a vaporized aliphatic alcohol with the aid of a catalyst and at an elevated temperature and pressure.

---

1,562,481. AUTOMATIC WINDOW-SHADE-ROLLER ADJUSTER. FRANK E. WERNTZ, Leeds, Mo. Filed May 10, 1922. Serial No. 559,949. 4 Claims. (Cl. 156—27.)



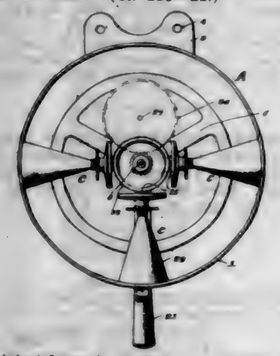
1. A device of the character described consisting of a pair of shade roller hangers bent at right angles and having their terminals bent at acute angles, a transverse cord adjustably secured to the lower angular portions of said hangers to prevent the same from spreading apart, another cord whose transverse intermediate portion is adjustably secured in the upper angular portions of the hangers, guides adapted to be secured to a window frame and through which opposite portions of the last-mentioned cord freely run, and means adapted to be secured to the window frame for holding said last-mentioned cord in any of its adjusted positions.

---

1,562,482. METHOD OF MAKING CHAIN BOLTS. HARRY E. WORRELL, Pittsburgh, Pa., assignor to McKinney Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1923. Serial No. 624,155. 2 Claims. (Cl. 153—32.)

1. The method of forming bolts which comprises providing a substantially flat blank having a wide upper portion whose uppermost edge is of substantially arcuate form-bending said portion to bring the side edges thereof into adjacent position to form a tubular body portion, bending a portion of the blank to semi-circular form of less diameter than said body portion, and forming a shank portion below said intermediate portion of angular form in cross section.

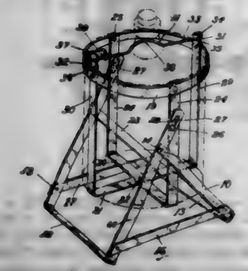
1,562,483. SHIP'S TELEGRAPH. FRANK W. WOOD, Montclair, N. J. Filed Jan. 13, 1923. Serial No. 612,446. 1 Claim. (Cl. 116—21.)



In a ship's telegraph receiving apparatus, a casing, a partition therein dividing the casing into a front and a rear chamber, a dial at the outer end of the casing, a main shaft rotatable in a bearing in the partition, an indicator wheel on the shaft within the rear chamber, a pointer on the shaft in front of the dial, a gear shaft rotatably mounted in a bearing in the partition, a pinion on one end of said shaft and a larger gear on the other end of the shaft, a gear on the main shaft engaging said pinion and of larger diameter than the pinion, a relatively small pinion rotatably mounted on the main shaft in said front chamber and engaging the gear on said gear shaft, a serrated wheel larger than the last named pinion and connected to rotate therewith, and one or more vibratory sound producers in said front chamber in generally radial relation to the main shaft, each of said sound producers comprising, a tubular member supported on said partition, a sound horn connected to the outward end of said tubular member and having its outer end located in an aperture in the casing, a diaphragm housing having screw-threaded engagement with said tubular member, a diaphragm secured in the flared inward end of said housing, a button on the diaphragm engaging the serrated wheels, and means for securing the diaphragm casing in adjusted position on said tubular member, the parts being constructed and arranged so that at each movement of the instrument pointer from one dial space to another the serrated wheel is rapidly moved and the diaphragm or diaphragms are rapidly vibrated, producing a loud penetrating and raucous noise, clearly perceptible above the other loud noises in a Diesel-engine room.

---

1,562,484. PORTABLE BOTTLE HOLDER. EARL C. WRIGHT, Cleveland, Ohio, assignor to Louis E. Wright, Cleveland, Ohio. Filed May 29, 1924. Serial No. 716,622. 9 Claims. (Cl. 248—58.)

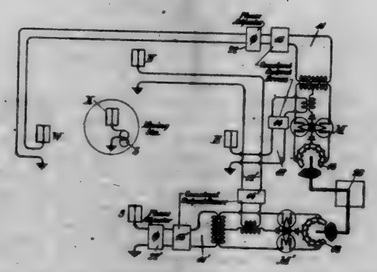


1. A receptacle holder comprising a support formed of upwardly bent supporting members, and a skeleton case for the receptacle consisting of spaced strips inter-

secting at the bottom and means connecting the upper ends of the strips together, and trunnions projecting outwardly from said strips, said supporting members having elongated, inclined slots with lateral openings entering the slots between their ends to receive said trunnions, whereby lifting the case will carry the support but lateral thrust thereof will detach the trunnions from the slots through the said openings.

---

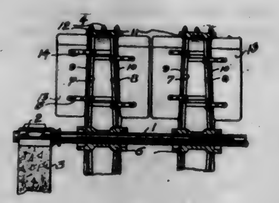
1,562,485. MOVEMENT AND POSITION INDICATOR. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 5, 1923. Serial No. 636,864. 9 Claims. (Cl. 250—2.)



1. The method of determining the speed of a moving station with reference to two fixed stations, which consists in simultaneously receiving waves of the same frequency radiated between the moving station and each of the fixed stations respectively, producing an indication proportionate to the relative phases of the received waves which corresponds to the movement of the moving station, and determining from the number of cycles of relative phase shift per unit of time the number of wave lengths traveled by the moving station within that unit of time.

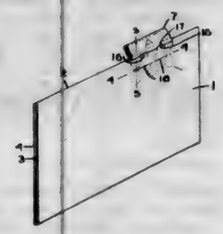
---

1,562,486. WATER MOTOR. WILLIAM G. ALEXANDER and MILBURN E. ALEXANDER, Brewster, Wash. Filed July 25, 1924. Serial No. 728,251. 3 Claims. (Cl. 170—110.)



1. In a water wheel, the combination with a hub and spaced side walls and an enclosing rim, of radial spokes arranged in two spaced series within the walls, feathering blades pivoted on said spokes at each side of said wheel, and means carried by said blades for co-action with spokes at the opposite side of the wheel for retaining said blades in operative position.

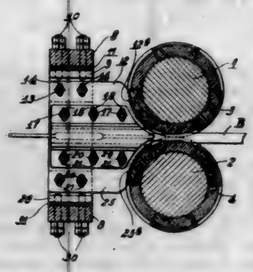
1,562,487. GUIDE CARD FOR CARD INDEXES. STANLEY ANTHONY, Boston, Mass. Filed Mar. 8, 1923. Serial No. 623,664. 19 Claims. (Cl. 129—16.8.)



17. An index device comprising a card, and a tab formed from a strip of sheet material doubled to provide a pocket for an index element and having its free extremities embedded in the substance of the card.

---

1,562,488. ADJUSTABLE LEADING-OUT GUIDE. GEORGE BAEHR, Irwin, Pa. Filed Mar. 22, 1923. Serial No. 626,764. 4 Claims. (Cl. 80—51.)



1. A stripping device for rolls, comprising a rigidly mounted frame, a supporting member attached to the frame by vertically adjustable means, a stripping guide attached to the supporting member by vertically adjustable means, said stripping guide having its free end extending into the forming groove of the die rolls and its edge in substantial alignment with the bottom of one of the forming grooves.

---

1,562,489. COMPOSITION OF MATTER FOR PREVENTING CORROSION AND SULPHATION OF STORAGE BATTERIES. FREDERICK D. BASS, Colorado Springs, Colo., assignor of one-half to B. W. Seldomridge, Colorado Springs, Colo. Filed Nov. 10, 1924. Serial No. 749,036. 5 Claims. (Cl. 136—29.)

1. A composition of matter for use in the treatment of batteries which includes an alkali, a grease, and a means for maintaining the same in a paste form.

---

1,562,490. METHOD OF MAKING ARSENATES. HARRY P. BASSETT, Cynthiana, Ky. Filed Feb. 19, 1923. Serial No. 620,050. 6 Claims. (Cl. 23—53.)

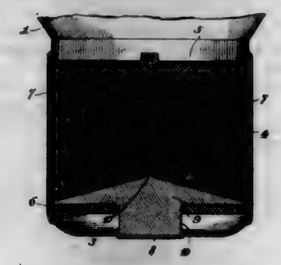
1. The method of oxidizing arsenious compounds to form arsenates which comprises treating such compounds with sufficient quantity of a base capable of forming a soluble chlorid and insoluble arsenates to form arsenites of such base, adding chlorine thereto to form arsenates of said base and a chlorid of said base, maintaining the acidity of the solution during oxidation, and adding thereafter an additional quantity of such base until the solution becomes slightly alkaline to form insoluble arsenates of said base and a soluble chlorid of said base.

1,562,491. AUTOMATIC NONPRINTING MECHANISM. FREDERICK W. BERNAU, Newark, N. J., assignor to Ellis Adding-Typewriter Company, Newark, N. J., a Corporation of New Jersey. Filed Sept. 24, 1921. Serial No. 502,858. 7 Claims. (Cl. 235—60.)

2. In an adding, subtracting, or listing machine having a traveling carriage, the combination with a group of movably mounted printing elements representing different numerical orders, of a locking bail operable by the carriage and common to a plurality of predetermined ones of said printing elements and adapted to directly engage with and lock them against movement when said bail is set by the carriage.

---

1,562,492. STRAINER. ABRAM BROWN, Maywood, N. J. Filed Mar. 19, 1924. Serial No. 700,298. 4 Claims. (Cl. 210—157.)

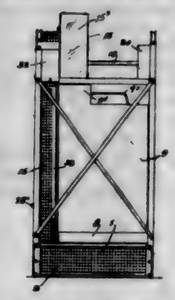


1. A strainer, comprising a receptacle having a closed bottom and having screened outlets in its side walls, a removable portable baffle located in the strainer and having a central post supported on the bottom of the strainer and providing an annular space around the post for the collection of sediment under the baffle, the upper face of said baffle of general conical shape.

---

1,562,493. AUTOMATIC RODENT TRAP. ANDREW CHERLANCHAKEVICH, Winnipeg, Manitoba, Canada. Filed Nov. 10, 1921. Serial No. 514,334. 2 Claims. (Cl. 43—76.)

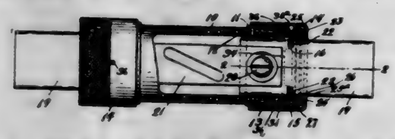
2. A rodent trap comprising an entrance compartment having open ends, normally open gates associated with the ends of the said compartment, means actuated by the entered animal for closing the gates, an elevated discharging compartment, an escape passage connecting the compartments, a normally inert rotary power driven trap door closing the bottom of the discharging compartment, a depressible release door associated with the trap door, means actuated by the depression of the release door under the weight of the animal adapted to release the trap door to rotate and forcibly discharge the animal, means automatically stopping and locking the trap door after it has rotated one revolution, means for resetting the entrance gates in their open position during



the rotary movement of the trap door and an exterminating compartment beneath the discharging compartment for receiving the discharged animal.

---

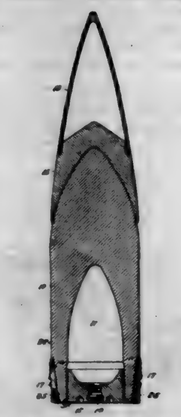
1,562,494. RENEWABLE ELECTRIC FUSE. FRANKLIN N. CONANT, Newburyport, Mass. Reflled for abandoned application Serial No. 477,384, filed June 14, 1921. This application filed Mar. 5, 1923. Serial No. 623,029. 14 Claims. (Cl. 200—132.)



1. A renewable enclosed electric fuse of the cartridge type comprising the combination of a tubular enclosing casing, a knife-blade fuse terminal extended outwardly from within the casing, plates having complemental terminal recesses therein adapted to conform to and envelop said terminal, and means arranged to press said plates inwardly toward each other and into substantial gas tight engagement with said terminal.

---

1,562,495. ARMOR-PIERCING SHELL. WILLIAM DALTON, Schenectady, N. Y. Filed Nov. 18, 1921. Serial No. 516,180. 5 Claims. (Cl. 102—29.)

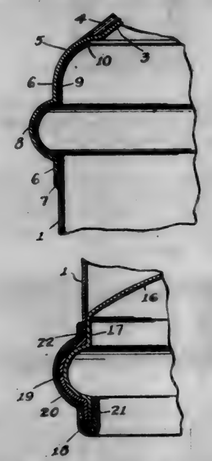


5. In an armor piercing shell, a shell body having a frusto-conical portion at its lower end, said frusto-conical portion meeting the main body of the shell in an undercut, a substantially cylindrical extension below said frusto-conical portion and having cut therein an in-

ward extending weakening groove, threads below said groove, a retaining ring threaded to fit said cylindrical extension and having a conical upper face, a rotating band adapted to fit in said under cut at its upper end, against said frusto-conical portion on its inner face and against the conical portion of said retaining ring at its lower end, and means for preventing relative movement between said retaining ring and said shell body.

---

1,562,496. CAN. AUGUSTINE DAVIS, Jr., and ARTHUR L. BETTS, Cincinnati, Ohio; said Betts assignor to said Davis. Filed Aug. 16, 1922, Serial No. 582,126. Renewed Jan. 17, 1925. 9 Claims. (Cl. 220—67.)

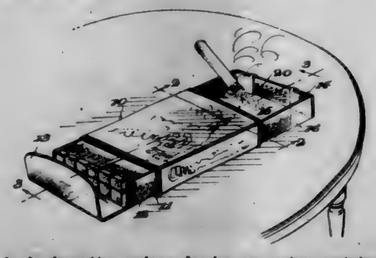


3. A can having a shell and a breast having a flange enclosing the upper portion of the shell and welded thereto, a bead rolled out in two thicknesses of metal the upper end of the shell rising upward above the bead and having an inwardly extended seat supporting the breast.

8. In a measuring can or bucket, a shelf, a bottom head having a downturned flange set into the lower portion of the shell, a weld forming a tight bottom joint, a heavy reinforcing ring encircling the lower portion of the shell and said flange, said ring having a portion extending beneath the edge of the shell and flange, and a bead forced outward beyond the lines of the can in the thicknesses of the ring, shell and flange.

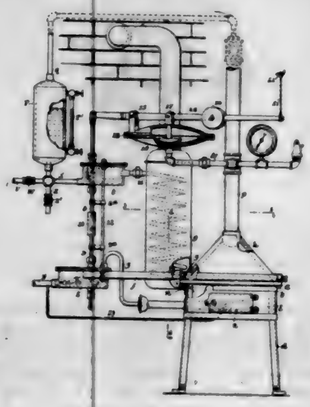
---

1,562,497. COMBINED CIGARETTE CONTAINER AND ASH TRAY. WILLIAM ROBERTS DERBY, Augusta, Ga. Filed Oct. 1, 1924. Serial No. 741,010. 3 Claims. (Cl. 206—38.)



1. A cigarette package having an outer container and a sliding cigarette tray, and an ash tray fitted in between the container and the cigarette case when not in use and designed to be pulled partly out of the container when in use.

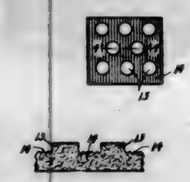
1,562,498. FLASHER STEAM HEATING APPARATUS. DANIEL DE VRIES, Nutley, N. J. Filed Apr. 8, 1924. Serial No. 704,941. 5 Claims. (Cl. 122—40.)



2. A steam heating system including a steam generator and a water conductor leading thereto, in combination with a heater for the generator, back and forth movable means moved in one direction by the pressure in the system and including two valves seatable respectively to damp the flow through the conductor and to damp the heater, one of said valves having a lead on the other in seating, and said conductor having a water trap, and float means in the trap to cushion said first-named valve on seating.

---

1,562,499. INSULATING PLASTER BOARD. GEORGE H. ELLIS, St. Paul, Minn. Filed Aug. 8, 1923. Serial No. 656,330. 3 Claims. (Cl. 25—42.)

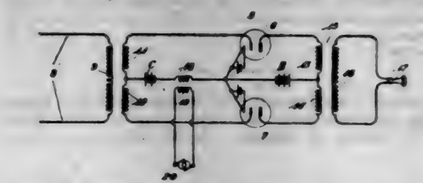


3. A plasterboard comprising a flat body of fibrous material having substantially cylindrical projections extending from one surface thereof, each projection being spaced from the surrounding adjacent projections substantially the same distance, the surface of said board between the projections being provided with adjacent parallel V-shaped ribs.

---

1,562,500. RECEIVING CIRCUITS FOR LOW-FREQUENCY IMPULSES. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,527. 4 Claims. (Cl. 178—63.)

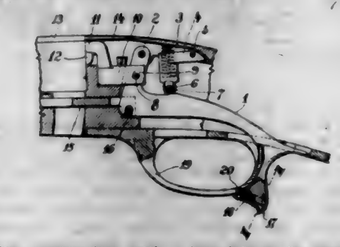
4. A receiving device for a signaling system comprising two three-electrode thermionic tubes, means for causing the tubes to produce similar pulsating currents in their output circuits, a circuit for applying said similar pulsating currents oppositely to the receiving device and connections for applying the received signals to the controlling electrodes of said tubes in opposite senses, whereby the amplitude of the pulsating current in the output circuit of one tube is increased, while that of



the output circuit of the other tube is decreased and a feedback circuit connecting the output circuits in said tubes with the input circuits of said tubes.

---

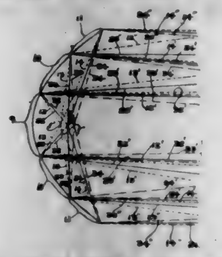
1,562,501. SPORTING GUN. RUDOLF VON FROMMER, Budapest, Hungary. Filed Aug. 25, 1921. Serial No. 495,182. 5 Claims. (Cl. 42—44.)



5. The combination with a breech-lever for guns operable by an upward pressure and adapted to actuate the ordinary bolt employed in locking the barrel, of a bolting block rectilinearly guided in the breech body, and connected with said breech-lever, a stop lug on the bolting block, and a projection on the barrel adapted to be engaged by said stop lug for fixing the barrel in its locked position.

---

1,562,502. LIGHT PROJECTOR. ROBERT CLYDE GOWDY, Cincinnati, Ohio, assignor, by mesne assignments, to The American Flatlite Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 18, 1924. Serial No. 699,972. 2 Claims. (Cl. 240—41.)

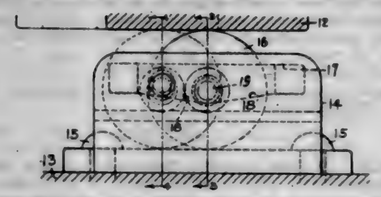


2. A concave reflector having a basic curvature which varies radially to provide a series of concentric zones merging and developing one into another, the basic curvature of one zone being elliptical, and a second zone hyperbolic.

---

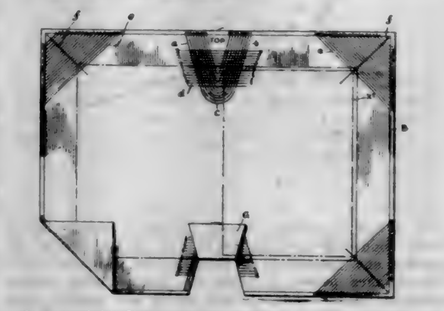
1,562,503. TRUCK BEARING. SOREN HANSSON, Butler, Pa. Filed Oct. 25, 1924. Serial No. 745,931. 3 Claims. (Cl. 308—226.)

1. A truck bearing comprising a casing, an anti-friction roller within said casing normally adapted to seat upon the bottom thereof, inclined guide-ways extending from the mid-portion toward each end of the casing, a yieldable member disposed transversely of the casing and extending through said roller and having its ends disposed within said guide-ways, the parts being so proportioned that when the roller is deflected from normal position, the guide ways will cause distortion of said flexible member to effect return of the roller.



---

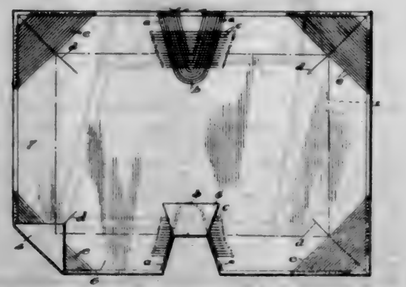
1,562,504. BOOK COVER. ERNEST WALTER JACKSON, Austin, Tex. Filed Jan. 26, 1923. Serial No. 615,073. 2 Claims. (Cl. 281—34.)



1. A book-binding cover comprising a substantially rectangular blank having a series of parallel lines produced on one face of each corner portion thereof and also having on each corner portion a line bisecting the corner angle and also bisecting the first named lines, said first named lines and said second named lines on each corner portion cooperating to indicate the location of the corresponding corner extremity of a book binding of less breadth and length than the blank when said book binding is disposed flatwise upon the blank in centered relation thereto, the corresponding lines of the respective series of first named lines being similarly marked.

---

1,562,505. BOOK COVER AND METHOD OF APPLYING THE SAME. ERNEST WALTER JACKSON, Austin, Tex. Filed Feb. 20, 1925. Serial No. 10,579. 4 Claims. (Cl. 281—34.)

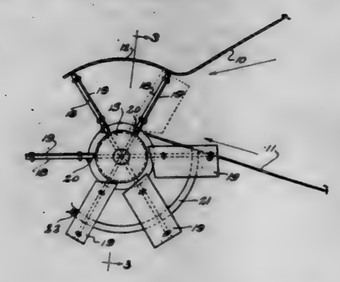


1. A one piece book cover for the binding of a book comprising a substantially rectangular blank having series of parallel lines produced on the inner faces of

the corner portions of the blank, said lines extending at an angle of approximately forty-five degrees to the longitudinal edges of the book blank and indicating lines on which said corner portions of the blank may be folded inwardly on the body of the blank underneath the back of the book binding to provide a book binding with a cover of double thickness at the outer faces of the corner portions of the book binding, the outer face of the book cover being continuously smooth throughout its area when applied.

---

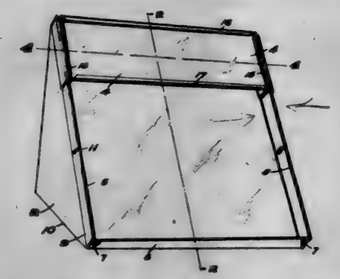
1,562,506. WATER MOTOR. BROOKS O. JENKINS, Birmingham, Ala., assignor of one-half to A. H. Stockmar and one-half to Robt. L. Steadham, both of Birmingham, Ala. Filed Apr. 28, 1924. Serial No. 709,674. 1 Claim. (Cl. 170—116.)



In a water motor, a power shaft, a frusto conical drum connected to said shaft and disposed with its smaller end uppermost, a plurality of transverse horizontal axes passed through the drum, blades rigidly mounted on the ends of said shafts and having their inner edges bevelled to correspond with the angle of the drum's wall, the blades on the ends of each shaft being set at right angles to each other, a flume having at one side a diagonal wall tangential to the drum which extends substantially from top to bottom of the flume, means to guide the idle blades over the diagonal wall of said flume, their bevelled edges permitting them to more quickly clear said flume wall, and means to arrest the blades in vertical position as they swing down under pressure of the water in said flume, said blades when under water pressure being disposed with their inner edges close to the periphery of the drum.

---

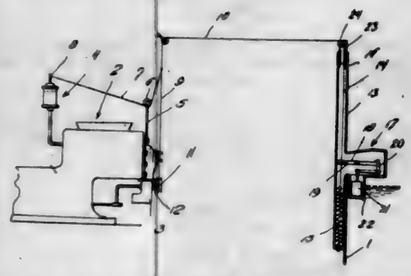
1,562,507. DISPLAY STAND FOR MERCHANDISE. CLARENCE P. JOHNSON, Newton, Mass. Filed June 25, 1924. Serial No. 722,315. 12 Claims. (Cl. 211—28.)



1. A collapsible display stand, having in combination, a tray provided at two opposite sides thereof with upstanding marginal walls formed by bending the material of the tray, triangular pieces of sheet material the hypothenuses of which are detachably secured to said marginal walls, and a bridge member the width of which is less than the corresponding dimension of the tray detachably secured at opposite ends thereof to said two opposite marginal walls of the tray and extending across the tray in spaced relation with the bottom of the tray.

---

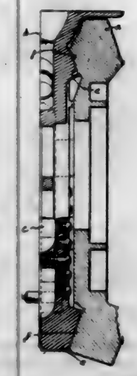
1,562,508. AUTOMATIC FLOW REGULATOR. HARRY G. JOHNSON, Galva, Ill. Filed July 2, 1925. Serial No. 41,136. 3 Claims. (Cl. 103—14.)



3. In a flow regulator of the class described, means adapted to be connected with a part of an engine whereby upon rotation of said means, the engine will be stopped, a flexible element connected with said means, a tubular casing, said flexible element having one end depending into said casing, a coiled spring located in said casing, said flexible element being connected to said spring, a bushing rotatable in said casing, a pulley carried by said bushing, said flexible element being trained over said pulley, a rockably mounted lever having one end projecting into said casing and connected with said flexible element, a bell crank, means for pivotally mounting the bell crank, said bell crank having one arm provided with a hook forming a latch for detachable connection with one end of said lever, and a float connected with the other arm of said bell crank.

---

1,562,509. PERMANENT-MOLD CONSTRUCTION. HARRY S. LEE, AMOS E. CHAFFEE, and FRED MILLARD, Plymouth, Mich.; said Chaffee and said Millard assignors of their entire right to the said Lee. Filed Feb. 21, 1925. Serial No. 10,830. 10 Claims. (Cl. 22—136.)



8. In a mold, the combination of a die which expands and tends to bow when heated, and means for automatically applying pressure transversely of said die to counteract the tendency of said die to bow.

1,562,510. PROCESS FOR PROTECTING WOOL, FURS, AND OTHER MATERIALS AGAINST ATTACK BY MOTHS. WILHELM LOMMEL, Wiesdorf-on-the-Rhine, and HEINRICH MÜNZEL, Leverkusen-on-the-Rhine, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed May 10, 1924. Serial No. 712,472. 2 Claims. (Cl. 167—6.)

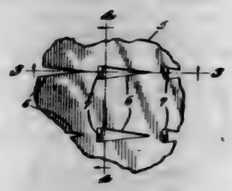
2. A moth-proof material of fabric consisting of a material or fabric liable to be attacked by moths, having incorporated or combined therewith a moth-repelling chemical substance containing the group

$$-N(R)-X=Y$$

wherein R represents hydrogen or a radical, X represents nitrogen or carbon and Y represents nitrogen, carbon or a nuclear radical.

---

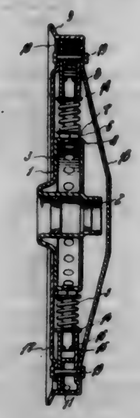
1,562,511. PRESSING BOARD. JOHN LUDWIG, Sr., Dallas, Tex. Filed Oct. 2, 1923, Serial No. 666,150. Renewed May 12, 1925. 1 Claim. (Cl. 69—9.)



A presser plate for presser boards comprising a thin sheet of material, said sheet having a plurality of triangular openings therein, needles projecting from the sheet, the base of each needle being merged into one edge of an associated opening, said needles being of a size and shape corresponding to that defined by the edges of the associated opening.

---

1,562,512. SPRING WHEEL. WESLEY MCBURNETT, Baton Rouge, La. Filed Dec. 19, 1923. Serial No. 681,624. 1 Claim. (Cl. 152—52.)



A wheel of the class described comprising a hub section, radiating bolts carried thereby, a rim section, consisting of a pair of annular plates, spacing plates between the first mentioned plates and bolts connecting the plates together, one of the annular plates having its outer part bent to form a rim receiving part, the outer ends of the radiating bolts extending between the annular plates at the inner edges, springs on said bolts, placed between the hub section and the rim section and front and rear discs fastened to the rim section.

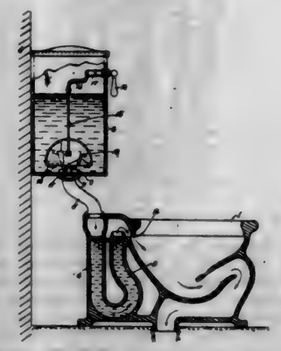
---

1,562,513. NAPKIN AND TOWEL DISPENSER. WILLIAM P. MCCORKINDALE, Holyoke, Mass., assignor to Macco Manufacturing Co., Holyoke, Mass., a Corporation of Massachusetts. Filed Oct. 13, 1920. Serial No. 416,724. 2 Claims. (Cl. 45—29.)

1. A dispensing device consisting of a frame having a forwardly and downwardly inclined bottom and stops located near the forward edge thereof, a pair of hanger members provided on said frame above said stops and having rearwardly directed hook-like portions designed to overlie a stack of paper sheets arranged in the frame and forwardly and downwardly extending follower portions and carrying on their lower end a weighted rod supported rearwardly of the center of gravity of said hanger rods and a swinging stop supported on the frame above the said first stop.

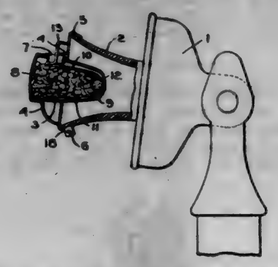
---

1,562,514. CLOSET TANK. ROBERTO HEYDRICH Y MARTINEZ, Habana, Cuba. Filed June 17, 1925. Serial No. 37,829. 1 Claim. (Cl. 4—43.)



A flush tank mechanism comprising in combination with a tank, a pipe extending upwardly in and terminating slightly above, the bottom of the tank and having an expanding open upper end, a hinged plain hemispherical bell for covering the open upper end of the pipe, and means, arranged within the tank and operable from outside the tank, to raise the bell on its hinge, a series of perforations in the bell and above the lower edge thereof, a support integral with and projecting from the pipe, ears on the support for hingedly receiving the bell, and a shelf on the support to receive the edge of the bell when it is in its lowered position and screw threads on the pipe for connecting it to the tank.

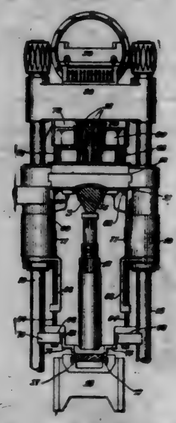
1,562,515. ANTISEPTIC ATTACHMENT FOR TELEPHONES. JACOB I. ORKIN, Boston, Mass. Filed Sept. 29, 1924. Serial No. 740,519. 6 Claims. (Cl. 179—185.)



1. In an antiseptic attachment for telephones, the combination with an antiseptic receiving chamber of a size to set within a telephone mouthpiece, of means for removably securing said chamber to the mouthpiece, said chamber having a filling opening, a pad of absorbent material within the chamber, and means for compressing said pad.

---

1,562,516. FASTENING-INSERTING MACHINE. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 23, 1923. Serial No. 676,648. 25 Claims. (Cl. 1—18.1.)



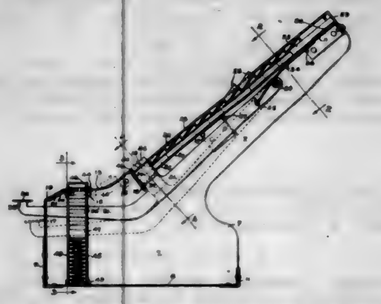
1. In a machine for inserting fastenings, a movable support, a plurality of fastening-inserting mechanisms movable independently of each other and co-operating with the support, yieldable means for moving the inserting mechanisms in such independent movement into position for co-operation with the support, and means exerting a tendency to move the inserting mechanisms in opposition to the moving means.

---

1,562,517. ELECTROLYTE FOR GALVANIC ELEMENTS. RUDOLF PÖRSCKE, Hamburg, Germany. Filed Aug. 29, 1921. Serial No. 496,637. 2 Claims. (Cl. 136—153.)

1. A galvanic cell containing an artificial manganese-oxygen compound as a depolarizer, and containing as an electrolyte, a solution of an alkaline earth metal chloride, such electrolyte being free from ammonium salts, free from dissolved substances of a highly oxidising character, such electrolyte initially also containing a small quantity of a mercury salt.

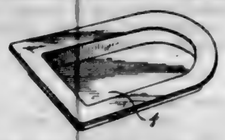
1,562,518. EDUCATIONAL DEVICE. ARTHUR L. RUNYAN, Long Beach, Calif. Filed Jan. 17, 1921, Serial No. 437,851. Renewed June 18, 1924. 18 Claims. (Cl. 35—9.)



1. In a mechanism of the class described, the combination with a plurality of character blocks, and a displaying support having a front face provided with means for sustaining and displaying the character blocks, of a series of magazines, for said blocks located in rear of the said front face, and an inclined ejecting lever for each of the magazines extending longitudinally of the magazines in rear of the same and having an operating portion and an ejecting portion arranged to move the blocks from a magazine and place them upon a part of the said support.

---

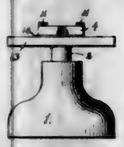
1,562,519. CELLULOID MOLD FOR CEMENTITIOUS PLASTICS. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor to Hayes Products Company, Grand Haven, Mich., a Corporation of Michigan. Filed Sept. 10, 1923. Serial No. 661,781. 3 Claims. (Cl 25—119.)



1. A mold for cementitious plastics consisting of a bottom and sides integral therewith and formed of a properly formed sheet of celluloid.

---

1,562,520. PROCESS FOR MOLDING PLASTIC BODIES. FREDERICK C. RUPPEL, Grand Rapids, Mich, assignor to Hayes Products Company, Grand Haven, Mich., a Corporation of Michigan. Filed Sept. 10, 1923. Serial No. 661,782. 1 Claim. (Cl. 25—158.)



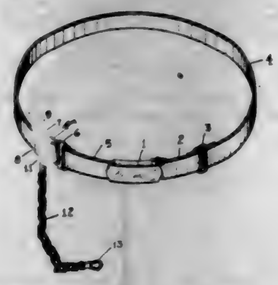
The process of producing plastic bodies which consists in partially filling a mold with a plastic mass, percussing the mold and the mass therein to cause the air bubbles in the mass to rise from that portion of the surface thereof which is in contact with the mold, then permitting the plastic mass to take an initial set, then filling the mold with plastic material, covering and inverting the mold and then percussing the mold and the mass therein to cause the air bubbles in the last filled-in mass to rise from that portion of the surface thereof which is in contact with the mold and cover, and then permitting the plastic mass to harden.

1,562,521. GRIP STRAP. CHARLES P. SCHLEGEL, Rochester, N. Y., assignor to The Schlegel Mfg. Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 2, 1925. Serial No. 262. 15 Claims. (Cl. 115—454.)

3. A grip strap for vehicles having a laterally bendable elongated grip portion comprising a helical spring, a core extending longitudinally through the spring and a covering for the spring having connection with the core at opposite ends of the spring.

---

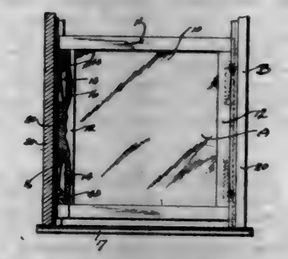
1,562,522. BELT. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 25, 1924. Serial No. 688,408. 1 Claim. (Cl. 24—3.)



An adjusting slide for belts comprising a front sheet metal portion curved transversely, sheet metal end portions at right angles to and in one piece with the front portion, the lower end portions having formed in one piece therewith at its free end a downwardly turned portion, formed with means for securing a flexible connection thereto, and a relatively narrow anchoring bar secured at its ends to the end portions in spaced relation to the front portion, and a flexible connection secured to the downwardly turned portion on the lower end portion.

---

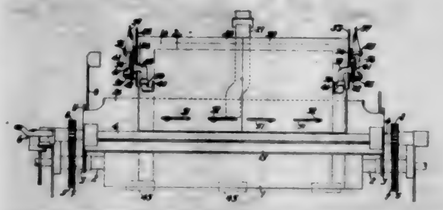
1,562,523. WINDOW-SASH-RETAINING ARRANGEMENT. WILLIAM R. SLAPPEY, Jacksonville, Fla. Filed Apr. 3, 1923. Serial No. 629,661. 4 Claims. (Cl. 292—77.)



1. In combination with a casing including inner and outer strips, of a sash for sliding in said casing intermediate said strips, a trackway carried by said casing intermediate said strips, and resilient members supported by said sash engaging said trackway a cam action being set up between the resilient members and trackway for laterally urging said sash into resilient and yieldable engagement with the inside strip.

---

1,562,524. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 5, 1922. Serial No. 586,064. 8 Claims. (Cl. 197—126.)



1. In a typewriting machine for simultaneously writing a series of items on continuous bill webs and on sectional order-sheets with the items spaced farther apart on the order-sheets than on the webs, a work-presenting frame at the intake side of the platen for guiding the webs forwardly to the platen, means on said frame comprising forwardly-diverging members under the rearwardly-extending webs at the intake side of the platen for receiving the order-sheets and guiding them rearwardly into a position beneath the webs from which they may be fed forwardly to writing position, so that they will be presented outside the webs at the line of writing, and means for severing said webs.

---

1,562,525. APPARATUS FOR EVAPORATING LIQUIDS INDIRECTLY. KARL LARS ESAIAS THUNHOLM, Orebro, Sweden. Filed Mar. 9, 1921. Serial No. 450,929. 4 Claims. (Cl. 159—37.)

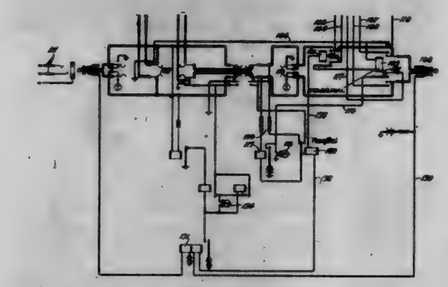
4. An apparatus for heat treating materials including superposed heating elements, each consisting of an annular substantially concavo convex floor provided at its inner edge with an inner ring and provided at its outer edge with an upwardly extending flange and with a downwardly extending annular flange, the upwardly extending flange of each heating element being of less height than the inner ring of the element, substantially annular ribs projecting upwardly from each of said floors and forming substantially concentric shallow channels, means for introducing a heating medium into and discharging the heating medium from said channels, heat transmitting plates arranged between the elements and having their inner edge portions resting on the inner rings and their outer edge portions arranged between the flanges of the elements, and annular flanged members resting on said plates immediately in line with the inner rings and provided with means to permit the fluid being treated to flow off of one heating plate downwardly on to the heating plate below.

---

1,562,526. TELEPHONE-EXCHANGE SYSTEM. JOHN F. TOOMEY and HENRY E. PHELPS, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,756. 26 Claims. (Cl. 179—27.)

1. In a telephone system, an operator's position, an automatic switch, a trunk circuit extending from the

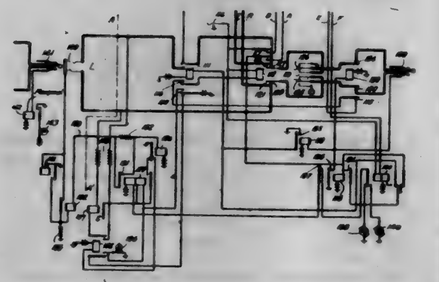
operator's position to said switch, subscribers' lines terminating in said switch, machine ringing equipment associated with said switch for ringing on said subscribers' lines, a cord circuit at said operator's position for connection with said trunk, a sender circuit adapted to be



switched in connection with said cord circuit for setting said switch, and means associated with said sender circuit responsive to the seizure of an idle subscriber's line by the automatic switch for automatically initiating said machine ringing.

---

1,562,527. TELEPHONE-EXCHANGE SYSTEM. JOHN F. TOOMEY and HENRY E. PHELPS, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 5, 1923. Serial No. 666,802. 25 Claims. (Cl. 179—27.)

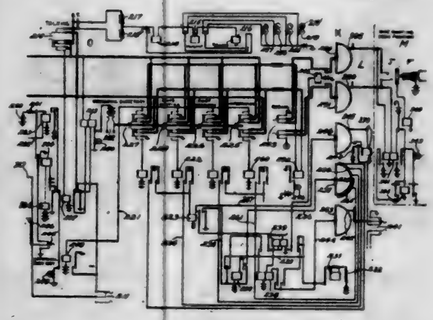


1. In a telephone system, a sender, automatic switches to be set thereby, a manual connecting circuit, means responsive to the actuation of the sender for connecting it to the connecting circuit, and means for automatically disconnecting the sender from said connecting circuit when one of said switches encounters a busy trunk group.

---

1,562,528. TELEPHONE SYSTEM. JOHN F. TOOMEY and HENRY E. PHELPS, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 15, 1923. Serial No. 674,939. 19 Claims. (Cl 179—27.)

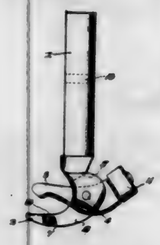
1. In a telephone system, a trunk circuit terminating in a plurality of terminals, an operator's position, a group of connecting circuits terminating in keys at said position, a signaling device at said position for each of said trunk terminals, means responsive to the seizure of said trunk by way of one of said terminals for selecting an idle one of said connecting circuits, and means responsive



to the actuation of one of said keys at said position for actuating the signaling device corresponding to the trunk terminal taken for use.

---

1,562,529. BINDER KNOTTER. ELLIS A. TRUMBO, Greenview, Ill. Filed Apr. 2, 1925. Serial No. 20,189. 1 Claim. (Cl. 289—11.)



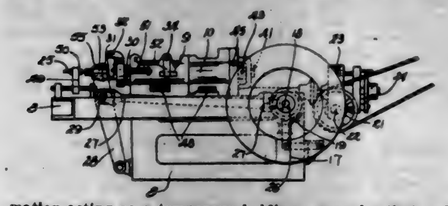
A binder knotter of the character specified comprising a supporting shaft, an inverted curved bill at the lower end thereof provided with a centrally disposed uninterrupted longitudinal slot, a pivot pin extending transversely of the slot through the bill, a tongue supported by and adapted to freely oscillate on said pivot pin within the slot, said tongue provided with an integral forward knob, and a roller on the rear end of said tongue, said longitudinal slot extending from the base of the bill to a point adjacent the outer extremity thereof, leaving a solid portion at the tip of the bill provided with a longitudinal channel, said channeled portion providing the minimum practical area for the knob of the tongue and the binding twine and said slot leaving the maximum practical clearance between the outer end thereof and the central bottom edge of the tongue.

---

1,562,530. PROCESS AND MACHINE FOR WORKING METAL BARS. HENRY JAMES WARD and WALTER ROY WARD, Balmain, Sydney, Australia. Filed Feb. 8, 1924. Serial No. 691,520. 4 Claims. (Cl. 219—3.)

1. A process of manufacturing successively a plurality of formations on a metal bar, consisting of holding the portion of said bar to be operated upon between a pair of insulating heads, passing an electric current through said portion to raise same to the required temperature, forming the desired formation thereon by pressure, and

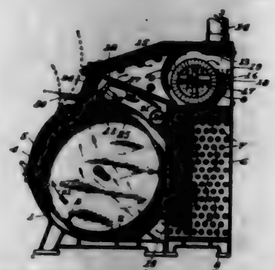
automatically feeding said bar forward into position for the next successive formation, the immediate prior for-



mation acting as a temporary holding means for that end of the bar, the end of the bar forming holding means for the first formation.

---

1,562,531. DRYING TUMBLER. FRANK M. WATKINS, Cincinnati, Ohio. Filed Jan. 17, 1920, Serial No. 352,238. Renewed Apr. 20, 1925. 12 Claims. (Cl. 34—5.)



11. In an up-draft tumbler the combination of a goods containing element, an air moving element for causing a circulation of air within the machine, means for removing moisture-laden-air from the machine, a lint screen in the air outlet passage from the goods containing element, a lint receptacle below said screen, and means cooperating with said screen for removing the deposit of lint therefrom.

---

1,562,532. STANDARD FOR SCALES AND THE LIKE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1922. Serial No. 533,791. 13 Claims. (Cl. 265—55.)

1. A standard for weighing scales and the like, comprising a tubular upright of sheet metal, a socket forming member receiving an end of said upright, an interior collar positioned within the upright and located partially within and partially above said socket forming member, and holding means extending through the socket forming member and the upright and bearing against said interior collar.

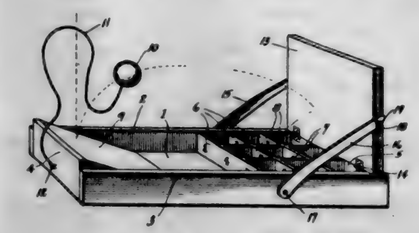
---

1,562,533. SEALED JOINT. EZECHIEL WEINTRAUB, Neuilly-sur-Seine, France. Filed Feb. 15, 1923. Serial No. 619,173. 4 Claims. (Cl. 49—81.)

1. An electrical device comprising an evacuated vessel, an electrode extending from the exterior to the interior of said vessel, and an airtight joint interposed between said electrode and said vessel, said joint comprising a pair of metallic members having substantially parallel adjacent surfaces, and a layer of fusible nonconducting vitric material having a coefficient of expansion substantially equal to that of the metallic members, said layer being interposed between and adhering to said surfaces.

---

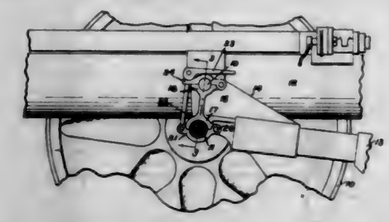
1,562,534. GAME. BROR WINGARD, Everett, Wash. Filed Mar. 28, 1925. Serial No. 18,975. 4 Claims. (Cl. 273—98.)



1. A game of the character described, comprising a base member, a plurality of pockets arranged at one end of said base, an inclined platform at the other end of said base and a captive ball adapted to be bounced from the platform into said pockets.

---

1,562,535. TOP CARRIAGE FOR GUNS. HARRY C. ZIMMERMAN, Washington, D. C. Filed Aug. 25, 1924. Serial No. 734,061. 14 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

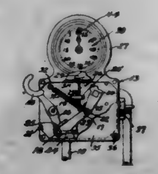


13. A top carriage for guns embodying a pair of upright supports adapted to rest on the gun carriage axle and receive the gun trunnions, means for locking the supports to the axle and to the trunnions, and a bar connecting the supports and carrying said locking means.

1,562,536. MAIL-BOX SIGNAL. CHARLES E. BEBO, McIntosh, Minn. Filed Aug. 8, 1923. Serial No. 656,896. 3 Claims. (Cl. 232—34.)

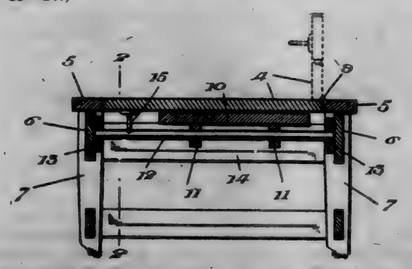
1. The combination with a rural mail box, of a lever pivoted at one end thereof, a flag signal carried at one end of said lever, a weight at the other end of said lever to hold said flag normally elevated, spaced guides along one side of said box, a rod slidable in said guides having an open loop in one end adapted to engage said lever and hold the same in position with the signal depressed, said rod being movable longitudinally to release said lever and having operating means at its end opposite said lever, a second lever pivoted at the side of the box and carrying a signal at one end, a rod disposed at the side of the box pivotally connected to said lever, guiding means through which said rod passes, and operating means at the end of said rod disposed adjacent the operating means on said first mentioned rod whereby both signals may be operated simultaneously.

1,562,537. TIME-CONTROLLED MECHANISM. FREDERICK JAMES BLUM, Sr., Oak Park, Ill. Filed Dec. 14, 1922. Serial No. 606,799. 8 Claims. (Cl. 161—7.)



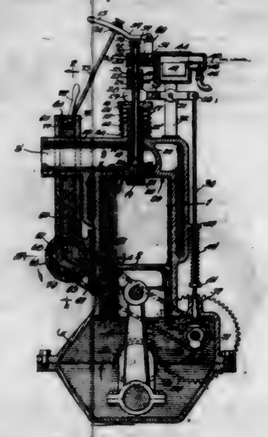
3. The combination in a time controlled mechanism of the character described, of a device having parts arranged to be set approximately in dead center position, means for yieldingly holding said parts in said position, an actuating arm for throwing said parts out of said position, a clock operated member for moving said arm to throw said parts from said position, and means for adjusting the extent of movement of said parts at dead center position through which said member must operate the same to throw them out of dead center position.

1,562,538. COMBINATION TABLE AND IRONING BOARD. DANIEL B. BRICKLEY, Warren, Ohio. Filed July 2, 1923. Serial No. 649,110. 1 Claim. (Cl. 45—17.)



A table comprising a frame having supporting legs, a top on said frame having a section adapted to be raised, a straight cross rod having its ends secured within said frame near one end thereof so as to remain fixed within the frame below the upper edge thereof, a cross bar carried by the frame within the same near the opposite end thereof, and an ironing board under said section of the top and extending over said rod and bar with its ends spaced from the ends of the frame, the ironing board being seatable on said bar and having portions rotatably and slidably engaging said rod.

1,562,539. INTERNAL-COMBUSTION ENGINE. DON COLE, Chicago, Ill., assignor of one-half to John A. Dienner, Chicago, Ill. Filed Sept. 9, 1918. Serial No. 253,140. 14 Claims. (Cl. 123—31.)



1. In a four-cycle internal combustion engine, a cylinder, a piston, a cylinder head closing one end of said cylinder, an exhaust valve at the head end of said cylinder, a fuel inlet adapted to admit fuel to the cylinder during the initial part of the suction stroke, an air inlet port at the other end of the piston stroke adapted to separately admit air to said cylinder during the latter part of the suction stroke, a continuously rotating valve controlling said air inlet port, a fuel passage in said exhaust valve, a fuel conduit individual to said fuel inlet and extending between said fuel inlet and the fuel passage in said exhaust valve, and means for jointly controlling the admission of fuel and air through said fuel inlet and through said air inlet port.

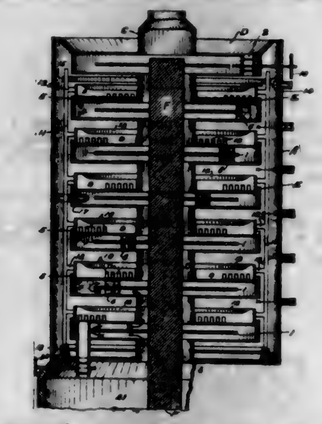
1,562,540. TIN-ZIRCONIUM ALLOY AND PROCESS OF MAKING THE SAME. HUGH S. COOPER, Cleveland, Ohio, assignor to Kemet Laboratories Company, Inc., a Corporation of New York. Filed June 27, 1922. Serial No. 571,294. 9 Claims. (Cl. 75—1.)

3. A pyrophoric alloy containing zirconium and 20% to 40% of tin.

1,562,541. OIL-SHALE RETORT. STEPHEN H. CORFIELD, San Diego, Calif. Filed May 10, 1922, Serial No. 559,839. Renewed Aug. 26, 1925. 1 Claim. (Cl. 202—14.)

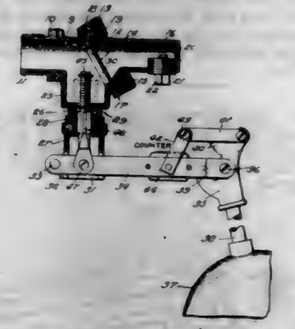
An oil shale retort comprising a casing having a closed top and bottom and through which oil shale is passed; a plurality of spaced apart superimposed tables concentrically within said casing; a vertical support centrally in said casing and tables; a plurality of baffle plates secured on said support and spaced between said tables to direct currents of heat around said tables; a skeleton frame operable concentrically within said casing; a plurality of scrapers carried by and operable

with said frame and spaced one above each of said tables, and having a portion of each scraper cut into blades, with the blade portions alternately staggered in relation to the uncut portions; with means to rotate



said frame and scrapers to move shale from one table to the table below it through an opening cut in the floor of the table offset in position relative to the other openings.

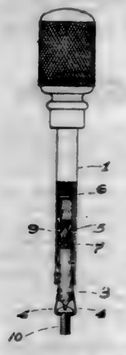
1,562,542. INTAKE REGULATOR FOR SIPHON TANKS. JAMES W. COX, Chicago, Ill., assignor to Pacific Flush Tank Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1921. Serial No. 486,449. 7 Claims. (Cl. 137—104.)



1. In a device of the class described, an inlet fitting having an outlet perforation, a pocket formed in the bottom of the fitting between the inlet and said outlet perforation, a screen arranged in the fitting between the inlet and said outlet perforation and above and extending over at least a portion of the pocket so that heavy matter intercepted by the screen may fall into the pocket, an outlet opening in the bottom of said pocket, an upwardly opening valve normally closing the outlet opening in the pocket, and a float connected to the valve for opening the latter.

1,562,543. SCREW-DRIVER. SETH J. COX, Franklin, Pa. Filed June 27, 1925. Serial No. 40,034. 1 Claim. (Cl. 145—52.)

In a screw driver which comprises a tubular shank of rectangular cross-section adapted to receive and carry the screw-driving bit in such manner as to rotatively actuate the same and so that said bit may have longitudinal movement within said shank, and a longitudinally movable, rectangular bit carried within and adapted to be rotatively actuated by said shank; the combination with the foregoing structure of a screw-engaging jaw member of bifurcated formation composed of spring steel arranged to receive said bit between the legs thereof, said bit and said jaw member being adapted to be carried within and to be retained in their relative

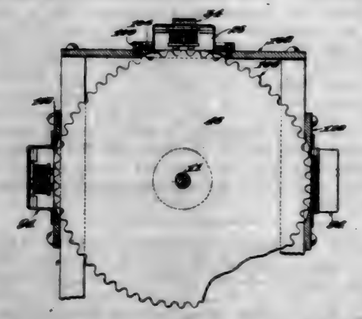


position by said shank, also to have longitudinal movement therein and longitudinal movement relative to each other, whereby said jaw member is caused to engage a screw and to hold the same in actuative relation to said bit, also to be moved and position rearwardly of the point of said bit out of such engaging relation, means arranged to limit said longitudinal movement of said bit within said shank, and means limiting the relative longitudinal movement of said bit and said jaw member.

1,562,544. INK. CHARLES L. CUNNINGHAM, Baltimore, Md. Filed Aug. 14, 1924. Serial No. 731,962. 10 Claims. (Cl. 134—28.)

1. A penetrative ink which includes alcohol, an ethyl ester of a kind that acts as a solvent for softening and penetrating a hardened non-hydroscopic coating, and suitable coloring matter.

1,562,545. APPARATUS FOR TESTING TELEPHONE RECEIVERS. VERNON DURBIN, Newton, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1923. Serial No. 631,818. 13 Claims. (Cl. 179—175.)



10. In an apparatus for testing telephone receivers having, in combination, means for generating sound energy of a constant value and at different frequencies, means for placing a telephone receiver in fixed position

adjacent to the sound generating means, electrical apparatus for measuring the electrical output of the receiver, a standard receiver, means for generating electrical voltages in the standard receiver, and connections between the standard receiver and the electrical measuring apparatus for calibrating the latter.

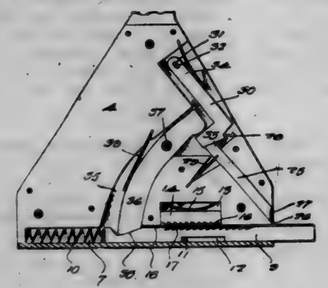
---

1,562,546. SAFETY RAZOR. WILLIAM C. EDWARDS, Jr., Kansas City, Mo. Filed Oct. 9, 1922, Serial No. 593,359. Renewed May 11, 1925. 44 Claims. (Cl. 30—12.)

1. In a razor, the combination with a flat blade, of a support for the blade arranged to support said blade near its longitudinal edges; a guard plate, studs rigid with the support for positioning said blade intermediate the support and the guard plate; openings through the guard plate to pass the studs and edge portions of said guard plate adjacent said openings arranged to contact outer and inner elements of said studs and to lock and space said guard and support a predetermined distance apart against movement from or towards each other and within which predetermined spacing the blade is transversely flexible.

---

1,562,547. AUTOMATIC HAMMER. JAMES A. FARLEY, Galveston, Tex. Filed June 23, 1925. Serial No. 39,090. 8 Claims. (Cl. 1—51.)



6. An automatic hammer comprising a head, a handle therefor, a sliding plunger arranged in said head, the forward end of said plunger projecting beyond the forward end of the head of the hammer, means for feeding the free end portion of a wire along the side face of said plunger, a cutter bar slidably mounted in said head, the lower end thereof being provided with a cutting edge for cooperation with the side face of the projected end of the plunger whereby the free end portion of the wire is cut to form a nail, a dog mounted in the head and engaging the upper end of said cutter bar, and means operable by the rearward sliding movement of the plunger for actuating said dog and said cutter bar, said means comprising a lever pivotally supported intermediate its ends in the head, one end of said lever engaging said dog, the inner end of the plunger being provided with a cam for cooperation with the other end of the lever.

---

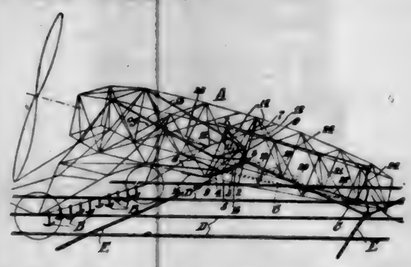
1,562,548. METHOD OF MAKING BELTS. ABRAHAM L. FREEDLANDER and WILLIAM G. GOODWIN, Dayton, Ohio, assignors to The Rubber Development Company, Dayton, Ohio, a Trust Estate. Original application filed Apr. 2, 1923, Serial No. 629,255. Divided and this application filed Mar. 3, 1924. Serial No. 696,470. 4 Claims. (Cl. 154—4.)

1. In a method of manufacturing a belt, placing a cylinder of belt material on a cutting drum, cutting the material into annular members triangular in section, placing one of such sections on a mandrel, cementing in reverse position a second section to the first one while on the mandrel, removing the two sections from the

mandrel and reversing in position, applying a third section in reverse position to the first section on the side opposite to the second section, and removing from the mandrel.

---

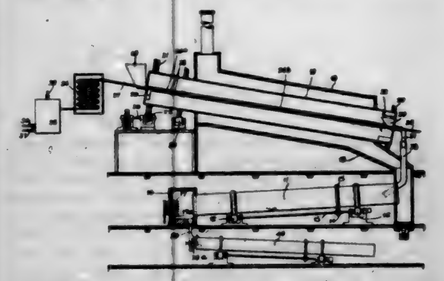
1,562,549. AIRPLANE. CHARLES WARD HALL, Larchmont, N. Y. Filed Jan. 3, 1924. Serial No. 684,108. 8 Claims. (Cl. 244—2.)



1. In an airplane, an arresting gear comprising a hook and a universal joint connection by which the shank of the hook is attached to the body framework of the airplane the length of the shank in front of the stern post said point of attachment located at a point above the bottom of the body when the hook is operatively engaged whereby its line of pull will project forwardly and upwardly close to the center of gravity of the machine.

---

1,562,550. REVIVIFYING FULLER'S EARTH. FRANK W. HALL, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed July 28, 1923. Serial No. 654,302. 6 Claims. (Cl. 252—2.)



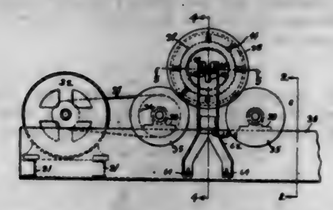
1. The process of treating spent absorbent material used in refining mineral oils that comprises subjecting the material to the distilling action of a carrier gas and then heating the material in the presence of air.

---

1,562,551. CONCRETE-PIPE MACHINE. HOWARD A. HALL, Eugene, Oreg. Filed Sept. 4, 1923. Serial No. 660,764. 4 Claims. (Cl. 25—30.)

1. In a concrete pipe machine, the combination of a form, means for rotating said form, end rings removably

placed in said form, and a sweeping device adapted to sweep water out of the pipe being formed consisting of



a plurality of sweeps set spirally in said form in a manner to allow said sweep to rest lightly on the inner surface of the pipe being formed.

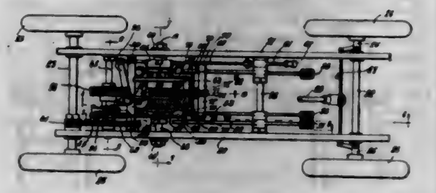
---

1,562,552. ELECTRIC-IRON PLUG. FRANK H. HANLEY, Detroit, Mich. Filed Feb. 9, 1923. Serial No. 617,917. 1 Claim. (Cl. 219—25.)

The combination with an electrical heating iron having posts, a switch, and a leading-in conductor, of a plug detachably mounted on said iron posts, sockets in said plug with one of said sockets connected direct to one of the leading-in wires of said conductor, the other socket having a leading-out wire connected to said switch, and a connector in said plug establishing an electrical connection between said switch and the other leading-in wire of said conductor.

---

1,562,553. OCCUPANT-PROPELLED VEHICLE. PETER HANSEN, New York, N. Y. Filed Dec. 27, 1924. Serial No. 758,848. 5 Claims. (Cl. 208—163.)

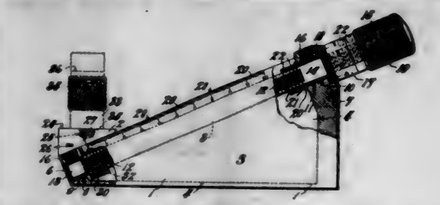


1. An occupant propelled vehicle comprising in combination with a chassis frame having front and rear wheels, of a steering means, alternately operable pedals to move the vehicle forward, a single pedal to move the vehicle backward, intermediate gear trains to transmit the movement of the pedals to the rear wheel axle, and means for disengaging the gear trains therefrom.

---

1,562,554. MICROMETER HEIGHT GAUGE. GEORGE J. HARDGROVE, Lovell, Wyo. Filed June 8, 1923. Serial No. 644,208. 16 Claims. (Cl. 33—162.)

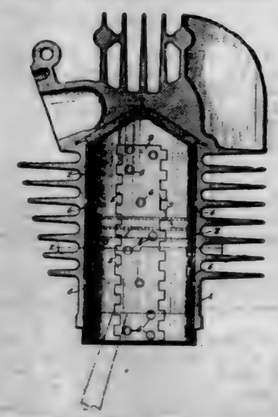
1. A device of the class described, comprising a body having a base and an inclined surface, the inclination of which to the base is at an angle of 23° 36.14', said body having a pair of screw bearings, the axes of which lie at the same inclination as that of the inclined surface of the body, a screw rotatably held in said bearings against longitudinal movement and having a pitch of forty threads per inch, a movable member mounted to slide on the inclined surface of said body and having a



threaded portion to engage said screw, said body having a scale associated with said inclined surface and said movable member, and means by which said screw may be turned.

---

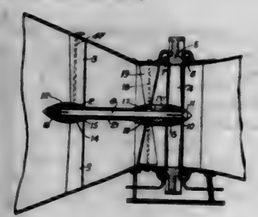
1,562,555. CYLINDER. WILLIAM S. HARLEY, Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 5, 1919. Serial No. 302,006. 6 Claims. (Cl. 74—108.)



1. An aluminum cylinder having wear resisting inserts cast integral with the cylinder on opposite sides thereof to take the side thrust of the piston due to the crank connection, each independent insert having an extensive edge contacting directly with the aluminum body whereby an extended area is afforded for holding the insert in position and for dissipating heat.

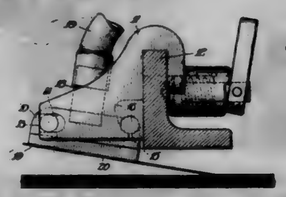
---

1,562,556. HYDRAULIC TURBINE. LEROY F. HARZA, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,551. 14 Claims. (Cl. 253—148.)



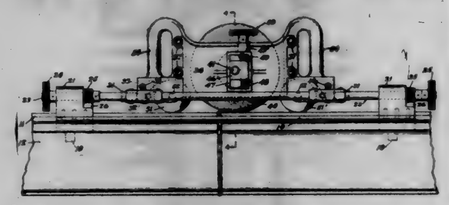
1. A hydraulic turbine comprising an axial flow runner having a rim exteriorly accessible and forming a portion of the water conduit, a shaft for said runner, and bearings for said shaft arranged within said conduit and attached to the walls thereof.

1,562,557. SHEET SEPARATOR. CARL HENDERSON, Chicago, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1923. Serial No. 618,923. 8 Claims. (Cl. 294—64.)



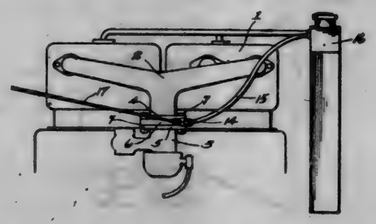
1. A suction shoe for separating one sheet of material from another, comprising a body, the bottom of which lies in two planes which are separated by shoulders lying along diverging lines, there being a suction opening in each of said two planes of said bottom, whereby the sheet is buckled over said shoulders in diverging lines for effectively separating the top sheet and facilitating the withdrawal thereof from the second sheet.

1,562,558. RAIL GRINDER FOR ELECTRIC BUTT-WELD JOINTS. WALTER HOSSON, Philadelphia, Pa. Filed Sept. 1, 1921. Serial No. 497,599. 25 Claims. (Cl. 51—178.)



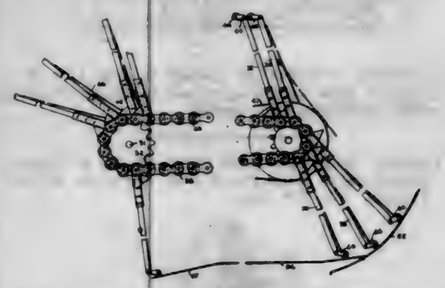
1. In a rail grinder, clamping means for securing the grinder to a rail, a guide extending longitudinally of the grinder and about which the grinding mechanism is adapted to swing, an adjustment for moving the mechanism laterally with respect to the rail, a frame swinging with respect to the guide, a grinding wheel carried by the frame and whose axis of rotation is adapted to rock and a supporting wheel adapted to rest upon the rail maintained in axial parallelism with the grinding wheel and determining the depth to which the grinding wheel grinds.

1,562,559. FUEL-MIXING DEVICE. STANLEY B. HOLMES, Seattle, Wash. Filed July 27, 1922. Serial No. 577,896. 1 Claim. (Cl. 123—25.)



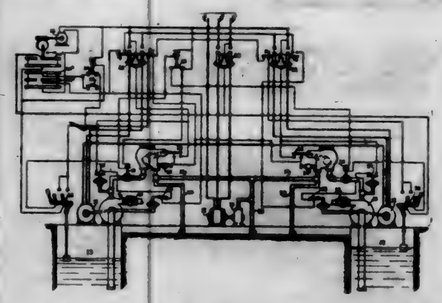
A fuel mixing device adapted to be interposed in the piping between a carburetor and point of combustion of an internal combustion engine comprising a casing having a Venturi passage therethrough and an annular channel about the passage, means for conducting air and water vapor into the said channel and a plurality of small openings in the casing leading from the channel and opening upwardly into the Venturi passage beyond its most restricted part and in the direction of flow of the fuel through the device.

1,562,560. SHEET-CONVEYING APPARATUS. AUGUST HORMEL, Jersey City, N. J. Filed Feb. 8, 1923. Serial No. 617,801. 19 Claims. (Cl. 198—134.)



1. In a drying chamber of the class described, a conveyor at the front for feeding printed sheets with the wet side up, an endless conveyor within said chamber for carrying said sheets substantially vertically with the wet side always facing in the same direction, said endless conveyor having a series of frames with pivoted toes at the free ends thereof.

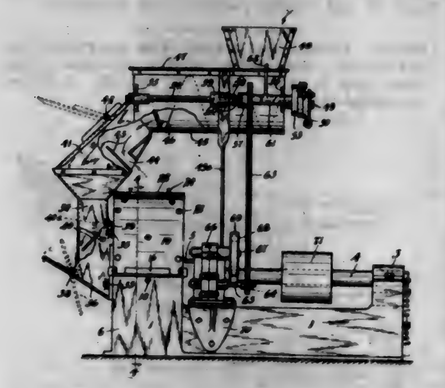
1,562,561. CONTROLLER FOR POWER-DRIVEN PUMPS. BAYARD M. HORTON, Kingston, Pa., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 23, 1923. Serial No. 620,708. 11 Claims. (Cl. 103—25.)



1. In a controller for a plurality of individually driven pumps, the combination with common priming means for the pumps, of automatic means limiting the effect of the priming means to the pumps singly.

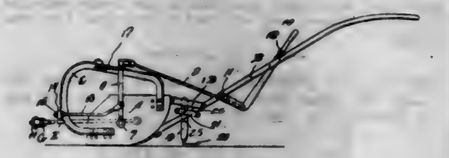
1,562,562. FEED-GRINDING MACHINE. AXEL E. JACOBSON, Minneapolis, Minn. Filed Apr. 21, 1923. Serial No. 633,732. 16 Claims. (Cl. 83—11.)

1. A grinding machine having in combination, a casing, a grinding surface secured therein, a rotary grinding member disposed in said casing and co-operating with said surface and constituting a fan, said casing having an axial lateral opening forming the eye of said fan, an upwardly extending housing communicating with said eye, and an inclined chute to which the material to be ground is delivered, a baffle plate extending upwardly across the major part of said chute, said chute having an opening in its lower side immediately above and adjacent said baffle plate through which air is drawn by said fan



to lift the material delivered to said chute over said baffle plate and through which heavy foreign material may pass.

1,562,563. ATTACHMENT FOR LOADERS. PATRICK H. JOHNSON, Vale, Oreg. Filed June 2, 1925. Serial No. 34,397. 3 Claims. (Cl. 37—140.)



1. A device of the class described wherein a loader includes a scoop, rocker frames on the scoop, a handle extending from the scoop, a draft appliance attached to the scoop, comprising a bar, a pair of links attached to the bar, said bar being located forwardly of the rocker frames and adapted to normally rest on the draft appliance, a pair of arms pivoted to the sides of the scoop, said links being pivoted to intermediate portions of the arms, a member connecting the free end of the arms, and means for moving the member, so as to rock the arms to bring the bars in frictional engagement with the rocker frames.

1,562,564. PROCESS FOR BRIQUETTING FUELS. ROBERT KATTNER, Grochau, Germany, assignor to Frankensteiner Magnesitwerke A. G., Grochau, Germany. Filed Sept. 19, 1925. Serial No. 57,465. 5 Claims. (Cl. 44—26.)

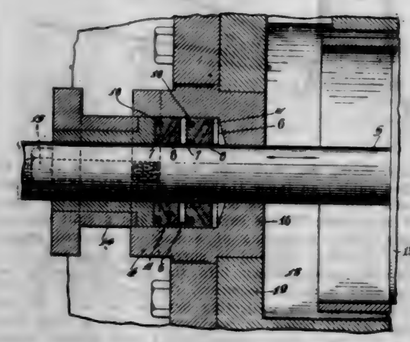
1. A process for briquetting fuels which consists in first intimately mixing the fuels with magnesium chloride, then adding magnesium oxide and then moulding and compressing the mixture to the desired shape, water being added if necessary.

1,562,565. HINGE FOR VANITY BOXES AND THE LIKE. CARL KOSS, Newark, N. J. Filed June 19, 1924. Serial No. 721,056. 2 Claims. (Cl. 16—128.)

1. A sheet metal hinge comprising a member in the form of a substantially cylindrical hollow seat open at one side, a member in the form of a hollow, substantially cylindrical, open-ended pintle lug having a shank, the pintle lug being rotatably received in the seat with the

shank extending through the open side of the latter, and means integral with the ends of the seat engaging in the open ends of the pintle lug.

1,562,566. PACKING CONSTRUCTION. DON A. LEIGH, Fellows, Calif. Filed Mar. 12, 1924. Serial No. 698,768. 1 Claim. (Cl. 286—25.)

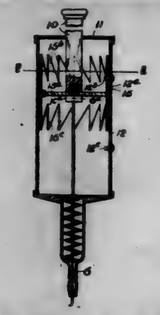


A packing construction comprising a cylinder, a stuffing box at one end of the cylinder, a plunger in the cylinder, a rod for the plunger projecting through the stuffing box, a sectional ring in the base of the stuffing box surrounding the rod and having a beveled face turned away from the cylinder, and an abutment ring fitting tightly in the bore and having a beveled face for the first beveled face to engage, said abutment ring being spaced a greater distance from the inner end wall of the stuffing box than the thickness of the sectional ring to permit reciprocation of the sectional ring, and the outside diameter of the sectional ring being less than the diameter of the bore of the stuffing box when the sectional ring is contracted upon the rod.

1,562,567. FILM-INDICATING SHUTTER DEVICE FOR CAMERAS. HANS LEPPERHOFF, Reading, Pa. Filed Mar. 21, 1925. Serial No. 17,277. 6 Claims. (Cl. 235—8.)

2. In a shutter device for cameras comprising a shutter-rod plunger; a cylindrical casing having a number-exposing wall aperture and inwardly extending wall projections above and below said aperture, and an indicator wheel carried by and freely rotatable upon said

plunger; said indicator wheel having oppositely extending cogs adapted to successively engage said upper and lower wall projections so as to impart a determined rotary movement to the wheel at each reciprocation of the plunger.



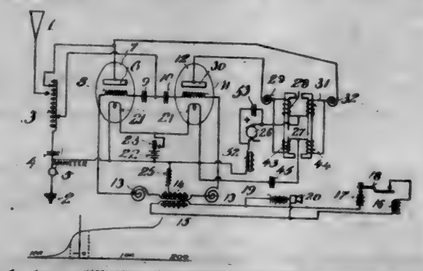
---

1,562,568. GUY-LINE FASTENER. REYNOLD LINQUIST, Portland, Oreg. Filed May 12, 1924. Serial No. 712,648. 2 Claims. (Cl. 24—136.)

1. A clamp for wire rope consisting of an outer U-shaped guide; an inner U-shaped slide dove tailed within said outer guide, the bottoms of said U-shaped members converging toward each other; and a split rope-engaging clamp consisting of a pair of grooved wedge-shaped members adapted to surround a rope and to be compressed when drawn into the tapered opening between said U-shaped members, the narrow end of said U-shaped members projecting beyond the ends of said clamps at all times, in combination with a block having a suitable anchor strap; and a face against which the narrow end of said dove tailed clamp members can bear in a manner than when placed on the hauling end of a guy line said wedges will be forced against said guy line without touching said block.

---

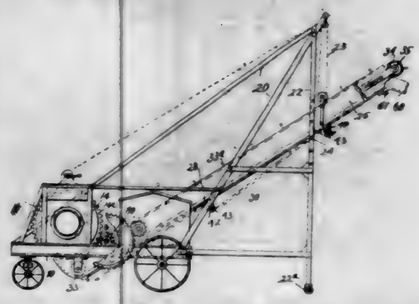
1,562,569. OSCILLATING-CURRENT SYSTEM. CHARLES V. LOGWOOD, New York, N. Y. Filed May 28, 1921. Serial No. 473,363. 12 Claims. (Cl. 179—171.)



1. An oscillation generator system comprising two audions having the plate electrodes thereof connected in parallel, an oscillating circuit operatively associated with the plate electrodes of said audions, a circuit including a source of current connecting said plate electrodes and the filament electrodes of said audions, and means for alternately charging alternate grid electrodes of said audions positively and negatively.

---

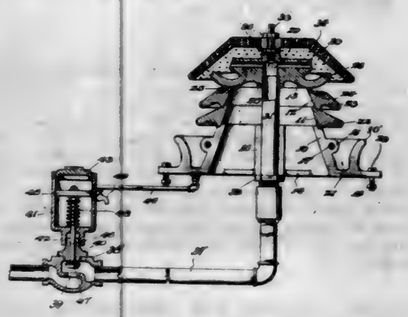
1,562,570. CONCRETE MIXING AND DISTRIBUTING MACHINE. STEWART R. MCKAY, Cleveland, Ohio. Filed June 9, 1920. Serial No. 387,590. 9 Claims. (Cl. 198—122.)



1. In a device of the character described, the combination of a wheeled truck, a derrick thereon, an inclined trough pivoted to the truck, a concrete mixer on said truck, means to discharge material from the mixer into said trough, means carried by the derrick to support the front end of the trough, an endless flight conveyor in said trough, means to actuate said conveyor, a perforated water pipe connected to the trough extended lengthwise thereof and arranged to discharge into said trough.

---

1,562,571. OIL BURNER. WILLIAM H. MCKENZIE, Chicago, Ill. Filed Sept. 14, 1923. Serial No. 662,683. 9 Claims. (Cl. 158—91.)



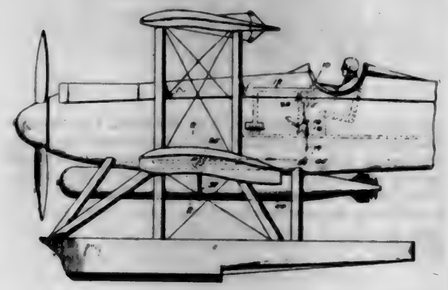
9. In an oil burner, a plurality of annular rings arranged one above the other, the bottom and top rings having a peripheral gully at their bases, the lower intermediate ring being larger than the one thereabove, a conduit conducting oil into the top gully whereby said liquid will drip downwardly successively on said rings, and a wick arranged about the periphery of the uppermost of said intermediate rings.

---

1,562,572. BOMB OR TORPEDO RELEASE CONTROL MECHANISM FOR AIRPLANES. SAMUEL BARTOW MCMURRAIN, Washington, D. C. Filed Apr. 24, 1925. Serial No. 25,716. 4 Claims. (Cl. 244—1.)

1. In an airplane, in combination, releasing mechanism, a steering control member, a switch associated

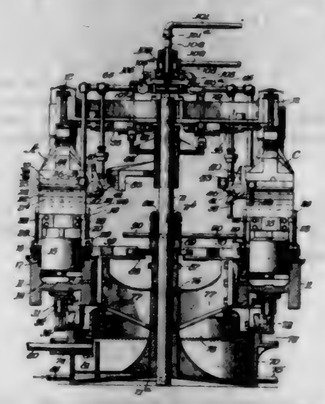
therewith, an electric circuit including a solenoid controlled by said switch, a hook associated with said solenoid, a tripping latch having an eccentric lug actuated by said hook, a pull rod having a notch engaged



by said lug whereby said rod is held in cocked position, an actuating spring for said rod and releasing cables connected with said rod adapted to be released when said first mentioned switch is closed.

---

1,562,573. ROTARY HYDRAULIC PRESS. ALBERT J. MATTER, Chicago, Ill., assignor to Elmes Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Dec. 2, 1920. Serial No. 427,674. 11 Claims. (Cl. 18—17.)

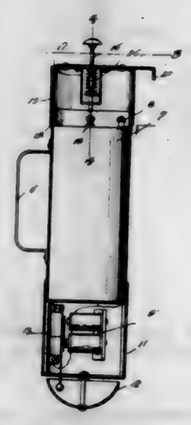


1. In apparatus of the class described, a combination comprising a frame, an actuated press member mounted thereon, a cooperating press member, a movable spacer cooperating with said cooperating press member and frame to support pressure from the actuated press member, and means for inducing a tension upon said spacer while under pressure from the actuated press member, said means being effective by said tension to move the spacer when it is relieved from such pressure.

---

1,562,574. PORTABLE BURGLAR ALARM. GEORGE J. MAUD, Adena, Ohio. Filed July 10, 1923. Serial No. 650,608. 2 Claims. (Cl. 177—314.)

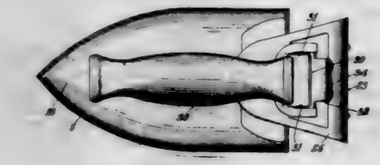
1. A device of the class described comprising a casing open at one end, a battery inserted into said casing through said open end and having its contacts close to said end, a closing cap for said open end fitted thereon, a guide carried by said cap and disposed in alignment with one of said contacts, a spring pressed circuit closing rod slidably mounted in said guide and adapted to be pressed against said last mentioned contact, said rod being provided between its ends with a retainnig



shoulder, a trigger slidably mounted upon the cap and provided with a key hole slot through which said rod passes slidably, the shoulder on said rod being operable with the restricted portion of said key hole slot, to maintain the rod in a set position, and an audible alarm mounted upon the casing having electric circuit connection with said battery.

---

1,562,575. ELECTRIC IRON. NILES I. MERKEL, Yorktown Heights, N. Y. Filed Apr. 26, 1923. Serial No. 634,654. 11 Claims. (Cl. 219—25.)



1. An electric iron having an internal element provided with a passage, a heating element arranged within said passage and means positioned upon the face of said internal element and extending across said internal element for retaining said heating element in position within said groove.

---

1,562,576. STORM WINDOW. WILLIAM MILBRATH, Lakefield, Minn., assignor of one-tenth to Samuel Dubetz, St. Paul, Minn. Filed Mar. 28, 1923. Serial No. 628,205. 7 Claims. (Cl. 20—55.)

1. A storm sash for a sliding sash window structure, comprising an upper section insertable in the window frame of said structure through the opening therein from the inner side thereof without removing the sliding sash,

and means operable from said inner side for removably retaining said section in position, a lower section likewise insertable through the window opening, and means

operable from the inner side of the window structure for detachably hinging said lower section and said upper section.

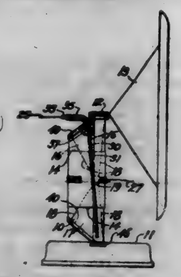
---

1,562,577. AUTOMOBILE TIRE. ALPHONSE F. MONEUSE, New Rochelle, N. Y. Filed Oct. 27, 1921. Serial No. 510,855. 1 Claim. (Cl. 152—26.)

In a protective device for automobile tires wherewith an inner tube is employed, the combination with a tire shoe having an opening therein provided with a countersunk recess at its inner end, said opening being formed in the shoe during manufacture, of a closure for said opening having a peripheral portion held in and filling said recess, and said closure being flush with the surface of the shoe.

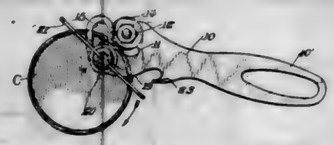
---

1,562,578. PIEZO-ELECTRIC DEVICE AND METHOD OF PRODUCING THE SAME. ALEXANDER MCL. NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1923. Serial No. 655,800. 11 Claims. (Cl. 179—101.)



1. A crystal having means including an electrode in the interior of the crystal, for connecting said crystal in an electric circuit.

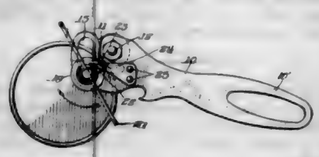
1,562,579. CAN OPENER. WILLIAM H. NORDHAUS, River Forest, Ill. Filed Apr. 20, 1925. Serial No. 24,314. 5 Claims. (Cl. 30—3.)



1. In a can opener of the type described, the combination of a handle bar formed with a transverse slot in one end portion thereof, a fixed cutter disc rotatably mounted on said bar laterally opposite one end of said slot, a feed wheel underlying said slot, an operating shaft connected to said feed wheel through said slot, and means whereby, upon rotation of said shaft, said feed wheel and shaft are caused to travel lengthwise of said slot.

---

1,562,580. CAN OPENER. WILLIAM H. NORDHAUS, River Forest, Ill. Filed May 25, 1925. Serial No. 32,577. 4 Claims. (Cl. 30—3.)



1. In a can opener of the type described, the combination of a handle bar formed with a transverse slot in one end portion thereof, a fixed cutter disc rotatably mounted on said bar laterally opposite one end of said slot, a feed wheel spanning said slot and formed with a hub occupying said slot, an operating shaft connected to said hub, and gearing on said shaft and handle bar effecting bodily travel of said feed wheel toward and from said cutter disc through a turning movement of said shaft.

---

1,562,581. ORNAMENTAL COVERING FOR SHOE BUTTONS. ALFRED C. NOYES, New York, N. Y. Filed Apr. 19, 1923. Serial No. 633,069. 8 Claims. (Cl. 24—113.)

1. A shoe button covering embodying a slide comprising a body portion and a fastening band portion connected to the body portion to provide a strap channel, said fastening band having a locking opening provided with a contracted entrance opening so arranged in said band as to enable a locking engagement between the loop of a shoe button and said band.

---

1,562,582. AUTOMATIC LOADING DEVICE FOR ELEVATORS. GEORGE D. PARKER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed Apr. 2, 1923. Serial No. 629,229. 11 Claims. (Cl. 198—26.)

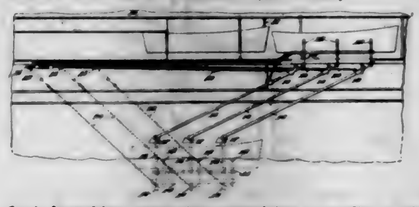
1. In an automatic elevator loading apparatus, the combination of a conveyer for advancing the boxes, an elevator including carriages and a guide-way for the carriages, a feeding track between the conveyer and the

elevator for receiving the boxes from the conveyer, a movable member in the path of the box as it passes along the feeding track from the conveyer, means actuated

thereby and connected to the conveyer for arresting the movement of the conveyer, and automatic means for advancing the box and stopping the same in the path of the carriages of the elevator.

---

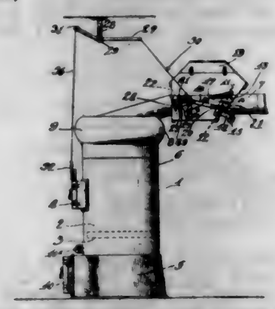
1,562,583. LAUNCHING APPARATUS. FRED FORREST PEASE, East Braintree, Mass. Filed June 17, 1920. Serial No. 389,599. 7 Claims. (Cl. 9—22.)



1. A launching apparatus comprising a cradle, a plurality of diagonal arms hinged at their lower ends to a launching platform and at their upper ends to the cradle with the axes of the hinges inclined to the cradle and parallel to one another to move the cradle from inboard to outboard position in a path which extends outwardly, downwardly and lengthwise of the launching platform.

---

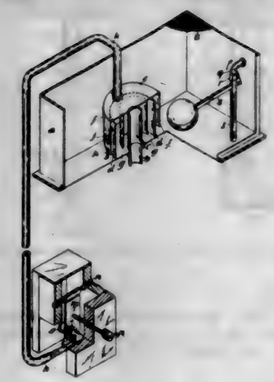
1,562,584. DAMPER MECHANISM OR DRAFT REGULATOR. WILLIAM J. PFEIFER, Oak Park, Ill. Filed Oct. 20, 1924. Serial No. 744,658. 14 Claims. (Cl. 236—16.)



1. In a mechanism of the class described, the combination of a flue forming a fluid passage adapted to permit a current to pass therethrough from a combustion chamber, a damper rockingly mounted upon an axis and adapted to permit such current to pass the damper in its open position at or below a predetermined speed without closing the damper, said damper being adapted to be automatically operated toward its closed position when the current passing the damper exceeds such predetermined speed, releasable damper-holding means operatively connected with and in movable relation to said damper, for releasably holding the same in its initial open position, and damper-operating means located outside of said passage and operatively connected with said releasable damper-holding means and adapted to move said damper to its initial open position.

---

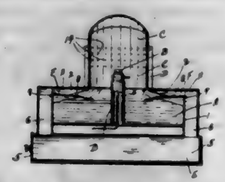
1,562,585. SANITARY FLUSHING DEVICE. MALCOLM TARLTON PHILLIPPS, Toorak, South Australia, Australia. Filed Jan. 5, 1922. Serial No. 527,210. 2 Claims. (Cl. 4—43.)



1. In a sanitary flushing device of the character described, a cistern, a discharge pipe extending into said cistern, a concentric upright wall surrounding said discharge pipe, a cover comprising a flat top piece and concentric depending walls adapted to nest about said pipe and upright wall, the outer of said depending walls having an axial depression extending almost to the flat top piece, and a snifter pipe in said depression, the outer end of which extends through the closed end of the depression to establish communication between the outside of the depending wall and the inside space directly beneath the cover piece.

---

1,562,586. INSECT DESTROYER. WILLIAM H. POOL, Salt Lake City, Utah. Filed Mar. 21, 1925. Serial No. 17,262. 2 Claims. (Cl. 43—113.)



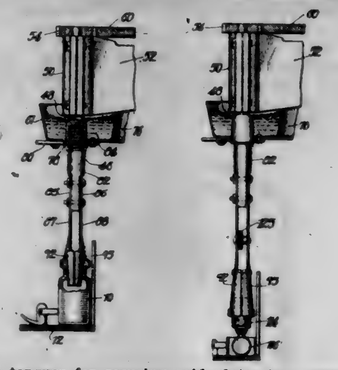
1. An insect trap comprising a liquid holding receptacle having an inwardly turned flange, a reflector secured at the inner periphery of said flange, a bait receptacle on the back of said reflector with perforations through the reflector opening to the interior of said bait receptacle, and a source of illumination centrally provided above said receptacle, with a liquid carried in said receptacle, and passage ways from the surface of said liquid to a box under said receptacle.

---

1,562,587. DEVICE FOR GRINDING BOTTLES AND STOPPERS. WILLIAM H. RANAGAN, Vineland, N. J. Filed Aug. 8, 1924. Serial No. 730,804. 3 Claims. (Cl. 51—181.)

3. A pair of grinding plates for a tool of the type described which comprises, a pair of sheets forming a

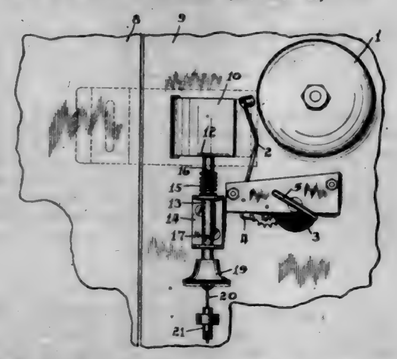
frustro-conical surface and adapted to be mounted respectively on their inner or their outer surfaces and attaching tongues for securing said plates to a supporting surface.



1,562,588. WIRE STRETCHER. LOUIS RENARI, Santa Rosa, Calif. Filed July 1, 1924. Serial No. 723,492. 3 Claims. (Cl. 188—72.)

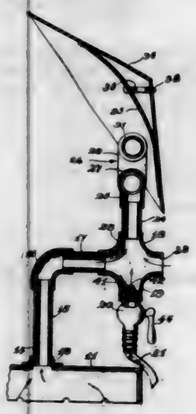
3. In a wire stretching device having a frame supported from the ground and on which the stretching means is mounted, opposed brackets depending from the frame, said brackets being substantially V shaped and being formed at their lower ends with substantially U shaped bearing sockets, whereby to turnably and removably receive the shaft of a wire-reel.

1,562,589. ALARM MECHANISM. ULYSSES G. REPLOGLE, Toledo, Ohio, assignor of forty one-hundredths to Hazel E. Jaquette, twenty-five one-hundredths to Frederick G. Replogle, twenty-five one-hundredths to Jesse W. Brown, and ten one-hundredths to Albert C. Jaquette, all of Toledo, Ohio. Filed Mar. 5, 1925. Serial No. 13,123. 4 Claims. (Cl. 116—6.)



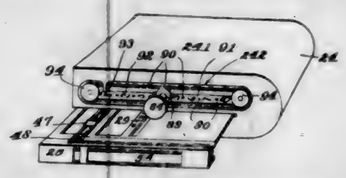
3. In an alarm mechanism, a hasp and staple, a bell having a tapper, means for operating the tapper, a door for supporting the hasp, an arcuate member connected to the hasp and extending through the door for engaging the tapper and means for engaging the arcuate member when it has moved a short distance to prevent reengagement of the member with the tapper.

1,562,590. GAS HEATER. BRAXTON F. RODGERS, Dallas, Tex. Filed June 14, 1924. Serial No. 719,981. 1 Claim. (Cl. 158—118.)



A gas heater comprising a fuel-mixing member having lateral air intake ports, an outlet nipple leading from the top of the fuel-mixing member, a gas intake in the bottom of the fuel-mixing member alined vertically with the outlet nipple, a T-coupling secured upon the upper end of the outlet nipple, perforated pipes secured in the ends of the T-coupling, perforated elbows secured upon the outer ends of said pipes and extending upwardly, and a perforated pipe connecting the upper ends of said elbows.

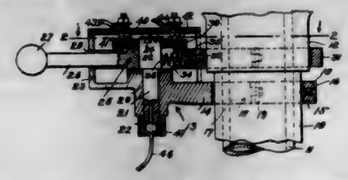
1,562,591. CHECK PROTECTOR. KARL ROSS, Los Angeles, Calif. Filed Nov. 20, 1922, Serial No. 602,166. Renewed May 25, 1925. 14 Claims. (Cl. 197—6.4.)



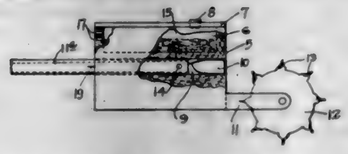
1. In a check protector, the combination of a housing comprising spaced sections, a stamping belt rotatably mounted in one of the sections, a slide shiftably mounted in the other section, and a roller mounted on the slide and operatable by movement of the slide to traverse a portion of the stamping belt.

1,562,592. VEHICLE SIGNAL. WALTER J. SAVIERS, Los Angeles, Calif. Filed Apr. 17, 1922. Serial No. 554,043. 2 Claims. (Cl. 116—36.)

1. In combination with a motor vehicle provided with a rotatable signal indicating mechanism, of a signal operating mechanism connected to the steering column of the vehicle, said mechanism comprising a manually operated lever having a toothed inner end, a flexible shaft connected to said lever and to said rotatable signal device for rotating said device on an actuation of said lever, and a notched collar mounted on the vehicle steering wheel column and movable therewith, the notches of said collar engaging the toothed end of said shifting lever to automatically return the same to a normal position after a shifting movement.

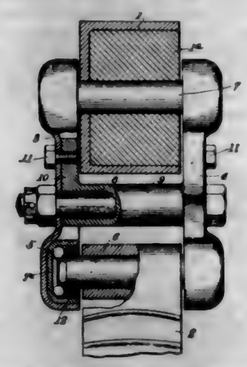


1,562,593. PNEUMATIC TOY. HARRY SCHWARTZ, New York, N. Y. Filed May 9, 1924. Serial No. 711,952. 1 Claim. (Cl. 46—37.)



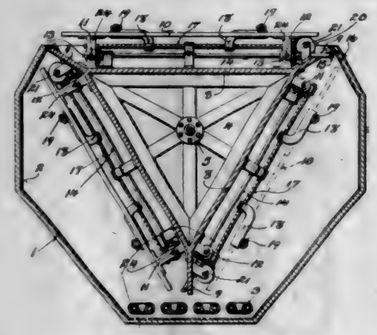
A toy comprising a body portion having a powder chamber therein and a longitudinal bore beneath said chamber, said bore and chamber having a communicating passage, a whistle in the end of said bore, a pipe adapted to be rotatably held in said bore and having a side opening adapted to register with said passage, the chamber having an opening in one end thereof whereby when the whistle is sounded the powder will pass through the chamber opening, a mark on said pipe, and a mark on the body portion, said marks when in register indicating that the side opening of the pipe and the communicating passage are in alignment.

1,562,594. VEHICLE-SPRING BEARING. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 10, 1925. Serial No. 14,392. 8 Claims. (Cl. 267—54.)



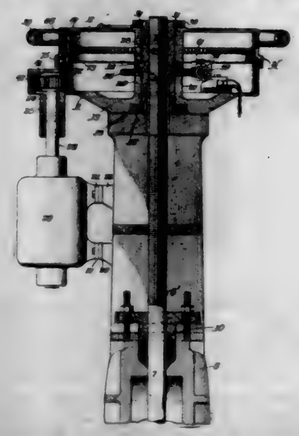
1. In a means for connecting vehicle springs to vehicle bodies, a pair of complementary shackle links, each of said links having its intermediate portion channeled, a combined spacer and link-reinforcing means comprising a portion extending across from link to link with a laterally projecting head portion on each end thereof arranged to fit within the channeled portion of the links, respectively, with means for securing said links to said connecting portion.

1,562,595. CURTAIN STRETCHER. FREDERICK W. SEHMER, Wauwatosa, Wis., assignor to Peerless Dye Works, Milwaukee, Wis. Filed Dec. 30, 1922. Serial No. 609,922. 2 Claims. (Cl. 34—17.)



1. A curtain stretcher and drier comprising a housing having an open top and adapted to form a heating compartment, a drum revolubly mounted within said housing and provided with a plurality of flat faces, the exposed face of which is normally positioned below the opening of said housing, radial portions extending from the corners of said drum and cooperating with the faces of the drum and sides of said housing to form a closure for the latter, curtain receiving bars carried by each of said drum faces, and means for actuating said bars.

1,562,596. VALVE-OPERATING MECHANISM. EMORY T. SMITH, Ludlow, Mass., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass., a Corporation of Massachusetts. Filed Mar. 6, 1922. Serial No. 541,620. 10 Claims. (Cl. 74—7.)

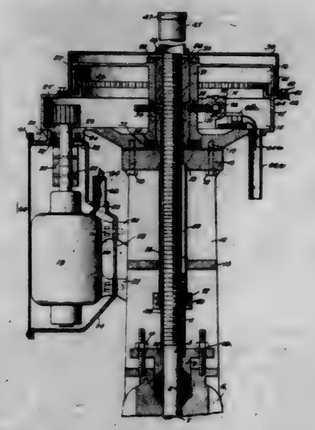


1. A power driven operating unit for valves and the like including a standard having a housing including a movable part, manual operating means affixed to and movable with a part of said housing, valve operating

mechanism in said housing, a motor carried by said standard and having driving connection with said operating mechanism, and an auxiliary manual valve operating device supported by a stationary part of said housing.

---

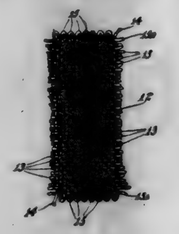
1,562,597. VALVE-OPERATING MECHANISM. EMORY T. SMITH, Ludlow, Mass., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1922. Serial No. 580,920. 12 Claims. (Cl. 74—7.)



1. In a device of the character described, in combination, a housing comprising nested sections, one of which is movable as a driving member, an element to be driven by said movable section, and being in part disposed in said housing, a motor operatively connected to the housing for driving said movable section, and a dust and moisture excluding casing secured to one of the sections of the housing and entirely enclosing said driving section and its connection with the element to be driven by said housing.

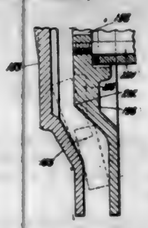
---

1,562,598. MOLDING TAPE. CLARENCE E. SNYDER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1923. Serial No. 671,088. 2 Claims. (Cl. 139—383.)



1. A narrow molding tape having soft, thinned margins, said tape comprising a set of warp threads spaced with substantial uniformity throughout the width of the tape and a reversed weft thread closely interwoven with the warp threads and extending materially beyond the outermost warp threads to provide the tape with relatively thin margins of substantial width.

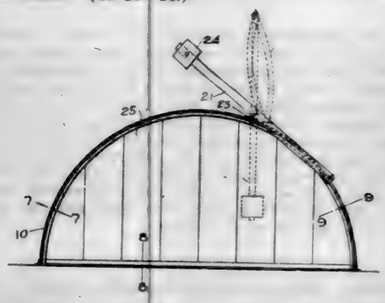
1,562,599. BOTTLE-CAP SORTING AND FEEDING MECHANISM. ARTHUR W. SUITER, Woonsocket, R. I., assignor to Russia Cement Company, Gloucester, Mass., a Corporation of Massachusetts. Original application filed May 4, 1921. Serial No. 466,822. Divided and this application filed Apr. 1, 1922. Serial No. 548,777. 4 Claims. (Cl. 226—88.1.)



1. A distributing mechanism for bottle caps comprising a receptacle adapted to contain caps and having an escape passage for said caps, said escape passage extending angularly, and a pointed projection in said passage over which a cap may pass when it is presented with its hollow side facing thereto but preventing the passage of a cap reversely presented.

---

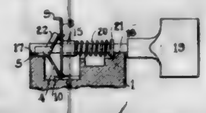
1,562,600. GARAGE DOOR. WILLIAM L. TAYLOR, Roanoke, Va. Filed May 8, 1924. Serial No. 711,935. 2 Claims. (Cl. 20—16.)



1. A garage structure having a curved roof including a curved roof door, the said roof and door extending in an arc from base to base of the structure, a hinge extending transversely of the roof, a curved door section having its upper end pivoted on the hinge, a pivot connecting the lower edge of the upper door section to the upper edge of the lower door section, weighted arms pivoted between their ends in line with the hinge of the upper door section and pivotally connected to the hinge between the said door sections, and a counterweight on the end of each arm remote from their connection to the hinges of the door sections.

---

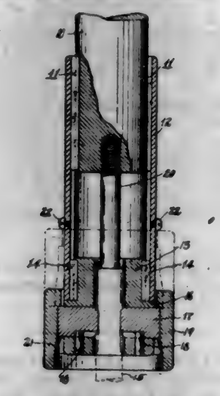
1,562,601. SNAP SWITCH. WILLIAM C. TREGONING, Cleveland, Ohio, assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 19, 1919. Serial No. 312,002. 16 Claims. (Cl. 173—346.)



1. In an electric switch, in combination, a reciprocably mounted contact member having spaced bearings, a rotatable member having its axis substantially perpendicular to the plane of reciprocation of said contact member, said contact member having converging faces located between its bearing points and obliquely disposed to the axis of said rotatable member and said rotatable member having a co-operating face disposed at a like angle to its axis and resilient means holding said members in engagement whereby said contact member is movable in reverse directions with a snap action upon unidirectional rotation of said rotatable member.

---

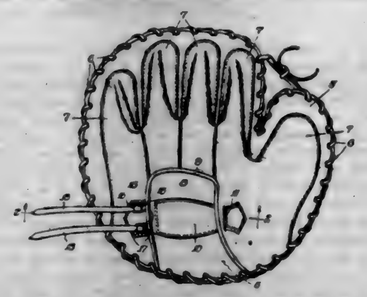
1,562,602. CHUCK. FRANK W. TRENN, Willoughby, Ohio, assignor to The Economy Engineering Company, Willoughby, Ohio, a Corporation of Ohio. Filed Aug. 5, 1922. Serial No. 579,785. 2 Claims. (Cl. 279—74.)



1. A rotary shaft, a longitudinally movable sleeve keyed at one end of the shaft, a pin on the shaft engaging a slot in the sleeve to limit the longitudinal movement of the sleeve on the shaft, a collar on the sleeve, means on the sleeve to limit the movement of the collar on the sleeve, a hollow head extending within the sleeve and adapted to be surrounded by the collar, jaws sliding transversely in the head, a seat in the collar holding the jaws in engagement with a drill in the head, an expanded cavity in the collar to permit the jaws to slide radially to release the drill, guide pins in the head for the jaws, and an ejector projecting from the shaft into the sleeve and actuated by the relative longitudinal movement of said shaft and sleeve to engage and eject the drill.

---

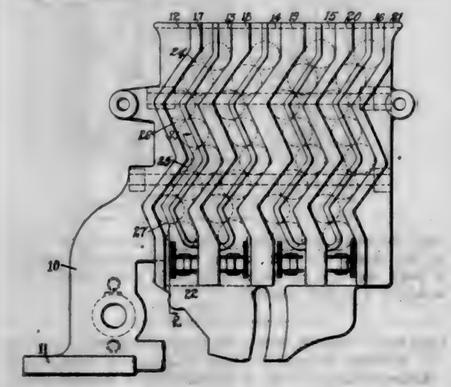
1,562,603. BASEBALL MITT. ARCHIBALD J. TURNER, Chicago, Ill., assignor to Thos. E. Wilson & Co., Chicago, Ill., a Corporation of Maine. Filed Mar. 25, 1925. Serial No. 18,078. 4 Claims. (Cl. 2—19.)



1. A mitt having a hand insertion opening, a strap secured to one lateral margin of the opening, extending across the opening, and having its other end bifurcated to provide a pair of thongs, together with a friction guide member associated with the other lateral margin of said opening affording two pairs of slots through which said thongs are separately extended.

---

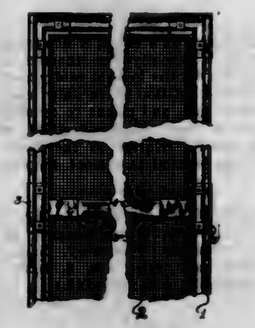
1,562,604. BOBBIN ANTIROLLING REPLENISHING MECHANISM. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 29, 1923. Serial No. 683,339. 3 Claims. (Cl. 139—245.)



1. In a weft replenishing mechanism, a guide-way adapted to receive a stack of bobbins therein, means to lower said stack of bobbins progressively in said guide-way, said guide-way being made of a plurality of alternately inclined connecting runs and each run being of sufficient length to accommodate a plurality of bobbins.

---

1,562,605. WINDOW-SCREEN BRACE. JOHN O. WAGNER, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 619,784. 1 Claim. (Cl. 156—14.)



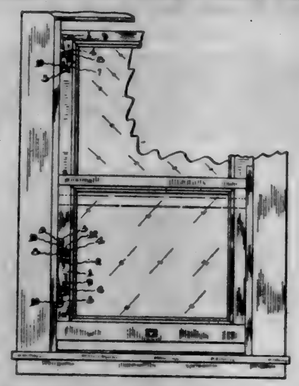
An expansible brace for a window screen comprising a transverse channel shaped bar and a pair of lugs conforming to the screen beam and secured thereto and having inwardly extending directed arms providing sockets for frictionally engaging said bar.

---

1,562,606. SASH FASTENER. ROBERT WASHBURN, Harriston, Ontario, Canada. Filed July 23, 1924. Serial No. 727,641. 3 Claims. (Cl. 292—342.)

1. A sash fastener comprising a block adapted to be secured to a window sash having the side adjacent the window sash inclined to form a wedge-engaging surface;

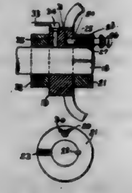
a wedge adapted to engage between said face and the window frame; a link pivotally connected with the block and the wedge, the link having a sliding engagement



with the pivot connecting it with the block; and a pin on the block, the link having a notch therein adapted to hook over the pin to hold the link, and therefore the wedge in a raised position.

---

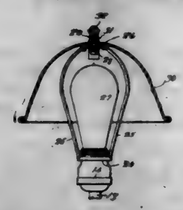
1,562,607. WHEEL-DRIVING ATTACHMENT. GEORGE A. AMIOTT, Worcester, Mass., assignor to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed Dec. 7, 1921. Serial No. 520,684. 2 Claims. (Cl. 192—67.)



2. The combination of a shaft, a hand wheel mounted on said shaft and normally free thereon, a handle on said wheel, yielding means to hold said wheel and handle in a predetermined position when said wheel is disconnected from said shaft, and means to connect said wheel to said shaft in a single relative position, whereby said handle has a definite relation to the shaft when connected thereto for manual movement thereof.

---

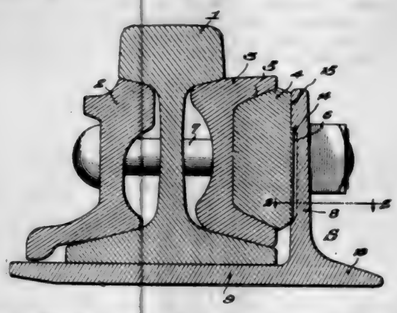
1,562,608. PORTABLE ELECTRIC LAMP. LAURITZ W. ANDERSEN, Waterbury, Conn., assignor to Waterbury Metal Wares Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 6, 1922. Serial No. 534,459. 5 Claims. (Cl. 240—148.)



1. In a lamp, the combination with a shade having a centrally disposed opening, of supporting arms, a curved plate attached to said arms and longitudinally slotted, a stud movable in said slot and projecting through the opening in the shade, and a knob upon the projecting end of the stud binding said stud shade and plate in locked relation.

---

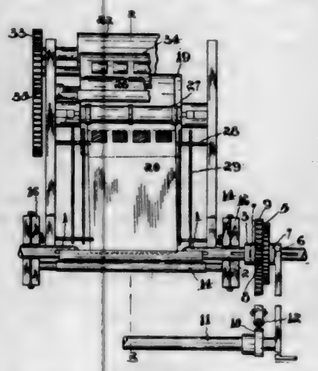
1,562,609. LIGHTENED CONSTRUCTION FOR RAIL JOINTS. VICTOR C. ARMSTRONG, Hackensack, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 10, 1925. Serial No. 42,795. 6 Claims. (Cl. 238—200.)



1. A lightened construction for rail joints including a shoe having a wall of standard thickness and subnormal displacements of metal therein.

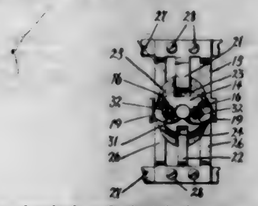
---

1,562,610. MAGAZINE-WRAPPING MACHINE. DANIEL S. BAIRD, Hamilton, Ontario, Canada. Filed Jan. 10, 1924. Serial No. 685,474. 7 Claims. (Cl. 270—27.)



1. In a magazine wrapping machine, the combination of feed mechanism adapted to draw a web of paper from a roll; means geared with the feed mechanism and located intermediate of the supply roll and the point of delivery of the feed mechanism for producing spaced lines of weakness across the web delimiting individual wrappers; rotary magazine rolling mechanism adapted to grasp and rotate a magazine fed to it; means loosely guiding said web to direct its leading end to a position to be rolled in with the magazine whereby the paper is free to move laterally between the feed mechanism and the wrapping mechanism; and means for synchronously driving said feed mechanism and magazine rolling mechanism so proportioned that the latter tends, when the web is caught in a magazine, to draw the web in at a greater speed than that at which it is fed whereby the wrapper delimited by a line of weakness is torn from the web.

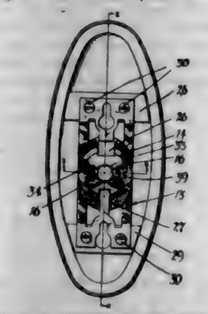
1,562,611. ELECTRICAL-FIXTURE-SUPPORTING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1921. Serial No. 471,075. 1 Claim. (Cl. 173—330.)



A mechanical and electrical connector device comprising a fixture supporting bracket and a plug slidably mounted on said bracket, said bracket being formed of sheet material and having two flat vertical bars lying in a common plane in front of the plug and having cross bars at the top and bottom connecting the vertical bars and lugs extending toward each other from said cross bars, said plug being slidably mounted between the two vertical bars and the lugs.

---

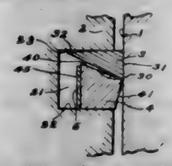
1,562,612. ELECTRICAL-FIXTURE-SUPPORTING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1921. Serial No. 471,076. 1 Claim. (Cl. 173—330.)



A mechanical and electrical connector device, comprising a fixture supporting bracket and a plug slidably mounted on said bracket, said bracket being formed of sheet material, and having two flat vertical bars lying in a common plane in front of the plug and having cross bars at the top and bottom connecting the vertical bars and lugs extending toward each other from said cross bars, said plug being slidably mounted between the two vertical bars and the lugs, said cross bars being provided with keyhole slots to receive headed supporting and securing members.

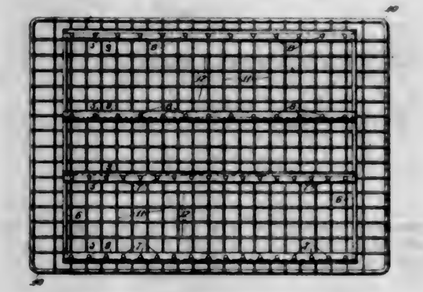
---

1,562,613. PISTON RING. BELDEN H. BLAKE, Cleveland, Ohio. Filed Dec. 10, 1924. Serial No. 754,994. 7 Claims. (Cl. 74—109.)



1. A composite piston ring comprising an upper ring section having a beveled lower face, a lower ring section having a beveled upper face, said two beveled faces being of unlike angle and meeting along their outer edges.

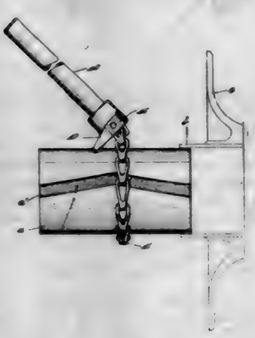
1,562,614. DISH-HOLDING RACK. GEORGE S. BLAKESLEE, Oak Park, Ill.; George R. Blakeslee executor of said George S. Blakeslee, deceased. Filed Sept. 6, 1921. Serial No. 498,882. 6 Claims. (Cl. 141—11.)



1. A dish holding rack comprising a metal frame, a series of rows of upright rods supported independently of each other and secured at their lower ends to said frame in spaced relation to each other, their upper ends being free, and bracing rods extending longitudinally of said rows over and close to the points of connection of the upright rods with said frame, said upright rods extending through perforations in said bracing rods, whereby said bracing rods serve to brace a plurality of the upright rods together and to the frame near their lower ends.

---

1,562,615. BUSHING-CONTRACTING DEVICE. AIMÉE D. BROCHU, Hartford, Conn. Filed Sept. 17, 1924. Serial No. 738,221. 4 Claims. (Cl. 29—88.)



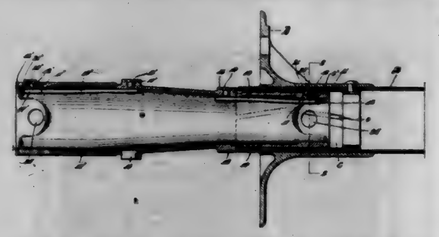
1. A bushing contracting device, comprising a handle, a head extending from one side of the lower end of the handle and projecting beyond the adjacent sides thereof, the lower end of said head adapted to bear transversely across a split bushing and serve as a fulcrum for raising and lowering the head on the bushing, and an encircling chain to embrace the bushing and having its ends secured to the projecting portions of the head at the upper end thereof and at opposite sides of the handle.

---

1,562,616. SLEEVE-EXTRACTING DEVICE. AIMÉE D. BROCHU, Hartford, Conn. Filed Sept. 17, 1924. Serial No. 738,222. 3 Claims. (Cl. 29—88.2.)

1. A bearing bushing extracting device including a body provided with a cylindrical end having a radial opening, a hardened metal catch mounted for radial

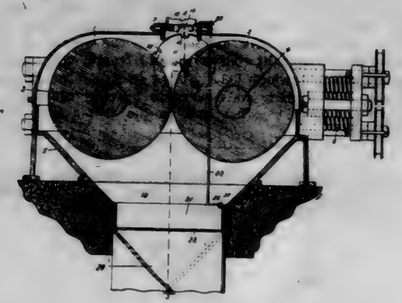
movement in said opening, a spring having one end detachably abutting against the inner end of said catch and holding the same against rotation, and means for



removably securing the other end of said spring to said body, said spring being separable from said catch for the purposes described.

---

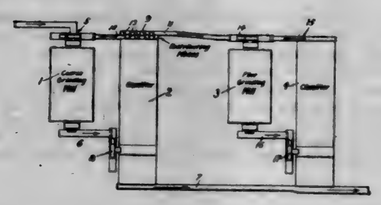
1,562,617. CRUSHING-ROLL APPARATUS AND PROCESS. HENRY KENYON BURCH, Los Angeles, Calif. Filed Feb. 26, 1924. Serial No. 695,149. 13 Claims. (Cl. 83—12.)



1. In combination with crushing rolls constructed to pass crushed material between the rolls and to permit oversize material to pass at the ends of the rolls in such manner that the oversize and crushed material pass from the rolls in substantially separate parallel streams, splitting means arranged adjacent to the planes of the ends of the rolls and in the path of the material passing from the rolls and adapted to part the stream of oversize material from the stream of crushed material.

---

1,562,618. GRINDING SYSTEM FOR ORE, ROCK, ETC. HENRY KENYON BURCH, Los Angeles, Calif. Filed Apr. 1, 1924. Serial No. 703,341. 4 Claims. (Cl. 83—9.)



1. A combination of a coarse grinding mill and a fine grinding mill, a classifier connected to receive the ground material from the coarse grinding mill and adapted to separate the finer portion of such ground material from the coarser portion thereof, and distributing means for delivering a part of the coarser material so separated to the fine grinding mill and returning another portion of such coarse material to the coarse grinding mill.

---

1,562,619. VARIABLE INDUCTANCE. RUSSELL W. CAMFIELD, Berkeley, and ROGER M. WISE, Oakland, Calif., assignors to E. T. Cunningham, San Francisco, Calif. Filed July 25, 1923. Serial No. 653,671. 8 Claims. (Cl. 171—119.)

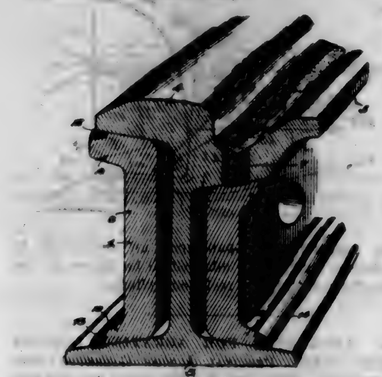
8. In a variable inductance coil for use in high frequency circuits, said coil comprising a pair of relatively rotatable coil sections, one within the other, and arranged by relative rotation through substantially 180° to move the sections from axial cumulative alinement, to axial differential alinement, said sections being so close together that appreciable capacity effects exist between them, causing the flow of charging currents in parallel to at least some of the coil turns, means for connecting the sections so that in the cumulative position the directions of winding for the sections are opposite, the connections however being such that the directions of current flow are the same, to produce the cumulative effect.

---

1,562,620. HOG TROUGH. WILLIAM DILL, Rushville, Ind. Filed Oct. 3, 1922. Serial No. 592,084. 1 Claim. (Cl. 119—61.)

A nestable trough especially adapted for use in feeding brood sows, formed of a single piece of metal and comprising a frusto-conical body, the walls of which are inclined toward the bottom and a frusto-conical raised portion concentrically of the bottom and coacting therewith to refine an annular food or water receiving chamber and having the upper flat surface thereof lying in the plane of the upper edges of the side walls of the body and forming an annular sharpened edge to prevent sows from lying in the chamber and spilling the contents thereof the inclined walls acting as creeping surfaces for frozen contents, and the raised portion also forming an independent water or food receiving chamber upon inversion of the body, substantially as and for the purposes set forth.

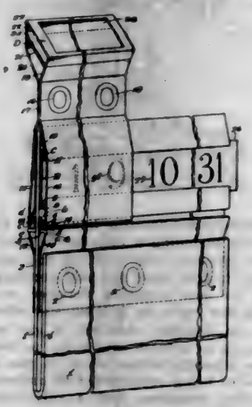
1,562,621. WELDED RAIL JOINT. CLARKSON A. DISBROW, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 16, 1925. Serial No. 44,053. 5 Claims. (Cl. 238—164.)



1. A welded rail joint including a rail having a welding hole in its head and a joint bar fitting the rail beneath said hole.

---

1,562,622. GUIDE AND FOLDER. ARTHUR ROSWELL DODGE, Los Angeles, Calif., assignor of one-half to F. W. Douglas, Los Angeles, Calif. Filed Apr. 4, 1922. Serial No. 549,604. 18 Claims. (Cl. 129—16.8.)



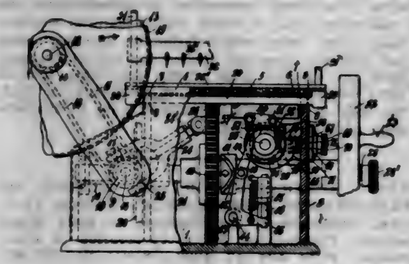
1. In combination with an index sheet, re-inforcing means fixed thereon and embracing the top of said sheet and forming a way; a tab; and a runner movable along and connecting the tab to said way.

18. An index sheet provided along its upper edge with a rail bent upon one side or face to form a horizontal groove adapted to receive and hold a slip on the outside surface of said rail.

---

1,562,623. SLICING MACHINE. WILLIAM H. DONALD, Cincinnati, Ohio, assignor to The F. A. Knowles Slicer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 14, 1923. Serial No. 680,652. 30 Claims. (Cl. 146—103.)

1. In combination, a carrier having a projecting member, feeding mechanism operatively related to said member comprising driving means rotary on an axis alined with said member, and means disposed entirely in aline-



ment with said carrier member along said axis, whereby said carrier renders said feeding mechanism inoperative after a predetermined degree of feeding.

---

1,562,624. PROCESS FOR MAKING SOLES FOR SHOES. ALFRED I. DUPREY, Eureka, Calif. Filed Dec. 16, 1924. Serial No. 756,364. 3 Claims. (Cl. 149—6.)

1. A process of making shoe soles which consists in cutting soles from thoroughly tanned leather from which all uncombined tannin and extraneous matter has been removed; then immersing the so cut soles in hot water to expand the fiber of the leather and packing the wet soles in boxes to allow the moisture to be evenly distributed throughout them, then subjecting the wet soles to a solution of rubber in the presence of heat and under vacuum, then subjecting the so rubberized soles to the action of a 2% solution of sulphur monochloride, then withdrawing and drying the soles and finally washing and drying the soles.

---

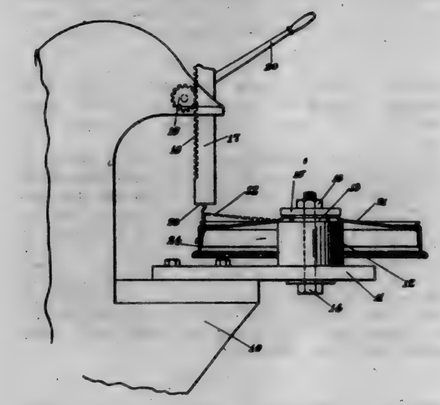
1,562,625. AIR BALLOON. IKLEY C. FIFE, Chicago, Ill., assignor to Elizabeth C. Fife, Chicago, Ill. Filed Aug. 24, 1923. Serial No. 659,146. 1 Claim. (Cl. 46—40.)

A toy balloon consisting of an elongated body simulating that of a bird, the body being hollow and provided at its head end with an opening through which the body may be inflated, the body being provided at its

opposite sides and at points between its ends with hollow wings, the wings being substantially elliptical in transverse section and connected with the interior of the body by relatively constricted air passageways, the body and wings being of elastic flexible material whereby the wings may swing with relation to the body when the body and the wings are inflated and the wings stand out from the opposite sides of the body when inflated and serve substantially as planes or stabilizers for holding the body in substantially natural poise to simulate the body of a bird in flight.

---

1,562,626. APPARATUS FOR AND METHOD OF STRAIGHTENING DISK WHEELS. CHARLES FINKBEINER, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 17, 1923. Serial No. 657,853. 4 Claims. (Cl. 153—48.)



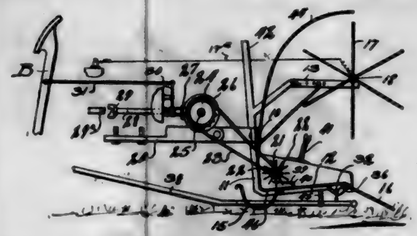
1. A machine of the character described comprising an arbor press having a horizontal base and an overhanging portion, said base having a portion extending forwardly therefrom, a vertically extending ram mounted on said over-hanging portion adapted for reciprocatory movement toward and from said base, a wheel center clamp secured to the outer end of said forwardly extending portion of the base adapted to clamp a wheel in a substantially horizontal plane whereby to present the rim thereof between said ram and said base, and operating means for said ram mounted on said overhanging portion.

3. The method of straightening distorted disk wheels in which the central portions of the disk are provided with trued faces for alignment and clamping of the disk flat-wise on the wheel hub flange, which method consists in supporting the wheel from its trued central portion with the portion exterior to said trued portion extending laterally free of the support, clamping in a fixed plane and rigidly against distortion substantially the entire area comprehended by said trued faces for engagement with the wheel hub flange, and while the wheel is so clamped directing bending pressures on the distorted free portions of said wheel on lines substantially parallel to the wheel axis.

---

1,562,627. INSECT-KILLING ATTACHMENT FOR AUTOMOBILES. SIR J. FRANKLIN, Beaver City, Nebr., and ROY W. TRACY, Brewster, Kans. Filed Dec. 23, 1924. Serial No. 757,680. 8 Claims. (Cl. 43—142.)

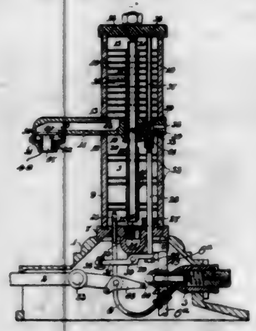
1. An insect killing attachment for motor cars comprising a pan, a cylinder mounted for rotation immediately above the rear end of the pan and having radially projecting teeth, a concave coacting with the cylinder, a reel mounted above and slightly in advance of the pan,



means for supporting the pan upon an automobile in advance thereof, and means adapted to be driven by the automobile for rotating the reel and cylinder.

---

1,562,628. APPARATUS FOR AERATING LIQUIDS AND THE LIKE. PERCIVAL ALBION GARRETT, Goodmayes, England. Filed Dec. 2, 1922, Serial No. 604,633. Renewed Oct. 6, 1925. 10 Claims. (Cl. 225—21.)



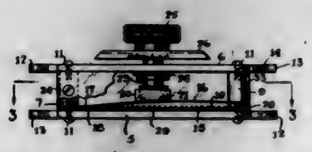
1. An apparatus for aerating liquids and the like of the type set forth, including a cylinder, a partition member dividing the cylinder into aerating and delivery chambers, a liquid in-flow valve for said aerating chamber, a snift valve for said aerating chamber which controls the liquid in-flow valve by holding and releasing an air cushion in the aerating chamber, a gas valve to said chamber, means to actuate said valve to deliver a short sharp charge directly to the liquid in the chamber, the said snift valve being constructed to automatically open under excessive pressures, and a valve-controlled communicating passage leading from said aerating chamber to a delivery chamber.

2. An apparatus for aerating liquids, including a cylinder, a partition member dividing the cylinder into aerating and delivery chambers, a discharge nossle carried by said partition, a snift valve also carried by said partition, said partition having an outflow passage adapted to communicate with the delivery chamber and controlled by said snift valve.

---

1,562,629. VARIABLE CONDENSER. HUGO GERNSBACK, New York, N. Y. Filed Sept. 27, 1923. Serial No. 665,092. 8 Claims. (Cl. 250—41.)

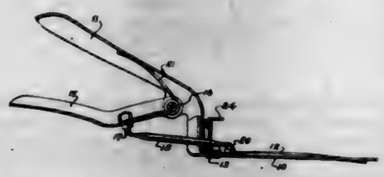
1. A variable condenser comprising an insulating base, a yielding cloth backing on said base, a condenser plate secured on the base over said backing and cushioned thereby, a cooperating condenser plate fixedly secured at one end on the base, having its free portion overstanding the first plate and formed on a single continuous curvature with the concave face of the same opposed to the first plate, a layer of solid dielectric between the plates



and screw means mounted on the base and engaging the upwardly bowed free portion of the curved plate to flatten the same in self-adjusting engagement with the cushioned lower plate.

---

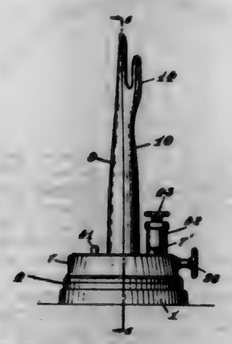
1,562,630. SHEARS. HENRY GINNEL, Scarsdale, N. Y. Filed Sept. 13, 1924. Serial No. 737,456. 3 Claims. (Cl. 30—13.)



1. Shears having pivotally secured blade members, one of which is stationary and the other movable, a stationary handle member having a single gripping portion secured to the stationary blade member, another handle member movable vertically when the blade members are in a horizontal plane, and means for actuating said movable blade member from the movable handle member.

---

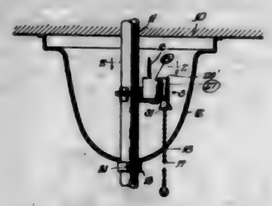
1,562,631. GLOVE STRETCHER, POWDERER, AND HEATER. REBECCA GOLTMAN, Montreal, Quebec, Canada. Filed Jan. 22, 1925. Serial No. 4,108. 1 Claim. (Cl. 223—19.)



A device of the character described comprising a base, a casing rotatably supported thereon, a pair of vertically positioned relatively spaced glove forms carried on said casing, levers movably interconnecting the sections of said forms, a powder tank mounted in the casing, a pump supported in the casing, an air pipe connecting said pump to the tank, tubes extending from said tank into said forms, vertically movable interconnecting means engaging said levers, and manually operable means supported upon the casing and arranged exteriorly thereof connected to said motion transmitting means for effecting relative movement between the sections of the forms.

---

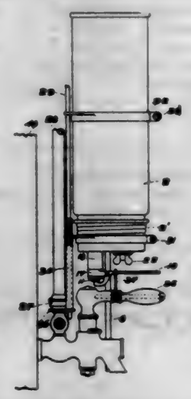
1,562,632. ADJUSTABLE SWITCH MOUNTING. DAVID D. GORDON, Chicago, Ill. Filed Jan. 31, 1925. Serial No. 5,916. 6 Claims. (Cl. 240—123.)



1. In an electric fixture, an elongated lamp supporting member, a canopy surrounding said member, and switch mechanism mounted upon said member, said switch mechanism including a controlling member extending through an aperture in said canopy, said switch mechanism having a portion movable in a plane normal to the axis of said supporting member, whereby the distance between said operating member and said supporting member may be varied.

---

1,562,633. CREAM DISPENSER. ROBERT R. GOSS and CHARLES H. GOSS, Franklin, Pa. Filed Sept. 23, 1921. Serial No. 502,783. 8 Claims. (Cl. 225—26.)



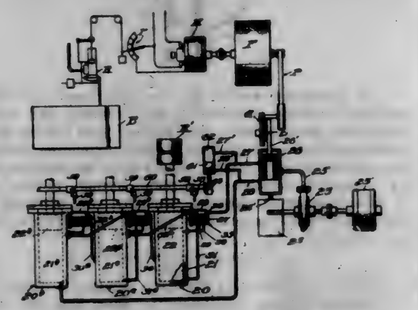
1. The combination with a coffee urn provided with a dispensing valve and a dispensing lever operable to open and close said valve, of a cream container of the vacuum type removably carried by said urn, a cream-delivery pipe for said container having its delivery end positioned in proximity to the delivery of said valve, a valve operable to control the delivery of cream through said delivery pipe, a cream-dispensing lever for said valve of said container positioned and maintained in juxtaposition to the dispensing lever for said urn, means maintaining said cream-dispensing lever in said juxtaposition to said dispensing lever of said urn, and venting means for said container.

5. The combination with a coffee urn provided with a dispensing valve, of a vertically-adjustable cream container having heat insulating walls removably carried by said urn, a cream delivery pipe for said container having

its delivery end positioned in proximity to the delivery of said valve, a valve operable to control the delivery of cream from said pipe, a cream dispensing lever for said cream container valve positioned in juxtaposition to the dispensing lever of said urn, means maintaining said cream dispensing lever in said juxtaposition to said dispensing lever of said urn, and venting means for said container.

---

1,562,634. CONTROLLING AND OPERATING MEANS FOR ENGINES, FOR UNDERFEED STOKERS, AND THE LIKE. DALLAS F. GRAHAMS, Toronto, Ontario, Canada, assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed July 1, 1922. Serial No. 572,240. 22 Claims. (Cl. 60—52.)



1. In combination, a plurality of engines to be operated, means for supplying pressure alternating in direction to said engines, connections between said engines to transfer pressure from one to another thereof normally to provide for their operation in succession, and means associated with one of said engines to render said engine inoperable by said alternating pressure without disabling any other of said engines.

---

1,562,635. HORSESHOE. MICHAEL J. GRIFFIN, Hartford, Conn. Filed Oct. 27, 1922. Serial No. 597,344. 2 Claims. (Cl. 168—41.)

1. A horseshoe having holes therein with the axes thereof inclined in opposite directions in the direction of depth of the shoe, and shoe calks each having a stem and a body of concavo-convex shape flared outwardly from the stem to the outer edge of the calk.

---

1,562,636. MEASURING SCALE FOR TRANSPARENT LIQUID CONTAINERS. WILLIAM M. GRIFFIN, Fort Wayne, Ind., assignor to Wayne Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed July 28, 1924. Serial No. 728,656. 6 Claims. (Cl. 116—135.)

5. A measuring scale for a transparent liquid container adapted to be secured to the casing thereof on the inside of said container, having in combination a vertically placed setting bar, substantially horizontal serrations on one side of said bar, a plurality of tabs loosely pierced by said bar, each having a gripping edge adapted to engage said serrations, a wedge for each tab to be inserted from below when said tab is in adjusted position

in the bar perforation of said tab on the side of said bar opposite the serrations, and a wedge strip adapted to be inserted from above in the same perforations forcing out said wedges, and means for fixing said strip in such assembled position.

---

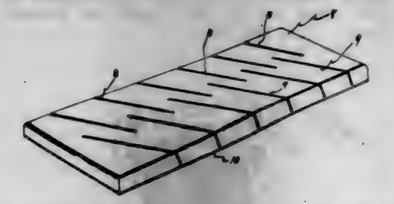
1,562,637. CANDLE PROTECTOR. NORBERT GROTH, West Union, Minn. Filed Apr. 28, 1925. Serial No. 26,480. 1 Claim. (Cl. 67—23.)

A candle protector of the character described comprising a semi-circular in cross section annulus adapted to embrace a candle adjacent the upper end thereof, a hood rising from the annulus and having an open upper end adapted to overlie the lighted end of the candle, a skirt depending from said hood and connected to the annulus by an outwardly extended flared portion which has its upper end arranged to engage the outer upper edge of the candle, the remaining portion of the skirt being spaced from the walls of the candles between the upper end and the annulus engaging portion to provide a space for the accumulation of melted wax, and a weight housed within the semi-circular annulus for the purpose specified.

---

1,562,638. CARD TRAY. JOHN PAUL HACHA, Detroit, Mich. Filed Feb. 26, 1925. Serial No. 11,688. 3 Claims. (Cl. 273—150.)

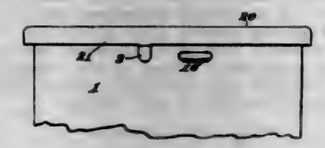
1. A card tray of the class described comprising a main body portion having a plurality of slits formed in the side thereof and extending inwardly therefrom diagonally of the length of said body, each of said slits



being inclined to the plane of the upper face of said main body and adapted for the reception of a single card.

---

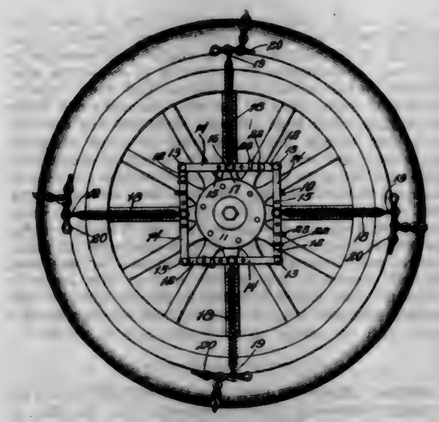
1,562,639. DEVICE FOR REMOVING FRICTIONALLY-HELD CAN TOPS. EDWARD HILDEBRANDT and HAROLD HILDEBRANDT, Tacoma, Wash. Filed May 28, 1923. Serial No. 641,991. 1 Claim. (Cl. 220—43.)



A can comprising a body having an outwardly projecting bead extending about its mouth, a cap having a groove formed about its periphery and adapted to fit over and be frictionally held by the beaded mouth of the can body, the outer wall of said groove extending below said bead, and tongues projecting from the outer wall of said groove and bent sharply back towards the can body beneath the bead to function as a tell-tale of the opening of the can.

---

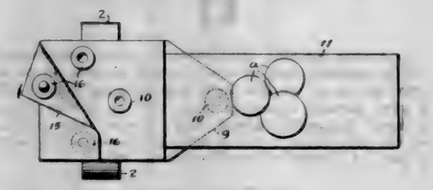
1,562,640. CHAIN TIGHTENER. WILLIAM J. HINES, Four States, W. Va. Filed Apr. 5, 1924. Serial No. 704,483. 4 Claims. (Cl. 152—14.)



1. Means for tightening the anti-skid chains of vehicles, comprising a frame adapted to be applied against one face of the wheel of the vehicle about the hub thereof, a plurality of levers each pivoted at one end to the frame to swing in the general plane of the frame, means including tension springs for connecting the levers at points intermediate their ends with the annular chain of the anti-skid chain of the wheel at the same side of the wheel as the frame, said springs being tensioned when the free ends of the levers are moved toward the frame and means for securing the levers against movement with said springs under tension.

---

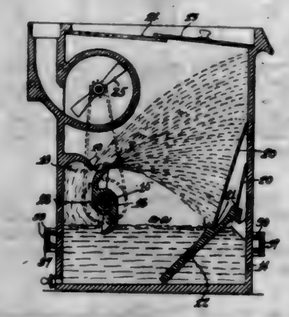
1,562,641. PURSE. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed May 31, 1924. Serial No. 716,872. 2 Claims. (Cl. 224—28.)



1. A purse having a pocket, and a lining strip adapted to be folded in the pocket, having one end secured adjacent the mouth of the pocket, and the other end free, so that it may be drawn out bringing the contents of the pocket loose on its surface.

---

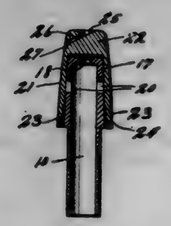
1,562,642. PADDLE-SHAFT MOUNTING FOR ETCHING MACHINES. AXEL HOLMSTRÖM, Villa Aerovik, Viggbyholm, Sweden. Filed Aug. 20, 1923. Serial No. 658,478. 22 Claims. (Cl. 41—9.)



1. In a paddle wheel assemblage for an etching machine, the combination of a plurality of paddle sections, a driving shaft adapted to pass through the sections, a sleeve upon each end of the driving shaft, clamping means for moving the sleeves relatively toward each other and cushions between the paddle wheel sections axially and between the sections and the shaft radially for supporting and sealing the sections and for damping vibration in the sections.

10. In an etching machine, a box internally resistant to etching liquor and having a lateral opening, a shaft normally passing through the opening, a paddle section resistant to etching liquor within the box and mounted upon the shaft and a liquor-resistant sleeve mounted upon the shaft through the opening to seal against the paddle section and tapering so as to radially flare as it extends inwardly.

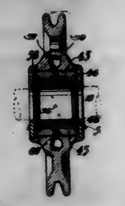
1,562,643. SLUG-CATCHING FLIER ATTACHMENT. HECTOR N. HOULE, Pawtucket, R. I. Filed June 2, 1925. Serial No. 34,439. 4 Claims. (Cl. 118—57.)



1. A slug catching attachment for fliers comprising a hollow member open at one end and adapted to be set over the top of the flier, said member being formed with a yarn passage extending from the top of the hollow member diagonally across said member and opening on the side thereof, the member having means whereby it may be caused to rotate with the flier.

---

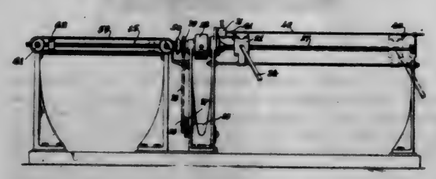
1,562,644. CASING PULLEY. ALBERT S. JONES, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed June 1, 1923. Serial No. 642,816. 3 Claims. (Cl. 64—17.)



1. In a casing pulley structure, a stationary shaft, a sheave rotatably mounted thereon, a bushing pressed in said sheave, a floating bushing between said pressed-in bushing and said shaft, and means carried by said pressed-in bushing for limiting axial movement of said floating bushing.

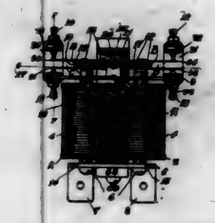
---

1,562,645. HELIX-WINDING MACHINE. ALLAN H. JONES, Belleville, N. J., assignor to Roller Bearing Company of America, Newark, N. J., a Corporation of New Jersey. Filed May 19, 1925. Serial No. 31,264. 10 Claims. (Cl. 153—67.)



1. In a helix-winding machine, in combination, a chuck to engage and rotate the helix and adapted to permit rearward longitudinal movement of the helix through it, an axially movable non-rotatable winding head in front of the chuck and substantially coaxial therewith, said head having a lateral guide aperture to receive and guide a metal strip and having axial die opening to receive the strip and coil the same to helical form, and a mandrel extending through the die opening and coaxial therewith.

1,562,646. RECTIFIER RELAY. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1918. Serial No. 215,454. 12 Claims. (Cl. 175—365.)



10. A device of the character described including a magnet core, a supporting member attached to said core, an armature having contact springs secured to the front and back thereof and cooperating contacts covered by said supporting member, a pair of U-shaped members formed integrally with said supporting member, and adjustable screw means secured in said U-shaped members for adjusting said co-operating contact relative to said contacts secured on said armature.

---

1,562,647. CONTACT-BANK STRUCTURE. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 9, 1920, Serial No. 394,889. Divided and this application filed Apr. 1, 1922. Serial No. 548,859. 3 Claims. (Cl. 175—306.)

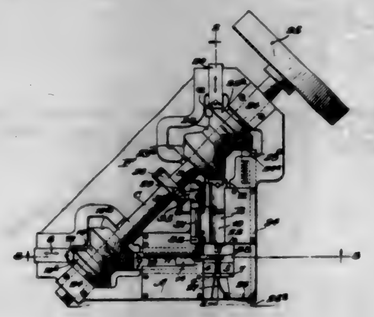
1. A switch bank comprising a strip of insulation provided with openings, a spring bank contact having portions of its body formed to engage said openings in said strip of insulation by a drive fit to secure the same together, other strips of insulation and bank contacts secured to each other in the same manner, said strips of insulation and bank contacts assembled one over the other and spaced from each other by other strips of insulation, said strips of insulation having openings in alignment when in their assembled position, a pair of clamping members having openings, and threaded members provided with nuts for extending through the openings in said clamping members and said insulation strips for clamping said bank contacts and said strips of insulation in their assembled position, the ends of said bank contacts extending beyond the ends of said strips of insulation, and means including a pair of bolts for permitting said switch to be mounted and dismounted as a single unit by merely operating said pair of bolts.

---

1,562,648. MACHINE FOR MAKING RIVETS AND THE LIKE. FRED R. LONG, Catawissa, Pa., assignor to Central Forging Company, Catawissa, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1924. Serial No. 694,334. 6 Claims. (Cl. 10—15.)

2. A machine of the class described including a gripping member and an upsetting member mounted to

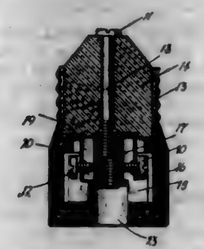
operate at right angles to each other, a common actuating shaft arranged obliquely to said members and having



separate cams thereon for synchronously operating the gripping and upsetting members.

---

1,562,649. SWIVEL-SHELL ATTACHMENT PLUG. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 20, 1920. Serial No. 425,329. 4 Claims. (Cl. 178—359.)

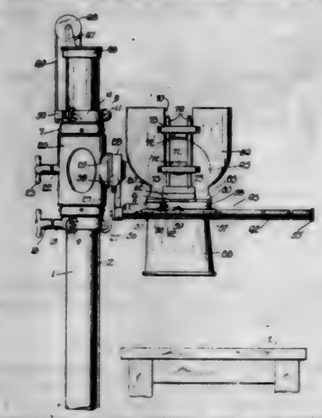


1. A swivel shell attachment plug comprising a threaded shell contact having an inwardly extending flange at its outer end, a center contact member, an insulating base in said shell contact for positioning and insulating said contacts with respect to each other, and a subassembly substantially outside said shell contact comprising an insulating member, a pair of wiring terminals having base portions at opposite ends of said insulating member, an eyelet extending axially through said insulating member and base portions, for securing said wiring terminals on said insulating member, and a metal tension member extending between said eyelet and center contact member for holding said sub-assembly in assembled position and electrically connecting the center contact with one of said wiring terminals, the other wiring terminal being provided with a sliding contact member for engagement with said inwardly extending flange.

---

1,562,650. X-RAY APPARATUS. WILLIAM MEYER, Chicago, Ill. Original application filed Feb. 18, 1918, Serial No. 217,788. Divided and this application filed Feb. 18, 1922. Serial No. 537,428. 9 Claims. (Cl. 248—5.)

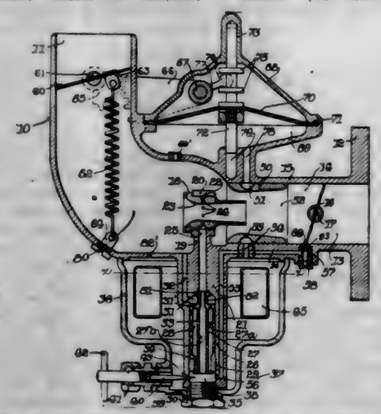
5. In combination, a central tubular sleeve, an upper ring having bearing rollers, a lower ring having bearing rollers, said rings having counterbores for receiving the ends of said tubular sleeve, three rollers on each ring, a lug for a balancing cable extending from the top ring



at a point between two rollers, and a clamping screw extending through the lower ring at a similarly situated point.

---

1,562,651. CARBURETOR. FRANK C. MOCK, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1918. Serial No. 209,811. 1 Claim. (Cl. 261—72.)



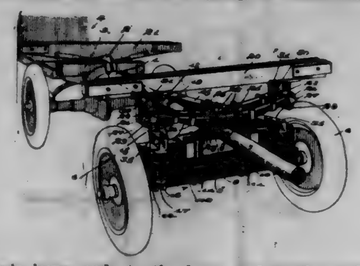
In a carburetor, the combination of a main barrel having a single air inlet and a mixture outlet, an automatic valve governing said inlet, a suction controlled element governing said valve, venturi means within said barrel, a suction passageway between said venturi means and said suction operative element, and a connection between said barrel and said suction operative element at a point between said valve and said venturi means for modifying the effect of the suction on said element.

---

1,562,652. TRAILER. WILLIAM C. NABORS, Mansfield, La. Filed Apr. 3, 1925. Serial No. 20,465. 5 Claims. (Cl. 280—33.4.)

1. In a trailer, an axle supported on wheels, a sill superposed on said axle, a bearing block secured on the sill intermediate the length of the latter and midway between the wheels, said bearing block having an opening for the reception of a reach pole, a semi-elliptic spring secured intermediate its length on said bearing block with the concavely curved side thereof uppermost,

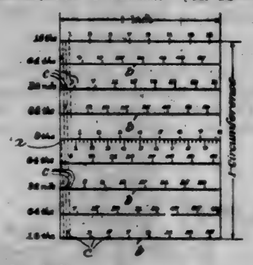
an elongated cross member adapted to support a load, hanger plates depending from said cross member adjacent to opposite ends of said spring, and links attached



at their lower ends to the lower end portions of said hanger plates and pivotally attached at their upper ends to the ends of said springs.

---

1,562,653. FRACTION-READING MICROMETER CALIPER. RALPH G. NILSON, Worcester, Mass., assignor to Nils Nilson, Worcester, Mass. Filed Nov. 14, 1921. Serial No. 514,967. 5 Claims. (Cl. 33—166.)



1. Means for indicating in common fractions of an inch the adjustment of a micrometer, the screw of which has the usual 40 threads to the inch, said means comprising two coaxial relatively rotatable cylindrical members, one being hollow and telescoped on the other and the two being inter-connected through the gauge screw so as to be relatively shifted axially thereby in accord with the pitch of the screw upon relative rotation of the members, the inner of said members being provided upon its cylindrical surface with eight lines extending longitudinally of the cylinder and equally spaced thereabout, each of said longitudinal lines being provided with division marks, each of said division marks being numbered to show the numerator of the fraction indicated thereby and the longitudinal lines being severally identified with numbers corresponding respectively to the denominator of the fractions indicated by the marks thereon, the outer member being provided at the end edge thereof overlying the inner member with a zero mark and with a circumferential scale of graduation, each division mark of the longitudinal lines being so positioned that, when the zero point of the outer member is brought in registration with said mark, the fraction indicated thereby will show the amount by which the two members have been relatively axially shifted from their initial or zero position.

---

1,562,654. METHOD OF PRODUCING ALLOYS. ALADAR PACZ, Cleveland Heights, Ohio. Filed Mar. 18, 1920. Serial No. 366,968. 20 Claims. (Cl. 75—1.)

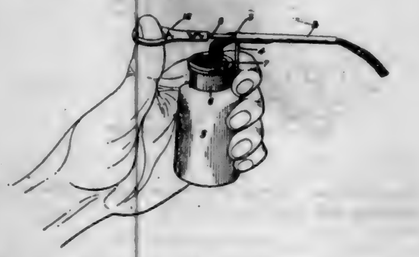
1. The process of producing alloys which contains the step of treating with aluminum a double fluoride of sodium with one of the component metals in a molten bath of the other component metal, whereby the aluminum replaces the first named component metal from its compound with the fluorine.

1,562,655. PROCESS AND COMPOSITION OF MATTER FOR DEOXIDIZING METALS AND ALLOYS. ALADAR PACZ, Cleveland Heights, Ohio. Filed May 11, 1921. Serial No. 468,779. 16 Claims. (Cl. 75—45.)

13. The process of refining metals and alloys which contains the step of incorporating in a molten bath of the same an intimate mixture of aluminum powder and sodium silico-fluoride.

---

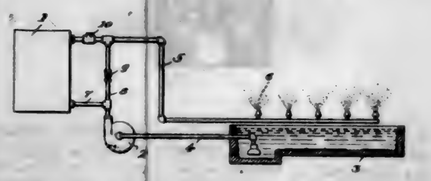
1,562,656. STRIP-GAUZE PACKER. KENNETH C. PARK, San Francisco, Calif. Filed Sept. 2, 1924. Serial No. 735,232. 4 Claims. (Cl. 128—263.)



1. A strip gauze packer comprising an oblate ellipsoidal barrel through which the gauze passes and in which it is arranged to be formed flat, a plunger for moving the gauze through the barrel and means for attaching the barrel to a strip gauze container.

---

1,562,657. APPARATUS FOR SPRAYING IN COOLING PONDS AND THE LIKE. LEE H. PARKER, Boston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Feb. 5, 1916, Serial No. 76,297. Divided and this application filed June 20, 1917. Serial No. 175,843. 9 Claims. (Cl. 261—115.)



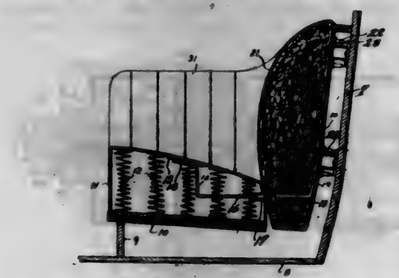
1. A cooling pond provided with spraying means, and a barrier at one or more sides of the pond, the barrier being provided with an apron at its lower part permitting the admission therebelow of a stream of cool air.

7. A spraying combination comprising a cooling pond 3 having spraying nozzles mounted thereover and upwardly directed, a condenser 1, piping 5 leading from the condenser to the spraying nozzles, a circulating pump 2, piping 4, 7 leading from the cooling pond to the condenser, a by-pass 8 leading from the piping 7 to the piping 5, a valve 9 therein and adapted to regulate the relative proportion of the flow through said by-pass, and a barrier 37 surrounding said pond and provided with air directing means 27 to direct an incoming stream of air to the pond.

---

1,562,658. VEHICLE SEAT. JOHN F. PRESSLEY, Detroit, Mich. Filed Nov. 3, 1922. Serial No. 598,819. 2 Claims. (Cl. 155—53.)

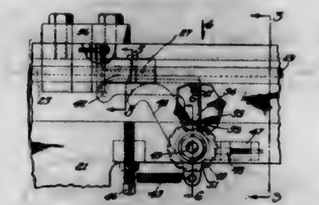
1. In a vehicle seat having sides and a back, an upiliary back to the rear of and spaced from said seat back; a U shaped member mounted on said auxiliary back and adapted for vertical movement relatively thereto; a pair of socket bearing members mounted on said seat back and adapted to receive the legs of said U shaped member to permit the approach and withdrawal of said



seat back to and from said auxiliary back; and resilient means connected to said U shaped member and said seat back for normally assisting the withdrawal of the one from the other.

---

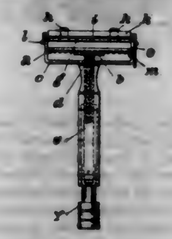
1,562,659. CHECK FOR LOOM NEEDLE MOTION. WILLIAM W. ROBERTSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 9, 1925. Serial No. 29,204. 8 Claims. (Cl. 139—123.)



1. In a needle motion for Axminster looms comprising a needle and a block movable therewith, a check lever movable into checking relation with respect to the block, and means actuated by the block as the latter nears the end of its stroke to move said lever into checking position.

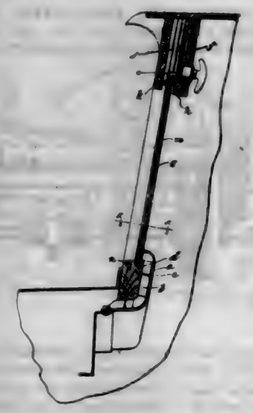
---

1,562,660. SAFETY RAZOR. WILHELM SIMMELBAUER, Munich, Germany. Filed Feb. 3, 1925. Serial No. 6,508. 4 Claims. (Cl. 30—12.)



2. A safety razor comprising a tubular, internally threaded handle, a U-shaped bow supported thereon, a bottom plate extending between the arms of the U-bow and guidingly embracing the same, a screw spindle swiveled to the plate and threaded through the handle, spaced guard elements secured to the plate, a blade-supporting bridge supported by the arms of the U-bow and adapted to be straddled by the spaced guard-elements when the bottom plate is moved upwardly toward the bridge, and a cover plate arranged above the bridge.

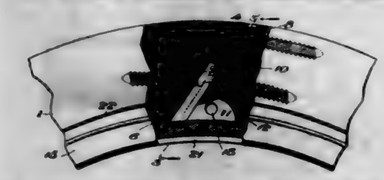
1,562,661. WEATHER FRAME FOR WINDSHIELDS. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Sept. 15, 1924. Serial No. 737,709. 7 Claims. (Cl. 296—93.)



1. In a windshield and window construction, a weather frame comprising a single integral frame of yieldable or deformable material forming a sill strip arranged to extend clear across the window opening and two vertical runways, the runways serving to guide the glass in vertical movement and the sill strip to pack the panel at the bottom.

---

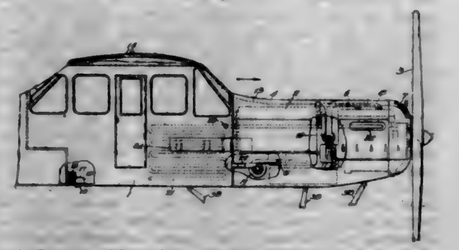
1,562,662. CORE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 6, 1922. Serial No. 558,943. 12 Claims. (Cl. 18—45.)



3. A core comprising a solid annulus of rubber composition transversely split to provide end portions said end portions being adapted for locking engagement and for disengagement by movement of one end portion in the plane of the core and toward the center thereof.

---

1,562,663. FLYING MACHINE. WILLIAM J. H. STRONG, Chicago, Ill. Filed July 22, 1918. Serial No. 245,979. 10 Claims. (Cl. 244—30.)

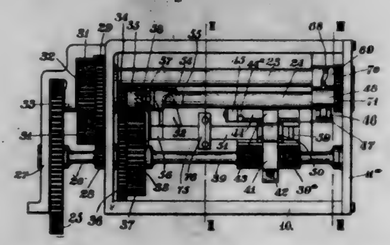


1. In a machine of the kind described, a substantially closed cabin, a conduit having an open end into which air is adapted to be forced by the movement of the ma-

chine through the air, a pump adapted to receive said air and force it into the cabin at a higher pressure and means controlling the pressure in the cabin.

---

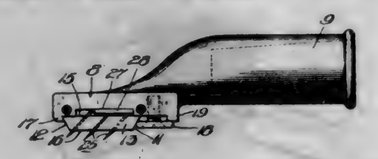
1,562,664. LUBRICATING MECHANISM. MARVIN R. TEDRICK, Plain City, Ohio. Filed Dec. 16, 1924. Serial No. 756,288. 8 Claims. (Cl. 184—27.)



2. Mechanism for lubricating a plurality of distinct parts comprising, in combination, a lubricant reservoir, a series of pumps and pistons therein for supplying lubricant to said parts to be lubricated, a cam shaft common to the series of pistons to act directly on said pistons, driving means for said cam shaft, means for connecting and disconnecting the cam shaft from its driving means and means actuating the same to cause the intermittent rotation of said cam shaft.

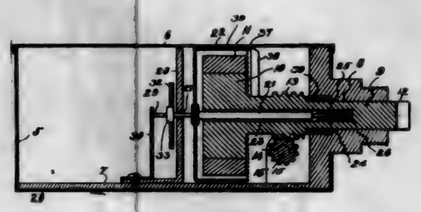
---

1,562,665. CARPET STRETCHER AND THE LIKE. WINGATE S. THOMAS, Chicago, Ill., assignor to Knapp Brothers Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1924. Serial No. 735,251. 8 Claims. (Cl. 45—89.)



1. A device of the class described comprising in combination a body member having a transverse recess in its bottom face, a downwardly reaching undercut lip on its lower front edge parallel to the recess aforesaid, a downwardly depending shoulder on its lower rear edge parallel to the recess aforesaid, a series of trapezoidal spacer blocks having their broad edges facing upwards and seated against the lower face of the body member with their outer upper corners registered into the undercut lip aforesaid, a locking plate having its rear edge seated against the downwardly depending shoulder aforesaid and its front edge in engagement with the rear bevelled edges of the spacer blocks, means for drawing the locking plate firmly towards the body member at a point intermediate between its front and rear edges aforesaid, a longitudinal adjusting plate seated within the transverse recess to occupy a portion of the same throughout its length, there being three diagonally extending parallel notches on one face of each spacer block, pins seated in said notches with a pin in the central notch between one pair of blocks and pins in the outermost notches between the next pair of blocks, etc., the butt ends of certain pins seating against the longitudinal adjusting plate aforesaid, and means in conjunction with the ends of the body member for drawing all of the spacer blocks firmly towards each other, substantially as described.

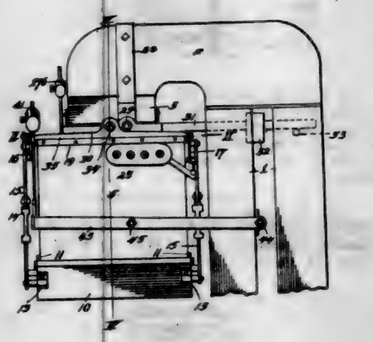
1,562,666. SPEEDOMETER. STEVEN TOTH, Los Angeles, Calif. Filed Apr. 17, 1922. Serial No. 554,254. 2 Claims. (Cl. 264—1.)



2. In a speedometer, a speed indicating dial, a rotatably mounted shaft adapted to be automatically reciprocated in one direction when not rotating and in an opposite direction when rotating, means associated with said dial and shaft for actuating said dial to indicate the speed at which said shaft is revolving, and a clutch mechanism actuated by the reciprocating movement of said shaft adapted to engage with said dial when said shaft is not revolving and to become disengaged from said dial when said shaft starts to revolve.

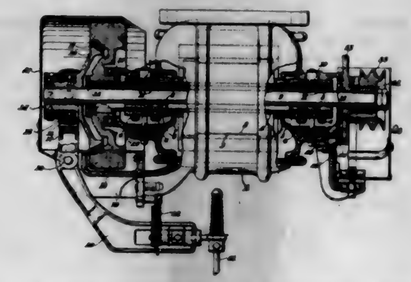
---

1,562,667. AUTOMATIC GRAIN WEIGHER. JAMES B. VAN DEREN, Hennessey, Okla. Filed Aug. 5, 1920, Serial No. 401,373. Renewed Sept. 9, 1922. Serial No. 587,232. 15 Claims. (Cl. 249—29.)



1. An automatic grain weigher, comprising a scale beam a hopper pivotally suspended therefrom, having two compartments, a door for each compartment simultaneously operable in reversed directions, a movable device actuated by up and down movements of the hopper, a lever on the hopper, prevented from movement by said device when the hopper is elevated, an oscillatory spout for directing grain into the compartment having its door closed, means actuated by a sufficient weight of grain in such compartment to lower the hopper, to unlock the door, bell-cranks pivoted on the hopper and linked together and to said lever, links pivotally connecting the opposite ends of the respective bell-cranks to the doors below the hinges thereof to give the opening door added leverage in closing the other door, and means actuated by the movement of the doors to reverse the position of the spout and change the flow of grain into the other compartment.

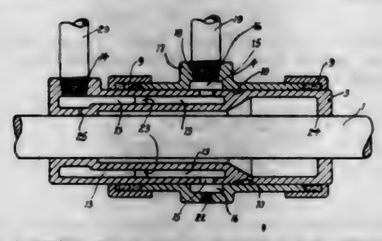
1,562,668. ELECTRIC-POWER TRANSMITTER. IRVING F. WEBB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 18, 1924. Serial No. 738,352. 5 Claims. (Cl. 192—18.)



1. An electric power-transmitter comprising a motor having magnetically coacting stationary and rotary motor-elements, a tubular power-shaft carrying the rotary motor-element, a driven shaft journaled within said tubular power-shaft, and a manually operated friction-clutch connection between said shafts.

---

1,562,669. STUFFING BOX FOR STEAM SHOVELS. CHARLES A. WEBER, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Jan. 6, 1921. Serial No. 435,545. 5 Claims. (Cl. 285—105.)



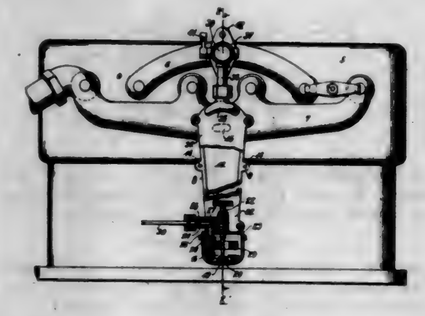
1. A stuffing box for steam shovels and the like comprising an inner rotatably mounted member having a channel within the wall thereof and inlet and outlet openings extending therefrom, and an outer member rotatably mounted on said inner member having a channel in connection with the outlet openings in said inner member, said outer member having an outlet opening therein.

---

1,562,670. CARBURETOR. GEORGE R. WELCH, Detroit, Mich. Original application filed July 21, 1919, Serial No. 312,304. Divided and this application filed May 5, 1925. Serial No. 28,171. 5 Claims. (Cl. 261—13.)

1. The combination with an internal combustion engine having an exhaust pipe, of a closed chamber communicating with said exhaust pipe by a single opening, so that the pulsating pressure in said exhaust pipe causes a flow of hot gases into and out of said chamber, said chamber extending to a substantial distance from said exhaust pipe, means forming a mixing chamber, said chamber having an air inlet, a fuel nozzle discharging into said mixing chamber, and means forming a passage leading from said mixing chamber to the intake of said internal combustion engine, a wall of said passage being formed by a wall of said closed heating chamber, the parts being so arranged that the air and fuel mixture first comes into contact with the wall of the heating chamber remote from the exhaust pipe.

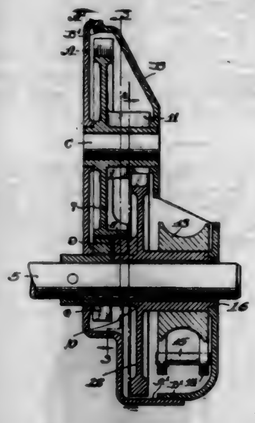
4. The combination with an internal combustion engine having an exhaust pipe, a heating device comprising a closed chamber having tapering side walls communicating with the exhaust pipe at a single port only,



so that the pulsating pressure in the exhaust pipe causes a flow of hot gases into and out of said chamber, a casing surrounding said chamber, and means for admitting fuel to said chamber at the small end of a tapered wall thereof to pass over said wall toward the large end.

---

1,562,671. GEARING. RAYMOND S. ZEITLER, Chicago, Ill. Filed Jan. 23, 1925. Serial No. 4,257. 5 Claims. (Cl. 74—7.)



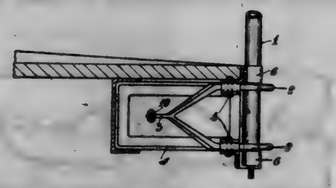
1. A mechanism for operating hand brakes or the like, comprising a drive shaft, a gear fixedly secured thereto, a drum and a pair of complementary segmental gears fixed with relation to each other and journaled upon the drive shaft, a gear block rotatably mounted and provided with two complete gears and a segmental gear for engaging said gear fixed to the drive shaft and the segmental gears rotatable thereon.

---

1,562,672. HOLDER FOR BOLSTER STAKES FOR FREIGHT VEHICLES. ERIC ANDERSSON, Kristinehamn, Sweden. Filed Apr. 21, 1924. Serial No. 707,806. 2 Claims. (Cl. 105—384.)

1. In a bolster stake holder, the combination of a laterally open socket bracket having cheek-pieces adapt-

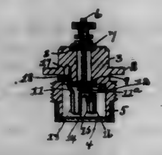
ed to enclose a stake from two opposite sides, and a locking lever pivoted on the inside of said bracket and capable of turning on an axis substantially parallel with



the longitudinal direction of a stake inserted in said bracket, the outer arm of said lever being hook-shaped and adapted to engage the outer side of such stake.

---

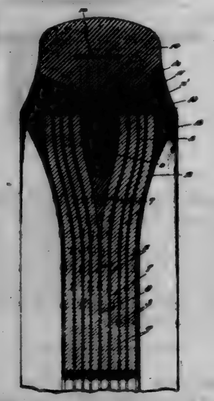
1,562,673. ELECTRIC HEATER OR VAPORIZER. LEONARD E. ASKE, Duluth, Minn. Filed Apr. 29, 1924. Serial No. 709,791. 7 Claims. (Cl. 219—38.)



1. The combination with a fluid conduit having a housing thereon, of a case extending into said housing and containing a chamber open at the inner end, a binding post extending into said chamber and spaced from said case, an electric heating wire within said chamber, said wire being electrically connected to said post and to said case, a porous cementitious refractory filling for said chamber adapted to envelop the major portion of said wire, a small portion of said wire being exposed to the fuel passage in said fuel conduit.

---

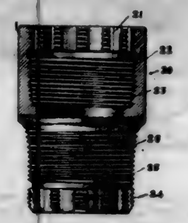
1,562,674. SOLID-TIRE VEHICLE WHEEL. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923, Serial No. 658,947. Renewed Feb. 18, 1925. 10 Claims. (Cl. 301—63.)



3. In a vehicle wheel, a body comprising plies of resilient body material and bonding plies of rubber material, the plies comprising the body being arranged in two sections and the said sections having their peripheral portions outwardly deflected to provide a circumferential channel, a cushioning filling in said channel, and a tread surrounding and sustained by the said filling and the walls of the channel.

---

1,562,675. COUPLING FOR WELL CASINGS. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, a Corporation of California. Filed Mar. 7, 1923. Serial No. 623,405. 4 Claims. (Cl. 285—146.)



1. A coupling for connecting contiguous ends of pipes, said coupling comprising a body portion threaded at one end whereby it may be connected to the end of one of said pipes, cutting threads formed at one end of the body portion for engaging the end of the other pipe to thread the same, straight full threads formed as a continuation of the cutting threads to form a firm connection between the pipe and the coupling, and tapered full threads formed as a continuation of the straight full threads to form a tight fit between the coupling and the pipe.

---

1,562,676. DEMOUNTABLE RIM. CLAUDE BELCHER, Des Moines, Iowa. Filed May 28, 1923. Serial No. 641,896. 2 Claims. (Cl. 301—11.)

1. In a demountable rim, a rim member having a tire engaging flange and having a rabbet in its outer surface, a second rim member received in said rabbet and having a tire engaging flange, means for detachably locking said rim members together, said means including a locking arm pivoted to one of said rim members and having a projecting member at its free end, the other of said rim members having a shoulder for coacting with said projecting member, a rocking pintle mounted on the other of said rim members, said pintle and said locking arm having coacting engaging means, and means for locking said pintle in one position of its movement.

---

1,562,677. BEAD FOR PNEUMATIC TIRES. FRANK H. BERNA, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Sept. 8, 1921. Serial No. 499,306. 15 Claims. (Cl. 245—1.5.)

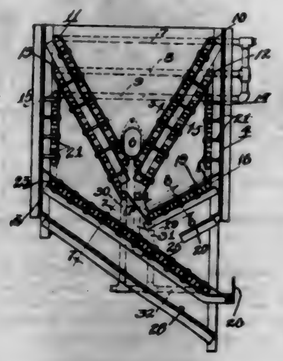
1. A bead comprising an extensible core and a filling of material which will not soften at the temperature of vulcanization.

1,562,678. TIRE-BEAD CONSTRUCTION. FRANK H. BERNA, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Oct. 5, 1921. Serial No. 505,628. 11 Claims. (Cl. 245—1.5.)

1. In a bead construction, a metallic grommet and a filler strip completely surrounding the grommet, said filler strip being composed of flexible material which will not soften at the temperature of vulcanization.

---

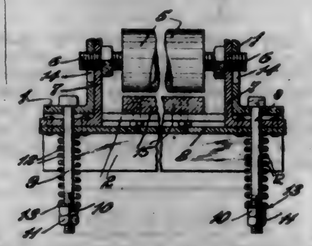
1,562,679. MATERIAL STEAM DRIER. CARL FREEMAN BLEDSOE, Chicago, Ill. Filed Sept. 20, 1924. Serial No. 738,795. 11 Claims. (Cl. 34—34.)



1. In a drying machine, a chamber, steam-heated coils extending along the sides thereof and interiorly thereof, and an inclined heating coil near the bottom of said chamber having a screen superposed thereover.

---

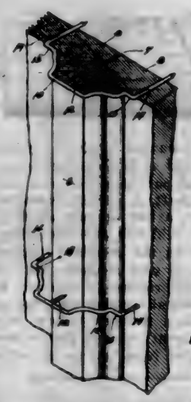
1,562,680. RETARDER FOR GRAVITY CONVEYERS. WILLIAM J. BOHN, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 5, 1925. Serial No. 554. 4 Claims. (Cl. 193—32.)



1. A gravity conveyer having a yieldably supported section and means for increasing the frictional resistance to the movement of an article on said section of sufficient weight to depress said section.

---

1,562,681. BATTEN NAIL. LOUIS F. BONALY, Leavenworth, Kans. Filed Mar. 16, 1925. Serial No. 15,830. 2 Claims. (Cl. 85—49.)



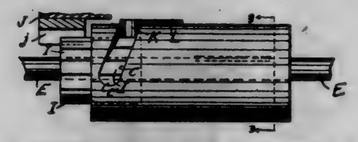
1. A batten nail comprising a body portion adapted to embrace the outer face of the batten member and carrying a prong or nail element for embedment in said outer face of the batten member, said body portion terminating at both ends in nail elements for securing the batten member to a building structure, and the end portions of said body portion also being formed with shoulders providing heads for said last-named nail elements.

---

1,562,682. CONDENSER. CARL F. BRAUN, San Francisco, Calif. Filed June 29, 1921. Serial No. 481,987. 2 Claims. (Cl. 257—225.)

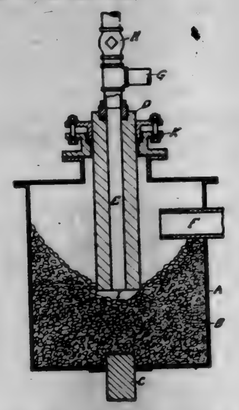
1. A heat exchanger comprising a shell having an inlet and an outlet through which a fluid may flow, a tube unit within said shell, a rigid mounting for one end of said tube unit, a dome shaped member secured to the other end of the tube unit and having an aperture therein disposed in the line of flow of the fluid through the tube unit, and a yieldable member having its central part connected to the dome shaped member and its outer edge connected to the shell for the yieldable support of said second mentioned end of the tube unit.

**1,562,683. DRIVE FOR STARTING INTERNAL-COMBUSTION ENGINES.** ODILON BRISSOIS, Chicago, Ill. Filed Nov. 3, 1921, Serial No. 512,423. Renewed Aug. 31, 1925. 8 Claims. (Cl. 74—7.)



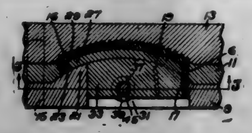
1. A rotatably mounted shaft, a cylindrical member, a partition wall and a head at one end of said cylindrical member, said partition wall and said head loosely mounted on said shaft, a spirally extending slot in said cylindrical member, a hub on said shaft secured thereto to turn therewith, said hub provided with longitudinally extending recesses on the periphery thereof, in combination with rollers in said recesses and means to yieldingly maintain said rollers in contact with the inner face of said cylindrical member and one side of said recesses, a gear pinion member loosely mounted on said shaft and an abutment on said pinion member arranged to travel in said slot from one to the other end thereof.

**1,562,684. SYNTHESIZING GASES IN ELECTRIC FURNACES.** MORTIMER JAY BROWN, Niagara Falls, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 2, 1922. Serial No. 591,695. 11 Claims. (Cl. 204—64.)



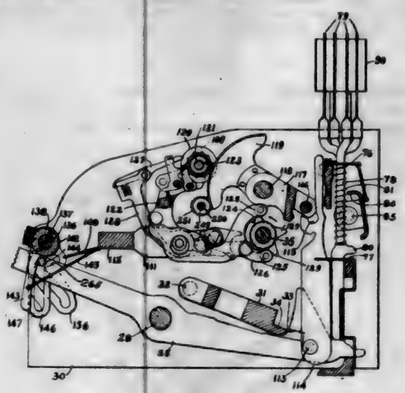
1. In a resistance electric furnace for effecting gas reactions, of the type having a resistor of comminuted material interposed between the electrodes, the method which consists in supplying resistor material at such rate with the reacting gas as to maintain the electrical resistance within predetermined limits.

**1,562,685. MOLD FOR PEDAL CUSHIONS.** JOSEPH F. O. BURMAN, Brockton, Mass. Filed Oct. 3, 1923. Serial No. 666,308. 10 Claims. (Cl. 18—42.)



1. In a mold of the character described, a base member having a plurality of raised portions each provided with a central longitudinal slot, said slots at one end being widened, means superimposed on said base member and forming recesses and a mold cover above said raised portions, core members having portions fitting the upper surfaces of said raised portions of said base member and adapted to be received in said openings, said core members having shank portions fitting said slots and having portions extending into said widened portions of said slots, and a locking bolt mounted for reciprocation in said base member for engaging said portions of said core members fitting said slots for holding them in position.

**1,562,686. CASH REGISTER.** THOMAS CARROLL, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed Dec. 8, 1919. Serial No. 343,395. 21 Claims. (Cl. 235—3.)



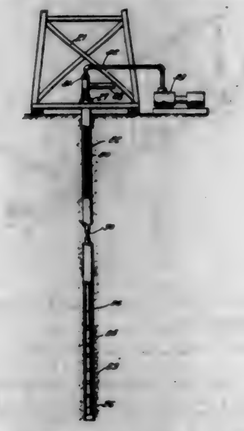
1. In a machine of the class described, the combination of a plurality of totalizers, independent actuating means for each totalizer, item entering means, and independent means actuated by the item entering means for operating the various actuating means.

**1,562,687. HINGED LUG FOR BRAKE SHOE.** LEONARD J. COLE, Buffalo, N. Y. Filed Jan. 10, 1925. Serial No. 1,701. 2 Claims. (Cl. 188—249.)

2. In a device of the class described, the combination of a brake shoe, a lug mounted on the brake shoe and swingable outwardly toward the lug on the opposite end of the brake shoe, the lug having a cam-shaped base portion, said cam-shaped base portion including a shoulder portion which functions as a locking element when it abuts with the end of the conventional brake band, for the purposes described.

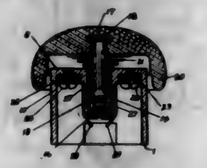
**1,562,688. PUMP.** ROLAND R. CRUM, Whittier, Calif., assignor, by direct and mesne assignments, to L. & B. Producing & Drilling Co., a Corporation. Filed Aug. 18, 1923. Serial No. 658,054. 10 Claims. (Cl. 103—46.)

1. In pumping equipment, the combination of: tubing arranged to extend within a well; pump mechanism secured to the lower end of said tubing; a fluid motor adapted to be operated in all phases of motion by fluid under pressure, said motor being associated with said pump mechanism; a fluid pressure pipe extending down-



wardly within said tubing; and means for delivering the discharge of said pump mechanism into the space between said tubing and said pressure pipe wherein said discharge is conducted to the ground surface.

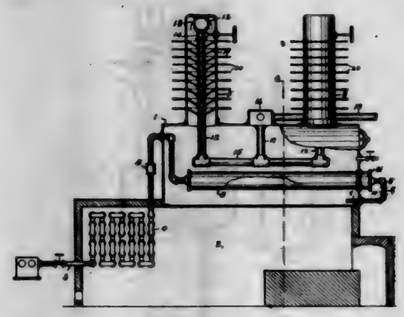
**1,562,689. PUSH-BUTTON SWITCH.** WILLIAM W. DEAN, deceased, late of Lowell, Mass., by Mary E. Dean, executrix, Birmingham, Mich., assignor to The General Phonograph Manufacturing Company, Elyria, Ohio, a Corporation of Ohio. Filed Dec. 8, 1923. Serial No. 679,301. 5 Claims. (Cl. 200—159.)



1. In a push button electric circuit controller, the combination of a base member, electric circuit controlling contacts mounted on said base member and normally disassociated electrically from each other, a push button member adapted to be reciprocated with respect to said base member, extending over the top of said base member and provided with an annular peripheral flange overhanging the upper part of the sides of the base member and adapted to telescope with said base member when the push button member is reciprocated, a pair of relatively long bearings, one on the base member and one on the push button member, upon which said push button member reciprocates with respect to the base member, said bearings fitting tightly, preventing the tilting and insuring the reciprocation of the push button member with respect to the base member, means whereby the contacts are associated electrically when the push button member is reciprocated and means for returning said push button member to normal when released.

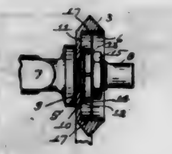
**1,562,690. STILL.** MAX F. DE BAILIGHTHY, Houston, Tex. Filed June 20, 1922. Serial No. 569,614. 3 Claims. (Cl. 196—119.)

1. The combination with a still including a boiler, of a plurality of reacting drums mounted therein, and one end of which projects outside of the boiler, a detachable head carried by the outer ends of said drums, an inlet



pipe formed with heating coils entering one end of the drum and a discharge nozzle leading from the outer end of the drum and entering the boiler.

**1,562,691. CAP FOR AUTOMOBILE RADIATORS.** MARTIN DE GRAAF, Grand Rapids, Mich., assignor, by mesne assignments, to Wolverine Metal Specialties Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Aug. 18, 1923. Serial No. 658,023. 3 Claims. (Cl. 151—2.)

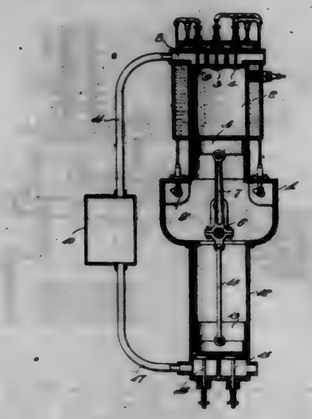


1. In a structure of the character described; a body having an opening with a contracted portion and an enlarged portion; a member having a screw-threaded shank extending through said opening and a shoulder abutting the outer side of the body; a concavo-convex washer on said shank; a nut on the shank outside the washer and adapted in screwed-down position to flatten the washer between the nut and the bottom of the enlarged portion of said opening and thereby press the washer into holding edgewise contact with the lateral wall of said portion.

**1,562,692. SURCHARGER FOR AEROPLANE ENGINES.** CLAUDE DE ROCHEFORT-LUCAY, Brooklyn, N. Y. Filed Oct. 12, 1922. Serial No. 594,132. 2 Claims. (Cl. 123—75.)

1. In an internal combustion engine, a crank case, a crank shaft rotatable therein, cylinders extending from said crank case, pistons in said cylinders having piston rods connected with said crank shaft for causing uniform reciprocation of the pistons during rotation of the shaft, one of the cylinders being a power cylinder and having a valve-controlled fuel inlet and a valve-controlled exhaust, an air inlet and a valve for said air inlet; the other cylinder constituting a compressor cylinder and having a valve-controlled air inlet and a valve-controlled air outlet; an air reservoir having an inlet passage lead-

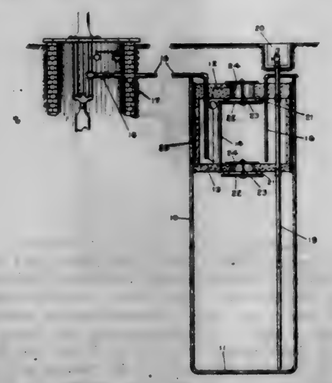
ing to the valve-controlled air outlet of said compressor cylinder and having also an outlet passage leading to said air inlet of said power cylinder, and means for opening



said air inlet valve of the power cylinder to admit compressed air from said reservoir during compression in said power cylinder.

---

1,562,693. CISTERN. RICHARD E. DILL, Alexandria, Nebr. Filed Mar. 12, 1923. Serial No. 624,449. 5 Claims. (Cl. 137—79.)

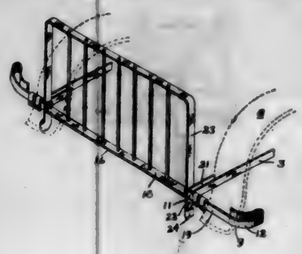


5. In a cistern, an underground cavity, a vessel within said cavity, said vessel being enclosed on all sides, a substantially horizontal partition dividing the interior of said vessel into an upper water chamber and a lower air pressure chamber, means for equalizing the internal pressures of said two chambers, means for forcing out water which collects in the bottom of said air pressure chamber, and means for conducting water into and out of said water chamber.

---

1,562,694. COMBINED BUMPER AND LUGGAGE CARRIER. ELGIN P. FARUM, Oakland, Calif., assignor to Oakland Machinery Company, Oakland, Calif., a Corporation of California. Filed Feb. 13, 1924. Serial No. 692,519. 9 Claims. (Cl. 293—55.)

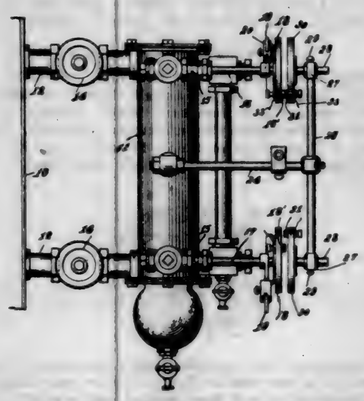
1. In a combined bumper and luggage carrier for automobiles, brackets adapted to be secured to the automobile, bumpers adjustably secured to said brackets and positioned at the rear of the rear fenders of the automobile,



and a carrier rack pivoted to said bumpers and interposed therebetween.

---

1,562,695. CIRCUIT CLOSER. JACOB SCHOBER GAINES and MARTIN E. CRIGHTON, Cairo, Ill. Filed Mar. 31, 1922. Serial No. 548,458. 1 Claim. (Cl. 200—84.)

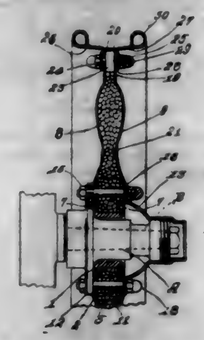


In combination with a reservoir and a plurality of floats pivotally mounted therein, a rock shaft extending from the float, a disk carried by the end of the rock shaft, contact elements carried by the disk, a vertical bracket member supported adjacent the reservoir, axially adjustable element carried by the ends of the bracket member, a disk carried by each of the axially adjustable elements, and contact elements extending from the disk and adapted to be engaged by the first mentioned contacts, the contacts in the last mentioned disks being adapted to be connected with the source of electrical energy which in turn is connected with a signal.

---

1,562,696. VEHICLE WHEEL. WILLIAM W. GARRIOTT, Seattle, Wash. Filed Oct. 31, 1924. Serial No. 747,095. 5 Claims. (Cl. 30—63.)

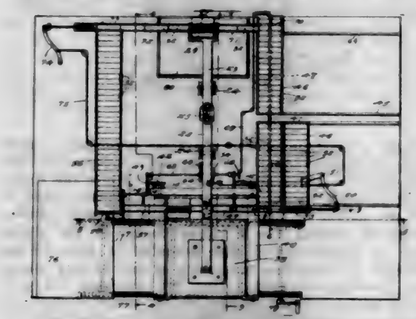
4. An insulated disk wheel of the character described comprising an auxiliary hub, spaced flanges rising therefrom, cross flanges arranged in the spaced flanges to provide compartments, an insulator piece receiving in each compartment, a plurality of spaced disks radiating from the flanges first mentioned, and terminating in spaced parallel outer portions, right angle disposed portions



formed on the outer portions and having their edges engaging in confronting relation, and a tire receiving rim secured to the straight parallel portions.

---

1,562,697. LETTER PRINTING AND ADDRESSING MACHINE. EDGAR F. GREER, Memphis, Tenn. Filed June 16, 1924. Serial No. 720,283. 6 Claims. (Cl. 101—47.)



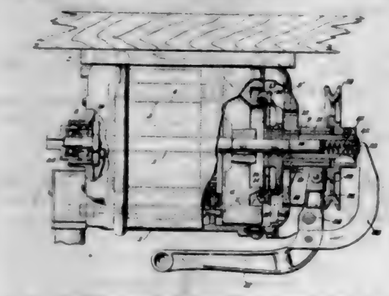
1. A letter printing machine, a rotary holder for the address printing type, means for imparting an intermittent rotary movement to the said holder, and means for feeding the address printing type to the holder during the intervals between the rotary impulses imparted thereto.

---

1,562,698. ELECTRIC SWITCH. GEORGE HEDEMAN HART, West Hartford, Conn. Filed Mar. 3, 1923. Serial No. 622,559. 6 Claims. (Cl. 200—172.)

5. In an electric switch and in combination, a rotary switch spindle having an offset projection, a handle having a bore, a connector slidably mounted in said bore and held against rotation relative to said handle and adapted to be threaded onto said spindle, a spring normally urging the handle against longitudinal movement relative to said connector, and a plate on the bottom of said handle having an opening slidably receiving said connector and an aperture adapted to closely receive said projection, said plate having a radially extending arm with an upturned end projecting into said handle.

1,562,699. ELECTRIC POWER TRANSMITTER. PARK A. HESS, Hillside, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 18, 1924. Serial No. 738,331. 4 Claims. (Cl. 192—18.)



1. An electric power-transmitter comprising a frame having bearings at its opposite ends only, a rotary and endwise movable sleeve-shaft journaled in one of said bearings, a driven clutch-element carried by said sleeve-shaft at its inner end between said bearings and formed with a friction clutch-face, a belt-pulley fixed to the outer end of said sleeve-shaft, a motor-shaft journaled at its opposite ends only in said sleeve-shaft and the other of the motor-frame bearings, a driving clutch-element fixed to the motor-shaft between the bearings for such shaft and formed with a friction clutch-face mating with that of the driven clutch-element, magnetically coacting stationary and rotary motor elements, said rotary element being fixed to the motor-shaft adjacent said fly-wheel, manually operated means for sliding said sleeve-shaft endwise, and a thrust bearing associated with the motor-shaft bearing remote from said sleeve-shaft.

---

1,562,700. TEETERING DEVICE. WALTER LEE HERRING, Tulsa, Okla., assignor to F. E. Riddle. Filed Sept. 4, 1923. Serial No. 660,908. 1 Claim. (Cl. 272—55.)

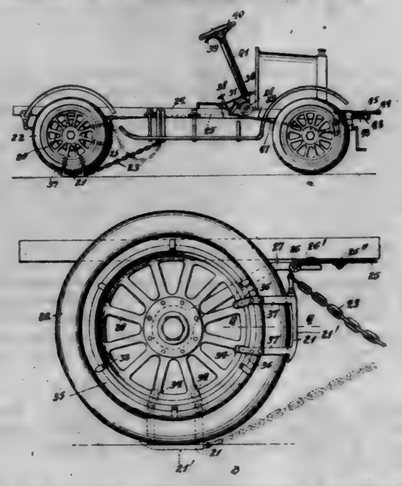
In a device of the character described, a base, an upright secured to the base and simulating the figure of a man, a standard having a vertical portion and a horizontal portion, the vertical portion being secured to the base and the horizontal portion being secured to the upright, said standard simulating the bended leg of a man, a frame connected to the standard and to the upright, a vertically swingable member including a main portion designed to simulate the other leg of a man, and an arm angularly arranged with respect to the main portion, means for pivotally mounting the member on

the standard and the frame, a saddle carried by the main portion of the member and a retractile coil spring connected to the base and to the arm of the member for elevating the main portion of the member with its saddle and a hand hold carried by the frame and overlying the main portion of the vertically swingable member.

1,562,701. GRINDING PASTE. PATRICK HOLMSTROM, Hemet, Calif. Filed Oct. 11, 1923. Serial No. 667,806. 2 Claims. (Cl. 51—279.)

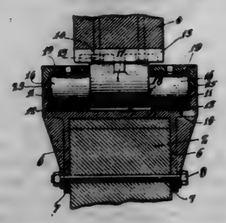
1. As a new composition of matter, a grinding paste containing citrus powder, a liquid, and an abrasive powder.

1,562,702. VEHICLE BRAKE. BAPTISTE ICRE, New York, N. Y. Filed Feb. 8, 1917, Serial No. 147,203. Renewed Feb. 9, 1925. 4 Claims. (Cl. 188—4.)



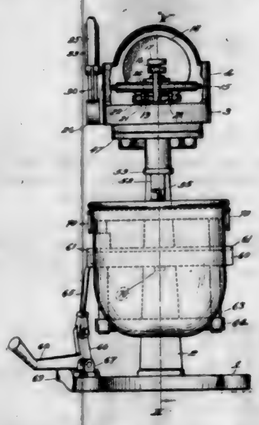
1. In a wheeled vehicle, a vehicle wheel provided with an internal circular circumferential track rigidly secured to said wheel and facing the center of the wheel, means interposed between said track and the wheel center, said means engaging said track and adapted to travel along the same about the axis of the wheel, a brake shoe adapted to become interposed between the tread of the wheel and the surface on which said tread runs, a connection extending outwardly from said track-engaging means to said brake-shoe to compel the latter to swing about the axis of the wheel, and means for controlling the position of said brake-shoe.

1,562,703. CENTER IRON. ELTON L. JONES and HARRY B. DAVIS, Jr., Taft, Calif. Filed Aug. 15, 1922. Serial No. 581,939. 4 Claims. (Cl. 308—21.)



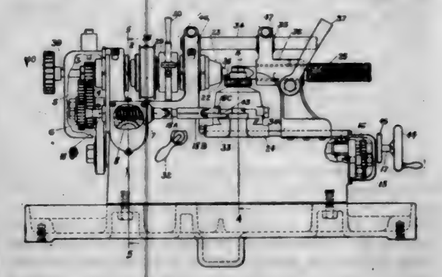
1. A center iron for mounting a walking beam or the like, comprising a one piece supporting member providing a horizontal trough closed at the ends and having opposed anchor plates depending from adjacent the ends of said trough, bushings positioned at opposed ends of said trough and spaced apart, a saddle member having a downward extension terminating in opposed trunnions, revolvably mounted by said bushings, the saddle member being shaped to leave an oil chamber between said bushings, and complementary cover plates having depending end flanges adapted to enclose the trunnions from above and at their ends.

1,562,704. BEATING AND MIXING MACHINE. WILLIAM J. KEVAN, Kansas City, Mo. Filed Oct. 6, 1924. Serial No. 741,960. 5 Claims. (Cl. 74—26.)



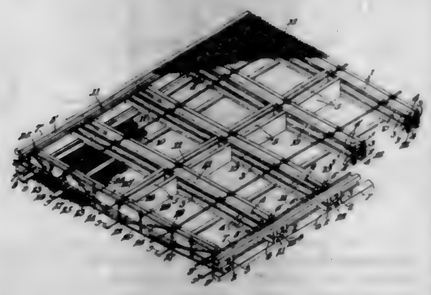
1. In a machine of the character described, a drive wheel, a driven wheel for peripheral engagement with a face of the drive wheel, means to adjust the driven wheel to shift its relationship with the drive wheel to a point nearer to or further from the center thereof, means for locking the adjusting means at the desired point of adjustment, a slide actuated to move in one direction by unlocking movement of the locking means, and yieldingly-actuated means for restoring the slide to its initial position as the locking means secures the adjusting means at the desired point of adjustment.

1,562,705. THREAD-CUTTING MACHINE. GEORGE R. KUNKLE, Elyria, Ohio, assignor to The General Phonograph Manufacturing Company, Elyria, Ohio, a Corporation of Ohio. Filed Aug. 13, 1921. Serial No. 491,985. 3 Claims. (Cl. 10—102.)



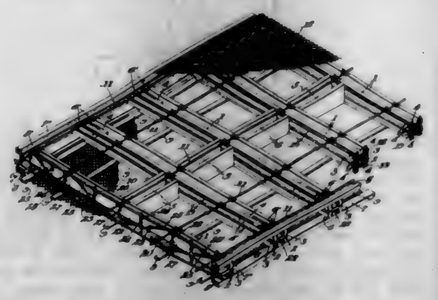
3. In a lathe, a longitudinally movable carriage, a cross carriage mounted upon said carriage to be moved in a direction transversely thereupon, a tool rotatably mounted in said cross carriage, and mechanism for rotating said tool including an adjustable drive shaft, said shaft comprising a plurality of sections, one of which is mounted within said cross carriage, each of said sections having a universal joint therein intermediate its ends.

1,562,706. CONCRETE BUILDING ELEMENT. SIMON LAKE, Milford, Conn. Filed Aug. 20, 1924. Serial No. 733,208. 9 Claims. (Cl. 72—42.)



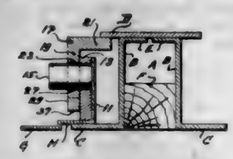
1. A concrete building element, comprising a pair of substantially similar slabs, longitudinal and transverse webs connecting said slabs and maintaining them in predetermined spaced relation, a reinforcing framework embedded in said slabs and defining said webs, reinforcing members in said webs and engaging the reinforcement of said slabs and insulating means embodied in said webs and positioned by said framework for preventing transmission of heat, cold and moisture from one of said slabs to the other.

1,562,707. PROCESS OF AND APPARATUS FOR MAKING CONCRETE BUILDING ELEMENTS. SIMON LAKE, Milford, Conn. Original application filed Aug. 20, 1924, Serial No. 733,208. Divided and this application filed Jan. 20, 1925. Serial No. 3,649. 11 Claims. (Cl. 25—131.)



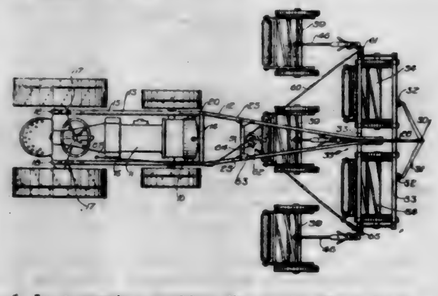
1. A method of fabricating concrete building elements comprising a reinforcing framework, an upper slab and a lower slab of concrete and interconnecting spacing webs uniting said slabs, which consists in spreading a layer of concrete of required area and thickness to form the bottom slab, embedding said framework therein, screeding off surplus concrete within said framework, supporting cores above the thus screeded concrete slab, depositing concrete upon said cores, screeding off the thus deposited concrete to the thickness desired to thus form the top slab of the element, allowing the concrete to attain a sufficient set to be self supporting, and thereafter removing said cores.

1,562,708. MOLD LOCK. FREDERICK JOSEPH LIOMIN, Glen Ridge, N. J. Filed Apr. 18, 1922. Serial No. 555,452. 12 Claims. (Cl. 25—131.)



3. In a mold of the character described, the combination of a support, a disconnectible panel coacting with the mold side thereof, an element substantially parallel to said panel carried thereby in proximity to the same, and a member capable of engaging said element together with the far side of said support so as to exert a wedging action therebetween and force the panel against the support on the near side.

1,562,709. LAWN MOWER. HARRY W. MCNUTT, Los Angeles, Calif. Filed Dec. 6, 1921. Serial No. 520,231. 3 Claims. (Cl. 56—7.)



1. In a mowing machine, the combination of: a vehicle; a mower unit disposed in front of said vehicle; a draft structure extending forwardly over said mower unit from said draft vehicle; a flexible connection between the forward end of said draft structure and said mower unit, whereby said mower unit may be pulled by said draft structure as said vehicle is propelled; frictional means for resisting the lateral swing of said mower unit around said flexible connection; and means for maintaining said mower unit in alignment when the direction of movement of said mowing machine is reversed.

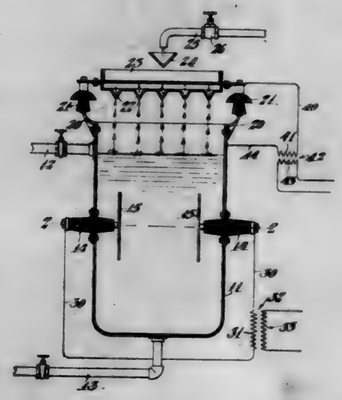
1,562,710. METHOD OF TREATING METALLIC OBJECTS AND RESULTING PRODUCTS. CHARLES P. MADSEN, New York, N. Y., assignor to Madsenell Corporation, New York, N. Y., a Corporation of New York. Filed July 27, 1920, Serial No. 399,386. Renewed Feb. 10, 1925. 9 Claims. (Cl. 204—1.)

1. The method of preparing iron, steel or equivalent surfaces to receive adherent and impervious metallic coatings, which comprises making the object to be coated the anode in a bath containing sulphuric acid of more than about eighty-six per cent strength while maintaining the bath at a temperature above normal.

1,562,711. COATED METALLIC ARTICLE AND METHOD OF MAKING THE SAME. CHARLES P. MADSEN, New York, N. Y., assignor to Madsenell Corporation, New York, N. Y., a Corporation of New York. Filed July 27, 1920, Serial No. 399,387. Renewed Feb. 10, 1925. 15 Claims. (Cl. 204—64.)

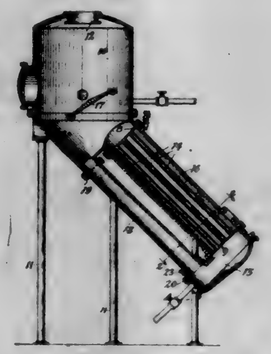
1. As an article of manufacture, a flexible metal base provided with an adherent, workable electrodeposit of a "nickel metal."

1,562,712. **PROCESS OF AND APPARATUS FOR DEHYDRATING EMULSIONS BY EXTERNALLY-CHARGED PARTICLES.** WYNN MEREDITH, Alameda, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Feb. 14, 1921. Serial No. 444,947. 12 Claims. (Cl. 204—25.)



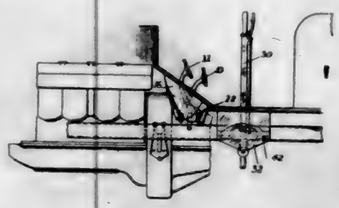
1. A method of separating conducting particles from an insulating media which comprises imparting an electric charge to other particles; introducing said charged particles into said media; and subjecting said media and said charged particles to an electric stress.

1,562,713. **EVAPORATOR.** HENRY D. MILES, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Jan. 28, 1924. Serial No. 688,906. 3 Claims. (Cl. 159—27.)



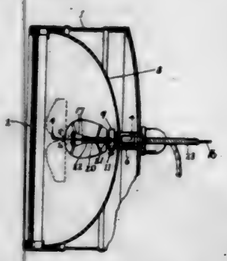
1. An evaporator comprising an inclined steam chest having upper and lower stationary flue sheets, a plurality of inclined up-take tubes arranged within the steam chest and having their upper and lower ends rigidly secured in said flue sheets, an upper exhaust chamber having its lower end rigidly connected with the upper end of said steam chest and communicating with said up-take tubes, a return chamber having its upper end rigidly secured to the lower end of said steam chest and communicating with the lower end of said up-take tubes, and an inclined return tube arranged below the steam chest and having one end rigidly connected with one of said chambers and slidably connected with the other chamber and communicating at its opposite ends with said exhaust and return chambers.

1,562,714. **DEFLECTOR.** WILLIAMS G. MILLIGAN, Akron, Ohio. Filed June 14, 1923. Serial No. 645,274. 5 Claims. (Cl. 180—77.)



1. In an automobile construction, the combination of a sectional floor board having slots therein for the operation of the control levers, a deflector having a front and side walls about the slots, means for suspending the deflector from one of the sections of the floor board, one of the side walls of the deflector extending rearwardly beneath the other section of the floor board, and a supplementary deflector upon the other section of the floor board cooperating with the first deflector to completely surround the slots.

1,562,715. **DIMMER FOR HEADLIGHTS.** JONATHAN R. NAYLOR, Three Rivers, Mich., assignor to Auto Light Control Company, Three Rivers, Mich, a Firm. Filed Oct. 27, 1924. Serial No. 746,055. 7 Claims. (Cl. 240—45.)

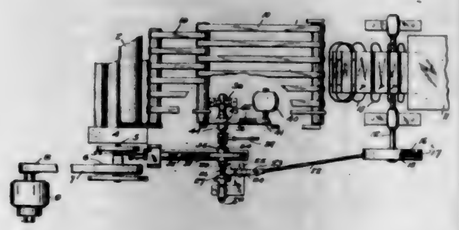


4. In a headlight, the combination of a reflector, a lamp, a screen support mounted on said lamp with its front end at the front end of said lamp, a pair of complementary screen members pivotally mounted on the front end of said support and adapted when closed to enclose said lamp and when opened to lie transversely at the front end of the lamp, and means for opening and closing said screen members.

1,562,716. **LITHOGRAPH-DRYING SYSTEM.** JULES A. NY, San Francisco, Calif., assignor of two-thirds to Western Can Company, San Francisco, Calif., a Copartnership consisting of MAX J. BRANDENSTEIN, Manfred Bransten, and EDWARD BRANSTEN. Filed Jan. 20, 1922. Serial No. 530,645. 9 Claims. (Cl. 101—416.)

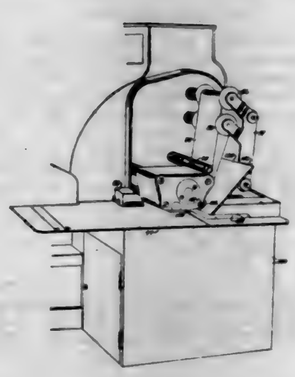
1. A system for continuously printing and drying bodies, comprising, in combination, a printing machine;

a drying apparatus including a traveling conveyor to receive the bodies successively from the machine, means for synchronizing the action of the machine and the



conveyor and means for interrupting the operation of the synchronizing means so that the machine and the conveyor may be independently driven or stopped.

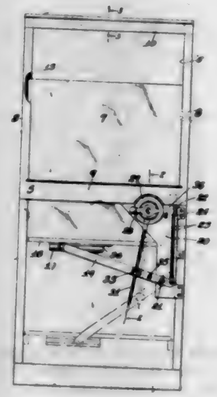
1,562,717. **CASH REGISTER.** EMIL E. OBERHAUSER, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed Apr. 16, 1924. Serial No. 706,892. 10 Claims. (Cl. 101—93.)



1. In a machine of the class described, the combination of means for causing two impressions on a slip of record material, severing means operable at each operation of the machine, means for feeding the slip after the first impression and prior to the second impression, and a slip supporting means adapted to maintain a slip out of cooperative relation with respect to said severing means during feeding operations.

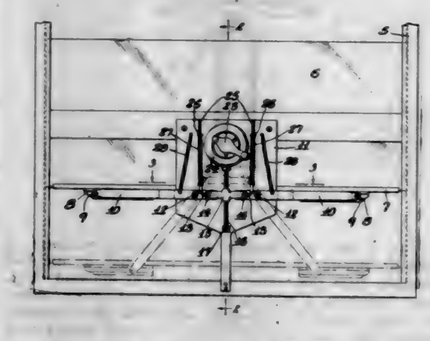
1,562,718. **WINDOW MOUNTING AND OPERATING DEVICE FOR DOORS.** ANTON E. OLSEN, New York, N. Y., assignor of one-half to George M. Reichenbach, New York, N. Y. Filed Aug. 12, 1922. Serial No. 581,356. 2 Claims. (Cl. 268—4.)

1. A window operating device of the class described, comprising an attaching plate, a lever pivoted to said plate, the free end of said lever being provided with an antifrictional device adapted to cooperate with the window panel to be operated, a block movably mounted in connection with said lever, a screw shaft in threaded engagement with said block, a bevel pinion at one end of said screw shaft, a bevel gear meshing with said pinion, a crank for rotating said bevel gear to correspondingly rotate said screw shaft, a spring mounted in connection with said lever and said attaching plate for counterbalancing the window panel in the operation of raising



and lowering the same, all of said parts being mounted in connection with said attaching plate to form a unitary construction thereof.

1,562,719. **WINDOW-OPERATING DEVICE.** ANTON E. OLSEN, New York, N. Y., assignor of one-half to George M. Reichenbach, New York, N. Y. Filed Aug. 15, 1922. Serial No. 581,948. 7 Claims. (Cl. 268—4.)



1. A window operating device of the class described, comprising a screw shaft, means for rotating said shaft, a block in threaded engagement with said shaft and adapted to be moved longitudinally thereof in the rotation of said shaft, oppositely disposed levers pivoted independently to stationary supports, one end of said levers being in operative connection with said block, and the other end of said levers being provided with antifrictional devices.

1,562,720. **BATHING GARMENT.** FRED L. PETTER and THEODORE BARGMAN, Detroit, Mich. Filed Aug. 10, 1922. Serial No. 580,886. 1 Claim. (Cl. 9—20.)

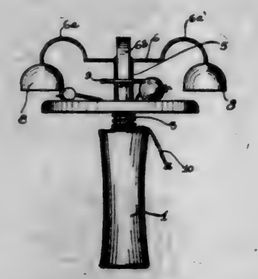
A bathing suit comprising an outer covering, a lining, a layer of kapok between said covering and said lining,

said covering and lining being stitched together to form noncommunicating individual kapok filled tufts that pre-

sent protuberances inside of a bathing suit for contact with wearer so that the body contact is materially reduced to facilitate removal of the suit.

---

1,562,721. MUSICAL TOY. FRANK M. PIERCE, Chicago, Ill. Filed Nov. 19, 1923. Serial No. 675,498. 9 Claims. (Cl. 46—46.)

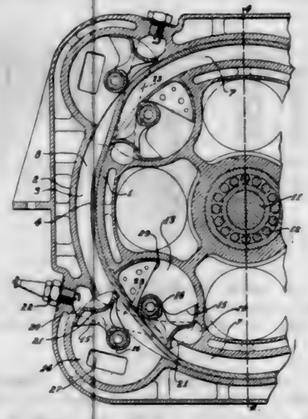


1. In a toy, a rotatable disk, metallic members of different timbre supported above said disk at different distances from the center thereof and at different elevations therefrom, a cable having bifurcated ends of different length extending through said disk upon opposite sides of the rotatable axis thereof, a small striker upon one of the bifurcated ends, a larger striker upon the other bifurcated end and a rotatable drum upon which the cable is adapted to be wound and rewound.

---

1,562,722. ENGINE. JOHN GORDON PLEMMONS, Detroit, Mich. Filed Nov. 1, 1920. Serial No. 421,146. 6 Claims. (Cl. 123—15.)

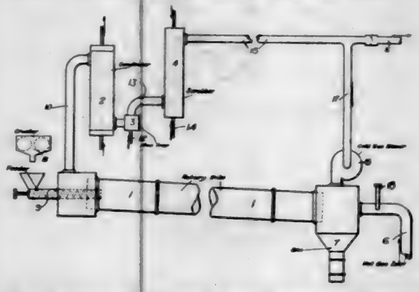
1. An engine of the class described comprising a body having an annular space therein, a rotor located in said space and formed with pairs of portions concentric with the casing, one pair of said portions being connected with the other pair, elements arranged tangential with respect to the casing, one pair of the portions forming interior chambers and the other pair exterior chambers, swinging abutments arranged in pairs and extending into said chambers and engaging the rotor, means for feeding an explosive charge to the rear side of one pair of swinging abutments, means for transferring compressed gas from the interior chambers to the exterior chambers, and



means for firing the charge in front of the opposite swinging abutments, and means for exhausting the exploded gases.

---

1,562,723. PROCESS OF DISTILLATION. DANIEL PYZEL, Piedmont, Calif., assignor to Simplex Refining Company, San Francisco, Calif., a Corporation of California. Filed Nov. 3, 1919, Serial No. 335,537. Renewed May 11, 1925. 2 Claims. (Cl. 196—79.)



1. A process of refining liquid bituminous material which comprises: mixing said material with solid matter to form a bituminous mixture; rolling said bituminous mixture in the form of coherent balls through a chamber; and passing hot non-oxidizing gases through said chamber in contact with said balls.

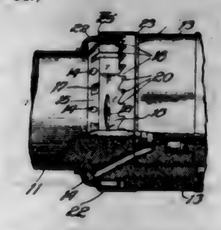
---

1,562,724. KEEPER FOR CUFF BUTTONS. HOWARD A. REDFIELD, Monterey Park, Calif. Filed Feb. 2, 1925. Serial No. 6,168. 2 Claims. (Cl. 24—90.5.)

2. A cuff button keeper composed of soft rubber molded into the form of a plate having a reinforced outer edge and provided with a transverse slot, said slot having its ends terminating in round holes of a diameter greater than the width of the slot, the material adjacent to the slot and around the holes being reinforced.

---

1,562,725. HANDLE-LOCKING MEANS FOR FLUID-PRESSURE-OPERATED TOOLS. ERNEST H. SHAFF, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Mar. 29, 1920. Serial No. 369,593. 3 Claims. (Cl. 121—36.)



1. A pneumatic hammer having a cylinder, a handle screw-threaded onto the cylinder, said cylinder having a plurality of external longitudinally extending grooves and said handle having a plurality of teeth in one end thereof adjacent said grooves, a locking device comprising a key member adapted to interengage with one of said grooves and having teeth adapted to interengage with the teeth on the handle, said grooves and teeth being differently spaced about the cylinder and handle respectively, the cylinder further having an exhaust port the outer end of which terminates adjacent said grooves, and an annular ring removably secured to the handle so as to be held against longitudinal movement relative thereto and having an inturned forward portion closely encircling the cylinder and forming an annular exhaust chamber into which said exhaust port is arranged to discharge, said ring further providing an annular shoulder adapted to engage with the forward end of said key member to hold it against forward movement in any one of said grooves.

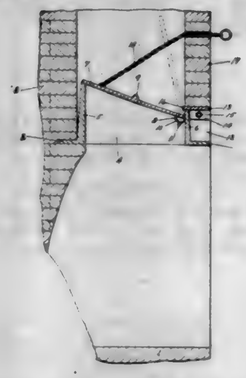
---

1,562,726. FLUID-PRESSURE-OPERATED TOOL. ERNEST H. SHAFF, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 5, 1920. Serial No. 371,444. 5 Claims. (Cl. 121—15.)

1. A fluid-pressure-operated tool having, in combination, a cylinder, an inner tube spaced from the interior of the cylinder to provide a storage chamber therebetween, the interior of the tube forming a piston chamber, a piston freely movable in said piston chamber, the extreme forward ends of the piston and storage chambers being in communication, annular series of ports through said tube at a point rearward of the front end of the piston chamber, a groove in the exterior of said tube communicating with said ports, said groove having a tapered bottom wall, an expansible resilient annular beveled valve member occupying said groove, the inclination of the beveled bottom wall of the groove cooperating with the valve member to hold the latter in position to close all of said ports, said valve member being arranged to be expanded by pressure within said piston chamber and to be moved along said tapered bottom wall of the groove and into contact with the interior of said cylinder whereby to cut off the forward portion of the storage chamber and direct the escaping motive fluid rearwardly, and suitable valve mechanism providing for inlet and exhaust of pressure fluid from said piston chamber.

---

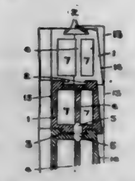
1,562,727. DAMPER FOR FIREPLACES. LOUIS W. SCHALLER, Portland, Oreg. Filed June 6, 1925. Serial No. 35,291. 2 Claims. (Cl. 126—288.)



1. In a device of the characted described, the combination of a frame comprising horizontal base members, and vertical walls at the inner edge of said base members, the vertical side walls and the rear wall sloping downwardly toward the front wall, a vertical front wall rising above the lowest point of the abutting side walls, ears cast integrally with the vertical front wall and the corresponding base member and extending upwardly to a level with the upper edge of the vertical front wall, a supporting bar resting on the upper edge of said ears and being attached thereto, with a cover resting freely on top of the side and rear walls and resting with the two front corners at the lowest point of the side walls.

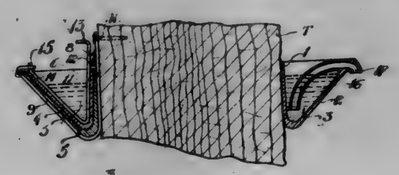
---

1,562,728. BUILDING CONSTRUCTION. THEODORE JULIUS JOHN ALBRECHT, Auckland, New Zealand, assignor of one-half to Stephen Shelton, Auckland, New Zealand. Filed Dec. 15, 1921. Serial No. 522,659. 1 Claim. (Cl. 72—41.)



A block for use in building walls and like structures including a substantially rectangular hollow body also rectangular in cross section, a vertical longitudinal partition positioned parallel to and medially of the side walls of the body and extending throughout the length thereof and integral with the upper portion of the body so as to divide the same into parallel compartments and the upper and lower portions of the body and the adjacent portions of the partition being provided with openings which are situated in alignment with the partitions which are adapted to register with openings in the adjacent blocks so as to place the compartments of each block in communication with each other and in communication with the compartments of the adjacent blocks.

1,562,729. TREE GUARD. JAMES B. ANDERSON, Grandview, Wash. Filed Dec. 24, 1924. Serial No. 757,890. 2 Claims. (Cl. 47—24.)



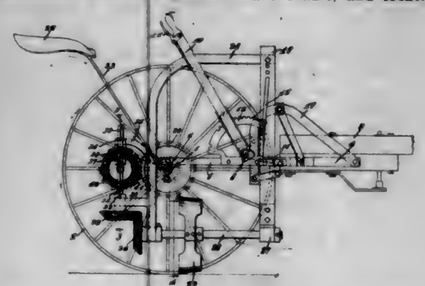
1. A tree guard comprising an encircling trough adapted to contain a liquid and means for automatically siphoning excess liquid from said trough.

1,562,730. MAGNETIC SCREW. BENJAMIN ANDREWS, Houston, Tex. Filed May 4, 1925. Serial No. 28,085. 4 Claims. (Cl. 172—239.)

1. In a device for producing a reciprocating motion, an inner cylindrical member having a pair of helical grooves therein, an outer cylindrical member enclosing said inner member and having internal helical grooves corresponding to those on the inner member, conductors located in one of said grooves to produce magnetization of opposite polarity on successive ribs between said grooves, and means for rotating one of said members relative to the other.

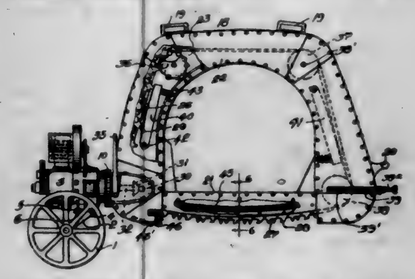
1,562,731. COTTON CHOPPER. JAMES FINIS ARNOLD, Kaufman, Tex., assignor to C. A. Norwood, Kaufman, Tex. Filed Oct. 5, 1923. Serial No. 666,795. 1 Claim. (Cl. 97—15.)

In a device of the class described, a frame; an axle journaled thereon; a ground wheel carried by the axle; a standard vertically adjustable on the frame; a rearwardly extended bracket connected to the upper end of the standard and prolonged downwardly behind the axle; a shaft extended beneath the axle and journaled in the lower end of the bracket and in the lower end of the standard; a chopper carried by the shaft; means on the frame and connected to the standard for raising and lowering the standard and the bracket; and an operative connection between the shaft and the axle, and located



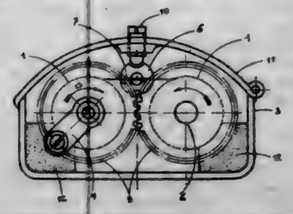
behind the axle the connection comprising relatively movable parts permitting a raising and lowering of the standard and the bracket.

1,562,732. PORTABLE SAWING MACHINE. EDWARD P. ARENBAU, Minneapolis, Minn., assignor to Arenbau & Sons Saw Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 15, 1924. Serial No. 693,025. 4 Claims. (Cl. 143—32.)



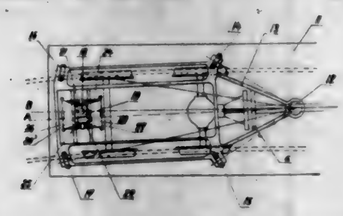
1. The combination in a sawing machine with a supporting truck, and a motor pivoted thereon to permit vertical adjustment of the machine, of a non-rotatable joint member rigid with the motor, a saw frame and endless chain saw, a joint member rigid with the saw frame and rotatable with relation to said non-rotatable member in a plane at right angles to the vertical adjustment of the machine, means for retaining said two members in operative position, and connections from the motor for operating the saw.

1,562,733. MACHINE FOR SHARPENING RAZOR BLADES. MARTHE AUGSBURGER, Geneva, Switzerland. Filed Nov. 10, 1922, Serial No. 600,106. Renewed July 20, 1925. 2 Claims. (Cl. 51—80.)



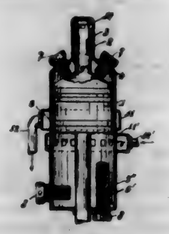
2. In a razor blade sharpening device, the combination of a casing, sharpening rollers mounted therein, means to rotate said rollers in opposite directions, said rollers being adapted to contact with and support a razor blade, a blade holder preventing displacement of said blade, a lid on said casing, and means penetrating said lid for adjusting the contact pressure between the blade and the rollers.

1,562,734. RUNNING GEAR FOR LOCOMOTIVES WITH FOUR DRIVING AXLES. LOUIS BAUDET, Paris, France. Filed May 20, 1925. Serial No. 31,656. 2 Claims. (Cl. 105—175.)



1. In a running gear for locomotives provided with four driving axles and a longitudinal driving shaft, a Bissell-frame borne by both axles of one half of the locomotive, a projection borne by the frame of the locomotive in the central longitudinal axis thereof and round which said Bissell-frame is adapted to oscillate at its inner end, two elastic joints of the longitudinal driving shaft at equal distances on either side of said projection, and means whereby said driving shaft actuates the axles.

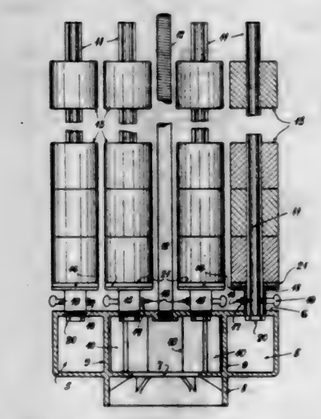
1,562,735. DISTRIBUTION AND CONTROL ARRANGEMENT FOR TWO-STROKE ENGINES. LUCA BONGIOVANNI, Torino, Italy. Filed Oct. 31, 1924. Serial No. 747,067. 3 Claims. (Cl. 123—74.)



2. In an internal combustion engine, the combination of a cylinder having inlet and exhaust ports and also having an upstanding axial throat at its upper end which is closed at its top; a hollow piston in said cylinder having an open-topped upstanding tubular projection on its upper face which extends into said throat and is spaced circumferentially from the same, said throat being formed adjacent its lower end with a series of transfer ports to enable the passage of explosive mixture from the space between the throat and tube into the explosion chamber of the cylinder; and a gas-tight ring in said space encircling the upper end of said tube and rigidly secured thereto.

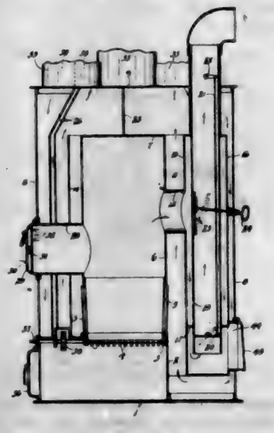
1,562,736. APPARATUS FOR DYEING WOUND YARNS ON SPINDLES. JOHN BRANDWOOD, THOMAS BRANDWOOD, and JOSEPH BRANDWOOD, Elton, Bury, England. Filed Dec. 22, 1923. Serial No. 682,301. 3 Claims. (Cl. 8—19.)

3. A support for cheeses of yarn, comprising a hollow chamber for dye provided with a spindle holder at its top having a plate for supporting the cheeses, an upwardly tapering spindle for positioning the cheeses having its lower end portion slidable downwardly in the spindle holder and provided with passages for dye which communicate with the said chamber, a plate secured to the spindle below the spindle holder to limit its upward movement, means for limiting the downward movement



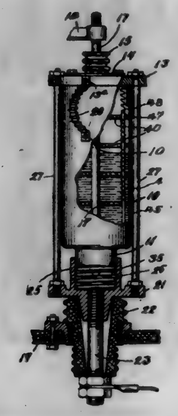
of the spindle when depressed in the spindle holder to free the cheeses, and a fastening device for locking the spindle in the spindle holder.

1,562,737. HOT-AIR HEATING SYSTEM. DEWITT A. BRUNETT, Minneapolis, Minn. Filed May 3, 1923. Serial No. 636,414. 11 Claims. (Cl. 126—109.)



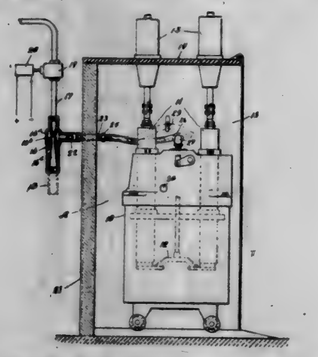
1. An auxiliary heating device for a furnace comprising a casing forming a secondary combustion chamber, means connecting said chamber to the primary combustion chamber of a furnace, a passage for descending cold air at the exterior of said secondary combustion chamber, a passage for ascending warm air at the interior of said secondary combustion chamber and a skirt partition between the exterior of said secondary combustion chamber and said passage for descending cold air spaced a comparatively small distance from the outer wall of said secondary combustion chamber to form a passage for ascending air communicating at its bottom with said passage for cold air and at its top with the said passage for ascending warm air.

1,562,738. HIGH-TENSION ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed Apr. 23, 1921. Serial No. 463,773. 15 Claims. (Cl. 200—150.)



14. An electric switch including an oil receptacle having a reduced neck at the bottom thereof, and yielding supporting means in engagement with said neck.

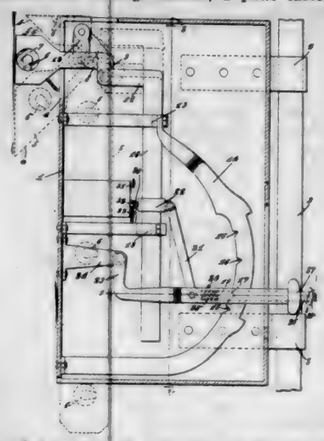
1,562,739. ELECTRIC SWITCHING APPARATUS. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed May 17, 1922. Serial No. 561,756. 12 Claims. (Cl. 200—150.)



2. The combination of an isolating partition wall, an enclosed electric switch disposed on one side of and adjacent said wall, a suction switch-ventilating device comprising an ejector disposed on the other side of and adjacent said wall, and a communicating conduit extended through said wall and having communication with said ejector and the interior of said electric switch.

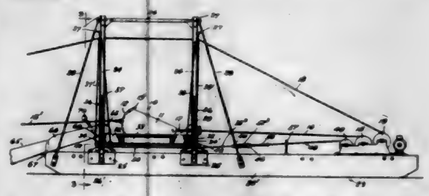
1,562,740. DIRECTION-INDICATING SIGNAL FOR VEHICLES. JAMES E. BURNHAM and EDWIN ALLEN JONES, Pomona, Calif. Filed Aug. 6, 1923. Serial No. 656,050. 6 Claims. (Cl. 116—54.)

1. A device of the class described comprising a supporting structure, a signal arm mounted to swing thereon, an L-shaped member slidably mounted on said structure and pivotally connected by its short arm with said arm, a lever fulcrumed on said structure and connected to actuate said sliding member, a pawl carried by the



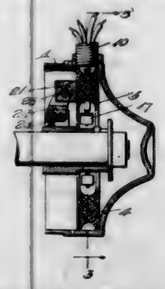
lever and a rack by the structure for locking the lever in adjusted positions whereby the arm is held at the desired angle.

1,562,741. EXCAVATING AND DUMPING APPARATUS. JAMES H. COYNE, Port Townsend, Wash. Filed Feb. 27, 1922. Serial No. 539,671. 8 Claims. (Cl. 214—95.)



1. In apparatus of the character described, an elevator, a framework in which said elevator operates, power operated cables for elevating the elevator, means provided on said framework for guiding the elevator in vertical and lateral directions successively, and controlling devices actuated by the movement of the cables and cooperating with said means to effect the tilting of the elevator during the lateral movement of the same.

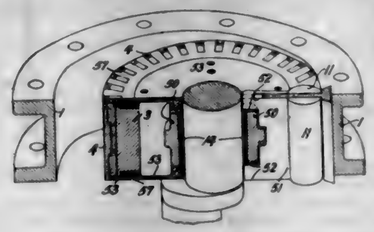
1,562,742. ENGINE TIMER. WILLIAM M. DAVIDSON, East View, Ky. Filed Nov. 27, 1923. Serial No. 677,822. 3 Claims. (Cl. 200—24.)



1. A timer comprising a shell, a race ring of insulating material secured therein and having a flat face at an angle to its axis, contacts embedded in said

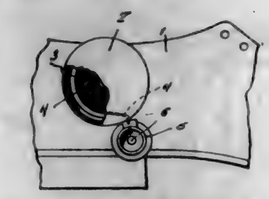
ring and having radial openings, and longitudinally split fasteners for reception in said openings and adapted to straddle wire terminals to electrically connect them with said contacts, said ring being recessed to permit spreading of the ends of said fasteners to secure them against removal.

1,562,743. ROTARY ENGINE. ALBERT WILLIAMS DAW and ZACHARIAS WILLIAMS DAW, London, England. Filed July 3, 1924. Serial No. 723,979. 4 Claims. (Cl. 123—8.)



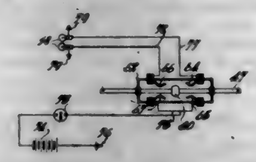
1. In a rotary engine of the crescent chamber type, in which two cylinders are connected together so that the action of the one is controlled by the other, the combination of a piston, radial projections at the ends of the piston, a rocking bearing in which the piston and piston projections slide, end plates, and slots in the end plates in which the said projections reciprocate and oscillate.

1,562,744. GOLF-TEE REEL. JOHNIE L. DILLOW, Big Stone Gap, Va. Filed July 8, 1925. Serial No. 42,227. 3 Claims. (Cl. 273—33.)



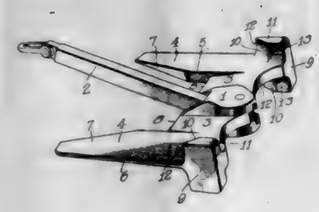
1. In a device of the class described, a tee, anchoring means therefor, a reel, and a flexible element wound upon said reel and connected at its outer free end with said tee.

1,562,745. DIRECTION INDICATOR FOR MOTOR VEHICLES. CHESTER M. DOWERS and MARION R. LOGAN, Cheyenne, Wyo. Filed May 15, 1924. Serial No. 713,590. 18 Claims. (Cl. 116—47.)



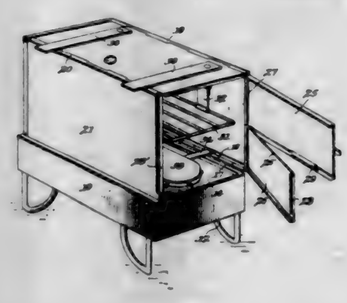
1. A device of the class described comprising, a housing adapted to be mounted at the side of a motor vehicle in position to be viewed before and behind and having slotways therein, direction indicating members mounted to be projected and retracted through the slotways, mechanism operable from the instrument board of the vehicle for projecting and retracting the indicating members each independently of the other, and spring held devices for closing the slotways when the indicating members are retracted.

1,562,746. STOCKLESS ANCHOR. ALBERT F. ELLIS, Rochester, N. Y., assignor of one-half to American Locomotive Company, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1923, Serial No. 678,459. Renewed Sept. 28, 1925. 6 Claims. (Cl. 114—208.)



3. A stockless anchor having its flukes tapered toward their forward ends and also tapered from their inner edges outwardly and their outer faces formed with upwardly-extended portions disposed lengthwise of the flukes.

1,562,747. FOLDING CAMP-STOVE OVEN. RAY E. ELLIS, Wichita, Kans., assignor to The Coleman Lamp Company, Wichita, Kans., a Corporation of Kansas. Filed Aug. 23, 1924. Serial No. 733,755. 6 Claims. (Cl. 126—38.)



1. In a device of the class described, a burner carrying case and a collapsible oven structure hinged to said case, said structure including side walls, end walls, and a top wall all hingedly and permanently connected and adapted when the oven is collapsed to be folded over one another, an article supporting shelf permanently connected to one of said walls and adapted to be moved against said wall when the oven is collapsed, and means permanently connecting said shelf to the wall, said means serving to permit the shelf to be moved away from the wall and operable to limit said movement and wholly to support the shelf above the burner case.

1,562,748. LOOSE-LEAF BOOK. CHARLES L. ENGEL and WALTER S. ENGEL, Kansas City, Mo. Filed Feb. 4, 1924. Serial No. 690,447. 4 Claims. (Cl. 129—24.)

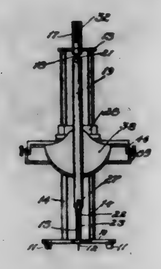
1. In a loose leaf book, a housing, a post holding member longitudinally movable in said housing to and from a position in which it is adapted to engage and

hold a leaf supporting post, and a temporary locking member pivoted to and in the housing and arranged to be engaged by said post holding member for releasably

holding the latter in the holding position and movable by said post holding member to the locking position with the latter, and adapted to be released by a key.

---

1,562,749. ELLIPSOGRAPH. DEE L. ERNST and HARRY H. ERNST, Evansville, Ind. Filed Oct. 27, 1924. Serial No. 746,165. 2 Claims. (Cl. 33—30.)

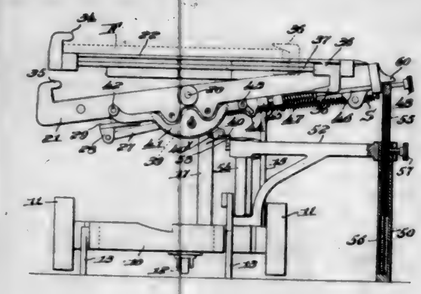


2. In an ellipsograph, a vertically movable carriage, a masterplate having a curved edge, means for oscillatably mounting the masterplate on the carriage, a stationary bracket above the masterplate having a socket, means for supporting the carriage and bracket, a marker having a ball seated in the socket and adapted to cooperate with the masterplate, and means for yieldingly maintaining the ball in the socket, as and for the purpose described.

---

1,562,750. TRUCK. JOHN J. FLOYD, Malden, Mass. Filed May 22, 1924. Serial No. 715,239. 10 Claims. (Cl. 254—2.)

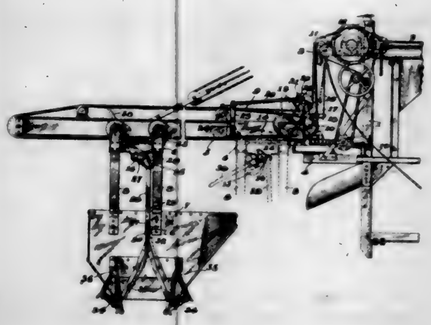
1. A truck of the class described comprising a frame; wheels on said frame; a second frame mounted on said first frame; a crank shaft adapted to function as pivotal means for said second frame; a work table mounted on said second frame and movable relatively thereto; means to lock said second frame from pivotal movement;



means coacting with said crank shaft whereby said table may be moved relatively to said second frame; and means to lock said table against said relative movement.

---

1,562,751. DISTRIBUTING BUCKET FOR CONCRETE PAVERS. CHARLES E. FOOTE, Nunda, N. Y., assignor to The Foote Company, Inc., Nunda, N. Y., a Corporation of New York. Filed Apr. 2, 1925. Serial No. 20,142. 10 Claims. (Cl. 214—59.)

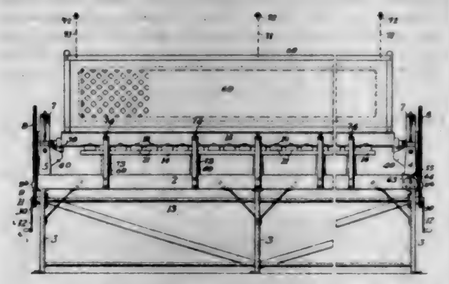


1. A distributing bucket for concrete pavers comprising a trolley adapted to move to and fro on a boom, a bucket supported by said trolley and having pivotal bottom doors, a cross shaft on said trolley and a segment rigidly secured on said cross shaft, means extending from the pivotal doors to the outer ends of said cross shaft, said means, cross-shaft and segment forming a toggle arrangement for said doors, so that a movement of the segment will rock said shaft to thereby open and close the doors.

---

1,562,752. PRINTING-BLOCK GAUGE TABLE. DONALD F. FRASER, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1925. Serial No. 20,747. 6 Claims. (Cl. 33—184.5.)

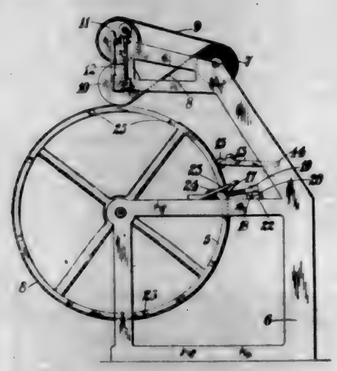
1. In means for truing and leveling the printing surfaces of printing blocks, a table having a gauging surface and having means engageable with the opposite ends of a printing block for supporting said block with its printing surface facing and in spaced relation to the surface of said table and substantially parallel therewith, one of said means being adjustable whereby to enable



one end of the printing surface of the block to be adjusted to the same distance from the surface of the table as the other end thereof, substantially as described.

---

1,562,753. MANUFACTURE OF PNEUMATIC-TIRE COVERS OR CASINGS AND IN MACHINE THEREFOR. CLAUDE MARIE GAUTIER, London, England. Filed May 10, 1923. Serial No. 638,004. 6 Claims. (Cl. 154—10.)

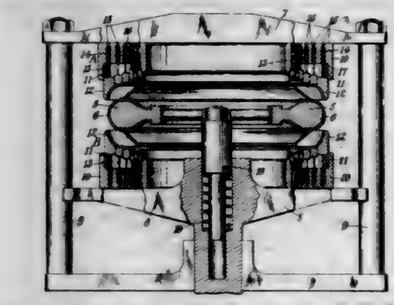


1. In a machine for marking tire-casings, the combination with a rotatable cylindrical member, and means for winding thereon a strip of fabric into the form of an endless band, of means for marking on the fabric, while in position on the said member and during the winding operation, indices in the form of a circumferential line and a plurality of transverse lines for serving as indicating means to enable said endless band to be correctly located, after removal from said member, on a former, substantially as described.

---

1,562,754. MACHINE FOR MAKING PNEUMATIC-TIRE COVERS OR CASINGS. CLAUDE MARIE GAUTIER, London, England. Filed May 10, 1923. Serial No. 638,005. 5 Claims. (Cl. 154—10.)

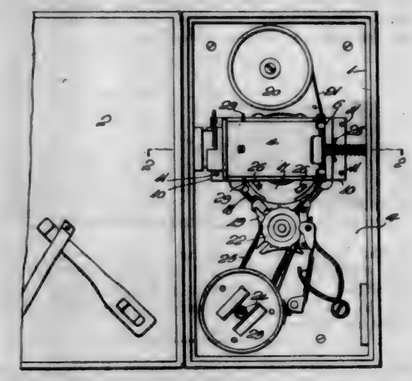
1. In a press of the character described for laying material for a pneumatic tire cover on a core, the combination with the core, of a press-element comprising a plurality of rings arranged concentrically one within another and coaxially with the throughway axis of the core, and having their operative faces, that are directed towards the material, shaped to conform to the required contour of the material on the core, which rings are resiliently mounted to move in the direction of said axis and are so arranged in relation to the core that they are adapted to come into contact with the material



thereon successively commencing with the outermost ring and finishing with the innermost ring when all the beads are in contact with the material on the core, substantially as described.

---

1,562,755. MOVING-PICTURE MACHINE. VICTOR A. GIANETTO, New York, N. Y. Filed Jan. 22, 1924. Serial No. 687,825. 5 Claims. (Cl. 88—19.3.)



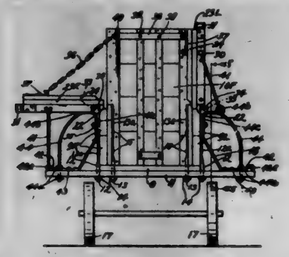
1. A moving picture machine comprising a casing having an opening, a lens arranged adjacent said opening, a shutter for said lens, means for guiding a film past said lens, a sprocket wheel for moving said film, a star wheel on the same shaft with and directly connected to said sprocket wheel, a pin wheel adapted to be continuously driven coacting with said star wheel, said pin wheel being formed with a flat disk body and with a plurality of pressed out cars having laterally extending lugs for engaging said star wheel for moving the same, said pin wheel also having a plurality of cams struck out therefrom from one side, and means actuated by said cams for operating said shutter.

---

1,562,756. CONVERTIBLE VEHICLE BODY. HENREY GOSSE, Sr., Wabasha, Minn. Filed July 21, 1924. Serial No. 727,184. 3 Claims. (Cl. 296—10.)

1. In a vehicle body having transverse bottom bars projecting beyond its sides, the combination with unfoldable end walls, of side walls each of which comprises a lower permanently vertical section and an upper section hinged to the lower section so as to be foldable alternately into vertical and horizontal position, and means for holding said foldable sections in either of said positions; said holding means comprising at each side

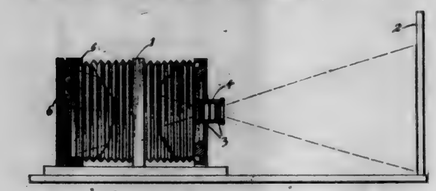
of the vehicle bracing brackets secured to the lower side section and to the bottom bars projecting from under the same; said brackets having each an eye, and the foldable side sections having above each of said brackets a transverse cleat with a hole in it; a brace



rod having at each end an angularly bent portion, one of said portions having a head designed to retain it in the hole in the cleat, the other end serving as a hook adapted to engage alternately in the upper eye of the bracket when the top section is in vertical position and in the lower eye when said section is folded outward.

---

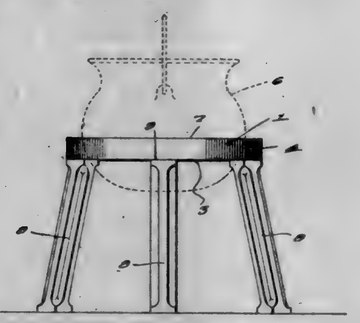
1,562,757. METHOD AND APPARATUS FOR PRODUCING HALFTONE DOT IMAGES. JOHN M. HAMMOND, Philadelphia, Pa. Filed Mar. 15, 1922. Serial No. 544,032. 4 Claims. (Cl. 95—5.7.)



1. The method of producing a half-tone dot image which comprises passing the light from the object to a sensitized medium through a graded density screen which is graded from the center outward and through a half-tone screen.

---

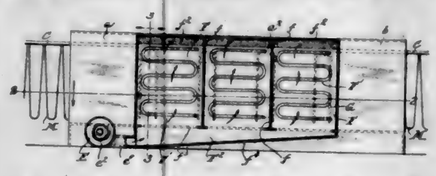
1,562,758. KETTLE STAND. CLAUD F. HANSON, Auburn, Ind. Filed Aug. 27, 1924. Serial No. 734,466. 1 Claim. (Cl. 248—41.)



A kettle stand of the class described including a ring member having parallel upper and lower surfaces, and the inside of said ring member having a frustoconical inner surface, the inside of said ring being formed at intervals with a plurality of dove-tailed recesses opening through said inner surface and extending from the upper and lower surfaces, and a plurality of legs having offset end portions of dove-tailed formations adapted for sliding cooperation with the recesses in said ring member and shoulders formed on the ends of the legs adjacent the offset end portions on which rests the under surface of the ring member, the inner surfaces of the end portions of the legs being flush with the inner surface of the ring when disposed in the recesses.

---

1,562,759. DRYING APPARATUS. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Oct. 23, 1920. Serial No. 419,052. 19 Claims. (Cl. 34—12.)



12. In a drier, a material chamber, means for moving therein a web of material suspended in festoons within said chamber, means for recirculating a drying atmosphere the intake of which recirculating means is below the suspended festoons and the outlet from which directs such atmosphere downwardly upon the suspended festoons, means for dividing the drying atmosphere so recirculated into a plurality of streams so as to return the atmosphere thus divided and recirculated into different regions of the material chamber, and means for heating the separate streams of the recirculated drying atmosphere.

---

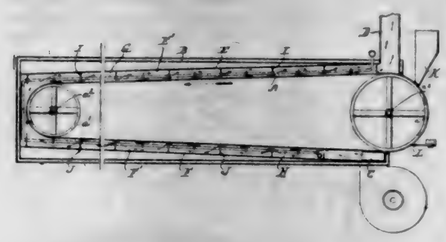
1,562,760. ART OF TREATING LIQUID MATERIALS. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Oct. 23, 1920. Serial No. 419,053. 5 Claims. (Cl. 159—15.)

1. In the art of treating liquid materials, the improvement which consists in concentrating the liquid material by flowing the same by gravity and in the form of a film into contact with a succession of inclined surfaces over which the gravity flow of the liquid material is tranquilized, and concurrently with the gravity flow of such film heating the liquid material and exposing the same to the action of a drying atmosphere.

---

1,562,761. ART OF DRYING SEMILIQUID MATERIALS. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Oct. 23, 1920. Serial No. 419,054. 4 Claims. (Cl. 159—8.)

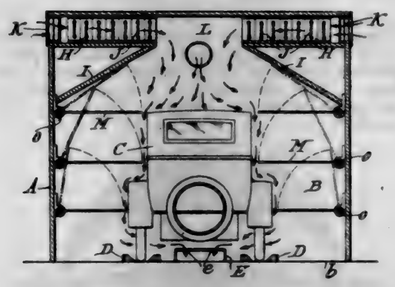
1. In an apparatus for treating liquid and semiliquid materials, a chamber, an endless carrier movable within said chamber, an end portion of said carrier being exposed to access exteriorly of said chamber, means for feeding to the exposed part of the carrier material in a film-like condition, baffles within the chamber and adjacent the carrier for producing a succession of flow channels, heating means positioned substantially centrally within the flow channels, transverse baffles also within the flow channels, said transverse baffles being staggered relatively to the carrier and the first named baffles, said two series of baffles being disposed alternately adjacent upper and lower boundaries of the flow channels, an outlet from the chamber at one end of the



flow channels, said outlet for the drying atmosphere being adjacent the point at which the material is fed to the exposed part of said carrier, means for feeding atmospheric air at normal temperature to the flow channel adjacent the point of egress of material from said chamber, whereby the inflowing cool air is conducted into contact with the heated product upon said carrier for reducing the temperature of said product, and means for circulating air within the flow channels in a direction contrary to the direction of movement of said material.

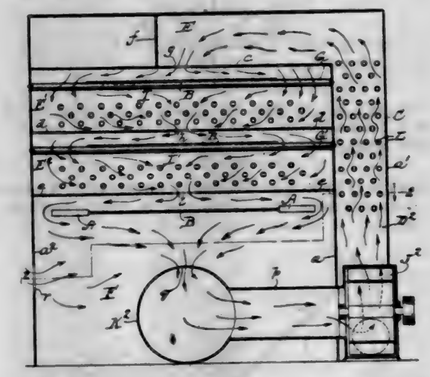
---

1,562,762. DRYING APPARATUS. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Mar. 31, 1921. Serial No. 457,250. 15 Claims. (Cl. 34—19.)



1. In an apparatus such as described, a chamber provided at the floor thereof with means for locating an object, recirculating means for effecting the positive recirculation of an oxidizing or drying atmosphere, including an eduction flue positioned adjacent the object locating means and a return flue positioned for feeding said recirculated atmosphere downwardly upon said object, and means separate from the recirculating means for feeding atmospheric air directly to said chamber, the inflow of such fresh atmospheric air to the chamber being independent of the circulation within the chamber of the oxidizing or drying atmosphere by said recirculating means.

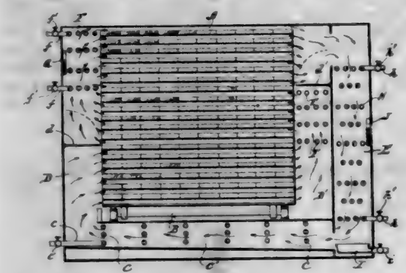
1,562,763. DRYING APPARATUS. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Aug. 8, 1922. Serial No. 580,416. 18 Claims. (Cl. 34—48.)



1. In an apparatus of the class described, a housing provided with means for channeling the flow of a drying atmosphere, means for moving material within a succession of flow channels, and means for feeding a drying atmosphere downardly upon the moving material, substantially centrally thereof, the drying atmosphere flowing crosswise of the direction of movement of said material and into contact therewith.

---

1,562,764. ART OF DRYING. GORDON DON HARRIS, Freeport, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Oct. 20, 1922. Serial No. 595,747. 6 Claims. (Cl. 34—24.)



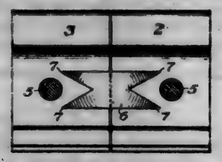
6. In the art of drying, the process which consists in initially heating and subsequently cooling the atmosphere to set up a flow of such atmosphere into contact with material, condensing the aqueous content of such atmosphere to a definite dewpoint for controlling the humidity of such atmosphere in proportion to the surface moisture of the material and to its diffusion within such material, and heating such atmosphere to a constant temperature in the periods between its initial heating and the subsequent cooling thereof.

---

1,562,765. RAIL BOND. WILLIAM F. HART, Pittsburgh, Pa., assignor to Verona Tool Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1922. Serial No. 589,790. 2 Claims. (Cl. 173—279.)

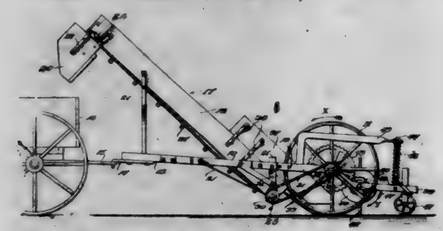
1. A rail bond formed of spring sheet material, having curved triangularly shaped rail engaging points extend-

ing longitudinally therefrom and in opposite directions, said points being so shaped and positioned that the portions cut away to form the points on the bond blanks, when blanking from a sheet, will form the points of other bond blanks.



---

1,562,766. STONE-GATHERING MACHINE. WILLIAM HENNIG, Athens, Wis. Filed July 10, 1924. Serial No. 725,164. 7 Claims. (Cl. 55—17.)



1. In a machine of the class described, a wheeled frame, a carrier mounted to oscillate on the frame, a stone-picking member mounted to revolve in the carrier, positive gearing connection between the frame wheels and the stone-picking member, an elevator carried by the frame in position to receive stones thrown by said member, and a tray interposed between the member and the elevator and pivotally mounted on the elevator.

5. In a machine of the class described, a wheeled frame, a carrier mounted to oscillate on the frame, a stone-picking member mounted to revolve in the carrier, positive gearing connection between the frame wheels and the stone-picking member, an elevator carried by the frame in position to receive stones thrown by said member, the elevator including a trough having open top and ends, sprocket wheels at each end of the trough, chains running over the sprocket wheels, spaced slats connecting the chains, and driving connection between the sprockets and the traction wheels of the machine.

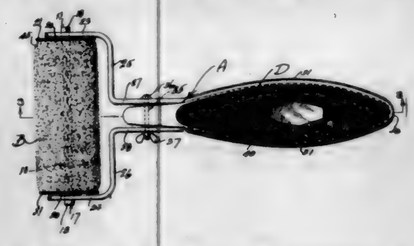
---

1,562,767. STORMPROOF COAT. DAVID HESS, Snake River, Wash. Filed Jan. 13, 1925. Serial No. 2,170. 1 Claim. (Cl. 2—87.)

A garment made up of a fabric, the fabric including a cloth backing, a series of strips stitched to the backing and extending circumferentially around the body of the garment, said strips having straight upper longitudinal edges and scalloped lower longitudinal edges, the lines of stitching being located adjacent the upper straight edges of the strips, the lines of stitching being spaced from each other whereby the strips overlap each other, the lines of stitching and the scalloped edges extending circumferentially around the body of the garment, an inner strip having its line of stitching lying under the intermediate portion of the next adjacent strip and between the inner points of the scalloped edge and the longitudinal straight edge thereof, and the line of stitching of the said inner strip lying under the free edge portion of an outer strip and disposed approximately parallel with the longitudinal edge thereof and intersecting the curved line of the scalloped edge portion of the said outer strip.

---

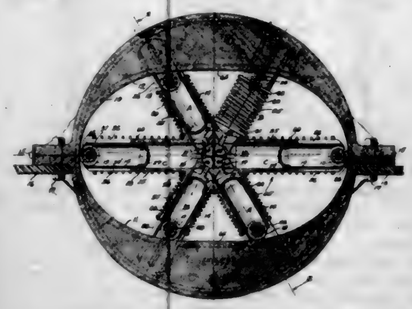
1,562,768. CLOTH-SURFACING DEVICE. ELMER HIATT, Milford, Conn. Filed Nov. 10, 1924. Serial No. 749,020. 14 Claims. (Cl. 26—31.)



1. In a cloth surfacing device the combination of a brush head including a shaft, a frame including yieldable brush head supporting arms provided with openings at their outer ends, a hub member for each end of the brush shaft providing a socket open at one end and closed by an end wall at the opposite end, and against which closed end wall the end of the shaft of the brush head abuts to limit the inward movement of the hub members on said shaft, said hub members being adapted to bear in the openings of said arms of the frame and including means to hold them in place against displacement.

---

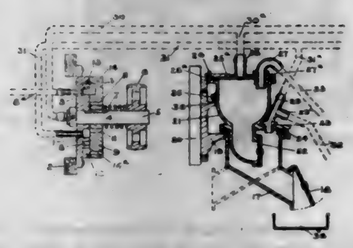
1,562,769. REVERSIBLE ROTARY MOTOR (STEAM). LLOYD B. HUBBARD, Wichita Falls, Tex., assignor to Hubbard Reversible Rotary Motor Corporation, New York, N. Y., a Corporation of Delaware. Filed July 16, 1923. Serial No. 651,754. 7 Claims. (Cl. 121—61.)



1. A motor comprising a rotor having a plurality of radially disposed cylinders, reciprocating pistons in said cylinders, rollers carried by said pistons, a stator having a track reacting with said rollers to rotate the rotor as the pistons are reciprocated, said rotor being provided with a central, transverse, tapered bearing opening and fluid passages leading from said opening to the cylinders, a stationary tapered tubular valve member in said opening having lateral inlet and exhaust openings adapted to register with said fluid passages, a piston secured to the inner end of said valve member, and means whereby fluid pressure from the supply passage may be communicated to the piston to retain the valve member in said opening.

---

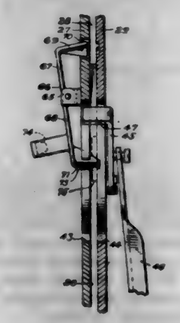
1,562,770. MILKING MACHINE. HERBERT DRUMMOND JAMIESON, Kerepehi, New Zealand. Filed May 23, 1923. Serial No. 640,989. 6 Claims. (Cl. 31—82.)



1. In a milking machine, a milk releaser including upper and lower chambers, a connection to establish communication between the upper chamber and a pulsator whereby to produce an intermittent vacuum in said chamber, a milk pipe connection from the teat cups to said upper chamber, means to establish communication between the lower chamber and an alternate vacuum and at mospheric connection of a pulsator and the annular spaces of the teat cups, so that air is exhausted from the upper chamber of the releaser and from the milk spaces of the teat cups continuously but by alternate routes whereby when vacuum is by the lower chamber, the froth as well as the milk itself is brought down into the lower chamber substantially as described and illustrated.

---

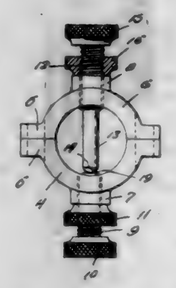
1,562,771. COIN-CONTROL APPARATUS. ODE D. JENNINGS, Palatine, Ill. Filed Dec. 1, 1924. Serial No. 753,218. 4 Claims. (Cl. 194—1.)



3. Means for controlling the operation of coin released apparatus comprising a coin chute composed of a front and a rear plate, said front plate provided with a groove and said rear plate provided with a slot; means to arrest a coin inserted in said chute; means to release the arrested coin; a coin return chute; and means provided with an inclined surface coacting with said slot and said groove and controlled by an arrested coin, said surface adapted to stop a subsequently inserted coin in said chute and to positively direct the same into said coin return chute.

---

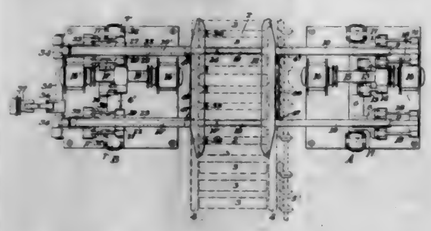
1,562,772. FILING GAUGE FOR CONNECTING-ROD-BEARING CAPS. CONRAD JOHNSON, Portland, Oreg. Filed Jan. 21, 1925. Serial No. 3,814. 4 Claims. (Cl. 33—180.)



1. A gauge for connecting rod bearing caps comprising a pair of complementary semi-circular sections, said sections having surfaces adapted to contact with one another when the sections are disposed in a predetermined relation relatively to each other, and opposed gauge members threaded through said sections, the opposite ends of said gauge members adapted for engagement when said sections are disposed in said predetermined relation.

---

1,562,773. MANIPULATOR. LANE JOHNSON, Ingram, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1923. Serial No. 633,138. 20 Claims. (Cl. 80—48.)



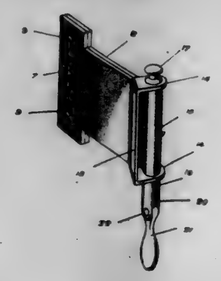
1. In a manipulator, a roll table having side girders, a guide between said girders having a horizontal supporting face below the plane of delivery of the roll table and extending a substantial part only of the distance between said girders, and manipulating means slidable on said guide, substantially as described.

---

1,562,774. HINGE. WALLER LOUIS KAUFMANN, Santa Ana, Calif. Filed May 17, 1924. Serial No. 714,002. 2 Claims. (Cl. 16—135.)

1. A hinge comprising a pair of leaves having attaching portions, one leaf having a portion at the extremity opposite to the attaching portion extending at

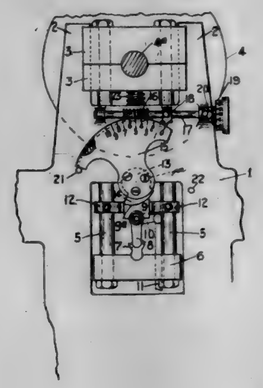
an obtuse angle to one side from the plane of said leaf and provided with angularly extending ears projecting toward the opposite side and intersecting said plane, a pin extending through said ears, the other leaf having a sleeve at the extremity thereof opposite to the attaching portion, said sleeve embracing said pin with its ends abutting said ears, the first named leaf being



flat between the second named portion thereof and the attaching portion, the second named leaf being flat from said sleeve to the attaching portion, said leaves being adapted to bear flatly together, the axis of said pin and sleeve lying in the plane of the second named leaf, and means on said pin for springing the ears toward one another to clamp the sleeve between them.

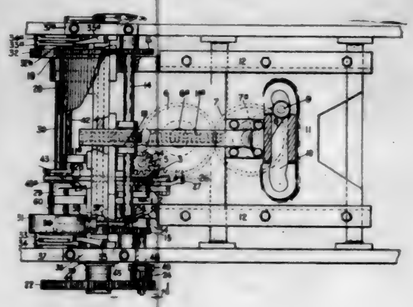
---

1,562,775. BED AND CYLINDER PRINTING PRESS. FRANCIS T. LEILICH, San Francisco, Calif. Filed Dec. 13, 1923. Serial No. 680,373. 7 Claims. (Cl. 101—250.)



1. In a printing press in which an impression cylinder is reciprocated by suitable mechanism, the combination of manually operated means for adjusting the position of the cylinder independently of the reciprocating mechanism, which includes an adjusting member provided with a curved surface and an adjustment block interposed between said mechanism and the latter element, and means for indicating the extent of the adjustment.

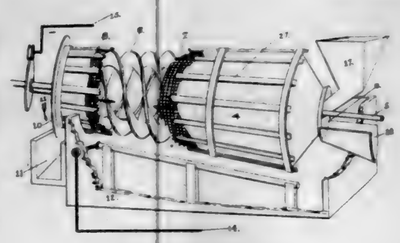
1,562,776. BED AND CYLINDER PRINTING PRESS. FRANCIS T. LEILICH, San Francisco, Calif. Filed Dec. 19, 1923. Serial No. 681,616. 27 Claims. (Cl. 101—283.)



1. A type bed, and means for reciprocating it, which include a horizontally rotated crank and a slidable member provided with a path of varying contour with which the crank is always engaged and by which said member is moved to and fro.

---

1,562,777. DEVICE FOR RECOVERING PRECIOUS METALS. CHARLES CORLISS MCBRIDE, Sanger, Calif. Filed July 3, 1923. Serial No. 649,262. 13 Claims. (Cl. 83—65.)

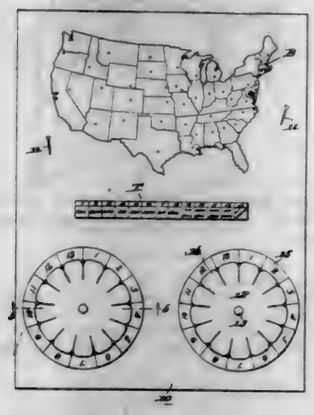


1. In a device for the recovery of precious metals, the combination of a rotatable porous cylinder lined with an amalgamated screen, said cylinder having intake and discharge openings at opposite ends, a spiral ribbon within the cylinder and adapted with the rotary movement of the cylinder to carry loose particles therein from the intake to the discharge opening, the cylinder being positioned so the axis is lower at the intake opening end, and means for submerging portions of the cylinder in an electrolyte solution.

---

1,562,778. EDUCATIONAL GAME. TERRENCE F. MCGOWAN, Boston, Mass. Filed Apr. 11, 1925. Serial No. 22,444. 7 Claims. (Cl. 273—134.)

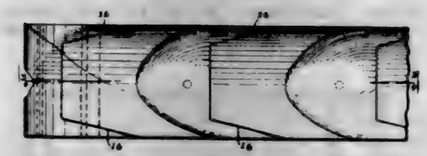
1. A game having an educational subject as a basis of play, and means, to be chosen at random and operated by the first player, whereby said player receives instruction as to his first move, and means exposed by



the said first means when operated whereby the next player receives instructions as to his first move; and means to mark each move of a player.

---

1,562,779. VEHICLE SPRING. MICHAEL M. MCINTYRE, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 28, 1922. Serial No. 584,604. 3 Claims. (Cl. 267—50.)

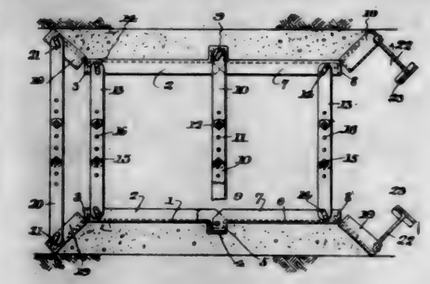


3. In leaf spring construction, a plurality of superposed leaves with their ends in relatively stepped arrangement, the opposed surfaces of the leaves being concave, and the end portions of certain leaves being deformed to fit the concave surface of the adjoining leaf, and there being openings through the leaves inwardly of said deformed portions for supplying lubricant from one of the spaces between the leaves to another.

---

1,562,780. CONCRETE FORM. MARIUS MICKELSON, Thatcher, Ariz. Filed Aug. 12, 1925. Serial No. 49,786. 5 Claims. (Cl. 25—118.)

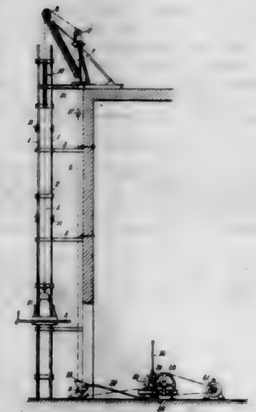
2. A form of the class described including opposed pairs of wall members, said members having interfitting end portions offset laterally, adjustable connecting strips mounted on the opposed pairs of members,



rods extending through said strips and through the members for holding said members to the ground and for connecting the interfitting portions.

---

1,562,781. BUILDER'S HOISTING DEVICE. FRITZ MOSER, Zollikon, near Zurich, Switzerland, assignor to Walter Schindler, Berne, Switzerland. Filed Mar. 26, 1923. Serial No. 627,770. 2 Claims. (Cl. 214—95.)



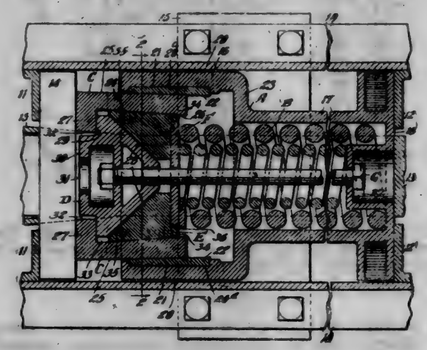
1. A builder's hoisting device comprising in combination, rigid guide means secured to a building being erected, a hoisting cage arranged to travel on said guide means and a slewable jib-crane above said guide means arranged to the side of said means, two rope-pulleys on said crane maintained in their relation to one another, and a single rope guided by said pulleys under all conditions of operation, said rope arranged to operate said cage when connected thereto and also operating as a hoist when the crane and its pulleys are swung from said guide means without changing the angularity of the crane jib.

---

1,562,782. HEAT-RESISTING STEEL. EDWARD HENRY NOACK, Stockton, Calif. Filed June 14, 1924. Serial No. 720,122. 1 Claim. (Cl. 75—1.)

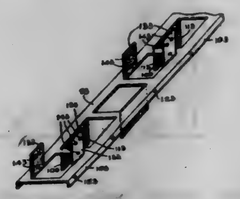
A steel containing silicon between 1.50% and approximately 2.00%; copper between 0.50% and approximately 1.00%; manganese not over 0.12%; and carbon not over 0.10%.

1,562,783. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 7, 1922, Serial No. 580,009. Renewed Oct. 15, 1925. 8 Claims. (Cl. 213—34.)



1. In a friction shock absorbing mechanism, the combination with a friction shell having opposed friction surfaces; of a spring resistance; a friction unit movable within the shell and including, friction shoes cooperable with said friction surfaces, a main wedge and coacting wedge blocks, said shoes and main wedge having shouldered engagement; and means for applying the actuating force directly to the shoes and, in effect, directly to said main wedge through the shoes.

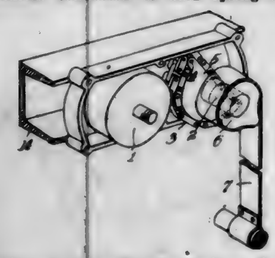
1,562,784. ANCHOR STRIP FOR SECURING FINISHING STRUCTURES TO CONCRETE. RUDOLPH K. OLSEN, Omaha, Nebr. Filed Mar. 23, 1922. Serial No. 546,091. 2 Claims. (Cl. 72—101.)



1. Anchoring means for securing finishing structures to concrete supports, comprising a relatively long strip of sheet metal, the body-portion of said strip disposed at the surface of the concrete, continuous flanges integral with the longitudinal edges of the strip and extending into the concrete, and a series of longitudinally spaced perforate tongues slit from the body-portion of the strip intermediate said continuous longitudinal flanges, said tongues normally lying in the plane of the body-portion and being bendable to extend outwardly therefrom whereby to project from the surface of the concrete at uniformly spaced and alined positions.

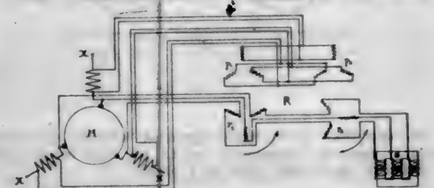
1,562,785. SHOCK ABSORBER. KNIGHT K. PARKER, Chicago, Ill. Filed Aug. 30, 1923. Serial No. 660,259. 10 Claims. (Cl. 267—10.)

1. A shock absorber comprising a housing, a coiled spring therein, a shaft rotatively mounted in said housing and projecting therefrom, an arm in said housing secured on said shaft intermediate its ends, a flexible member connected to said spring and to one



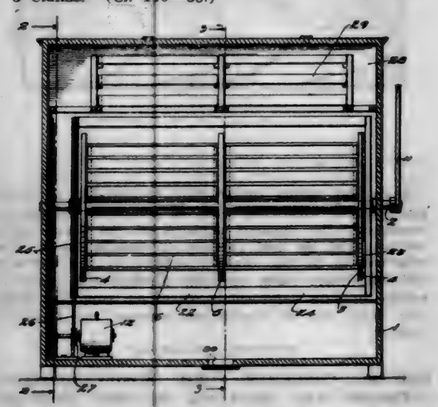
end of said arm, a crank arm fixed on the outer end of said shaft, and a flexible member connected to said crank arm.

1,562,786. REGULATION OF POLYPHASE COMMUTATING MOTORS. JOSEPH PERRET, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Paris, France. Filed Mar. 20, 1922. Serial No. 545,267. 4 Claims. (Cl. 172—276.)



1. A controlling system for polyphase commutator motors comprising in combination a polyphase commutator motor having stator and rotor windings connected in series, an induction regulator having double primary and secondary windings, electrical connecting means between said stator and said primary windings, electrical connecting means between said secondary winding and said rotor winding and means to vary the phase displacement of the voltages of said motor and said regulator.

1,562,787. INCUBATOR. IRA M. PETERSIME, Gettysburg, Ohio. Filed May 22, 1923. Serial No. 640,736. 6 Claims. (Cl. 119—33.)



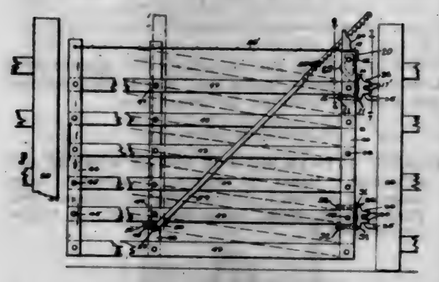
3. An incubator comprising a cabinet, a shaft mounted in the cabinet, a drum mounted upon said shaft, a pair of members pivotally mounted on said shaft one

at each end of said drum, a series of blades having their ends attached to said pivotally mounted members so that said members and blades will rotate together to form an agitator, and means engaging one of said pivotally mounted members to rotate the entire agitator.

1,562,788. OILER FOR TRANSMISSION BANDS. WALTER A. RARIG, Oakland, Calif. Filed Apr. 24, 1923. Serial No. 634,328. 3 Claims. (Cl. 184—11.)

1. An oiler adapted to be positioned in the transmission housing and bolted to one side only of an opening therein into adjacent the flywheel of an engine comprising a plate bent upon itself to form a tapered conveyor, the front wall of the bent portion being cut away to a greater extent than the back wall whereby the back wall acts as a positive oil catch, said conveyor terminating in an end opening adapted to drip oil on the clutch collar and having spaced openings in the bottom to drip oil on the transmission bands.

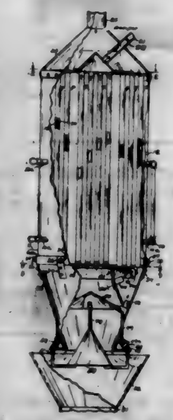
1,562,789. GATE. MILFORD RUDOLF, Bloomfield, Ind. Filed Nov. 20, 1924. Serial No. 751,188. 5 Claims. (Cl. 39—80.)



4. A gate including a header, including an upper integral mounting, said mounting embodying an upper head having flat sides and a substantially U-shaped socket formed upon the lower end thereof, said head and socket having laterally projecting flanges, said socket having a hinge element integral therewith, an inverted U-shaped yoke formed integral with the top of the head and provided below its upper end with a transverse pin, a lower mounting having a hinge element, a pair of transverse slats arranged upon the opposite sides of the mountings and engaging between the flanges of the upper mounting, co-acting hinge elements engaging the first named hinge elements, bolts passing through the transverse slats and serving to bind them to said mountings, longitudinal slats extending between the transverse slats and pivoted upon said bolts, a transverse slat pivotally connecting the longitudinal slats at a point remote from the transverse slats, and a diagonal brace connected with one of the longitudinal slats and having a longitudinal set of teeth to engage with the transverse pin of the yoke.

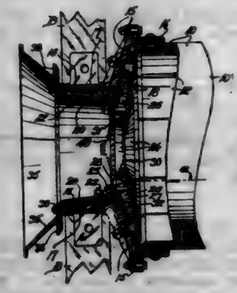
5. In a gate of the character described, as a subcombination, an upper integral mounting comprising a head having flat faces, a socket carried by the lower end of the head, said socket carrying a hinge element, means whereby a pair of transverse slats may be securely held upon the mounting, and an anchor element carried by the head for engagement with a diagonal brace.

1,562,790. GRAIN-HEATING DEVICE. GEORGE A. ROCKBURG, Milwaukee, Wis., assignor of one-third to John C. Kleist, Milwaukee, Wis., and one-third to Peter Provost, Milwaukee, Wis. Filed May 12, 1924. Serial No. 712,746. 10 Claims. (Cl. 34—34.)



1. In a device of the character described, the combination with a heating drum having passages for grain extending symmetrically therethrough, of a steam pipe provided with branches entering said drum at symmetrically spaced points, whereby to equalize steam flow and temperatures to which grain in said passages is subject.

1,562,791. DISCHARGE HEAD FOR GRINDING MILLS. JOSEPH P. RUTH, Jr., Denver, Colo. Filed Apr. 10, 1923. Serial No. 631,114. 7 Claims. (Cl. 83—9.)

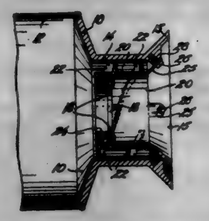


1. In a grinding mill, a head having a journal, a liner for said journal and a baffle plate secured on the inner end of the liner, the liner and plate being removable together from said journal at its outer end.

1,562,792. DISCHARGE FOR GRINDING MILLS. JOSEPH P. RUTH, Jr., Denver, Colo. Filed June 12, 1923. Serial No. 644,892. 3 Claims. (Cl. 83—9.)

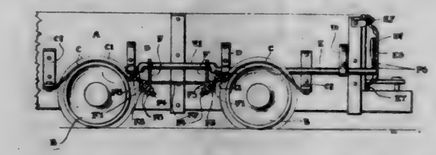
1. In combination, a head for grinding mills having a discharge throat provided with an inner wall and a

closure mounted in said throat, said closure comprising a transverse wall, a sleeve at the periphery of said wall spaced from the inner wall of the throat and having an outer wall, and a spiral feed screw carried by the outer wall of the sleeve and engaging the inner wall of the throat.



---

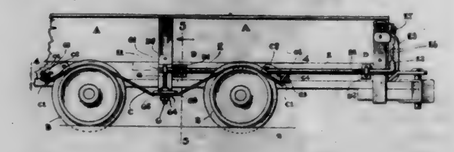
1,562,793. RAILWAY-CAR BRAKE. HUGH W. SANFORD, Knoxville, Tenn. Filed Apr. 15, 1921. Serial No. 461,562. 31 Claims. (Cl. 188—57.)



1. The combination with the car body and a wheel at one side of the car, of a horizontal rock shaft arranged parallel to and supported at one side of the car body and having a crank, brake means jointed to said crank and adapted to be pressed downward into engagement with said wheel when said rock shaft is turned to move said crank downward, and rigid means extending approximately horizontally across the end of the car and normally acting on said shaft to turn said shaft to lift said crank and said brake means and said turning means being adapted to be moved manually to turn said shaft in the opposite direction, substantially as described.

---

1,562,794. RAILWAY-CAR BRAKE. HUGH W. SANFORD, Knoxville, Tenn. Filed July 18, 1921. Serial No. 485,541. 3 Claims. (Cl. 188—57.)



1. The combination with the car body and a wheel at one side of the car, of a horizontal rock shaft arranged parallel to and supported at one side of the car body and having a crank, a transverse bracket on the car body, a bolt, a brake strap attached to the outer face of said bracket by said bolt and placed in operative relation with said crank to adapt said strap to be pressed into engagement with said wheel when said rock shaft is turned to move said crank downward, an arm on said shaft at the side of the latter opposite the crank, whereby the weight of said arm will lift said crank and the brake means when said arm is free, and means for engaging and holding said arm when said shaft has been turned to make said engagement, substantially as described.

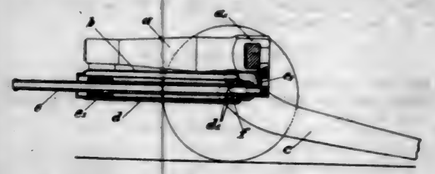
---

1,562,795. COMBINED SPRAG AND BRAKE FOR POWER-DRIVEN VEHICLES. HARRY SAUVEUR, Berlin-Lankwitz, Germany, assignor to Handel-Maatschappij H. Albert de Bary & Co., Amsterdam, Netherlands. Filed Feb. 14, 1924. Serial No. 692,810. 4 Claims. (Cl. 188—6.)

1. In a road vehicle of the class described, the combination of a pivoted sprag having a point to engage the road surface, a two-armed spur pivoted on said sprag, said spur being adapted to act as a brake and to lift said sprag, a cylinder connected with a source of compressed air, and a piston movable in said cylinder, said piston being operatively connected with said sprag.

---

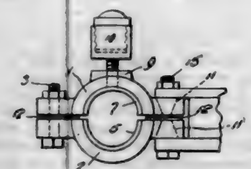
1,562,796. SHELL-FIRING GUN WITH TWO BARRELS. HERMANN SCHULER, Dusseldorf, Germany, assignor to Rheinische Metall-Waaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Filed Nov. 25, 1924. Serial No. 752,206. 28 Claims. (Cl. 89—43.)



1. A shell firing gun comprising two interconnected barrels of different calibre, one barrel being provided with a buffing device for the other barrel.

---

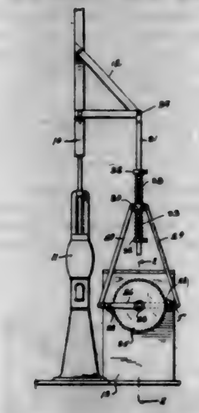
1,562,797. PITMAN BOX FOR USE ON MOWERS AND BINDERS. HARRY W. SHULL, Broadwater, Nebr., assignor of one-half to James P. Murphy, Alliance, Nebr. Filed Feb. 16, 1923. Serial No. 619,482. 2 Claims. (Cl. 308—36.)



1. A pitman box for mowers, binders and the like wherein the pitman is formed of an arm adapted for axial and rocking movement, operated from a rotating crank having a crank pin, comprising separable bearing sections formed with substantially semi-cylindrical crank pin receiving portions, and laterally extending flanges from the ends of the semi-cylindrical portions, semi-cylindrical bushings removably fitted in the corresponding portions of said bearing sections for providing a bearing on the crank pin, means for holding the bushings against movement in the bearing sections, removable shims between the flanges of the sections, and means cooperating with the flanges of each section for securing the sections in bearing forming relation, said shims permitting the adjustment to take up wear, and straps secured to the flanges at one end of each section by the securing means therefor, and to the sides of the pitman for mounting the bearing on the end of the pitman, the bearing sections being adjustable transversely with relation to the axis of said pitman.

---

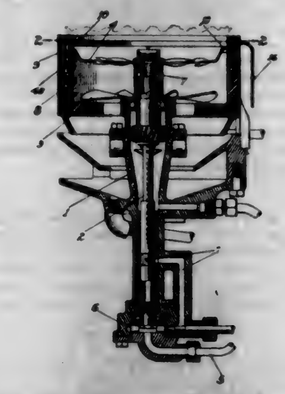
1,562,798. MECHANICAL MOVEMENT. ALBERT J. SKALKA, Fairfield, Nebr. Filed Mar. 29, 1924. Serial No. 702,857. 3 Claims. (Cl. 74—54.)



1. Means for converting the reciprocation of an element reciprocating at varying speeds to a substantially uniform motion including a pair of shafts, a yieldable connection between said shafts for transmitting rotary motion from one of the shafts to the other thereof, said connection storing energy for transmission from one shaft to another thereof, and a connection between the reciprocating element and one of said shafts for applying step by step rotary motion to the shaft including a part yielding in proportion to the load.

---

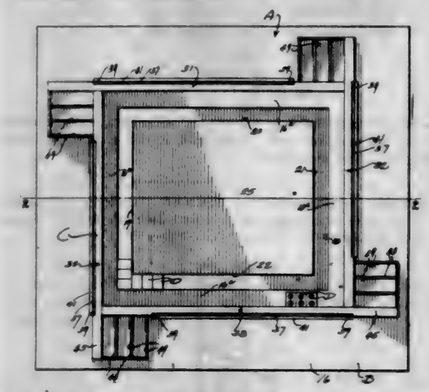
1,562,799. ELECTRICAL IGNITION MEANS FOR OIL BURNERS. IRA EDWARD SMITH, Stockton, Calif. Filed Jan. 14, 1925. Serial No. 2,396. 8 Claims. (Cl. 158—77.)



7. An electric ignition means for an oil burner, which includes a rotary burner plate onto which the oil is fed, and a casing surrounding the plate in spaced relation thereto, comprising a conducting ring mounted in connection with the casing, concentric with and spaced from the member, and located in a transverse plane with the rim of the latter, the casing being made of insulation material, circumferentially spaced projections on the plate extending evenly toward the ring, but spaced therefrom, and an electric circuit; said circuit having a step-up transformer interposed therein, one lead from the transformer being connected to the ring, and the other lead therefrom being grounded, and the member being also grounded.

---

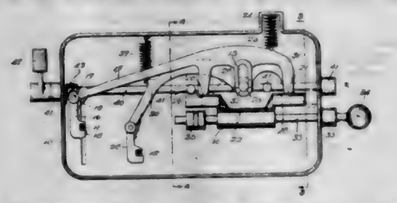
1,562,800. GAME BOARD OR TABLE. JOE F. SMITH, Dallas, Tex. Filed Apr. 18, 1924. Serial No. 707,441. 4 Claims. (Cl. 273—13.)



1. In a device to facilitate the playing of tile games the combination of a playing board having a groove formed inwardly of the plane of the playing surface thereof suitable for receiving the tiles in conventional manner for building of the wall, and racks rigidly supported by the board in adjacent relation with the grooves.

---

1,562,801. AUTOMOBILE CONTROL. WALTER J. SPIRO, White Plains, N. Y. Filed Aug. 12, 1924. Serial No. 731,574. 25 Claims. (Cl. 74—58.)



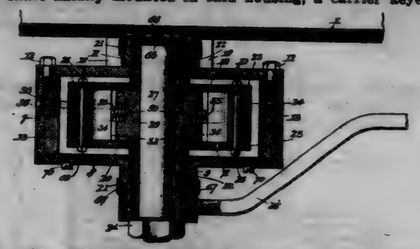
1. In an automobile control, the combination of a speed change lever, a shift lever connected thereto, means for applying a stored energy for automatically actuating the shift lever in opposite directions, and a selector disposed to control the movement of said shift lever.

---

1,562,802. FRICTION-CONTROLLED PAWL-AND-RATCHET-OPERATED SHOCK ABSORBER FOR AUTOMOBILES AND LIKE VEHICLES. FRANK N. SPRAGUE, Holyoke, Colo. Filed Apr. 15, 1924. Serial No. 706,728. 4 Claims. (Cl. 267—9.)

1. The combination with the side bar and side spring of an automobile, of a housing on said side bar, disks rotatably mounted in said housing, and a ring rigidly clamped between said disks having internal ratchet teeth, a brake band secured to the housing and extending around said ring, the ends of said band terminating in apertured ears, a screw extending loosely through said ears having an elongated head which is mounted in an aperture in the circular wall of said housing, a fixed nut on the end of said screw, a coil spring on said screw interposed between the nut and the adjacent ear, a coil spring on the screw interposed between the other ear and the head of

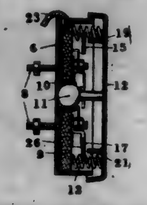
said screw, whereby said screw when turned causes said brake band to grip said ring with a resilient pressure, a shaft axially mounted in said housing, a carrier keyed



to said shaft having pawls for engaging said ratchet teeth, an arm on said shaft, and a rod connecting said arm and said side spring.

---

1,562,803. AUTOMOBILE SIGNAL DEVICE. WILLIAM I. STONE, St. Louis, Mo. Filed Dec. 2, 1921. Serial No. 519,370. 3 Claims. (Cl. 200—59.)



1. In a device of the class described, the combination with a base, of means securing said base to a brake lever, an insulating block within said base, contacts carried by said insulating block, a foot plate supported by a universal joint, said foot plate being provided with a flange overlapping said base, contacts carried by said foot plate and cooperating with said first named contacts, and electric circuits controlled by said contacts.

---

1,562,804. GRAIN-CAR DOOR. GEORGE W. STRONG and GEORGE UHLIN, Rosedale, Kans. Filed July 7, 1925. Serial No. 42,030. 4 Claims. (Cl. 20—34.)

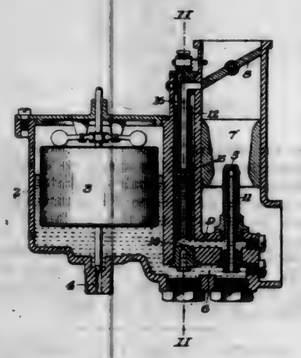
1. The combination of door jambs having ways on their opposed sides and recesses in their inner sides adjacent the upper ends of the ways, a door, shoes secured on the outer side of the door to ride on the jambs and provided at their upper ends with trunnions engaging in said ways and with tongues adapted to engage in said recesses, and means for raising and lowering the door.

1,562,805. PROCESS FOR SEPARATING POTASSIUM AND SODIUM HYDROXIDES. THEODOR SUTTER, Monthey, Switzerland, assignor to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed May 8, 1925. Serial No. 28,951. 2 Claims. (Cl. 23—154.)

1. The herein described process for the separation of mixtures of potassium hydroxide and sodium hydroxide, according to which, in order to separate potassium hydroxide, the mixture is concentrated until crystallization occurs in part at relatively high temperature, whereupon the potassium hydroxide crystals formed are eliminated from the mother liquor also at raised temperature, and, in order to separate sodium hydroxide, the mixture is diluted in such a manner that partial crystallization occurs only at relatively low temperature, whereupon the sodium hydroxide crystals formed are eliminated from the mother liquor also at low temperature.

---

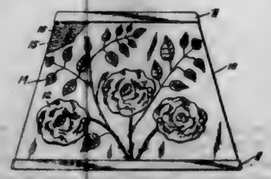
1,562,806. CARBURETOR. RICHARD H. TAYLOR, New York, N. Y., assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Nov. 29, 1919. Serial No. 341,519. 2 Claims. (Cl. 261—41.)



1. In a carburetor, a carbureting passage, a throttle therefor, a secondary priming fuel feed for said passage communicating therewith and effective with the throttle in substantially closed position, a slow speed feed communicating with said passage and effective upon initial opening of the throttle, and a fuel supply for said secondary feed adapted to be drawn upon by said slow speed when the throttle is opened to cut off the fuel supply to the secondary feed when the engine supplied by the carburetor begins operating on its own power and while it is operating on the mixture from the slow speed feed, substantially as described.

---

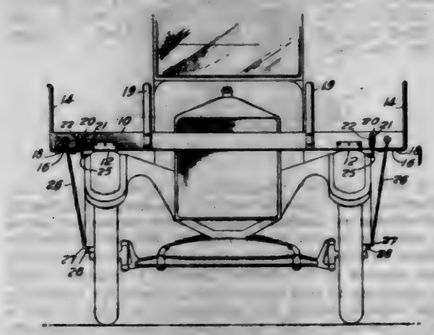
1,562,807. LAMP SHADE. FERDINAND THIEL, New York, N. Y. Filed Mar. 19, 1925. Serial No. 16,686. 1 Claim. (Cl. 41—21.)



The method of ornamenting a lamp-shade which consists in, first, fixing solid objects to the surface to be ornamented, second, drawing a design on the surface complementing the design obtained by fixing said solid objects thereto, third, applying coloring material to the entire surface to be ornamented, and fourth, applying a coating of transparent beads to the entire surface to be ornamented.

---

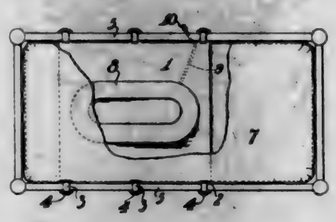
1,562,808. LUMBER CARRIER. JOHN A. THOMPSON, Jr., Taylor, Tex. Filed Jan. 3, 1925. Serial No. 320. 4 Claims. (Cl. 224—29.)



1. A carrier attachment for automobiles, comprising a front and rear beam, cushioned means adapted to rest upon the fenders of the automobile, slidably mounted hooked members for engaging the under side of the fenders and upwardly extending arms carried by said front and rear beams for retaining the material to be carried thereby.

---

1,562,809. DRAW SHEET. WILLIS B. THOMPSON, Seattle, Wash. Filed Sept. 3, 1921, Serial No. 498,378. Renewed Feb. 26, 1924. 3 Claims. (Cl. 5—91.)



1. As a new article of manufacture for the purpose described, a draw sheet having incorporated therein, inward of its edges, an inflatable body supporting member, comprising two spaced elongated parts lying in substantial parallelism and in such proximity to each other as to support the back and hips of the patient upon opposite sides of the spine to relieve the spinal column of the patient of any considerable pressure, and means for anchoring the draw sheet to a supporting structure to resist its displacement with respect thereto.

---

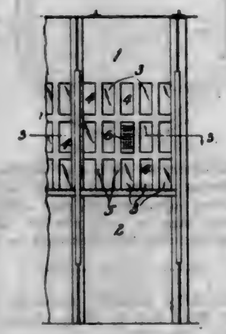
1,562,810. SCREW DRIVER OR TURNSCREW OR THE LIKE. LESLIE TOWL, Forest Gate, London, England. Filed Nov. 20, 1922. Serial No. 602,129. 3 Claims. (Cl. 145—61.)

3. A tool of the class adapted to be operated by one hand, said tool including a body part provided with a longitudinally extending groove in its outer face, a rotary abutment for the palm of the hand on the upper end of the body part, an annular disk concentrically arranged on the body part and slidably engaging the same for longitudinal adjustment, and means for securing the disk in different positions of adjustment on the body

part fixed thereto against relative rotary movement, said means including a set screw on the disk extending into the groove of the body part.

---

1,562,811. PARTITION IN JAIL CONSTRUCTION AND SPEAKING PANEL THEREFOR. MICHAEL J. TRACY, St. Louis, Mo., assignor to Pauly Jail Building Company, St. Louis, Mo., a Corporation of Missouri. Filed June 3, 1925. Serial No. 34,582. 7 Claims. (Cl. 189—5.)



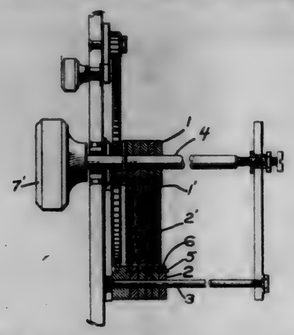
1. A partition composed principally of tool proof steel plate, a plurality of window panels therein, and a speaking panel in said partition, said speaking panel comprising a partiton having perforate walls.

---

1,562,812. VARIABLE CONDENSER. HARRY TYRER, Camp Alfred Vail, N. J. Filed Mar. 26, 1924. Serial No. 701,958. 1 Claim. (Cl. 250—41.)

A variable condenser comprising a plurality of separately formed rotor and stator plates, said rotor and stator plates being mounted on a rotatable and fixed shaft respectively, each of said rotor and stator plates having a portion, adjacent their respective shafts, of substantially greater thickness than that of the main electrically effective area of said plates for the purpose of spacing said plates, each of said rotor and stator plates having a pin formed integrally therewith

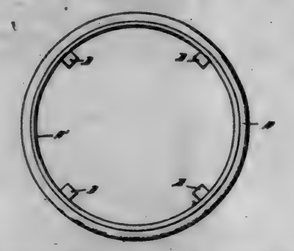
and adapted to engage a corresponding groove in the adjacent rotor and stator plate respectively to insure against relative rotation between said rotor plates and



between said stator plates, means for rotating said rotor plates to bring the latter to a greater or lesser degree between said stator plates, for the purpose of varying the capacity of said condenser.

---

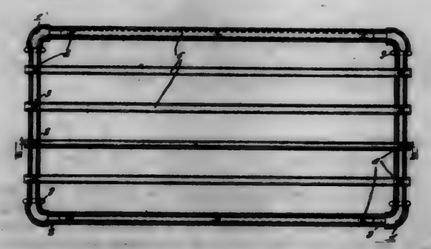
1,562,813. METHOD OF MAKING RIMS. JAMES H. WAGENHORST, Jackson, Mich. Filed June 4, 1924, Serial No. 717,718. Renewed Oct. 15, 1925. 9 Claims. Cl. 29—159.)



1. The herein described method of making rims which consists in forming a rim and sizing and shaping to a circle, punching openings in said rims at definite points, attaching lugs to said rim at said apertured points and then forming bolt openings in said lugs.

---

1,562,814. CHICKEN ROOST. CHARLES WARRINGTON, Camden, Ill. Filed Oct. 8, 1924. Serial No. 742,447. 1 Claim. (Cl. 119—25.)



A roost including elbows, pipes split longitudinally throughout their lengths and connected by the elbows to form a frame, the splits in the pipes being in the upper portions thereof and said pipes constituting communicating liquid receptacles, pins secured to the bottom portions of the pipes and extending upwardly through the open tops thereof but out of contact therewith, perches mounted on certain of the pins and supported above and longitudinally of two of the pipes, perches mounted at their ends upon the remaining pins and bridging the frame, means for supporting the frame, and means on the pins for supporting the perches.

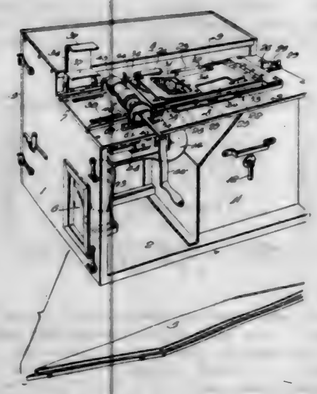
---

1,562,815. RADIO SOUNDER AND INTERFERENCE ELIMINATOR HAROLD W. WEBBE, Columbus, Ohio. Filed June 18, 1923. Serial No. 646,045. 1 Claim. Cl. 178—88.)

A radio sounder comprising, in combination, a telephone receiver provided with a diaphragm adapted to be vibrated by incoming signals, said diaphragm having a centrally located raised ridge, a wire of considerable length stretched taut and arranged in proximity thereto and adapted to be vibrated thereby, a separate circuit in proximity to said wire including means for amplifying said signals, means for adjusting said wire so as to be in resonance with the receiver diaphragm and the incoming signals, said receiver being capable of being moved longitudinally in either direction with relation to said wire.

---

1,562,816. PHOTOGRAPHIC-PRINTING APPARATUS. THOMAS CARROLL WILLSON, Philadelphia, Pa. Filed Jan. 7, 1924. Serial No. 684,818. 12 Claims. (Cl. 95—75.)

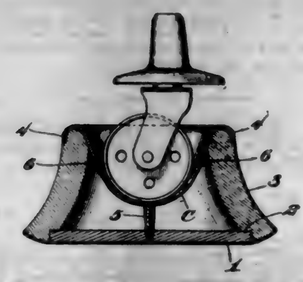


1. In a photographic printing apparatus, the combination of a negative holder across which a sensititzed strip is adapted to be extended, and mechanism to advance said strip across said holder at intervals, said mechanism including a continuously operable rotatable segment to engage one side of said strip during a part of its revolution to pull the same.

---

1,562,817. PIANO GLIDE. GEORGE C. WISMER, Santa Barbara, Calif. Filed Dec. 13, 1924. Serial No. 755,765. 1 Claim. (Cl. 84—190.)

A device of the class described comprising a base member, a shell resting thereon, a cup member supported by the upper end of the shell, and means for connecting the cup member to the base member to hold the cup



member, base and shell in assembled relation, said cup member being provided with openings in communication with the interiog of the device.

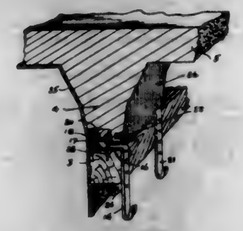
---

1,562,818. PROCESS FOR THE PURIFICATION OF PHOSPHORIC ACID CONTAINING ARSENIC. OTTO WOLFES and HORST MAENDER, Darmstadt, Germany. Filed May 5, 1925. Serial No. 28,217. 1 Claim. (Cl. 23—165.)

Process for the purification of phosphoric acid containing arsenic by treating it with phosphoreted hydrogen and removing the precipitated metallic arsenic.

---

1,562,819. MEANS EMPLOYED IN REENFORCED CONCRETE CONSTRUCTION. ROY A. BADY, Los Angeles, Calif. Filed Nov. 22, 1923. Serial No. 676,259. 3 Claims. (Cl. 25—131.5.)

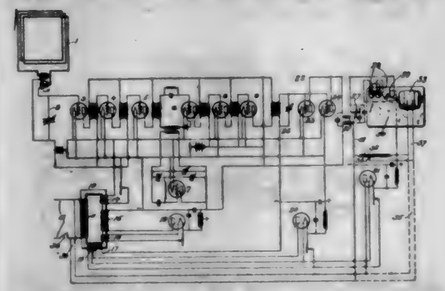


1. A mold form for concrete comprising a right plate and a left plate, a supporting truss and a plurality of metallic members fixed on the top of said truss and bent alternately right and left thereover, the depending ends of said members bent upward and supporting the lower edges of said plates and the upper ends of said members bent at an angle and within the mold and bifurcated to support reenforcing means.

---

1,562,820. RADIO RECEIVING SYSTEM. JOHN B. BRADY, Somerset, Md., assignor to Morkrum Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 22, 1923. Serial No. 658,816. 3 Claims. (Cl. 250—8.)

1. An automatic radio receiving apparatus comprising in combination an electron tude radio receiver arranged to respond to groups of impulses of energy extending through a definite number of successive time intervals for each signal, means operated by said electron tube receiver for opening and closing a local circuit in accordance with said impulses, automatic character selecting means connected in said local circuit, a source of alternating current and a rectifier connected between said source of alternating current and said local circuit



whereby said automatic character selecting means operates in accordance with said impulses with negligible electrical inertia.

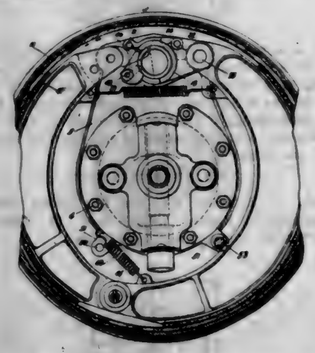
---

1,562,821. METHOD FOR COATING PARTICLES WITH INERT POWDER. LESTER A. BUNDS, Santa Clara, Calif., assignor to San Jose Spray Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 14, 1925. Serial No. 23,026. 3 Claims. (Cl. 23—243.)

3. The method of preparing a crystalline salt which consists of conveying the ground salt in a current of hot air while intermixed with an inert and more finely ground powder, whereby the evaporation from the salt particles leaves a salt residue on the particles in which the inert particles are held.

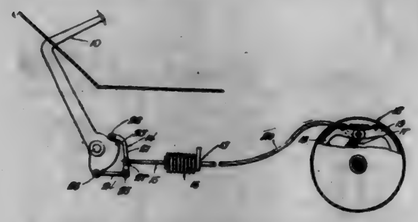
---

1,562,822. VEHICLE BRAKE-SHOE CARRIER PLATE AND BRACKET MECHANISM THEREFOR. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1924. Serial No. 701,173. 20 Claims. (Cl. 188—194.)



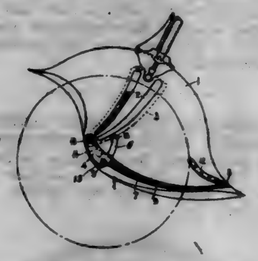
1. In combination with a vehicle wheel having a brake drum and a spindle supported by an axle, a carrier plate fitting around and fastened to the axle end of the spindle and extending above the spindle, a bracket fastened to said extended portion of the plate and having a part protruding through the plate beyond the drum, a universal joint including a shaft with a cam attached thereto housed within said bracket, braking means, housed within the drum and adapted to act thereon, pivoted to said bracket so as to be actuated by said cam, and a cover plate lying over the carrier plate for closing off the drum opening.

1,562,822. BRAKE CONSTRUCTION. ADIEL Y. DODGE, South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1924. Serial No. 702,768. 7 Claims. (Cl. 74—110.)



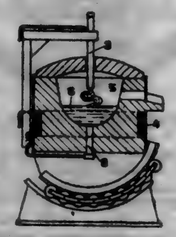
1. A brake construction comprising a pedal, a longitudinal reciprocable reach rod for causing actuation of the brake mechanism and transmission means between said pedal and reach rod comprising means whereby the movement ratio of the reach rod to the pedal decreases substantially as the pedal movement progresses, said last means comprising a lever pivoted to said reach rod and a pair of connections between the pedal and lever.

1,562,824. SPRING SUSPENSION OF VEHICLE WHEELS. ROBERT DOUGLAS ESCOMBE, Sevenoaks, Kent, England. Filed Mar. 27, 1922. Serial No. 547,296. 7 Claims. (Cl. 208—97.)



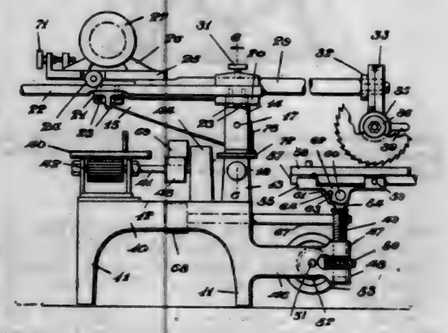
1. In a motor cycle the combination with the fork of a lever of much less length than the wheel radius pivoted upon the fork at one end, a wheel having its axle supported by the other end of said lever, and a laminated spring directly and rigidly attached to said lever at said other end and prolonging it and bearing upon a fixed part of the cycle.

1,562,825. ELECTRIC FURNACE. GEORG EVERYNOFF, Ekaterinoslav, Russia. Filed Nov. 11, 1924. Serial No. 749,216. 1 Claim. (Cl. 204—64.)



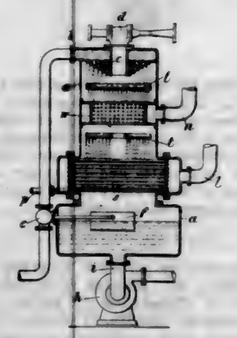
An electric furnace, comprising, in combination, a receptacle adapted to receive the metal to be treated and to be filled therewith up to a predetermined height; a carbon-electrode, the arc-forming end of which is very small in proportion to the diameter of the space containing said metal and which is arranged in such a height relatively to the surface of the metal present in said receptacle that its end is located above said surface; a coil so arranged as to produce a magnetic field by which the arc can be caused to assume the shape of a helical line, and to rotate, and means for supplying current to said coil and said electrode.

1,562,826. WOODWORKING MACHINE. EDWIN J. FAGEN, Jr., Harrisburg, Pa. Filed Feb. 13, 1922. Serial No. 536,337. 1 Claim. (Cl. 144—3.)



In a woodworking machine the combination of a motor; a carriage slidably supporting said motor; a rotatable post slidably supporting said carriage; a tool-carrying cross-head slidably supported radially of the post; a base frame supporting said rotatable post; a mandrel-carrying shaft mounted in said frame; a second tool-carrying shaft mounted in parallel relation to said first shaft; a third idler pulley-carrying shaft interposed between said first and second shafts; and means for operatively connecting said motor alternatively with said tool-carrying cross-head and said first, second and third shafts.

1,562,827. APPARATUS FOR THE REMOVAL OF GASES FROM LIQUIDS. HARRY FOTHERGILL, Westminster, London, England. Filed Oct. 11, 1924. Serial No. 743,067. 17 Claims. (Cl. 183—2.5.)

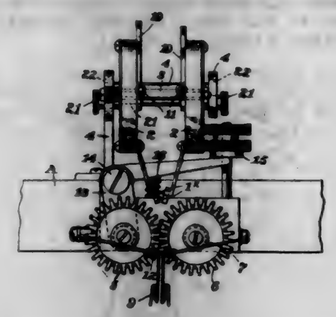


1. Apparatus for the removal of gases from liquids comprising a vessel, means for introducing liquid into the vessel in a falling spray, an exposed heating surface within said vessel sufficient to effect ebullition of the liquid at the temperature and pressure existing in the vessel, said surface being arranged beneath the falling spray and upon which surface the liquid is sprayed and is ebullated, and a connection to the vessel for the introduction of a heating medium from an outside source in to direct contact with the liquid falling through the vessel.

1,562,828. PROCESS OF COLORING MOTION PICTURES. ARTURO HERNANDES-MEJIA, New Rochelle, N. Y.; Margaret N. Hernandes, administratrix of said Arturo Hernandes-Mejia, deceased, assignor to Colorgraph Laboratory, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 16, 1919. Serial No. 271,359. 17 Claims. (Cl. 95—2.)

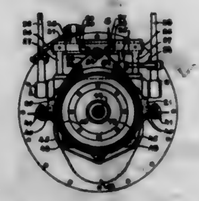
1. A photographic process comprising imprinting, in alignment, upon opposite sides of light-transmissive material, sensitized upon both sides, two images from negatives of the same object, from one of which negatives certain color sensations have been omitted and from the other of which other, complementary, color sensations have been omitted, developing and fixing said images, toning both of the same to a color corresponding to the sensations omitted from one of said negatives, and applying to one side of said material a toning solution adapted to turn the image on said side from such color to a color corresponding to the sensations omitted from the negative from which was imprinted the image on said side.

1,562,829. YARN-FURNISHING MECHANISM FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1922. Serial No. 553,461. 4 Claims. (Cl. 66—12.)



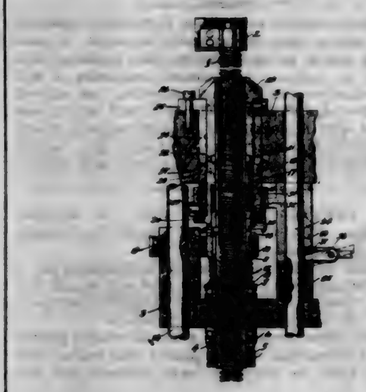
1. In combination a pair of rotary yarn furnishing members adapted to feed the yarn at different rates of speed according to the different positions along the members to which the yarn is moved to pass between them, a guide pivoted above the rotary members, depending from its pivot and moving along a plane coinciding with the plane in which the rotary members meet, a sweep arranged above the plane of the rotary members and having a swinging movement, and connected with the said pivoted guide, said sweep reaching to a point beyond the outer ends of the rotary members, and a guide below the rotary members receiving the yarn therefrom and directing it upwardly to the sweep, substantially as described.

1,562,830. BRAKE-OPERATING MECHANISM. GEORGE D. HUGO, Seattle, Wash. Filed Oct. 8, 1923. Serial No. 667,194. 12 Claims. (Cl. 188—140.)



1. In a vehicle of the class described, a braking mechanism, a rotatably driven member, a contact member adapted to be frictionally engaged with said rotatably driven member and to be moved by such contact, a guide on the said contact member, a stationary guide and a flexible member extended through said guides and having operative connection with the braking mechanism whereby the latter will be actuated by rotative movement of the control member in either direction.

1,562,831. CLUTCH MECHANISM. HOWARD W. HUNT and FORREST E. CARDULLO, Cincinnati, Ohio, assignors to The G. A. Gary Company, Cincinnati, Ohio, a Corporation of Ohio. Original application filed Aug. 8, 1921, Serial No. 490,453. Divided and this application filed Mar. 12, 1924. Serial No. 698,705. 6 Claims. (Cl. 74—40.)

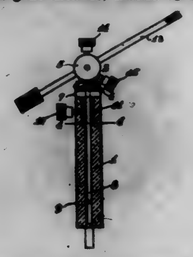


1. In a mechanism of the class described, a supporting frame, means adapted by rotation to move the supporting frame, a movable clutch member concentric therewith and slidably keyed thereto, a first clutch, a second clutch, and a clutch shifting member concentric with the movable clutch member and adapted by partial rotation to shift the movable clutch member axially from engagement with the first clutch into engagement with the second clutch.

1,562,832. UNIVERSAL COIL MOUNTING. RAY E. JONES, Oakland, Calif. Filed Sept. 19, 1923. Serial No. 663,617. 3 Claims. (Cl. 171—119.)

2. A coil mounting comprising a body, coil mounts positioned on said body, means to secure the coils to

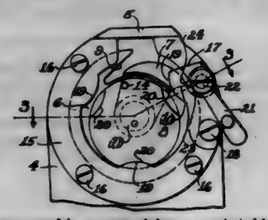
said mounts, carriages upon which said coil mounts are positioned, a gear journalled in said carriage, a rack with which said gear meshes, means to swing said mounts



on either of two axes at right angles to each other and means to rotate said gear to adjust the mounts at right angles to one of the said axes of rotation.

---

1,562,833. SEWING MACHINE. HARRY W. KRAG, St. Louis, Mo., assignor to American Shoe Machinery & Tool Company, St. Louis, Mo. Filed Sept. 8, 1922. Serial No. 586,885. 5 Claims. (Cl. 112—188.)



1. A sewing machine comprising a rotatably mounted shuttle, a bobbin case eccentrically mounted in said shuttle, and means on said machine for retaining said bobbin case in position, said means comprising a plurality of circumferentially spaced projecting lips adapted to overlap the edge of said bobbin case, said bobbin case being formed with a plurality of circumferentially spaced recesses adapted for engagement with said lips, thereby preventing rotation of said bobbin case with said shuttle.

---

1,562,834. DENTAL CEMENT. PAUL W. KRUGER, Boyett, Miss. Filed Oct. 6, 1924. Serial No. 742,083. 8 Claims. (Cl. 106—6.)

1. A dental cement comprising a combination of a dental cement comprising a powder that can be set into a hardened cement with guaiacol, a liquid containing guaiacol in its composition, and a terebinth.

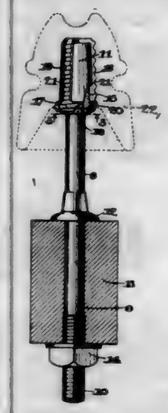
5. A dental cement comprising a dental cement powder comprising a magnesium cement powder that reacts with guaiacol, to form the hardened mass, guaiacol and balsam of fir.

---

1,562,835. SIGNAL APPARATUS. LEONARD W. KUTTLER, Euclid, Ohio. Filed June 15, 1923. Serial No. 645,521. 5 Claims. (Cl. 88—1.)

1. A signal apparatus including, a frame, a signal member supported in said frame, prisms on said signal member to collect light rays from an outside source and to reflect the same as a signal, the peaks of some of said prisms inclined in one direction and the peaks of others of said prisms inclined toward the first mentioned peaks to increase the reflection of the light rays from the outside source.

1,562,836. PIN FOR INSULATORS. WILLIAM D. KYLE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 15, 1922. Serial No. 601,070. 5 Claims. (Cl. 173—321.)

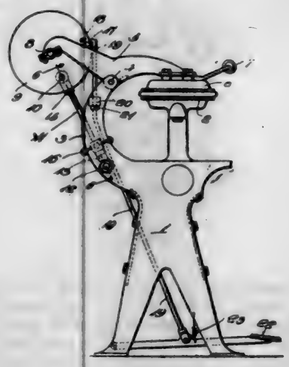


1. In an insulator pin, the combination of a metal pin having a head, and longitudinally extending soft metal strips having a key connection with said head and having inwardly projecting parts at their ends to hold them against longitudinal movement relative to said head, the outer edges of said strips being indented to form threads for receiving an insulator.

2. In an insulator pin, the combination of a metal pin having a head, longitudinally extending soft metal strips having a key connection with said head and having outer indented edges forming threads for the insulator, and means for holding said strips against longitudinal movement relative to said head.

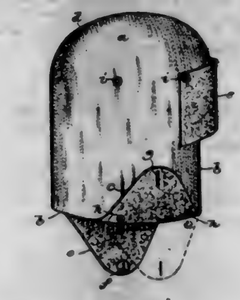
---

1,562,837. GARMENT PRESS. FREDERICK W. LINDEMANN, St. Paul, Minn. Filed Jan. 15, 1925. Serial No. 2,633. 8 Claims. (Cl. 68—9.)



1. A garment press comprising a pressing head mounted for movement to and from pressing position, and means for locking said head in pressing position, said means including a fly-wheel and means connected therewith whereby the same is set in motion by initial movement of the head, said fly-wheel thereafter expending its kinetic energy to assist in completing the movement of said head.

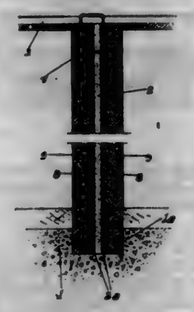
1,562,838. CAP. EUGENE H. MAHLER, Milwaukee, Wis., assignor to Columbia Knitting & Mfg. Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 5, 1923. Serial No. 643,522. 1 Claim. (Cl. 2—172.)



A cap comprising a crown having an upwardly foldable back band, a reinforcing front band secured along the lower edge thereof to the adjacent lower edge of said crown, the ends of said front band extending rearwardly beyond the ends of said back band whereby the adjacent ends of said bands overlap when said back band is folded upwardly thereby forming in effect a continuation of said front band, said back band being provided with throat-protecting flaps, the vertical dimension of said flaps being such as to permit folding of the same out of sight between said crown and said back band when the latter is folded upwardly, said flaps being provided on their inner sides adjacent their front and rear edges and adjacent the line on which they fold with fastening members, said crown being provided with complementary fastening members adapted and arranged for conction with said first-mentioned member when said back band is folded upwardly and said flaps folded between the latter and said crown whereby said members are completely concealed and act to hold said back band and said flaps in their said respective folded positions, and means for fastening said flaps together in position to protect the throat of the wearer.

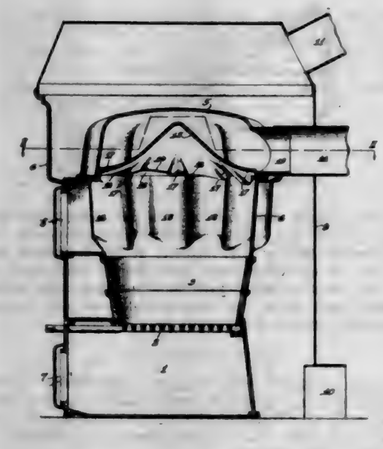
---

1,562,839. WALL CONSTRUCTION. JOHN F. MAKOWSKI, Stockton, Calif., assignor to California Cedar Products Company, Stockton, Calif. Filed Dec. 8, 1923. Serial No. 679,328. 2 Claims. (Cl. 72—17.)



1. A wall construction including a single continuous imperforate fire proof sheet of material extending from a floor to a ceiling and being supported only at its ends, and plaster adhered to the core.

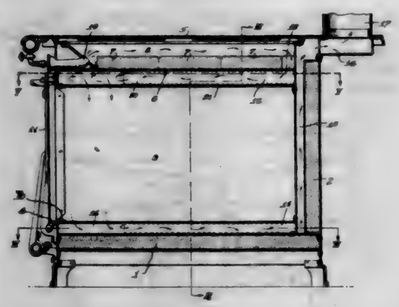
1,562,840. DRAFT EQUALIZER AND DIFFUSER. HENRY C. MAUL, Detroit, Mich., assignor to The Michigan Stove Company, Detroit, Mich., a Corporation of Michigan. Filed May 11, 1925. Serial No. 29,355. 5 Claims. (Cl. 126—99.)



1. The combination in a heater, a combustion chamber, a horizontally disposed draft member co-axially of said combustion chamber and supported on the upper edges of said combustion chamber, said draft member having a number of draft walled openings for the products of combustion to pass through from one side to the other side of the said draft member, said draft member having a closed top and the openings varying in size with some of the opening walls below the plane of the upper edges of said combustion chamber.

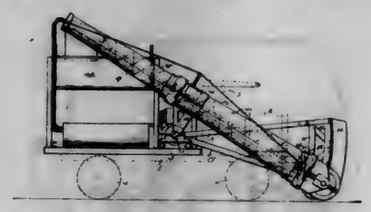
---

1,562,841. HOTEL RANGE. HENRY C. MAUL, Detroit, Mich., assignor to The Michigan Stove Company, Detroit, Mich., a Corporation of Michigan. Filed May 11, 1925. Serial No. 29,356. 6 Claims. (Cl. 126—89.)



1. A range having a cooking top and oven, a chamber under said cooking top for a source of heat adapted to heat said cooking top and said oven, a top flue between said chamber and said oven, said flue having for its top wall the bottom wall of said chamber and for its bottom wall the top wall of said oven, and flues at the bottom, sides and rear of said oven adapted to receive heat from said chamber.

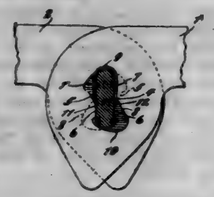
1,562,842. SNOW PLOW AND LOADER. HARRY P. MILNE and LOUIS M. SANDERS, East Orange, N. J.; Louis M. Sanders, jr., administrator of said Sanders. Filed July 5, 1923. Serial No. 649,432. 18 Claims. (Cl. 37—12.)



1. In a snow plow and loader, the combination of a self-propelled vehicle with a plow body supported upon the forward end of said vehicle, struts extending from the rear of said plow body, and pivotal connections for the rear ends of said struts mounted upon said vehicle, whereby said plow body may be elevated and lowered about said pivotal connections as a center.

---

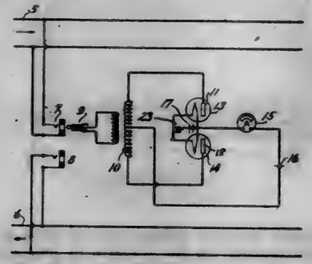
1,562,843. CHAIN AND PARTS THEREFOR. FRIEDERICH MÜLLER, Elizabeth, N. J., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Dec. 4, 1923. Serial No. 678,407. 5 Claims. (Cl. 74—32.)



1. In a chain, a series of links, each having an opening widening in two directions from the pivotal center, the sides extending along straight lines substantially throughout their length and the ends being eccentric.

---

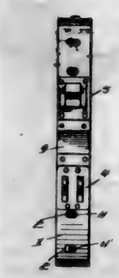
1,562,844. TRANSMISSION CIRCUITS. HENRY W. O'NEILL, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1923. Serial No. 657,399. 5 Claims. (Cl. 179—175.)



1. In combination, a transformer, means comprising a signaling line for delivering to a winding of said transformer current having intensity variations approximately of a frequency of the order of the syllabic frequency of of speech, and a direct current measuring instrument and a unidirectional electric discharge device in circuit with a second winding of said transformer, said transformer having such an impedance ratio that the impedance of said device as seen from the line is substantially infinite, and said instrument giving an indication varying approximately at a frequency of the order of the syllabic frequency of speech, in response to current impulses delivered to said instrument from said unidirectional electric discharge device.

---

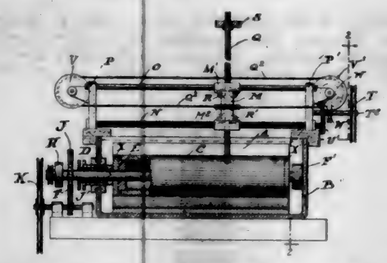
1,562,845. BRAKE BAND. GUSTAVE CARL PACK, New Brunswick, N. J. Filed June 4, 1925. Serial No. 34,875. 1 Claim. (Cl. 188—249.)



In a structure of the class described, a brake band provided with a plurality of circumferentially spaced key hole slots, said slots being disposed transversely of the longitudinal axis of the band, said band being provided adjacent its free end with spaced holes, a lining, and a resilient backing strip to which said lining is permanently fastened, said lining and strip being of a radius greater than that of said band, and said strip being equipped with lugs disposed in said holes and headed studs fitted into said key hole slots.

---

1,562,846. ANTIFRICTION MATERIAL AND METHOD OF MAKING THE SAME. CLARENCE Q. PAYNE, New York, N. Y. Filed Feb. 5, 1923. Serial No. 617,175. 10 Claims. (Cl. 204—1.)



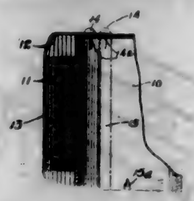
1. A metal and mineral aggregate comprised of a body of metal with portions of the mineral embedded in the metal in spiral lines.

---

1,562,847. RIBBON FASTENER. DAVID PHILLIPS, College Point, N. Y. Filed Sept. 18, 1924. Serial No. 738,341. 1 Claim. (Cl. 206—54.)

The herein described adjustable fastener for the end of a roll of ribbon for use upon a hollow block, the same comprising a flexible strap member, a flat dart pointed pin for piercing one end of the strap and securing it against one end of the block, said pin having a flat head, and a detachable fastener pin for the remote end portion

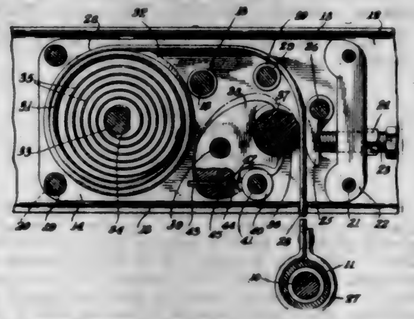
of the strap for connecting the same detachably to the opposite end of the block, the latter pin being adapted



to pierce through any desired point of the strap according to the effective length thereof and having a bend formed therein between the point and the head thereof to prevent accidental pulling loose thereof.

---

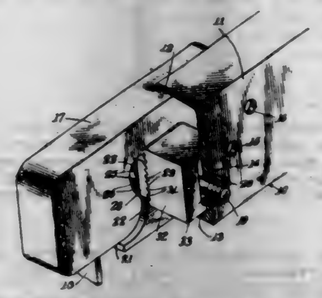
1,562,848. SHOCK ABSORBER. WILLIAM S. PORTER and HUGH L. HUGHES, Weehawken, N. J., assignors to Nojar Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 30, 1923. Serial No. 660,105. 5 Claims. (Cl. 267—10.)



1. A shock absorber for vehicles comprising a casing adapted to be fixed to the vehicle frame, a member extending from said casing to be secured to the vehicle axle, a friction roll against which said member is disposed, a rocking support for said friction roll, a pivoted friction block opposed to said roll, and means for adjusting said block.

---

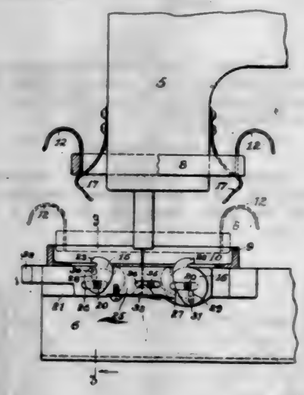
1,562,849. ADJUSTABLE SUPPORT AS APPLIED TO ROLLED STRUCTURAL SHAPES. WILLIAM S. PORTER and HUGH L. HUGHES, Weehawken, N. J., assignors to Nojar Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 13, 1923. Serial No. 662,452. 4 Claims. (Cl. 267—10.)



1. An adjustable support bracket comprising a fixed block, a rotatable bracket element, a plate intermediate said block and bracket, co-operating means on said bracket and plate permitting radial adjustment of the bracket, co-operative means on the opposite side of said plate and block permitting vertical adjustment, and means for clamping said bracket, plate and block rigidly when in adjustment.

---

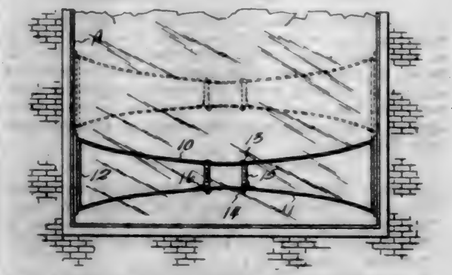
1,562,850. EMBROIDERY-FRAME HOLDER FOR SEWING MACHINES. IRVIN RADER, Reading, Pa., assignor to The Nolde and Horst Company, Reading Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1923, Serial No. 633,598. Renewed Sept. 25, 1925. 3 Claims. (Cl. 112—103.)



1. The combination with a sewing machine having a work table and an overhanging needle-bar head, of a work holder comprising a ring member having an inwardly extending circular flange adapted to seat upon the work table and a work-clamping ring member insertable in said flanged ring member, and means for clamping the latter to the work table comprising clamping devices pivotally secured to the work table and actuating means for swinging said devices into and out of engagement with said inwardly extended circular flange.

---

1,562,851. WINDOW DISPLAY RACK. ROSCOE R. RANSOM, Dallas, Tex. Filed June 16, 1924. Serial No. 720,277. 6 Claims. (Cl. 211—17.)



1. In a window display rack, a pair of flexible leaves fastened together at their ends, and means for spreading the leaves intermediate their ends to clamp the rack in a window frame.

---

1,562,852. CORD MACHINE. HERMAN P. RUF, New York, N. Y. Filed Feb. 7, 1925. Serial No. 7,452. 1 Claim. (Cl. 117—35.)

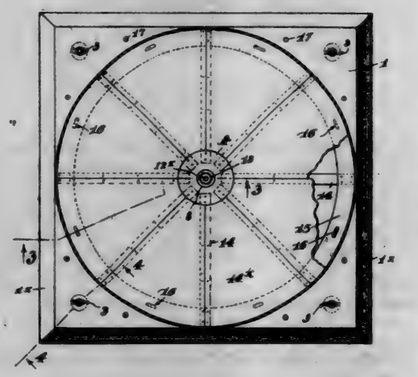
In a cord making machine, the combination with means for receiving a plurality of threads and actuating the

same to produce a cord, of means for guiding said threads to be received as aforesaid, the guiding means comprising a rod having a longitudinal groove to receive said threads,

the surface of said rod at the sides of said groove forming substantialy circular sliding surfaces for said threads and permitting threads to be fed into said groove simultaneously at both sides of the rod.

---

1,562,853. PORTABLE AUTOMOBILE TURNTABLE FOR GARAGES. MAX SCHONBERGER, Brooklyn, N. Y. Filed June 18, 1925. Serial No. 37,885. 4 Claims. (Cl. 104—45.)



1. A portable automobile turntable for garages, comprising a frame, a turntable revolubly mounted to rotate on said frame and rotary supporting members for the frame in combination with spring resistance members adapted to normally project said rotary supporting members below the frame, the said resistance members being adapted to be overcome by the weight of an automobile upon the turntable.

---

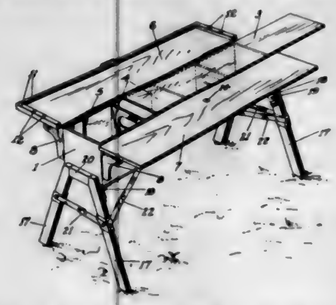
1,562,854. COMPOSITION FOR PRESERVING EGGS. CLIFFORD C. SHAFER, Newark, N. J., assignor to Guaranty Egg Corporation, Newark, N. J., a Corporation of New Jersey. Filed May 3, 1923. Serial No. 636,391. 2 Claims. (Cl. 99—11.)

1. A composition for preserving eggs consisting of a solution of a carbohydrate, mineral oil, odorless gum and wax, and refined Burgundy pitch.

---

1,562,855. COMBINATION LUNCH BOX AND TABLE. ALFRED S. TINKESS, Stockton, Calif. Filed Jan. 27, 1925. Serial No. 5,065. 5 Claims. (Cl. 190—12.)

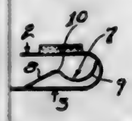
2. A combined food box and table device comprising a box adapted to rest on the running board of a car, flat members associated with the box for providing a table top, leg members hinged onto the box and adapted to be folded under the box when not in use and means



between the running board and said leg members for holding the device immovable on said board when the legs are folded.

---

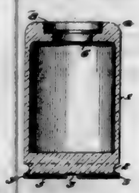
1,562,856. PENCIL HOLDER. WILLIAM J. WHITE, San Francisco, Calif., assignor of one-half to William H. Gilbert, San Francisco, Calif. Filed Jan. 2, 1924. Serial No. 683,897. 2 Claims. (Cl. 24—11.)



1. A pencil holder comprising opposed resilient jaws adapted to clamp between them the outer wall of a garment pocket, a laterally opening clip on one of the jaws in which clip a pencil may be moved sidewise in the lateral opening therein in a position to be removably held, a resilient tongue carried by said clip adapted to yieldingly clip a pencil between it and one side of the clip, and a shoulder provided intermediate of the ends of the tongue permitting insertion of a pencil between the clip and the tongue but preventing lateral withdrawal of the pencil past the shoulder.

---

1,562,857. PRESERVING JAR. FREDERICK V. WINTERS, New York, N. Y. Filed Sept. 29, 1923. Serial No. 665,630. 5 Claims. (Cl. 215—1.)



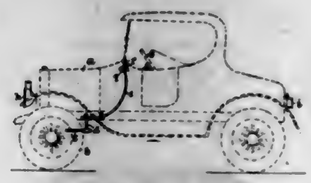
1. A preserving jar having an external annular groove in its side wall near its base and vertical notches leading from its base to said groove for the purpose specified, a cover for said jar having a passage therethrough, and a sealing plug arranged in said passage in the cover.

---

1,562,858. AUTOMOBILE SIGNAL SWITCH. ANTONY ALESSI, Paterson, N. J. Filed May 28, 1923. Serial No. 641,870. 2 Claims. (Cl. 200—59.)

1. In a vehicle signal control, the combination of a steering mechanism having a yieldable means connected thereto, a switch including a stationary contact,

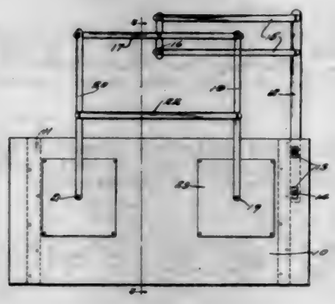
a movable contact, and a means for manually moving said contacts into operative engagement, and a latch means for retaining said contacts in operative engage-



ment, said yieldable means being in constant engagement with said latch means and adapted to release said latch means when the steering mechanism is moved.

---

1,562,859. PANTOGRAPH. MAURICE M. ANDERSON, Madison, Wis. Filed Dec. 20, 1923. Serial No. 681,830. 1 Claim. (Cl. 33—25.)

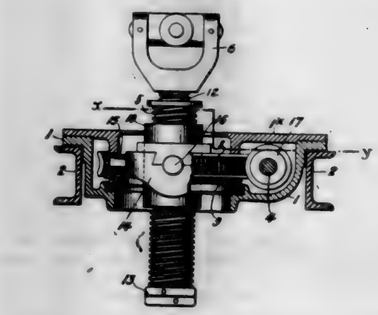


A pantograph apparatus comprising a board, a brace disposed transversely across the board, securing devices carried by the board and spaced at equal distances from the brace and located between the edge of the brace and the end edge of the board, an arm connected with the securing devices, and having an edge bearing against the adjacent edge of the brace, extension bars pivotally connected with the arm, a connecting bar pivotally connected with the free ends of the first mentioned bars, a cross arm secured to the connecting bar at a point midway between the ends of the cross bar and at a point midway between the ends of the said arm, tracing arms pivotally connected with said cross arm and a brace bar pivotally connected at its end with the tracing arm at points between the ends thereof.

---

1,562,860. TILTING MECHANISM OF SELF-DISCHARGING WAGONS. WALTER BARNETT and JAMES FLORENDINE, Rugby, England. Filed Feb. 27, 1925. Serial No. 12,015. 2 Claims. (Cl. 298—19.)

1. In tilting mechanism for self-discharging wagons of the kind specified and in which a tilting screw to tilt the body is universally jointed at its upper end to the base of the body and is raised or lowered by mechanism carried by the chassis of the vehicle; the combination of a gear case permanently fixed to the chassis of the vehicle beneath said tilting body of said wagon, a horisontal annular bearing in said gear case, an annular toothed worm-wheel carried in said bearing, a screw-threaded nut within said annular wheel through which nut said tilting screw passes and engages, a universally jointed connection between said nut and said wheel to carry said nut and cause it to share the revolutions



of said worm wheel and to permit said nut and said tilting screw to have free angular adjustment, fixed horizontal bearings in said gear case, an operating shaft carried in said fixed bearings in said fixed gear case, a worm on said operating shaft to engage said annular toothed wheel, and means for revolving said operating shaft to raise or lower said tilting screw.

---

1,562,861. BEDSTEAD. HENRY F. BERBIG, Duluth, Minn. Filed Jan. 31, 1924. Serial No. 689,659. 2 Claims. (Cl. 5—114.)

1. A folding bedstead comprising a two-part separable receptacle forming the head and foot of the bed, and foldable bed stocks for cooperative engagement with the receptacles, said stocks being foldable only outwardly, and springs permanently attached to the head and foot of the bed and vertically removably attached to the stocks for normally holding the four sides of the bed together.

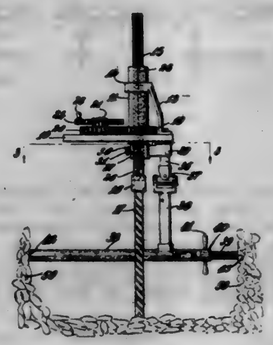
1,562,863. PURIFICATION OR EXTRACTION OF SOLUBLE SUBSTANCES. WALTER BROADBRIDGE, EDWIN EDSER, and WILLIAM GEORGE SELLERS, London, England, assignors to Minerals Separation North American Corporation, New York, N. Y. Filed June 13, 1922. Serial No. 568,047. 4 Claims. (Cl. 23—102.)

1. The process of purifying a soluble substance contaminated with insoluble finely divided impurities, which consists in treating the contaminated substance with a solvent to dissolve the soluble substance and produce a contaminated solution, agitating the contaminated solution with a small proportion of a flocculating agent to flocculate the impurities, filtering the solution to separate it from the flocculated impurities, and recovering the substance from the filtered solution.

---

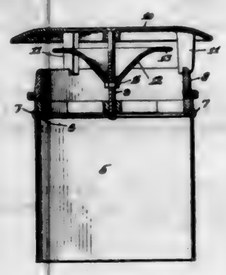
1,562,864. MINING DRILL. FRANK BROSOSKY, Haywood, W. Va. Filed Dec. 10, 1921. Serial No. 521,290. 2 Claims. (Cl. 255—46.)



1. A drill comprising a supporting plate, an upright bearing member secured to the upper face of said plate, a sleeve rotatably mounted in said bearing member and said plate, a gear fixed to said sleeve adjacent the upper surface of said plate, manually operable gear means journaled in the plate and operatively connected to said first named gear, a slotted screw extending axially through said sleeve, a key fixed in said sleeve and projecting into the slot in said screw, a rod fixed to the lower face of said plate, a bracket secured to said rod, a split nut on the end of said bracket and operatively engaging said screw, a drill chuck on the lower end of said screw, a second rod below said first rod, a universal connection between said rods, a laterally extending tubular member secured to the lower end of said second rod, and an extensible abutment member mounted in one end of said tubular member.

---

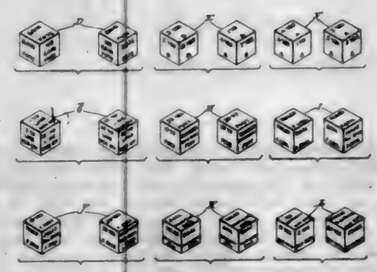
1,562,865. FLOOR VENTILATOR. HERBERT L. BROWN, Richmond, Va. Filed June 19, 1925. Serial No. 38,246. 4 Claims. (Cl. 98—27.)



1. In a ventilator of the type set forth, a spider-ring and flange, a cover and a central screw for clamping it in place on said flange, and a damper-member threaded on said screw at a point below the cover, for the purpose set forth.

---

1,562,866. GAME APPARATUS. NORMAN W. BURGESS, Lexington, Va. Filed Jan. 18, 1924. Serial No. 687,074. 3 Claims. (Cl. 273—94.)

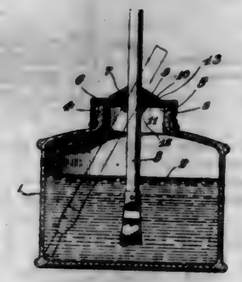


1. In game apparatus, a board having goals at its opposite ends and graduated between goals, a piece to be moved over the face of the board, a marker of length equal to the distance between a determined number of the graduations, adapted to be placed with one end in line with the piece, its other end indicating the movement of the piece that must be made in a determined number of plays, the opposite ends of the marker being designated to correspond with the goals, and chance-controlled indicating means for determining the direction of movement and its extent at each play.

---

1,562,867. BRUSH HOLDER FOR BOTTLE CAPS. GEORGE B. BUSH, Philadelphia, Pa., assignor to Continental Scriptex Ink Co., Philadelphia, Pa. Filed Dec. 1, 1923. Serial No. 678,031. 3 Claims. (Cl. 91—67.2.)

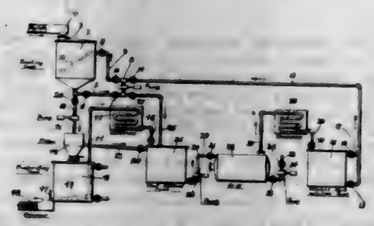
1. In combination with a bottle cap having an opening therethrough, a resilient holder seated in said opening and having a circumferentially enlarged portion for sealing over its engagement with the cap and having an axially extending portion, there being an opening through



the axially extending portion and a brush having a stem passing through said axial opening and having gripping fit therein.

---

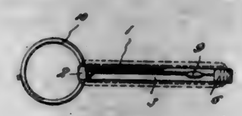
1,562,868. PROCESS OF TREATING DECOLORIZING AND CLARIFYING HYDROUS MAGNESIUM SILICATES. MARVIN L. CHAPPELL, Inglewood, Calif., assignor to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Oct. 15, 1924. Serial No. 743,746. 8 Claims. (Cl. 252—2.)



1. The process of treating spent decolorising and clarifying agent containing as the basic ingredient hydrous magnesium silicate which comprises contacting the silicate with a color solvent containing the requisite sulfuric acid to restore at least the original decolorising and clarifying powers of the silicate.

---

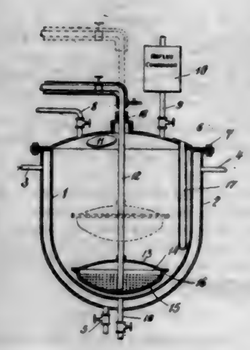
1,562,869. BOBBED-HAIR CURLER. ANTIONETTE V. COMINGS, East Grand Forks, Minn. Filed June 16, 1924. Serial No. 720,368. 4 Claims. (Cl. 132—42.)



4. An article of the class described comprising a hair curler having a pair of arms, means for detachably interengaging the ends of said arms, said means consisting of a loop on one of said arms under which the other arm engages, a recess in said loop and an elastic band secured in the end of the arm opposite to the loop and adapted to be stretched over both of said arms and engage with said recess.

---

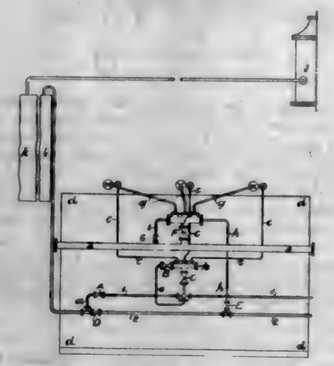
1,562,870. DIGESTION AND FILTRATION APPARATUS. LLOYD C. DANIELS, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 9, 1920. Serial No. 350,884. 2 Claims. (Cl. 167—4.)



1. A digestion or extraction and filtration apparatus, comprising a receptacle provided with heating means, a filter head within the receptacle and conforming generally to the contour of the bottom of the receptacle, an outlet pipe leading from within the filter head to the outside of the apparatus, a vapor outlet pipe having a reflux condenser, and means for introducing compressed gas into the receptacle above the liquor level therein to force the liquor out through the filter head and the pipe to the outside of the apparatus.

---

1,562,871. ICE-MANUFACTURING APPARATUS. ALBERT CHARLES DAVIS, Liverpool, England. Filed Dec. 27, 1919. Serial No. 347,858. 3 Claims. (Cl. 62—167.)



1. In ice-manufacturing apparatus of the direct-expansion type, and wherein the apparatus includes ice-freezing walls, means for delivering liquid refrigerant to the freezing walls under refrigerant-evaporation conditions to produce the freezing, and means for delivering the refrigerant to said walls while maintaining the refrigerant under pressure sufficient to prevent material evaporation of the refrigerant, whereby thawing conditions are produced for removal of the formed ice from such walls.

1,562,872. DISTANT CONTROL FOR AUTOMOTIVE MACHINES AND MATERIAL-HANDLING MACHINES. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,701. 76 Claims. (Cl. 214—132.)
